https://www.christianitytoday.com/ct/2016/november/bible-never-says-all-men-are-created-equal.html

An Anglican man rang me out of the blue the other day to ask if the New Testament teaches “equality.” “Not really,” I replied. “**The New Testament mentions *equality* once or twice, but when it comes to social relationships, it is far more interested in concepts like oneness, commonness, partnership, union, and joint-inheritance.** If you make all those passages about equality, you flatten their meaning. And in any case, it’s become a blunderbuss word that means everything and nothing.”
…

Two New Testament texts explicitly mention *isotēs*, the Greek word for equality, proportionality, or fairness. In 2 Corinthians 8:13–14, Paul urges the church in Corinth to give generously to the Jerusalem church, “that there might be *equality*.” And in Colossians 4:1, he tells masters to grant their slaves “what is right and *fair*.”

Most of the famous “equality” passages use quite different language. Galatians 3:28 doesn’t say that there is no Jew and Gentile, slave and free, male and female because we are all equal, but because we “are all one in Christ Jesus.” Colossians 3:11 doesn’t talk about equality between barbarians and Scythians, but rather asserts that “Christ is all, and is in all.” Ephesians 3:6 doesn’t say that Gentiles are now equal with Jews, but rather that we are now “heirs together.” Ephesians 6:9 doesn’t talk about equality between slaves and masters, but rather that both have the same Master.

https://www.missioalliance.org/biblical-equality/

For Wilson, the point of Galatians 3:28 is not that Jews and Greeks, slaves and free, and males and females are equal in Christ, but that they are made *one* in Christ. **Wilson argues that oneness is too often confused, thinned, and compromised by an “all men are created equal” rhetoric enshrined in treatises like the US Declaration of Independence.**

Wilson does, however, acknowledge the biblical notion of equality (in 2 Cor. 8:13-14 and Col. 4:1) as it elevates right, fair, and dignified treatment regardless of “class, sex, race or subgroup.” Yet, for Wilson, **Christians too often substitute Scripture’s deeper path of oneness, partnership, and joint-inheritance for individualist notions of “equal access to entitlements and privileges.”**

https://www.gutenberg.org/files/47422/47422-h/47422-h.htm#Page_266

It has been currently asserted that the premises of the abolitionists were embraced in the Declaration of Independence; so that the United States have been committed to them from the beginning. The words usually referred to are the following: **"That all men are created equal: that they are endowed by their Creator with certain inalienable rights: that among these are life, liberty, and the pursuit of happiness. That to secure these rights governments are instituted among men, deriving their just powers from the consent of the governed,"** etc.
…

It may be true that Jefferson, the draughtsman of the Declaration, did heartily adopt his propositions in the sense of the advocates of the social contract; **for it is well known that he was properly a Democrat, and not, like the other great Whigs of Virginia, only a Republican; that he had drank deeply into the spirit of Locke's political writings; and that he had already contracted a fondness for the atheistical philosophy of the French political reformers.**

https://www.whitenationalism.com/cwar/pillar1.htm

In contrast, examine the statement authored by Thomas Jefferson and placed in our Declaration of Independence – it is the very premise upon which the American nation is founded: "We hold these truths to be self evident – that all men are created equal."

It is obviously and self evidently false.

Our own eyes tell us the contrary – that all men are profoundly unequal in their abilities and aptitudes, and that the groups to which they attach themselves display average inequalities as well.

It is clear that the slave owning Jefferson knew his statement was false at the time he made it.

So then the question is, why did he say it?

The personal driver behind Jefferson's statement was, of course, that all educated property owners were equal to their competitors, the hereditary aristocrats in Europe, and should share power with them.

But when we hear the straight forward declaration of self-interest, we recognize instantly that educated property owners are few in number and are utterly powerless without the support of the millions who are

not educated and do not own property, but are forced to sell their labor. Thus, the educated property owners – the gentleman rentiers – have no claim to political legitimacy unless they can enlist the support of those who are propertyless and uneducated.

The gentlemen rentiers of America's founding must fight a war against the Universalist Empire of Britain and cannot do it alone. **And as the gentleman is inherently manipulative and deceptive, he makes an open ended promise that he knows is based on a wildly and obviously false notion that all men are created equal. It results in an implied promise that Jefferson knows will be utterly impossible to keep. But Jefferson makes the deceptive and manipulative promise anyway, because it is in his individual interest to make it.**

https://archive.org/details/naturesgodhereti0000stew_o9j9/page/198/mode/2up?view=theater

In Jefferson's first draft of the Declaration, as it happens, there was no "Creator." "All men are created equal & independent," reads the manuscript, and "from that equal creation they derive rights inherent & unalienable."229

https://archive.org/details/naturesgodhereti0000stew_o9j9/page/262/mode/2up?view=theater

In Jefferson's original draft, the phrase was "sacred & undeniable." The change, which came at Franklin's suggestion, was in this case a fortunate one.

https://archive.org/details/naturesgodhereti0000stew_o9j9/page/328/mode/2up?view=theater

In Jefferson's first draft of the Declaration of Independence, interestingly, the relevant clause reads as follows: "all men are created equal & independent." **The phrase "equal & independent" comes from Locke, and here it serves to remind us that neither God nor nature supplies any order of subordination among humans.** In that first draft, Jefferson's derivation of our rights from "that equal creation" – rather than from the Creator – confirms that the equality of concern here is a fact of nature, not an imperative from on high.

https://docsouth.unc.edu/southlit/jefferson/jefferson.html#p64

This I believe is the case with every barbarous people. With such, force is law. The stronger sex therefore imposes on the weaker. **It is civilization alone which replaces women in the enjoyment of their natural equality. That first teaches us to subdue the selfish passions, and to respect those rights in others which we value in ourselves. Were we in equal barbarism, our females would be equal drudges.**

https://en.wikipedia.org/wiki/Philip_Mazzei

The contribution of Philip Mazzei to the U.S. Declaration of Independence was acknowledged by John F. Kennedy in his book *A Nation of Immigrants*, in which he states that:[4]

> The great doctrine 'All men are created equal'[5][6] and incorporated into the Declaration of Independence by Thomas Jefferson, was paraphrased from the writing of Philip Mazzei, an Italian-born patriot and pamphleteer, who was a close friend of Jefferson. A few alleged scholars try to discredit Mazzei as the creator of this statement and idea, saying that "there is no mention of it anywhere until after the Declaration was published". **This phrase appears in Italian in Mazzei's own hand, written in Italian, several years prior to the writing of the Declaration of Independence.** Mazzei and Jefferson often exchanged ideas about true liberty and freedom. No one man can take complete credit for the ideals of American democracy.

https://en.wikipedia.org/wiki/All_men_are_created_equal#Origin_of_Thomas_Jefferson's_use_of_the_phrase

At the age of 33, Jefferson may have also borrowed the expression from an Italian friend and neighbor, Philip Mazzei,[9] born in Prato, as noted by Joint Resolution 175 of the 103rd Congress as well as by John F. Kennedy in *A Nation of Immigrants*.[11][12]

> 9. Philip Mazzei, The Virginia Gazette, 1774. Translated by a friend and neighbor, Thomas Jefferson:
>
> > ***Tutti gli uomini sono per natura egualmente liberi e indipendenti. Quest'eguaglianza è necessaria per costituire un governo libero. Bisogna che ognuno sia uguale all'altro nel diritto naturale.***

https://www.njitalianheritage.org/wp-content/uploads/2015/12/All-Men-are-Equal.pdf

> The idea that "all men are created equal" was part of the political, philosophical, and theological ethos of the period. Earlier, in 1774 the Scottish immigrant to Pennsylvania, James Wilson, wrote in *Considerations*

> *on the Nature and Extent of Legislative Authority of the British Parliament* that **“All men are, by nature, equal and free: No one has a right to any authority over another without his consent.”**
>
> **Wilson could have easily been citing John Locke in 1690, who wrote that “Man being born ... [with] of all the rights and privileges of the law of Nature, equally with any other man, or number of men in the world.”** Or, he could have been citing Algernon Sidney’s *Discourses, Concerning Government*, 1698, when he cited others, stating “That Hayward, Blackwood, Barclay, and others who have bravely vindicated the right of kings in this point, do with one consent admit, as an unquestionable truth, and assent unto the natural liberty and equality of mankind. ...”
>
> Like all of the Enlightened political thinkers, Mazzei was very familiar with Roman law and the writings of the third century Roman jurist Domitius Ulpian. **Ulpian wrote that “By law of nature all men are equal,” nearly eighteen hundred years ago. This concept was handed down and reinterpreted for centuries and has evolved into its present definition.** Mazzei’s words may have had an immediate influence on both Mason and Jefferson, but these men were long familiar with a concept that was first heard in ancient Rome and had become a clarion aspect of Western tradition.

...

The Virginia Declaration of Rights, chiefly authored by George Mason and approved by the Virginia Convention on June 12, 1776, contains the wording: **"all men are by nature equally free and independent, and have certain inherent rights of which ... they cannot deprive or divest their posterity; namely, the enjoyment of life and liberty, with the means of acquiring and possessing property, and pursuing and obtaining happiness and safety."**[17]

...

The Massachusetts Constitution, chiefly authored by John Adams in 1780, contains in its Declaration of Rights the wording: "All men are born free and equal, and have certain natural, essential, and unalienable rights; among which may be reckoned the right of enjoying and defending their lives and liberties; that of acquiring, possessing, and protecting property; in fine, that of seeking and obtaining their safety and happiness."[19]

...

Richard M. Weaver, **in one of the cornerstone works of traditional conservatism, *Ideas Have Consequences* (1948),** paraphrased a 19th-century writer, stating that "no man was ever created free and no two men [were] ever created equal". He continued: **"The comity of peoples in groups large or small rests not upon this chimerical notion of equality but upon fraternity, a concept which long antedates it in history because it goes immeasurably deeper in human sentiment. The ancient feeling of brotherhood carries obligations of which equality knows nothing. It calls for respect and protection, for brotherhood is status in family, and family is by nature hierarchical."**[39]

> https://archive.org/details/in.ernet.dli.2015.218820/page/n381/mode/2up?view=theater
>
> **Of the three slogans, *fraternité*, *liberté*, and *égalité*, the first was a mere operatic phrase, of which practical politics took no account whatsoever, and the two others were irreconcilable opposites.**
>
> https://biblehub.com/commentaries/luke/23-12.htm
>
> *And the same day Pilate and Herod were made friends together.* This union of two such bitter enemies in their enmity against Jesus evidently struck the early Church with sad wonderment. It is referred to in the first recorded hymn of the Church of Christ (Acts 4:27). **How often has the strange sad scene been reproduced in the world's story since! Worldly men apparently irreconcilable meet together in friendship when opportunity offers itself for wounding Christ!**

https://charltonteaching.blogspot.com/2021/08/the-demonic-strategy-of-equality.html

> *Equality is the great dogma on which liberal Western democracies are built.* ***It might have seemed like a step forward at a time when the gap between rich and poor, powerful and weak was as great as it was, and the movement towards less inequality surely did bring certain benefits in the short term.***
>
> ***But the flaw that lies at its heart is now being revealed.*** *If equality, and equality alone, is taken as the foundation of a culture then that culture will collapse into the lowest common denominator and it will eventually collapse altogether.*
>
> *Equality is totally contrary to human nature and to enforce it is to force human beings to live against both their natural and their spiritual instincts. It becomes a tool to push the higher down to the level of the lower.*
> *...*
>
> *Equality is often said to be rooted in Christianity. If it were how strange it is that it is never mentioned in the Bible and was only discovered to be a Christian virtue 1800 years after the time*

> *of Christ.* ***Oneness in Christ is a Christian virtue but that is not equality which is a materialistic distortion of it.***
>
> ***Equality is actually a property of unformed matter, matter untouched by the creative breath of spirit, which is why you see it most at lower levels of evolution. The more life evolves, the more unequal it becomes because the freer it becomes and yet within that inequality there is also a spiritual oneness.***

…

For them we can see what lies behind the drive for equality - a spitefully destructive hatred of creation itself; the desire to reduce creation to chaos. This is *exactly* the core motivation Tolkien attributed to Morgoth (Melkor) - the Satan of his universe.

Thus equality - which sounds to Modern Man as an obvious and major virtue; is actually an instance of ultimate evil. Characteristic of which, is *exactly* this kind of value-inversion - where an ultimate virtue is actually an ultimate evil.

And a world where such value-inversion is ever-more mainstream, official and compulsory; is exactly what is meant by the End Times.

---

https://counter-currents.com/2013/10/becoming-who-we-are-leftist-eurocentrism-the-destiny-of-the-west/

The anti-Western animus of the European Left may be foolish, dishonest, and disastrous – but it is not un-Western.

From the beginning the West has been animated by a spirit of individualism that has involved the willingness to negate even the desire for life in order to achieve the ideal. We have been willing to risk everything, in other words, for individual autonomy, and for our vision of what is *right*. **This is the source of everything great about us, but it is simultaneously our tragic flaw. It seems to lead, in many Westerners, to a form of madness in which one comes to believe that freedom means emancipation from all limits whatsoever.** And so modern Westerners now believe that we are not just capable of taming or channeling our animal desires, but of giving birth to ourselves.

We believe that we can free ourselves from history, from culture, from biology, even from the limits of time and space. **We deny heredity, natural inequality, upper limits on physical and mental development, ethnic and national characters, and even the difference between the sexes.** We want to "have it all" and be all, or anything. But, of course, this really amounts to being nothing at all. **And that really is our goal: the apotheosis of the Western spirit. To be absolutely free of all limits and all otherness; to be free of anything not chosen by the autonomous self. To be free, in fact, of identity.** Pico della Mirandola (in his *Oration on the Dignity of Man*, 1486) understood us correctly: we Westerners are the animal with no nature – or at least we *think* that we are. And this realization, in fact, is what Hegel saw standing at the end of history. **All of history for Hegel was the coming into being, through (Western) humanity of Aristotle's God: the being who is utterly and completely independent, self-sufficient, and undetermined; spinning in an eternal bliss of pure and perfect self-relatedness.**

But, of course, this is complete insanity. It is true enough that we are able to negate our animal nature in the name of an ideal, or to channel our animal drives. But we are not free to be anything we like.

…

In his *Philosophy of Right*, Hegel deals with different conceptions of freedom. Most philosophers and ordinary people take freedom to mean "lack of constraint," and to be the opposite of "determination." But, good dialectician that he was, Hegel argues that this conception rests upon a false dichotomy. If freedom means lack of determination, then freedom is completely impossible. All of us are born into a determinate set of cultural, social, geographical, and historical circumstances.

> https://counter-currents.com/2021/12/fichte-on-self-consciousness-as-the-foundation-of-all-knowledge/
>
> J. G. Fichte holds that the human self has no intrinsic identity, aside from that which we *create* for it. He completely rejects the notion that our identity is in any way determined by nature. **This is the modern "blank slate" theory pushed to a radical extreme. It is to Fichte that we must look if we wish to find the philosophical origins of current intellectual fashions such as "gender fluidity," "social construction" of race and gender, and radical egalitarian claims about human perfectibility.**

http://www.thephora.net/forum/forum/the-academy/history/58979-can-we-say-that-communism-is-was-in-some-sense-jewish-give-your-opinions/page69#post1927879

Communism as a modern ideology existed before Hess, but primarily as wishful thinking. **It was Hess who turbo-charged it with the *Wissenschaftslehre* (loosely translated as "the science of science") of Hegel's gifted contemporary, Johann Gottlieb Fichte (1762-1814),** forming it into what Hess termed *Wissenschaftlicher Kommunismus* ("scientific Communism," based on the whole realm of knowledge and social analysis), which was then transmitted to Marx in whose hands it became "scientific socialism," an enthralling epistemology possessed of brutal logic, and a ruthless political machine.
…

In Fichte's philosophy, **the self is not a static thing with fixed properties,** but rather, a self-producing process which owes its existence to nothing but itself. Fichte's concept of a rational agent that constantly interprets itself in light of *normative* standards that it imposes on itself, in both the theoretical and practical realms, is similar to the self-worship of the rabbis.

Notice Fichte's phrase, "normative." The concept of the "normative" underscores the extreme relativism of the whole of the Hegelian theory of knowledge and control which would be further synthesized and refined by Edmund Husserl in his theory of phenomenology. **When one of God's immutable laws becomes inconvenient for the self-invented, self-worshipping Fichtian-Hegelian man, he dismisses it as "normative," i.e. a mere temporal custom, "culturally conditioned" and mistaken for an enduring truth.** When Pope Paul VI was asked why the Church of Rome had dropped certain aspects of the Apostle Paul's teaching concerning women, he is alleged to have replied, "Because they were only normative."

http://faithful-nation.com/2020/06/14/a-white-on-white-conflict/

Beginning in the 18th century, an ever growing number of whites have turned away from the Christian faith and have worshiped human reason in place of the true God, believing that human reason can bring about a heaven on earth. This sinful attitude is attractive to those who wish to set themselves up as the divine law-giver capable of determining good and evil. The apostasy from God's revealed religion is accompanied by a hatred of the created order evident in nature, **and the end result of worshipping human reason is a revolutionary assault on all traditional norms.**
…

The perverted desire to revolt against God coupled with the natural genius of the white race has produced the most destructive human force in history. The bloodiest revolutions and wars have been fought because white utopians desire to remake the world in their own image. They have learned nothing from their past failures and are always ready to plunge the world into greater suffering. We should keep this in mind when attempting to heal society. **Our complaints about black behavior, mass immigration, and even Jewish influence, should be secondary to the issue of white apostasy and the white predilection for abstract, revolutionary thinking.**

https://archive.org/details/foesofourownhous01roos/page/164/mode/2up?view=theater

Professor Carl Pearson, a leading English Socialist, states their position exactly: "The sex relation of the future will not be regarded as a union for the birth of children, but as the closest form of friendship between man and woman. **It will be accompanied by no child bearing or rearing, or by this in a much more limited number than at present. With the sex relationship, so long as it does not result in children, we hold that the state in the future will in no wise interfere, but when it does result in children, then the state will have a right to interfere.**" He then goes on to point out that in order to save the woman from, "economic dependence" upon the father of her children, the children will be raised at the expense of the state; the usual plan being to have huge buildings like foundling asylums.

Mr. Pearson is a scientific man who, in his own realm, is worthy of serious heed, **and the above quotation states in naked form just what logical scientific Socialism would really come to. Aside from its thoroughly repulsive quality, it ought not to be necessary to point out that the condition of affairs aimed at would in actual practice bring about the destruction of the race within at most a couple of generations; and such destruction would be heartily to be desired for any race of such infamous character as to tolerate such a system.**

https://en.wikipedia.org/wiki/Karl_Pearson

After Galton's death in 1911, Pearson embarked on producing his definitive biography – a three-volume tome of narrative, letters, genealogies, commentaries, and photographs – published in 1914, 1924, and 1930, with much of Pearson's own money paying for their print runs. The biography, done "to satisfy myself and without regard to traditional standards, to the needs of publishers or to the tastes of the reading public", triumphed Galton's life, work and personal heredity. **He predicted that Galton, rather than Charles Darwin, would be remembered as the most prodigious grandson of Erasmus Darwin.**

...

> He gave lectures on such issues as "the woman's question" (this was the era of the suffragist movement in the UK)[24]
> and upon Karl Marx. **His commitment to socialism and its ideals led him to refuse the offer of being created an OBE (Officer of the Order of the British Empire) in 1920 and also to refuse a knighthood in 1935.**

---

http://www.thephora.net/forum/forum/the-academy/philosophy/69491-on-why-materialism-matters?p=1645835#post1645835

Opus 131:

Leftism begun with Greek rationalism (which survived in the middle ages thanks to nominalism). In essence, without Christianity, the west would have descended into this materialistic hell hole we call modern "civilization" well before it was time for that to happen. **This attempt to blame Christianity for the errors of modernity stems from Aryan denial. It is a way for us to deny our own degeneracy while blaming Semites exclusively,** as if there could possibly be such a thing as human groups which are perfectly good (our own), and human groups which are exclusively evil (everybody else). Sorry, but we all have our share in the decline of human civilizations. Blacks with their violence, Jews with their insidiousness, and us with our soul crushing rationalism. The reign of the anti-Christ has need of subjects, and those will belong to all races. The devil is thoroughly multicultural.

https://voxday.net/2019/09/01/godless-primitivism-is-not-the-answer/

Without Christianity, without the European nations, **without the Graeco-Roman legal and philosophic traditions,** there is no Western civilization.

https://www1.cbn.com/questions/what-are-the-three-parts-of-man

As God is a tripartite -- Father, Son and Holy Spirit -- so man is three parts -- **body, soul and spirit.** In the most explicit example from Scripture of these divisions, the Apostle Paul writes:

> Now may the God of peace Himself sanctify you entirely; and may
> your **spirit** and **soul** and **body** be preserved complete, without blame at the coming of our Lord Jesus Christ (1 Thessalonians 5:23 NASB).

...

> But a **natural (psuchikos -- soulish) man** does not accept the things of the Spirit of God, for they are foolishness to him; and he cannot understand them, because they are spiritually appraised (1 Cor. 2:14 NASB).

...

> For the word of God is living and active and sharper than any two-edged sword, and piercing as far as **the division of soul and spirit**, of both joints and marrow, and able to judge the thoughts and intentions of the heart (Heb. 4:12 NASB).

We see in this passage of Scripture that the soul and spirit can be divided -- and that it is the Word of God that pierces our heart to bring the division of soul and spirit, something that only God can do.

https://www.gutenberg.org/files/18377/18377-h/18377-h.htm#CHAPTER_VII

It must be carefully noted (what ascetics of all ages have overlooked) that the flesh is not the body. Envy and hatred are just as much works of the flesh[1] as revelling and uncleanness. **It is not the body which lusts against the soul, but the evil nature running through them both which refuses the leading of the Spirit of God.** But these are practical statements: the proper psychology of Scripture is given in another series of passages. It comes out clearly in 1 Thess. v. 23—'your whole spirit, and soul, and body be preserved blameless unto the coming of our Lord Jesus Christ.' Here the division is threefold. **The body we know pretty well, as far as concerns its material form. The soul however, is not the 'soul' of common language. It is only the seat of the animal life which we share with the beasts. Above the soul, beyond the ken of Aristotle, Scripture reveals the spirit as the seat of the immortal life which is to pass the gate of death unharmed.**

https://en.wikipedia.org/wiki/Plato%27s_theory_of_soul

The Platonic soul consists of three parts which are located in different regions of the body:[1][2][3]

1. the *logos* (λογιστικόν), or *logistikon*, located in the head, is related to reason and regulates the other parts.
2. the *thymos* (θυμοειδές), or *thumoeides*, located near the chest region and is related to anger.
3. the *eros* (ἐπιθυμητικόν), or *epithumetikon*, located in the stomach and is related to one's desires.

https://oll.libertyfund.org/title/acton-the-history-of-freedom-and-other-essays#lf0030_label_020

[Greece and Rome] survive not in their institutions, but in their ideas, and by their ideas, especially on the art of government, they are—

> The dead, but sceptred sovereigns who still rule
> Our spirits from their urns.

To them, indeed, may be tracked nearly all the errors that are undermining political society—Communism, Utilitarianism, the confusion between tyranny and authority, and between lawlessness and freedom.

---

https://www.gutenberg.org/files/2332/2332-h/2332-h.htm#link2H_4_0007

This Essay, silly as it is, was exceedingly well received, both in England and on the Continent. And the reason is evident. **The classical scholars who saw its absurdity were generally on the side of the ancients, and were inclined rather to veil than to expose the blunders of an ally;** the champions of the moderns were generally as ignorant as Temple himself; and the multitude was charmed by his flowing and melodious diction.
...

Christchurch was up in arms; **and though that College seems then to have been almost destitute of severe and accurate learning, no academical society could show a greater array of orators, wits, politicians, bustling adventurers who united the superficial accomplishments of the scholar with the manners and arts of the man of the world;** and this formidable body resolved to try how far smart repartees, well-turned sentences, confidence, puffing, and intrigue could, on the question whether a Greek book were or were not genuine, supply the place of a little knowledge of Greek.

https://www.garynorth.com/Deuteronomy4.pdf

In a very real sense, Julian's edict launched a dilemma that has faced the Western church since the eleventh century. If the knowledge of pagan texts is the legitimate basis of a gentleman's education – an assumption acknowledged by the Christian West until the Darwinian educational reforms of late nineteenth century – then why should Christians seek to become gentlemen?
...

Darwinism has replaced classicism in the modern curriculum, and college graduates are not so much gentlemen as bureaucrats, but the dilemma is in principle the same. The solution is the biblical covenant, which provides Christians with revelational standards of evaluation that are to govern both the form and the content of education, but Christians have never believed this strongly enough to establish biblical guidelines for education.

https://www.garynorth.com/conspiracyinphiladelphia.pdf

The curricula of the colleges at Oxford and Cambridge had always been grounded on the ideal of thorough knowledge of the pagan classics, **and even the Puritans, while always officially skeptical about such training, and always filled with fear and trembling about its threat to the soul, were forced to submit their ministerial candidates and the sons of the gentry and merchants to the classroom rigors of the humanists, generation after generation.**42 They did not succeed in changing the curricula of the universities during the Puritan Revolution, and after that, there was no possibility of trinitarian educational reform.

The classical educational model of Oxford and Cambridge did its steady work of secularization in the English-speaking world, even in Puritan Harvard and Yale.

https://archive.org/details/enlightenmentint0000unse_i6k5/page/38/mode/2up?view=theater

In our time, when Latinity is dying and has retreated to the academy, it is hard to visualize the easy intimate traffic between the eighteenth century and the ancients. **Educated Christians never thought for a moment that their classicism might in any way interfere with their religious duties.**
…

When Oglethorpe's expedition set sail for Georgia, Charles Wesley, with no sense of incongruity, borrowed his pious benediction – *Christo duce et auspice Christo* – from a Horatian ode.1

https://www.gutenberg.org/files/51634/51634-h/51634-h.htm#Chap_10

In order to understand what kind of moral education students in Roman Catholic colleges receive, one must only be told that from beginning to the end they are surrounded by an atmosphere in which nothing but Paganism is breathed. The models of eloquence which we learned by heart were almost exclusively taken from Pagan literature. In the same manner Pagan models of wisdom, of honor, of chastity were offered to our admiration. Our minds were constantly fixed on the masterpieces which Paganism has left. The doors of our understanding were left open only to receive the rays of light which Paganism has shed on the world. Homer, Socrates, Lycurgus, Virgil, Horace, Cicero, Tacitus, Cæsar, Xenophon, Demosthenes; Alexander, Lucretia, Regulus, Brutus, Jupiter, Venus, Minerva, Mars, Diana, etc., etc., crowded each other in our thoughts, to occupy them and be their models, examples and masters for ever.

It may be said that the same Pagan writers, orators and heroes are studied, read and admired in Protestant colleges. But there the infallible antidote, the Bible, is given to the students.
…

It is true that the Church of Rome, as an offset to that, gave us her principles, precepts, fables and legends that we might be attached to her, and that she might remain the mistress of our hearts. But these doctrines, practices, principles and fables seemed to us so evidently borrowed from Paganism—they were so cold, so naked, so stripped of all true poetry, that if the Paganism of the ancients was not left absolute master of our affections, it still claimed a large part of our souls.
…

If, therefore, I am asked what moral and religious education we received at college, I will ask in return, What religious education can we receive in an institution where seven years are spent without once being permitted to read the Gospel of God? **The gods of the heathen spoke to us daily by their apostles and disciples—Homer, Virgil, Pindar, Horace! and the God of the Christians had not permission to say a single word to us in that college!**
…

But the greater number of students in Roman Catholic colleges cannot accept the bastard Christianity which Rome presents to them. Of course, during their studies they follow its rules, for the sake of peace; but they have hardly left college before they proceed to join and increase the ranks of the army of skeptics and infidels which overruns France, Spain, Italy and Canada—which overruns, in fact, all the countries where Rome has the education of the people in her hands.

https://en.wikisource.org/wiki/Schopenhauer_as_Educator#2

And so the life of the modern man is passed in see-sawing between Christianity and Paganism, **between a furtive or hypocritical approach to Christian morality, and an equally shy and spiritless dallying with the antique:** and he does not thrive under it.

http://www.thenietzschechannel.com/works-pub/cw/cw.htm

Noble Romans experienced Christianity as *foeda superstitio* [abominable superstition]: I recall how the last German of noble taste, how Goethe* experienced the cross. One looks in vain for more valuable, more *necessary* opposites... —**But such falseness as that of Bayreuth is no exception today. We are all familiar with the unaesthetic concept of the Christian Junker.** Such *innocence* among opposites, such a "good conscience" in a lie is actually *modern* par excellence, it almost defines modernity. Biologically, modern man represents a *contradiction of values*, he sits between two chairs, he says Yes and No in the same breath.

https://en.wikipedia.org/wiki/Simon_Raven

Simon Arthur Noël Raven (28 December 1927-12 May 2001) was an English author, playwright, essayist, television writer, and screenwriter. He is known for his louche lifestyle as much as for his literary output.
…

His unashamed credo was "a robust eighteenth-century paganism... allied to a deep contempt for the egalitarian code of post-war England".[2]

https://www.telegraph.co.uk/news/obituaries/1330265/Simon-Raven.html

The upper layer, a schoolmaster's version of Hellenism that was propagated in the public schools, Raven described in the following manner in *The Decline of the Gentleman* (1961):

> *First,* ***the truth must be sought honestly and with intelligence on every level, and must be prized above convenience and even perhaps above freedom itself, because it is not made by man but exists independently of him****... One comes at the truth by logic, patience, and fairmindedness. From which it follows, by extension, that one should always be moderate... With moderation comes tolerance... Being free meant that you were not "servile," i.e... that subject to the general good you did not have to do anything against your will and must not, as a point of honour, do anything for monetary gain... Pericles expressed stern views about women: They should be heard of, he said, neither for good nor ill... [T]he Greeks strongly disapproved of inflated pride... They took the view that anyone who became too pleased with himself or thought himself too clever would be punished by the gods with disgrace and ruin.*

This simplified and sanitized Hellenism was developed for the purpose of civilizing crass public schoolboys, and designed to harmonize with Christianity: the Greeks were presented as proto-Christians, lacking only the knowledge of Christ to make them perfect. But there were layers beneath layers, and to those with sufficient intellect and curiosity the classical authors also delivered an unsanitized, definitely un- and anti-Christian message, entirely subversive of public school values; Raven sucked this up greedily.

> *Here was Horace, openly boasting of how he ran away from a battle. Tacitus, quietly equating enthusiasm with stupidity. Thucydides, grimly announcing that the only law of human affairs was "Necessity." Lucretius, recommending regular one-night stands as a way of securing immunity from passion, which was simply the unwholesome and ridiculous product of suppressed or thwarted lust. Catullus, advocating sex with women or sex with boys, whichever you fancy at the time, because there is no such thing as right or wrong in this context...* ***All of them insistent that you take what pleasure you can from this world because only superstitious fools believe in the existence of the next.***

https://archive.org/details/enlightenmentcon0000isra/page/416/mode/2up?view=theater

A key instance of humanism's anachronistic Christianization of pre-Christian thought was indeed precisely this tendency to subsume Platonism, and also Stoicism, into Christian Neoplatonism and generally overstate parallels and similarities between Platonism and early church dogma. This tradition persisted in the later seventeenth century among the Cambridge Platonists, Plato's philosophy being viewed by them as profoundly akin to, and essentially a preparation for, the thought-world of the early Church Fathers. For all his vast erudition and penetrating insights, Cudworth figured in this respect among the principal offenders. Despite the growing sophistication of seventeenth-century erudition, this long-hallowed tradition of scholarship was not challenged, and perhaps could not have been, until the new *critique* based on wholly fresh philosophical criteria arose towards the end of the seventeenth century. **But once the rupture occurred, the implications were far-reaching and of immense consequence.**25

https://archive.org/details/enlightenmentcon0000isra/page/162/mode/2up?view=theater

The point was expressed with typical adroitness and humour by d'Argens, during the period he lived in Holland, in the later 1730s. **His Chinese visitor to the West,** reporting back home what he sees as the extraordinarily eccentric behaviour and strangeness of the Europeans, in his *Lettres chinoises*, **[1739-40] remarks that it was astonishing but he had often had reason to reflect that were the Greek and Roman philosophers so widely extolled there actually to return, far from being admired or permitted to expound their doctrines, they would everywhere in Europe be quickly silenced – immediately imprisoned in Paris and Vienna and burnt in Madrid and Rome:** Empedocles, Thales, Anaxagoras, and Pherecydes, he avers, all would suffer the same fate.133

https://rmx.news/religion/the-german-catholic-church-is-nearly-anti-christ-says-hungarian-archbishop/

"**One of the most striking signs of the European Union's anti-Christianity is that its constitution did not mention Europe's Christian roots. They write about Greco-Roman traditions and the Enlightenment, but not about Christianity.** Yet, ancient culture and art survived thanks to Christians: the writings of Virgil, Tacitus, Homer and others were copied by monks in the depths of their cells."

http://garynorth.com/freebooks/docs/html/gnbd/appendix_e.htm

Rushdoony identifies the origin of the myth: "Greece: The Humanist's Homeland."(3) He begins his chapter, "The Unity of the Polis," with this crucial observation: "The importance of Greek thought in Western history cannot be understood by a reading of the works of specialists in the field, **because the prevailing approach is neither philosophical nor historical but religious. ... <u>The majority of scholars turn to Greek culture, not for its own sake, but to find a heritage and a homeland to buttress their anti-Christianity.</u>**"(4)

> https://archive.org/details/theistsatheistst0000moln/page/18/mode/2up?view=theater
>
> **In the *Philosophy of Religion* Hegel argues that the religion of Hellas does not belong to one people only, it belongs essentially to all humanity as the latter's par excellence faith.** It answers the needs of concrete man because the Greek god (the gods of Homeric mythology)
>
> > has within him the content of the noble and the true which is at the same time that of concrete man. ... **[In this religion] god has no content which would be unknown to man, or which man does not find and know in himself. The confidence of man in the gods is at the same time confidence in himself.**12
>
> ...
>
> It is obvious that 'god' or 'gods' is here merely a convenient expression for our inner world, that it brings a welcome release from the fetters that another religion, the Hebrew-Christian, had imposed on the inner man.13

...

We must take seriously Otto Scott's suggestion: **Christians should study Classical history and culture, not to exaggerate the virtues of Classical civilization, but to understand why it collapsed.**(9)

---

https://www.age-of-the-sage.org/philosophy/footnotes_plato.html

The safest general characterization of the European philosophical tradition is that it consists of a series of footnotes to Plato. I do not mean the systematic scheme of thought which scholars have doubtfully extracted from his writings. I allude to the wealth of general ideas scattered through them.

Above all it should be insisted upon that the greatest inheritance the Greeks left in practical philosophy was not the splendour of Plato, or the vast erudition of Aristotle, but the systems of Zeno and Epicurus, and the scepticism of Pyrrho. **In the Roman Empire Platonists and Aristotelians were scarce; Stoics and Epicureans occupied all society. And if in the Middle Ages the schoolmen returned to the great classical masters, <u>in our own day the world has again fallen into modern paths, and every thinking man is either a Stoic, an Epicurean, or a Sceptic.</u> These eternal systems were born not in the golden but in the silver age of Greek literature.**

>
> Here Mr. Mahaffy is very pleasant reading indeed. His account of the colleges at Athens and Alexandria, for instance, is extremely interesting, **and so is his estimate of the schools of Zeno, of Epicurus, and of Pyrrho.**

https://archive.org/details/antigonosgonatas00tarn/page/32/mode/2up?view=theater

Of all the systems of the Greek world, Stoicism is the only one that in any sense comes home to ourselves, or has any affinity to the feelings of modern men and women. And it is not merely through its influence upon St. Paul that Stoicism affects the world to-day. The later Stoics travelled far from Zeno; they learnt much that he did not know; nevertheless, without his impulse they would not have been.66 **We may pass over Aristotle, and treat Plato as poetry; but we cannot imagine a time when men, for their own sakes, will cease to read the slave Epictetus and his imperial pupil.**

Leo Strauss's Indictment of Christain Philosophy on JSTOR

Later writers motivated by the same antitheological passion as Marsilius **would conclude that the orthodox scholastics had been too successful in their attempt to harmonize Aristotle with Christian theology and that a new beginning was needed, a beginning that would entail the rejection of Aristotle and the entire classical tradition.**56

https://archive.org/details/enlightenmentint0000unse_i6k5/page/82/mode/2up?view=theater

Political preoccupations kept breaking in. **Thus the philosophes slighted whatever contribution Aristotle may have made to the scientific method; they saw him mainly as the favorite of the Scholastics – a pagan who had trafficked with the enemy. Their treatment of Plato, which has long perplexed and annoyed students of the eighteenth century, was equally shabby. Rousseau, who worshipped Plato's writings as *divin*, was a lonely voice in the Enlightenment.** Rather more characteristically, Montesquieu described Plato as a fine poet; Voltaire, puzzled and impudent, called Plato eloquent and unintelligible, a clever fabulist with occasional insights; Wieland equated Plato's metaphysical vision with an otherworldly mysticism; while Jefferson could hardly get through the *Republic*: it seemed to him puerile, whimsical, full of unintelligible jargon and downright nonsense – he simply could not understand how the admirable Cicero could have eulogized Plato so extravagantly. **Despite this condescension, the Enlightenment was permeated with Platonic ideas.** The Stoics, who taught the philosophes a great deal, had studied Plato closely, and had adopted many of his teachings. The neoplatonists had adopted others, and their system was transmitted to posterity in large part by Augustine. **Now the philosophes patronized Plato, ignored the neoplatonists, and ridiculed Augustine, but they inherited, despite themselves, a wide range of Platonic ideas, largely through the Stoics and such modern Platonists as Galileo.**

https://archive.org/details/enlightenmentint0000unse_i6k5/page/322/mode/2up?view=theater

The image of a bridge is helpful but incomplete; it fails to evoke the essential hostility between eighteenth-century religion and eighteenth-century secularism: the philosophes rudely treated the Christian past rather as Voltaire treated the plays of Shakespeare – **as a dunghill strewn with diamonds, crying out to be pillaged and badly needing to be cleaned out.**
…

David Hume slyly suggested that the Roman Emperor Julian had conceded "the great Charity of the Christians, which they extended, he says, even sometimes to Heathens: But he asserts, like a Rogue as he is, that they borrow'd that Virtue from the writings of Homer & other heathen poets."1
…

Hence the philosophes – rogues that they were – could claim that they were doing to the Christians what the Church Fathers had claimed they had done to the Greeks and Romans: they were merely taking back what had originally belonged to them.

This philosophic estimate is uncharitable, positively unchristian; still, here as so often before, we encounter the curious duality of the Enlightenment's historical verdicts: **the philosophes were ungenerous and prejudiced and still right in substance. What the philosophes took over from Christian theologians and Christian philosophers were the least distinctively Christian, the least religious, parts of their teachings – they were usually ideas that had come to the Church Fathers from the Stoics.** Moreover the philosophes rarely left these semipagan borrowings untouched – as the ancient Greeks unmistakably made their own what they took from their neighbors, so the philosophes emptied what they borrowed of its religious content.

https://archive.org/details/theistsatheistst0000moln/page/66/mode/2up?view=theater

Thus, ancient humanism is not exhausted in the one dictum of Protagoras that 'man is the measure of all things' and the consequences of this dictum, it is also in its systematically influential aspect a syncretism of later theories: **Lucretian materialism, Stoic one-ness with the world-soul (cosmos), and the Pyrrhonic (skeptic) thesis which weighs two sides of all problems and suspends judgment upon**

finding that they are equally uncertain (the doctrine of equipollence). In this syncretic humanism we discern, therefore, three elements: the first, the *Lucretian motive*, is everywhere evident in the history of humanism: dispel the fear of the gods by demonstrating that everything that surrounds man, and man himself, are impersonal matter and motion. Secondly, the *Pyrrhonian motive*, **which underlines the need to substitute philosophy for religion because philosophy's main tool, reason, can never attain certitudes,** only probabilities, sufficient for a worldly attitude which is superficially moral. It keeps us free from troublesome relationships with our fellow men, and protects us against the suspicion of the authorities. The third ingredient in ancient humanism was the *Stoic motive*, **it insisted on man's link with the world-soul (*pneuma*), a half-material, half-spiritual force through which, and through which alone, we transcend our materiality (passions), and believe in, and work for, an entity of a truly human scope, the *cosmopolis*.**

Thus the educated pagan man, the philosopher, became a humanist either by denying the existence of the gods, or, as Hegel suggested, by regarding them as his equals, even his competitors.
…

Thus the true atheist-humanist of antiquity is the Pyrrhonic sage, the skeptic who is nevertheless sufficiently eclectic to allow room in his system for Epicureans and Stoics, to face Zeus as an equal,11 **to see himself and the cosmos as homogeneous, to have a material soul in communication with the world-soul.**

https://en.wikipedia.org/wiki/The_Open_Society_and_Its_Enemies

The Open Society Foundations, created by investor George Soros, were inspired in name and purpose by Popper's book.[20]

https://books.google.fi/books?id=_M_E5QczOBAC&lpg=PP1&hl=fi&pg=PA241#v=onepage&q&f=false

But some part at least of the authoritarian Church of the Middle Ages succeeded in branding such practical humanitarianism as 'worldly', as characteristic of 'Epicureanism', and of men who desire only to 'fill their bellies like the beasts'. **The terms 'Epicureanism', 'materialism', and 'empiricism', that is to say, the philosophy of Democritus, one of the greatest of the Great Generation, became in this way the synonyms of wickedness, and the tribal Idealism of Plato and Aristotle was exalted as a kind of Christianity before Christ. Indeed, this is the source of the immense authority of Plato and Aristotle, even to our own day, that their philosophy was adopted by medieval authoritarianism. But it must not be forgotten that, outside the totalitarian camp, their fame has outlived their practical influence upon our lives.**

https://archive.org/details/worshippingstate0000wike/page/22/mode/2up?view=theater

Liberalism at its very essence is the return to this world as the highest good, the embrace of the natural and the rejection of the supernatural. Consequently it is a shedding of the moral seriousness that Christianity had imposed by its embrace of the cross, and a return to the far less morally demanding world of ancient paganism.

But liberalism is a *new* kind of paganism. That we must keep firmly in mind. It is one thing to have a kind of innocent embrace of this world *before* one has heard of Christianity; it is quite another to reject life in the next world as defined by Christianity, and everything in this world that might lead to it.

Liberalism rejected the good things in paganism that Christianity had baptized. They had become too closely associated with the Christian worldview. And it embraced everything in paganism that Christianity had rejected - the crass materialism, the cynicism, the nihilism and fatalism, the hedonism.

https://archive.org/details/worshippingstate0000wike/page/112/mode/2up?view=theater

The old paganism had heartily affirmed the body, but many ancient pagans had also praised the goods of the soul. (Think of Plato, Aristotle, and Cicero.) Christianity affirmed the essential goodness of creation even while rejecting hedonism, but it took the pagan acclaim of the soul and its virtues up into its own supernatural framework. **For this very reason, modern liberalism had to destroy or reject even the pagan thought that had proven compatible with Christianity.**

>
> **For if, after they have escaped the pollutions of the world through the knowledge of the Lord and Savior Jesus Christ, they are again entangled in them and overcome, the latter end is worse for them than the beginning.**

http://garynorth.com/freebooks/docs/html/gnbd/appendix_e.htm

Historian Joseph R. Strayer writes: "**But whatever their constitution, they did not develop a legal tradition that persisted in the West.** The Greeks were deeply concerned with law, but since each small community had its own laws, tailored to fit the needs of that community, it was hard to develop general principles applicable to all of the Greek-ruled areas. **By the time that the Greeks had developed such principles, they had been swallowed up by the Hellenistic monarchies,** which, in turn, were swallowed up by Rome."(54)

Bury wrote much the same thing: contrary to Pericles' funeral oration, **Athens did not become the school of Greece until after the collapse of the empire. Athens became influential through its philosophers and through its new position as a clearing house of cosmopolitan influences**--in short, through its Hellenism. In fact, he argued, Athens had more influence through its theater than through anything else.(55) **It was Hellenism, with its cosmopolitanism, that produced the famed Athenian individualism.**(56) The Athenian's covenantal bond to his city--his *polis*--had been broken. "The citizen of Athens has become a citizen of the world."(57) That is to say, he had become no citizen at all--no civil oath, no democratic sanctions, and no political or judicial legacy to pass on to posterity. **Instead, he and his peers, to the extent that they left a judicial legacy to the future, did so by abandoning their inheritance from the past: the judicial ideal of the *polis*. The politically minded intellectuals among them--and there were fewer and fewer of them as the fourth century progressed--adopted a new ideal.**

This later Hellenistic intellectual development was Stoic natural law philosophy, which was the product of the collapse of the Greek city-states, not the foundation of Athenian democratic politics. **Stoic natural law theory was used to justify the new world empires of Macedonia and Rome.**

https://archive.org/details/richardwagnerspr011346mbp/page/n177/mode/2up?view=theater

One may aver, without exaggeration, that the Antique would have stayed unknown, in its now universal world-significance, had the German spirit not recognised and expounded it. The Italian made as much of the Antique his own, as he could copy and remodel; the Frenchman borrowed from this remodelling, in his turn, whatever caressed his national sense for elegance of Form: the German was the first to apprehend its purely-human originality, to seize therein a meaning quite aloof from usefulness, but therefore of the only use for rendering the Purely-human. ...

One may say that the true idea of the Antique has existed only since the middle of the eighteenth century, since Winckelmann and Lessing.

https://www.gutenberg.org/cache/epub/18267/pg18267-images.html#TRANSLATORS_INTRODUCTION

Even at this early period of his life Nietzsche was convinced that Christianity was the real danger to culture; **and not merely modern Christianity, but also the Alexandrian culture, the last gasp of Greek antiquity, which had helped to bring Christianity about.** When, in the later aphorisms of "We Philologists," Nietzsche appears to be throwing over the Greeks, it should be remembered that he does not refer to the Greeks of the era of Homer or Æschylus, or even of Aristotle, but to the much later Greeks of the era of Longinus.

Classical antiquity, however, was conveyed to the public through university professors and their intellectual offspring, and these professors, influenced (quite unconsciously, of course) by religious and "liberal" principles, presented to their scholars a kind of emasculated antiquity. It was only on these conditions that the State allowed the pagan teaching to be propagated in the schools; and if, where classical scholars were concerned, it was more tolerant than the Church had been, it must be borne in mind that the Church had already done all the rough work of emasculating its enemies, and had handed down to the State a body of very innocuous and harmless investigators. A totally erroneous conception of what constituted classical culture was thus brought about. Where any distinction was actually made, for example, later Greek thought was enormously over-rated, and early Greek thought equally undervalued.

https://www.gutenberg.org/cache/epub/18267/pg18267-images.html#Page_133

40. The position we have taken up towards classical antiquity is at bottom the profound cause of the sterility of modern culture; **for we have taken all this modern conception of culture from the Hellenised Romans. We must distinguish within the domain of antiquity itself: when we come to appreciate its purely productive period, we condemn at the same time the entire Romano-Alexandrian culture.** But at the same time also we condemn our own attitude towards antiquity, and likewise our philology.

41. There has been an age-long battle between the Germans and antiquity, *i.e.*, a battle against the old culture. It is certain that precisely what is best and deepest in the German resists it. **The main point, however, is that such resistance is only justifiable in the case of the Romanised culture; for this culture, even at that time, was a falling-off from something more profound and noble.** It is this latter that the Germans are wrong in resisting.

https://archive.org/details/completeworksrie033168mbp/page/n355/mode/2up?view=theater

420. I do not wish to convert anybody to philosophy: **it is both necessary and perhaps desirable that the philosopher should be a *rare* plant. Nothing is more repugnant to me than the scholarly praise of philosophy which is to be found in Seneca and Cicero.** Philosophy has not much in common with virtue.

http://www.iranicaonline.org/articles/nietzsche-and-persia

In another posthumously published fragment, he deplores a lost historical opportunity: "**It would have been much more fortunate had the Persians become masters (*Herr*) of the Greeks, rather than have the Romans of all people [*gerade die Römer*] assume that role"** (*Sämtliche Werke,* VIII, p. 65). In this note, Nietzsche implicitly expresses once more his radical opposition to Greek metaphysical thought, as developed by Socrates and Plato, and its later prevalence in Western world through the supremacy of Greek culture within the Roman Empire.

42. **Everything classic was thoroughly cultivated by Charles the Great, whilst he combated everything heathen with the severest possible measures of coercion.** Ancient mythology was developed, but German mythology was treated as a crime. The feeling underlying all this, in my opinion, was that Christianity had already overcome the old religion: people no longer feared it, but availed themselves of the culture that rested upon it. But the old German gods were feared.

A great superficiality in the conception of antiquity—little else than an appreciation of its formal accomplishments and its knowledge—must thereby have been brought about. We must find out the forces that stood in the way of increasing our insight into antiquity. **First of all, the culture of antiquity is utilised as an incitement towards the acceptance of Christianity: it became, as it were, the premium for conversion, the gilt with which the poisonous pill was coated before being swallowed. Secondly, the help of ancient culture was found to be necessary as a weapon for the intellectual protection of Christianity. Even the Reformation could not dispense with classical studies for this purpose.**

The Renaissance, on the other hand, now begins, with a clearer sense of classical studies, which, however, are likewise looked upon from an anti-Christian standpoint: **the Renaissance shows an awakening of honesty in the south, like the Reformation in the north. They could not but clash; for a sincere leaning towards antiquity renders one unchristian.**

On the whole, however, the Church succeeded in turning classical studies into a harmless direction: **the philologist was invented, representing a type of learned man who was at the same time a priest or something similar. Even in the period of the Reformation people succeeded in emasculating scholarship. It is on this account that Friedrich August Wolf [1759-1824] is noteworthy: he freed his profession from the bonds of theology. This action of his, however, was not fully understood; for an aggressive, active element, such as was manifested by the poet-philologists of the Renaissance, was not developed.** The freedom obtained benefited science, but not man.

43. It is true that both humanism and rationalism have brought antiquity into the field as an ally; and it is therefore quite comprehensible that the opponents of humanism should direct their attacks against antiquity also. **Antiquity, however, has been misunderstood and falsified by humanism: it must rather be considered as a testimony against humanism, against the benign nature of man, &c. The opponents of humanism are wrong to combat antiquity as well; for in antiquity they have a strong ally.**
...

87. Even in the best of cases, **philologists seek for no more than mere "rationalism" and Alexandrian culture—not Hellenism.**
...

144. The naive character of the Greeks observed by the Egyptians.

145. The truly scientific people, the literary people, were the Egyptians and not the Greeks. That which has the appearance of science among the Greeks, originated among the Egyptians and later on returned to them to mingle again with the old current. **Alexandrian culture is an amalgamation of Hellenic and Egyptian: and when our world again founds its culture upon the Alexandrian culture, then...[12]**

[12] "We shall once again be shipwrecked." The omission is in the original—Tr.
...

159. **Philosophic heads must occupy themselves one day with the collective account of antiquity and make up its balance-sheet. If we have this, antiquity will be overcome. All the shortcomings which now vex us have their roots in antiquity, so that we cannot continue to treat this account with the mildness which has been customary up to the present. The atrocious crime of mankind which rendered Christianity possible, as it actually became possible, is the *guilt* of antiquity.** With

Christianity antiquity will also be cleared away.—At the present time it is not so very far behind us, and it is certainly not possible to do justice to it.
...

161. Christianity has conquered antiquity—yes; that is easily said. In the first place, it is itself a piece of antiquity, in the second place, it has preserved antiquity, **in the third place, it has never been in combat with the pure ages of antiquity. Or rather: in order that Christianity itself might remain, it had to let itself be overcome by the spirit of antiquity—for example, the idea of empire, the community, and so forth.** We are suffering from the uncommon want of clearness and uncleanliness of human things; from the ingenious mendacity which Christianity has brought among men.

http://garynorth.com/freebooks/docs/html/gnbd/appendix_e.htm

Consider Werner Jaeger, author of the multi-volume masterpiece on Greek education, *Paideia*. Hugh Nibley, the remarkable Mormon scholar and linguist, studied under him at the University of California at Berkeley in the 1930's. In an autobiographical essay, Nibley tells of his studies in Hebrew and Arabic (he could learn a new language in a few weeks).

> "The most illustrious visiting scholar of the time was Werner Jaeger, who favored me with long chats and frank revelations over the teacups (my refusal to drink the stuff made an indelible impression on him and his wife). **Professor Jaeger knew very well, he told me, that the Greeks were part of a wider Oriental complex, but he had to bypass all that in his study of the Greek mind, because it tended to disturb the neatness and balance of his great work on Greek Education."**[(20)]
>
> https://archive.org/details/enlightenmentint0000unse_i6k5/page/466/mode/2up?view=theater
>
> Among general interpretations of Greek culture, Werner Jaeger, *Paideia: The ideals of Greek Culture*, 3 vols. (1936; tr. Gilbert Highet, 2nd edn., 1945), offers a powerful analysis moving from Homer to Plato; **it credits the Greeks with the invention of philosophy and the ideal of "culture." *Paideia* is, as some critics have noted, an essentially aristocratic view of Greek civilization, and this view appears not merely in what it argues but in when it stops. Historians of the Hellenistic age have protested against what they call this "purism"** (see, most recently, Moses Hadas, *Hellenistic Culture: Fusion and Diffusion* [1959], but Jaeger's work retains, at least for me, its authority.

https://archive.org/details/greeks-romans-germans/page/109/mode/2up?view=theater

Only the expression of a more purely Nordic blood could help redefine a more rigorous form of humanism that, in contrast to the decadent Romans or the French and more in line with the thought of the Greeks themselves, **"thought not in terms of individuals but in terms of races and peoples. This is the true humanism."**60 This true humanism implied a more precise concept of "true" humanity, which the Nazis explicitly redefined in harmony with their version of Greek thought, based on the concepts of hierarchy, race, and eugenics. The German effort after Winckelmann to dust off the Acropolis and return to Greece was **"a search for a Greek model, independent of the Roman tradition," the refusal to accept a "secondhand"**61 **Greek heritage deformed by its passage through Roman hands.**

https://archive.org/details/greeks-romans-germans/page/125/mode/2up?view=theater

Walter Eberhardt, a professor at the University of Münster,128 opened the hostilities against Latin in an accusatory 1935 article published in *Nazionalsozialistische Wissenschaft*, a Nazi academic journal.129 The classical scholar agreed with the need to study the values of antiquity in order to revive them in practice, **but only Greek antiquity – not Roman.** While Rome had been the favorite of 16th century French and Italian Renaissance humanists, Greek antiquity had been rediscovered in the 18th century by the Germans. This was not an accident: **"They rediscovered it at a moment when, locked in combat against French classicism (which is, ultimately, Roman and Latin), they needed an ally."**130
...

Eberhardt saw this never completely forgotten cultural and political antipathy as a sign of otherness, a fundamental racial incompatibility between *Germanentum* and *Romanitas*: **"Rome as a global phenomenon is foreign to our race,"**134 **and what was all too easily subsumed under the much-abused term *antiquity* was in fact not a unified and coherent entity.**135 **It was important to distinguish between Rome and Greece. "Our reticence toward Rome … comes from the depths of our being," for "the world of Hellenism and *Romanitas* were two very distinct entities."**136

https://archive.org/details/greeks-romans-germans/page/115/mode/2up?view=theater

Nazi humanism thus required a very careful selection of just which humanities it ought to emphasize. **It could not canonize all of the classical tradition but rather needed to separate the Indo-Germanic wheat of archaic and classical Greece from the Semitic chaff of the Orientalized Hellenistic era.**80
...

Bogner argued that traditional humanism erred when it naively believed that "the Greeks wanted to create a man of ideas through paideia," pursuing a universal, abstract ideal unbound by any blood ties or racially determined characteristics.
…

Bogner's attack on this seductive humanism was virulently racist, coming as it did from an article denouncing the *Assimilationsjude* of antiquity – the Jew of the diaspora who dressed in Greek robes to hide in plain sight in the Hellenistic world, then later donned a Roman toga and learned to speak Latin under the Roman Empire.83
…

Only the late, decadent Hellenistic Greeks had sought to promote a concept of education aimed at the universality of mankind or the universal in the individual man: **High Greek culture, which was fundamentally selective and elitist, had been sold off to the highest bidder by degenerate Levantines, who had imposed their idea that "it was not their roots but their culture (paideia) that made the Greeks."**

https://archive.org/details/greeks-romans-germans/page/213/mode/2up?view=theater

Vigilance, according to Fritz Schachermeyr, was thus necessary for the scholar of the humanities, classics, or antiquity if they wanted, as the author emphasized, to preserve their role and their place in the new National Socialist state. **Experts in antiquity would have to teach racially valid and spiritually pertinent material: "Until now we have accepted everything that came from antiquity as a sort of sublime revelation. … This is how the humanist, who was on the one hand the conservator of the most noble part of the Nordic spirit, has become the vehicle for all anti-Nordic spiritual patrimony." Only a starry-eyed humanism, a blind adoration for antiquity that did not separate the Nordic wheat from the Asiatic-Semitic chaff, could have preserved the "destructive poison" in a culture that had "eliminated the Nordic peoples of antiquity"**132 – and that still remained an active threat in the contemporary world. **Not all of antiquity was ripe for the eating; any self-respecting humanism thus required a very selective approach to the humanities.**

https://counter-currents.com/2021/12/themis-unblinded/

Many Neo-Classical symbols were culturally appropriated during the French and American revolutions, both of which were heavily influenced by Freemasonry, the Enlightenment, and the childish myth of progress. **These Neo-Classical symbols were used to cast the revolutions as a return to tradition, when in reality they were in many ways the antithesis of the Greco-Roman world.**

Even the most radical of Athenians and Roman Populares would have laughed at the Enlightenment's John Lennonesque talk of a universal brotherhood of man. Rights were understood as ancestral customs that had been established through struggle, not as universal entitlements. Athenian democracy had the flavor of *Starship Troopers*, not a hippy commune. **Latter-day Stoics such as Marcus Aurelius may have been more amenable to Enlightenment ideas,** but by their time the Classical world had passed from what Oswald Spengler describes as *culture*, which is living, to *civilization*, which is dead. **Arguably, Marcus Aurelius was closer to the rising Magian culture than to his Roman ancestors.**

---

https://counter-currents.com/2018/07/how-power-invented-individualism/

But we must remember that social and political individualism, and by extension modern liberalism, could not have come into being from a spiritual doctrine alone. The Eastern Orthodox regions of Europe share the early Christian tradition with Western Europe, yet did not create individualism; Islam stresses the personal ideal of the Prophet, and has produced anti-social 'holy fools', yet did not create individualism. Buddhism and Sikhism were spiritually egalitarian religions that abolished caste distinctions – yet did not create individualism.

https://archive.org/details/iconaxeinterpret00bill/page/146/mode/2up?view=theater

For the secular occasion of New Year's Day, 1667, Polotsky published *The Eagle of the Russias*, an elaborate secular panegyric to his imperial benefactor, replete with baroque decorations, anagrams on the Tsar's name, and praise above that given to Hercules, Alexander the Great, and Titus.
…

Ukrainians and White Russians also wrote and staged a number of the "school dramas" that had been popular in those Latinized regions. Music accompanied most of these performances, so that Russia "first became acquainted with secular singing and secular instrumental music not in life, but in spectacles."80

https://archive.org/details/enlightenmentcon0000isra/page/306/mode/2up?view=theater

The prelates also managed to limit the impact of Peter's cultural revolution among Russia's elites. The tsar thought it essential for reorganizing Russian society and the state that Latin be taught and cultivate as a vehicle of instruction, reading, and scholarly interaction.43 A particularly important strand in this programme was the scheme for fostering Latin colleges, or gymnasia, in Kiev, Moscow, St Petersburg, and Novgorod, **though here he mostly built on pre-existing institutions, like the Slavonic-Greek-Latin Academy in Moscow (founded in 1687) and the Kiev Academy, founded to counter the Jesuit Counter-Reformation in the Ukraine, in the 1630s, institutions which, in fact, remained under ecclesiastical control.**44 The tsar chiefly wanted Latin as a tool for instruction in technical subjects and promoting the study of western mathematics, science, and philosophy. **The church, however,** fearful of the potential effect of the Roman classics and modern philosophical and scientific works in Latin on Russian society and anxious lest the teaching and learning of Latin encourage the further penetration of Roman Catholicism in the Ukraine, and other border lands between Russia and Poland, **quietly but firmly opposed its broader use in Russian higher education. Indeed, virtually no classical pagan Latin or Greek texts were published in Latin or Greek in the Russian empire, much less translated into Russian, before the 1760s.**45 **Through the church's guardianship of education and culture, pagan antiquity in general, whether literary, historical, philosophical, or scientific, was effectively deleted from the Petrine 'revolution.'**

https://archive.org/details/iconaxeinterpret00bill/page/188/mode/2up?view=theater

Finally, a cult of classical antiquity began to emerge on Russian soil. **Taken over first from Poland and then from Italian and French visitors was the idea that classical forms of art and life might serve as a supplement (if not an alternative) to Christian forms.** The belief subtly grew that classical antiquity could – unaided by Christian revelation – answer many of the pressing problems of life.
…

The new operas, plays, and ballets of the Elizabethan era were built around classical more often than scriptural subjects – in marked contrast to the theater of Alexis' time.

https://archive.org/details/iconaxeinterpret00bill/page/212/mode/2up?view=theater

The Kiev-Mogila Academy (which was not made a theological academy until the nineteenth century) was the closest approximation to a Western-style liberal arts university. Between 1721 and 1765, twenty-eight seminaries were founded – all on the Kievan model; **and it is probably not too much to say that Kiev taught Russia not only to read and write in the eighteenth century,** but also to think in the abstract, metaphysical terms which were to prove so attractive to the aristocratic intellectuals.2

https://archive.org/details/iconaxeinterpret00bill/page/354/mode/2up?view=theater

The last decade of the eighteenth century had already seen a marked rise in aristocratic suicides. Heroic suicide had been commended by the Roman Stoics, who were in many ways the heroes of classical antiquity for the eighteenth-century aristocrats.
…

Belinsky felt that preoccupation with the cursed questions set his own time apart from that of Lomonosov and the confident, cosmopolitan Enlightenment:

> **In the time of Lomonosov we did not need people's poetry; then the great question – *to be or not to be* – was solved for us not in the spirit of the people (*narodnost'*), but in Europeanism.**146

https://archive.org/details/iconaxeinterpret00bill/page/346/mode/2up?view=theater

THE WANING of classical form in art and life was one of the many fateful results of the reign on Nicholas I. **His official ideologists – Uvarov and Pletnev – had found the literary heritage of classical antiquity largely incompatible with the new doctrine of official nationality.** The continued loyalty of the aristocratic intellectuals to the distant world of classical antiquity and the neo-classical Renaissance became sign of their estrangement from official ideology.

https://archive.org/details/cu31924026657902/page/172/mode/2up?view=theater

The spirit of antiquity has always remained alien to Russia. In the Middle Ages, down to Peter the Great, it scarcely knew the ancient world by name; the Kievans brought from the Polish schools Latin and the Classics, yet this remained wholly fruitless; with but few exceptions, the lettered knew the Classics only from French travesties. People, moreover, were often averse to them; when Karamzín wanted to insert in his "Pantheon of Foreign Literature" some speeches of Demosthenes the Censorship forbade it "because Demosthenes was a Republican, as were Cicero and Sallust, and such people should not be translated." The same point of view was still put

forward after 1848, people complaining particularly of instruction in ancient history, saying that one ought to start from the point of view that it was only as a punishment for their heathenism that God refused the Greeks and Romans appreciation and receptivity for the benefits of Autocracy. **Not till the study of the classical writers had lost all object and only maintained itself in Europe as a tradition, which has become more obstinate in proportion as it has lost its ground of utility, was it, thanks to the triumvirate D. Tolstoy, Katkóv, and Leóntiev, included in the most comprehensive way in the curriculum with the express object of stupefying the young and making studies more difficult.**

> https://en.wikipedia.org/wiki/Dmitry_Tolstoy
>
> In 1871, Tolstoy was in charge of the college reform, which would result in the prevalence of the classical education (included Latin and Greek languages and ancient literature, among other things).

>
> 65. **When I observe [Autumn 1874] how all countries are now promoting the advancement of classical literature I say to myself, "How harmless it must be!"** and then, "How useful it must be!" It brings these countries the reputation of promoting "free culture." In order that this "freedom" may be rightly estimated, just look at the philologists!
>
> https://books.google.fi/books?id=38xQHS4h0yEC&lpg=PR1&hl=fi&pg=PA574#v=onepage&q&f=false
>
> By the way, **it is exactly five years ago [July and August 1876] that we had our so-called classical reform of education. Mathematics and the two ancient languages, Latin and Greek, were acknowledged as the best means to mental and even spiritual development.** This is not something that we alone acknowledged or invented: it is a fact, and an incontestable fact, derived from the experience of the whole of Europe over the course of centuries, and we merely adopted it. But the point here is this: along with the much intensified teaching of these two ancient languages and mathematics, **the teaching of Russian has been all but suppressed.**
> …
>
> But that's just the point: we, the upper classes of Russian society, are no longer born into the living Russian language and have long since ceased to be. We will not have our living language until we merge completely with the People.

---

https://archive.org/details/enlightenmentint0000unse_i6k5/page/470/mode/2up?view=theater

In many respects the Hellenistic age was more important for the Enlightenment than the great classical age.

https://archive.org/details/enlightenmentint0000unse_i6k5/page/94/mode/2up?view=theater

"The Greeks were the teachers of the Romans," Diderot remarked to Catherine the Great, "the Greek and Romans have been ours."2 The remark seems obvious, but it must be treated with some reserve. It applied squarely to erudite literary men like himself, to Hume or Gibbon or Lessing, **but for the most part the philosophes, like the culture around them, drew their intellectual sustenance from Rome rather than from Greece – from Roman Stoics, Roman Epicureans, and Roman Eclectics.**

> 2. *Plan d'une université pour le gouvernement de Russie*, in *Ouevres*, III, 477. **For the German Romantic Hellenists, it was, of course, Greece alone – and the Greece of their fond imagination – that shaped their philosophy of life.**

…

Still, the philosophes' choice of Rome seems to reflect on their taste; it seems a choice of sturdiness over brilliance, **of popularizers over genius, of common sense over depth – in a word, of the comfortable second-rate over the unsettling first-rate.**

…

Horace was right: while the great Mediterranean Empire was held together by Roman soldiers, it was nourished by Greek ideas. **The captive had overwhelmed the captor – and so what the philosophes admired about Rome was, for the most part, what was most Greek in it. Yet it was Greek with a difference; it was Greek made plain.** Much like the philosophes of the eighteenth century, Roman literati gave their best talents to explicating, disseminating, and in the process vulgarizing, difficult philosophical ideas. Cicero above all, wrote Montesquieu, had made Greek ideas "available to all men,

like reason itself."6 He had been "the first of the Romans to take philosophy out of the hands of the scholars and detach it from the encumbrance of a foreign language."7

https://en.wikipedia.org/wiki/Quarrel_of_the_Ancients_and_the_Moderns#Debate_in_France

In 1674, Desmarets de Saint-Sorlin made a public call on his friend Perrault to "defend France" against "that heretical troop who prefers ancient works to our own." In response to this call, **Perrault and his brother Claude tried to charge Boileau with the crimes of blasphemy and *lèse-majesté* on the grounds that he preferred the works of ancient pagan authors who wrote under a regime of liberty** (in Classical Athens or the Ancient Roman Republic) to the works of modern, Catholic authors who submitted to the absolute monarchy of Louis XIV.[18]

https://www.gutenberg.org/files/55905/55905-h/55905-h.htm#link2H_4_0006

His knowledge of the Latin poets, from Lucretius and Catullus down to Claudian and Prudentius, was singularly exact and profound.
…

His knowledge of Greek, though doubtless such as was, in his time, thought respectable at Oxford, was evidently less than that which many lads now **[July 1843]** carry away every year from Eton and Rugby.
…

In the gorge of the Apennines he naturally remembers the hardships which Hannibal's army endured, and proceeds to cite, not the authentic narrative of Polybius, not the picturesque narrative of Livy, but the languid hexameters of Silius Italicus. On the banks of the Rubicon he never thinks of Plutarch's lively description, or of the stern conciseness of the Commentaries, or of those letters to Atticus which so forcibly express the alternations of hope and fear in a sensitive mind at a great crisis. **His only authority for the events of the civil war is Lucan.**

All the best ancient works of art at Rome and Florence are Greek. **Addison saw them, however, without recalling one single verse of Pindar, of Callimachus, or of the Attic dramatists; but they brought to his recollection innumerable passages of Horace, Juvenal, Statius, and Ovid.**
…

The world generally gives its admiration, not to the man who does what nobody else even attempts to do, but to the man who does best what multitudes do well. Bentley was so immeasurably superior to all the other scholars of his time that few among them could discover his superiority. But the accomplishment in which Addison excelled his contemporaries was then, as it is now, highly valued and assiduously cultivated at all English seats of learning.
…

English literature was to the French of the age of Lewis the Fourteenth what German literature was to our own grandfathers. Very few, we suspect, of the accomplished men who, sixty or seventy years ago, used to dine in Leicester Square with Sir Joshua, or at Streatham with Mrs. Thrale, had the slightest notion that Wieland was one of the first wits and poets, and Lessing, beyond all dispute, the first critic in Europe. **Boileau knew just as little about the Paradise Lost, and about Absalom and Ahitophel; but he had read Addison's Latin poems, and admired them greatly. They had given him, he said, quite a new notion of the state of learning and taste among the English.**
…

He thought, indeed, that no poem of the first order would ever be written in a dead language. And did he think amiss? Has not the experience of centuries confirmed his opinion? Boileau also thought it probable that, in the best modern Latin, a writer of the Augustan age would have detected ludicrous improprieties. And who can think otherwise? What modern scholar can honestly declare that he sees the smallest impurity in the style of Livy? **Yet is it not certain that, in the style of Livy, Pollio, whose taste had been formed on the banks of the Tiber, detected the inelegant idiom of the Po?** Has any modern scholar understood Latin better than Frederic the Great understood French? Yet is it not notorious that Frederic the Great, after reading, speaking, writing French, and nothing but French, during more than half a century, after unlearning his mother tongue in order to learn French, after living familiarly during many years with French associates, could not, to the last, compose in French, without imminent risk of committing some mistake which would have moved a smile in the literary circles of Paris?

https://archive.org/details/in.ernet.dli.2015.218820/page/n213/mode/2up?view=theater

Voltaire's first great success was the epic *La Ligue, ou Henri le Grand*, half of which he wrote in the Bastille in pencil between the lines of a book. Five years later he published it, in enlarged and revised form, as *Henriade*. This took the

world by storm. Accustomed as he was to base his artistic plans on rational considerations, he had argued that the French were in need of an epic, and that he was therefore bound to give them one. And his countrymen accepted the gift. The effect of this work can only be understood if we recall the intellectual condition of France and Europe at the time. **It is the cold pale product of a brilliant craftsman and witty cultural philosopher, a work depending on the empty trappings of allegorical personifications such as Love, Peace, Discord, Fanaticism; and inspired, not by Homer, say, or Dante, or Milton, but by Virgil. At that time, however, it would have been considered ludicrous to place Homer above Virgil, so this was all to the good. Frederick the Great declared that every man of taste must prefer the *Henriade* to the Iliad.**

https://books.google.fi/books?id=5X-46TqjDv0C&lpg=PP1&hl=fi&pg=PA150#v=onepage&q&f=false

As we have seen, from the Renaissance up to the eighteenth century Stoicism proved to be a vital influence on Western thought. The other Hellenistic schools of Epicureanism and Pyrrhonian skepticism also made their mark during this period. As their unofficial ancient reporter, Cicero was read widely. **There was only limited interest in either Aristotle (still associated with medieval scholasticism) or Plato (whose popularity waned after the Italian Renaissance).**

> https://en.wikipedia.org/wiki/Joseph_Glanvill
>
> Joseph Glanvill FRS (1636-4 November 1680) was an English writer, philosopher, and clergyman. Not himself a scientist, he has been called "the most skillful apologist of the virtuosi", **or in other words the leading propagandist for the approach of the English natural philosophers of the later 17th century.**[1]
>
> https://quod.lib.umich.edu/e/eebo/A42823.0001.001?rgn=main;view=fulltext
>
> He confesseth [*ibid.*] that he was much *opposed and slighted by the first Fathers*; and in his *Light out of Darkness,* p. 105. he saith, That *Aristotle was condemned by the first Christians, and Honest men of all Ages*. **And I think the times of the *first Fathers* during the *Glory* of the *Roman Empire,* were some of the *wisest* times; and I mention in my Letter concerning *Aristotle,* the Observation of *Gassendus,* that in the *flourishing* times of *Rome,* and *Athens,* the *Academicks* and *Stoicks* were more in Esteem, than the *Sectators* of *Aristotle*; and instance in *Cicero, Pliny,* and *Quintilian,* who though they had a great Esteem of *Aristotle,* did yet prefer *Plato* before him.** So that in those most *wise* Times, and among those wise men, *Aristotle's Account* was not *superlative,* if *Gassendus,* or M. *Stubb* himself be to be believed.

In the nineteenth century, especially in Germany, things began to change. The focus of attention shifted from the Hellenistic schools back to their Hellenic predecessors. The Hellenistic period was increasingly seen as an age of decline and corruption, whereas the Hellenic period was seen as a period of purity and creativity. **Consequently there was renewed interest in the Hellenic philosophers Socrates, Plato and Aristotle, and a condescending dismissal of the later Hellenistic schools.** This general shift in focus influenced German classical scholars of the period, who were often critical of Stoicism as a philosophical system (see Ierodiakonou 1999: 4). This shift was also mirrored by **a dramatic decline in the reputation of Cicero, who was increasingly disparaged as a second-rate compiler of second-rate philosophy, most famously by the German scholar Theodor Mommsen** (see MacKendrick 1989: 288-9).

https://books.google.fi/books?id=wcIPP_ghwqcC&lpg=PP1&hl=fi&pg=PA488#v=onepage&q&f=false

Thus, while early-19th-century Philhellenism – though consistently racist – had both radical and reactionary aspects, the discipline of Classics was conservative from the start. The educational reforms of which it formed the centrepiece were systematic attempts to avoid or prevent revolution.26

> 26. The only possible objection to this is the utopian aspect of Humboldt's original concept of *Bildung* (see above, Note 11). **Professor Canfora (1980 pp. 39-56) argues that there was a right-wing *usurpazione* of Classics at the turn of the 19th century. However, he takes the Jacobin use of Antiquity as his base. Following conventional wisdom in Northern Europe, I do not include this in the tradition of *Altertumswissenschaft*/Classics.**

https://books.google.fi/books?id=wcIPP_ghwqcC&lpg=PP1&hl=fi&pg=PA282#v=onepage&q&f=false

From the beginning, then, *Altertumswissenschaft* in Germany – like its equivalent, Classics, in England – was seen by its promoters as a 'third way' between reaction and revolution. In actuality, however, its effect was to shore up the *status quo*.

> https://books.google.fi/books?id=eZSPCwAAQBAJ&lpg=PP1&hl=fi&pg=PA307#v=onepage&q&f=false

Especially for thinkers and writers who understand themselves as "liberal," the classics seemed to offer a way beyond the impasse between the dogmas of orthodox Christianity and the skeptical bent of Enlightenment materialism. This is perhaps the source of the appeal of Neoplatonic ideas of the soul both to Wordsworth and to younger admirers such as John Keats after the turn of the century. The revival of Neoplatonism and the "Plato enthusiasm" in Germany and Britain from the 1790s onward may have seemed to offer a new, less skeptical way thinking about immortality, which also took account of Enlightenment critiques of religious superstition, and that was or seemed reconcilable to scientific discoveries about "life" (see Chandler 1998: 409-17).1

1. **Erasmus Darwin, author of *Zoonomia* (Darwin 1794), a medical and naturalist treatise much associated with radicalism, uses as an epigraph a passage from *Aeneid* 6 associated with Stoicism: "the heaven and earth […] a spirit within sustains, and mind, pervading its members, sways the whole mass and mingles with its mighty frame."** See Potkay 2012: 218.

Yet the classics were also invoked by radicals who wanted to draw attention to the greater political freedom enjoyed by ancient authors to question or even to deny the immortality of the soul. **According to Leigh Hunt, writing in *The Examiner* in 1817, Epicurus "taught his Atheism, or rather his denial of creation and providence, without the least political molestation" while Cicero "was suffered to doubt and to dogmatize alternately, just as he pleased"** (Hunt 1817: 259).

https://www.gutenberg.org/files/2167/2167-h/2167-h.htm#link2H_4_0015 **[November 1824]**

Those French and English authors who have treated of the affairs of Greece have generally turned with contempt from the simple and natural narrations of Thucydides and Xenophon to the extravagant representations of Plutarch, Diodorus, Curtius, and other romancers of the same class,—men who described military operations without ever having handled a sword, and applied to the seditions of little republics speculations formed by observation on an empire which covered half the known world. Of liberty they knew nothing. It was to them a great mystery,—a superhuman enjoyment. They ranted about liberty and patriotism, from the same cause which leads monks to talk more ardently than other men about love and women. **A wise man values political liberty, because it secures the persons and the possessions of citizens;** because it tends to prevent the extravagance of rulers, and the corruption of judges; because it gives birth to useful sciences and elegant arts; because it excites the industry and increases the comforts of all classes of society. **These theorists imagined that it possessed something eternally and intrinsically good, distinct from the blessings which it generally produced. They considered it not as a means but as an end; an end to be attained at any cost. Their favourite heroes are those who have sacrificed, for the mere name of freedom, the prosperity—the security—the justice—from which freedom derives its value.**

https://archive.org/details/Marx_Karl_-_Doctoral_Thesis_-_The_Difference_Between_the_Democritean_and_Epicure/page/n3/mode/2up?view=theater

Greek philosophy seems to have met with something with which a good tragedy is not supposed to meet, namely, a dull ending. The objective history of philosophy in Greece seems to come to an end with Aristotle, Greek philosophy's Alexander of Macedon, and even the manly-strong Stoics did not succeed in what the Spartans did accomplish in their temples, the chaining of Athena to Heracles so that she could not flee.

Epicureans, Stoics and Sceptics are regarded as an almost improper addition bearing no relation to its powerful premises. Epicurean philosophy is taken as a syncretic combination of Democritean physics and Cyrenaic morality; Stoicism as a compound of Heraclitean speculation on nature and the Cynical-ethical view of the world, together with some Aristotelean logic; and finally Scepticism as the necessary evil confronting these dogmatisms. **These philosophies are thus unconsciously linked to the Alexandrian philosophy by being made into a one-sided and tendentious eclecticism.** The Alexandrian philosophy is finally regarded entirely as exaltation and derangement – a confusion in which at most the universality of the intention can be recognised.
…

Should not this relationship urge us at least to an inquiry, to see Greek philosophy ending up with two different groups of eclectic systems, one of them the cycle of Epicurean, Stoic and Sceptic philosophy, the other being classified under the collective name of Alexandrian speculation?
…

It seems to me that though the earlier systems are more significant and interesting for the content, the post-Aristotelean ones, and primarily the cycle of the Epicurean, Stoic and Sceptic schools, are more

significant and interesting for the subjective form, the character of Greek philosophy. But it is precisely the subjective form, the spiritual carrier of the philosophical systems, which has until now been almost entirely ignored in favour of their metaphysical characteristics.

https://archive.org/details/alexandriaandher00kinguoft/page/56/mode/2up?view=theater

You must not suppose, in the meanwhile, that the philosophers whom the Ptolemies collected (as they would have any other marketable article) by liberal offers of pay and patronage, were such men as the old Seven Sages of Greece, **or as Socrates, Plato, and Aristotle. In these three last indeed, Greek thought reached not merely its greatest height, but the edge of a precipice, down which it rolled headlong after their decease.** The intellectual defects of the Greek mind, of which I have already spoken, were doubtless one great cause of this decay: but, to my mind, moral causes had still more to do with it. The more cultivated Greek states, to judge from the writings of Plato, had not been an over-righteous people during the generation in which he lived. **And in the generations which followed, they became an altogether wicked people; immoral, unbelieving, hating good, and delighting in all which was evil. And it was in consequence of these very sins of theirs, as I think, that the old Hellenic race began to die out physically, and population throughout Greece to decrease with frightful rapidity, after the time of the Achæan league.** The facts are well known; and foul enough they are. When the Romans destroyed Greece, God was just and merciful. The eagles were gathered together only because the carrion needed to be removed from the face of God's earth.

https://archive.org/details/greeklifeandtho00unkngoog/page/n36/mode/2up?view=theater

Any one who comes to study **the Hellenic Renaissance in England, which has assumed such force and such extension in our own day, [1887]** cannot but be surprised at the abrupt way in which all its studies stop about midway in Greek History. **By a sort of tacit consent the battle of Chaeronea is considered the minor limit of all that was good and perfect in Greek thought and life.** The conquests of Alexander, the high culture of Rhodes and Alexandria, the profound thinking of the later schools, the deep learning, the splendid art, the multiform politics of Hellenism—**all this is shut out from the schoolboy, as forming no part of the Greek he is to know,** and it is but seldom taken up—with the exception of Theocritus—by those who preserve the habits and prejudices of school in their college life. A man may consider himself, and be considered by the classical English public, an adequate and even distinguished Greek Professor, who has never read Strabo, Diodorus, or Polybius, who has never seen the poems of Aratus, Callimachus, or Apollonius, and who does not know a single date in Greek history between the death of Alexander and the battle of Cynoscephalae. From that time onward the accident that Greece enters into the field of Roman history lifts the veil, **and the student comes upon a Hellenistic world, so different from the old Hellenic republics, that but for the permanence of names and places the people might be difficult to recognise.** After the conquest of Greece by Mummius, Greece as a living moment in the world's history is forgotten. Pharsalia, Philippi, and Actium might as well have been in Asia or in Spain, **and the literary activity of the Greeks under the empire is rather avoided than neglected by modern Hellenists. For there is a notion abroad among many scholars that the study of any but the golden age of Greek literature is a contamination of their spotless Atticism.** The occurrence of later forms, or of constructions unused by Aristophanes, is so foul a stain, that not the infinite richness of story in Polybius, or the splendid morals in Plutarch, or the large information in Strabo, or the wit in Lucian, or the unconscious sublimity in the Gospels, can save them from being rejected as 'bad Greek' and excluded from school and college studies.

This is no doubt the first and most efficient cause of our general ignorance of what is called *Hellenism*, as opposed to *Hellenedom*. **The golden age in literary style ended with Demosthenes, and though this was by no means the case in philosophy and art, the question of style has overridden larger and higher considerations.** No better Greek study than Plutarch's *Lives* could possibly be appointed for boys—with one exception, that of style; and so the intricacies of Demosthenes, the subtleties of Plato, or the contortions of Thucydides are the Greek prose set before them. Great results are indeed required to justify this strict exclusiveness.

A curious accident has, however, aided the 'pure scholars,' and made their triumph in our generation almost complete. Our greatest Greek historian, Grote, was not at all one of their number. His perception of the exact meaning of tenses or particles was such as to excite the rage and contempt of their now forgotten coryphaeus. **But Grote was a radical and a democrat, and composed his great political pamphlet in twelve volumes to show the splendours of republican government. Hence he could only traduce Alexander the Great,** and turn with indignant disgust from the later politics of the petty states of Greece. He had no heart to comprehend the splendour of monarchy, or the wisdom of federations. **But his great book dominated our studies, the smaller handbooks have abridged Grote and not Thirlwall,** and wind up the history of Greece with the close, not of its philosophical and artistic, but of its political and literary supremacy, overlooking the fact that the apparent political death of Greece meant only its absorption into larger systems, and its entry into the wider stream of the world's history.

The Athenians, strengthened by a generation of prosperity, could afford now to demand the luxury of liberty; gradually, as the dictatorship grew harsher, the cry for freedom grew louder; and Harmodius and Aristogeiton, who had conspired for love and passion rather than for democracy,* were transformed by popular imagination into the martyrs of liberty.

The establishment of the empire at Rome was a distinct step in advance. It was the only way in which ancient civilization could be kept together. It was an enormous boon to ninety-nine out of every hundred of the population. **Modern Imperialism is retrograde. It prohibits a free press. It refuses the right of public meeting. It fosters the military spirit. Lastly, it returns to the hereditary principle, which was irrevocably condemned by the immortal French Revolution.** It is not so bad as the government of a privileged class. That is all that can be said for it. But no government can meet the wants of modern society unless, whatever be its form, it is in spirit Republican.

https://archive.org/details/in.ernet.dli.2015.503389/page/n135/mode/2up?view=theater

And now what is the attitude of "society" in the West-European Civilization since 1770, and particularly since 1848, towards the *fact* of this revolution from below, **which has long since reached the stage of scorning and deriding its Liberal beginnings and the concessions they have won, such as freedom of the press, of unions, and of meeting, finally universal suffrage** – after exploiting them to the furthest limits of disintegration?

https://en.wikisource.org/wiki/Lives_of_the_Eminent_Philosophers/Book_I#cite_ref-9

But philosophy, the pursuit of wisdom, has had a twofold origin; it started with Anaximander on the one hand, with Pythagoras on the other. The former was a pupil of Thales, Pythagoras was taught by Pherecydes. The one school was called Ionian, because Thales, a Milesian and therefore an Ionian, instructed Anaximander; the other school was called Italian from Pythagoras, who worked for the most part in Italy. 14. **And the one school, that of Ionia, terminates with Clitomachus and Chrysippus and Theophrastus, that of Italy with Epicurus.** The succession passes from Thales through Anaximander, Anaximenes, Anaxagoras, Archelaus, to Socrates, who introduced ethics or moral philosophy; from Socrates to his pupils the Socratics, and especially to Plato, the founder of the Old Academy; from Plato, through Speusippus and Xenocrates, the succession passes to Polemo, Crantor, and Crates, Arcesilaus, founder of the Middle Academy, Lacydes,[10] founder of the New Academy, Carneades, and Clitomachus. **This line brings us to Clitomachus.** 15. **There is another which ends with Chrysippus,** that is to say by passing from Socrates to Antisthenes, then to Diogenes the Cynic, Crates of Thebes, Zeno of Citium, Cleanthes, Chrysippus. **And yet again another ends with Theophrastus;** thus from Plato it passes to Aristotle, and from Aristotle to Theophrastus. In this manner the school of Ionia comes to an end.

In the Italian school the order of succession is as follows: first Pherecydes, next Pythagoras, next his son Telauges, then Xenophanes, Parmenides,[11] Zeno of Elea, Leucippus, Democritus, who had many pupils, in particular Nausiphanes [and Naucydes], who were teachers of Epicurus.

This was the advice which Bias of Priene gave after the destruction of the Ionians; and that given before the destruction by Thales of Miletus, **a Phoenician by descent,** was good too; he advised that the Ionians have one place of deliberation, and that it be in Teos
(for that was the center of Ionia), and that the other cities be considered no more than demes.

https://www.perseus.tufts.edu/hopper/text?doc=Perseus%3Atext%3A1999.04.0028%3Abook%3D1%3Achapter%3D170%3Asection%3D3

Φοίνικος. 'Plutarch' (de Mal. Herod. 15) attacks this statement, as 'making Thales barbarian'; H. only means that he was descended from the Thelidae, original settlers of Miletus, who were descended from Cadmus. **As the father of Thales bore a Carian name (Examius, Diog. Laer. i. 1. 22), he probably had non-Hellenic blood in him.**

https://en.wikisource.org/wiki/Lives_of_the_Eminent_Philosophers/Book_I#Thales

22. **Herodotus, Duris, and Democritus are agreed that Thales was the son of Examyas and Cleobulina, and belonged to the Thelidae[15] who are Phoenicians, and among the noblest of the descendants of Cadmus and Agenor.** As Plato testifies, he was one of the Seven Sages. He was the first to receive the name of Sage, in the archonship of Damasias[16] at Athens, when the term was applied to all the Seven Sages, as Demetrius of Phalerum mentions in his *List of Archons*. He was admitted to citizenship at Miletus when he came to that town along with Nileos, who had been expelled from Phoenicia. Most writers, however, represent him as a genuine Milesian and of a distinguished family.

https://books.google.fi/books?id=wcIPP_ghwqcC&lpg=PP1&hl=fi&pg=PA333#v=onepage&q&f=false

In fact, however, **Curtius saw the Pelasgians as a first wave of inferior Aryans who came through Anatolia** and over the Hellespont to Greece leaving traces in Phrygia.
…

Curtius' historical scheme of Aryan Hellenes conquering semi-Aryan Pelasgians has the advantage of combining two ideologically desirable features – northern conquest by a master race, and the preservation of essential racial purity. The new invaders were thoroughly northern. **One of their groups 'took the land way through the Hellespont's ancient portal of the nations: they passed through Thrace into the Alpine land of Northern Greece, and there, in mountain cantons, they developed their peculiar life in social communities … under the name of Dorians.'**61
…

Curtius was much more brief on Ionian origins, noting simply that the Ionians had come straight from Phrygia to the east coast of the Aegean.62 Greek tradition stated clearly that Anatolian Ionia was settled by Ionians from Greece only in the 11th century, but Niebuhr had defied the Ancients on this point. **In this way Curtius had the authority of the new scholarship behind him when he denied the tradition and claimed that Greeks had lived there much earlier. In conclusion to this section he argued that their separate migrations had differentiated the Dorians from the Ionians: hence 'the first foundations had been laid of the dualism which pervades the whole history of this people.'** They were, however, racially united: 'an inner sense of kinsmanship attracted them to one another.'63

https://archive.org/details/greeks-romans-germans/page/433/mode/2up?view=theater

> Speer subsequently commented: **"By the Greeks [Hitler] meant the Dorians. Naturally his view was affected by the theory, fostered by the scientists of his period, that the Dorian tribe which migrated into Greece from the north had been of Germanic origin and that, therefore, its culture had not belonged to the Mediterranean world."**

https://archive.org/details/in.ernet.dli.2015.55010/page/n129/mode/2up?view=theater

An active and enterprising people had settled Attica in or before neolithic days, and had hospitably received and intermarried with Ionians—a mixture of Pelasgo-Mycenaeans and Achaeans[28a]—fleeing from Boeotia and the Peloponnesus in the face of the northern migrations and invasions. **Here was no conquering alien race exploiting a native population, but a complex Mediterranean stock, of medium stature and dark features, directly inheriting the blood and culture of the old Helladic civilization, proudly conscious of its indigenous quality,[29] and excluding from its national sanctuary, the Acropolis, those half-barbarian upstarts, the Dorians.[30]**

https://archive.org/details/in.ernet.dli.2015.55010/page/n159/mode/2up?view=theater

Miletus, southernmost of the Ionian Twelve, was in the sixth century the richest city of the Greek world. The site had been inhabited by Carians from Minoan days; and when, about 1000 B.C., the Ionians came there from Attica, they found the old Aegean culture, though in a decadent form, waiting to serve as the advanced starting point of their civilization. **They brought no women with them to Miletus, but merely killed the native males and married the widows;[20] the fusion of cultures began with a fusion of blood.**

> https://anastrophe.uchicago.edu/cgi-bin/perseus/citequery3.pl?dbname=GreekNov21&getid=1&query=Hdt.%201.146
>
> For this reason, and for no other, the Ionians too made twelve cities; for it would be foolishness to say that these are more truly Ionian or better born than the other Ionians; since not the least part of them are Abantes from Euboea, who are not Ionians even in name, and there are mingled with them Minyans of Orchomenus, Cadmeans, Dryopians, Phocian renegades from their nation,

> Molossians, Pelasgian Arcadians, Dorians of Epidaurus, and many other tribes; **and as for those who came from the very town-hall of Athens and think they are the best born of the Ionians, these did not bring wives with them to their settlements, but married Carian women whose parents they had put to death.** For this slaughter, these women made a custom and bound themselves by oath (and enjoined it on their daughters) that no one would sit at table with her husband or call him by his name, because the men had married them after slaying their fathers and husbands and sons. **This happened at Miletus.**

Like most of the Ionian cities, Miletus submitted at first to kings who led them in war, then to aristocrats who owned the land, **then to "tyrants" representing the middle class.** Under the dictator Thrasybulus, at the beginning of the sixth century, industry and trade reached their peak, and the growing-wealth of Miletus flowered forth in literature, philosophy, and art.
…

The wealth and luxury of the city became a proverb and a scandal throughout Greece. Milesian merchants, overflowing with profits, lent money to enterprises far and wide, and to the municipality itself. They were the Medici of the Ionian Renaissance.

It was in this stimulating environment that Greece first developed two of its most characteristic gifts to the world—science and philosophy. The crossroads of trade are the meeting place of ideas, the attrition ground of rival customs and beliefs; diversities beget conflict, comparison, thought; **superstitions cancel one another, and reason begins. Here in Miletus, as later in Athens, were men from a hundred scattered states; mentally active through competitive commerce, and freed from the bondage of tradition by long absences from their native altars and homes.** Milesians themselves traveled to distant cities, and had their eyes opened by the civilizations of Lydia, Babylonia, Phoenicia, and Egypt; in this way, among others, Egyptian geometry and Babylonian astronomy entered the Greek mind. Trade and mathematics, foreign commerce and geography, navigation and astronomy, developed hand in hand. Meanwhile wealth had created leisure; **an aristocracy of culture was growing up in which freedom of thought was tolerated because only a small minority could read. No powerful priesthood, no ancient and inspired text limited men's thinking;** even the Homeric poems, which were to become in some sense the Bible of the Greeks, had hardly taken yet a definite form; and in that final form their mythology was to bear the imprint of Ionian skepticism and scandalous merriment. Here for the first time thought became secular, and sought rational and consistent answers to the problems of the world and man.*

Nevertheless the new plant, mutation though it was, had its roots and ancestry. The hoary wisdom of Egyptian priests and Persian Magi, perhaps even of Hindu seers, the sacerdotal science of the Chaldeans, the poetically personified cosmogony of Hesiod, were mingled with the natural realism of Phoenician and Greek merchants to produce Ionian philosophy. Greek religion itself had paved the way by talking of Moira, or Fate, as ruler of both gods and men: **here was that idea of law, as superior to incalculable personal decree, which would mark the essential difference between science and mythology, as well as between despotism and democracy. Man became free when he recognized that he was subject to law.**
…

Poetry seems natural to a nation's adolescence, when imagination is greater than knowledge, and a strong faith gives personality to the forces of nature in field, wood, sea, and sky; it is hard for poetry to avoid animism, or for animism to avoid poetry. Prose is the voice of knowledge freeing itself from imagination and faith; it is the language of secular, mundane, "prosaic" affairs; it is the emblem of a nation's maturity, and the epitaph of its youth. **Up to this time (600) nearly all Greek literature had taken a poetic form;** education had transmitted in verse the lore and morals of the race; even early philosophers, like Xenophanes, Parmenides, and Empedocles, gave their systems a poetic dress.
…

The poverty of Greek prose before Herodotus is bound up with the conquest and impoverishment of Miletus in the very generation in which prose literature began. Internal decay followed the custom of history in smoothing the path of the conqueror. **The growth of wealth and luxury made epicureanism fashionable, while stoicism and patriotism seemed antiquated and absurd; it became a byword among the Greeks that "once upon a time the Milesians were brave."[38] Competition for the goods of the earth became keener as the old faith lost its power to mitigate class strife by giving scruples to the strong and consolations to the weak.** The rich, supporting an oligarchic dictatorship, became a united party against the poor, who wanted a democracy. The poor secured control of the government, expelled the rich, collected the remaining children of the rich on threshing floors, set oxen upon them, and had them trampled to death. The rich returned, recaptured power, coated the leaders of the democracy with pitch, and then burnt them alive.[39] ***De nobis fabula narrabitur.*** When, about 560, Croesus began to subject to Lydian rule the Greek coast of Asia from Cnidus to the Hellespont, Miletus saved its independence by refusing to help her sister states. But in 546 Cyrus conquered Lydia, and without much difficulty absorbed the faction-torn cities of Ionia into the Persian Empire. The great age of Miletus was over. **Science and philosophy, in the history of states, reach their height after decadence has set in; wisdom is a harbinger of death.**

Außerdem zeigt die Familiengeschichte der bedeutenden Männer Italiens, wie das Genie die Blüte, aber in den meisten Fällen auch das Ende der Familie ist. **Individualismus und Intellektualismus sind die psychologischen Quellen aller höheren Kulturentwicklung, sie zerstören aber den organischen Bestand der Rasse** und leiten schließlich jenen unabwendbaren Prozeß ein, den man die geistige Selbstverzehrung der Völker genannt hat.

https://archive.org/details/jstor-1835889/page/n15/mode/2up?view=theater **[July, 1916]**

But the existence of other forms of "race suicide," so freely gossiped about by writers of the empire, also enters into this question, and here the inscriptions quite fail us. The importance of this consideration must, nevertheless, be kept in mind. **Doubtless, as Fustel de Coulanges (*La Cité Antique*) has remarked, it could have been of little importance in the society of the republic so long as the old orthodox faith in ancestral spirits survived, for the happiness of the *manes* depended upon the survival of the family, and this religious incentive probably played the same role in the propagation of the race as the Mosaic injunctions among the Hebrews, which so impressed Tacitus in a more degenerate day of Rome.** But religious considerations and customs—which in this matter emanate from the fundamental instincts that continue the race—were questioned as all else was questioned before Augustus's day. Then the process of diminution began.
...

The race of the human animal survives by means of instincts that shaped themselves for that purpose long before rational control came into play. Before our day it has only been at Greece and Rome that these impulses have had to face the obstacle of sophistication. There at least the instinct was beaten, and the race went under.

171. **WE have seen** (§§ 31, 12) **that the school of Miletos did not come to an end with Anaximenes, and it is striking fact that the man who gave the most complete answer to the question first asked by Thales was a Milesian.**1 It is true that the very existence of Leukippos has been called in question. Epicurus is reported to have said there never was such a philosopher, and the same thing has been maintained in quite recent times.2 On the other hand, **Aristotle and Theophrastos certainly made him the originator of the atomic theory, and they can hardly have been mistaken on such a point.** Aristotle was specially interested in Demokritos, and his native Stageiros is not very far from Abdera, the seat of the Atomist school.

https://archive.org/details/manhisgods00smit/page/144/mode/2up?view=theater

The idea of causality was contained implicitly in the *logos* of Heraclitus as well as in the primordial substances of Thales and his friends, but it was first explicitly worded by Leucippus of Miletus (ca. 450 B.C.), who is credited with the assertion that nothing happens without a cause, but everything with a cause or of 'necessity,' necessity meaning in accordance with the thing's being, or with its nature.

https://ncse.ngo/review-creationism-and-its-critics-antiquity

In the fifth century BCE the Greeks originated a tradition of defending theories about the cosmos and its origins and order by reason. **Almost immediately philosophers conceived of "the argument from design," the claim that the apparent order in the cosmos is best understood as created by an intelligent craftsman. As David Sedley recounts the story, the only fundamental attack on this argument was that of the Atomists.**

https://penelope.uchicago.edu/Thayer/E/Roman/Texts/Plutarch/Lives/Pericles*.html#ref9

4 But the man who most consorted with Pericles, **and did most to clothe him with a majestic demeanour that had more weight than any demagogue's appeals, yes, and who lifted on high and exalted the dignity of his character, was Anaxagoras the Clazomenian, whom men of that day used to call "Nous,"** either because they admired that comprehension of his, which proved of such surpassing greatness in the investigation of nature; or **because he was the first to enthrone in the universe, not Chance, nor yet Necessity, as the source of its orderly arrangement, but Mind (*Nous*) pure and simple, which distinguishes and sets apart, in the midst of an otherwise chaotic mass, the substances which have like elements.**

https://en.wikisource.org/wiki/Lives_of_the_Eminent_Philosophers/Book_IX#Democritus

34. Democritus was the son of Hegesistratus, though some say of Athenocritus, and others again of Damasippus. **He was a native of Abdera or, according to some, of Miletus. He was a pupil of certain Magians and Chaldaeans. For when King Xerxes was entertained by the father of Democritus he left men in charge, as, in fact, is stated by Herodotus;[58] and from these men, while still a boy, he learned theology and astronomy.** Afterwards he met Leucippus and, according to some, Anaxagoras, being forty years younger than the latter. But Favorinus in his *Miscellaneous History* tells us that **Democritus, speaking of Anaxagoras, declared that his views on the sun and the moon were not original but of great antiquity, and that he had simply stolen them.** 35. **Democritus also pulled to pieces the views of Anaxagoras on cosmogony and on mind,** having a spite against him, because Anaxagoras did not take to him. If this be so, how could he have been his pupil, as some suggest?

According to Demetrius in his book on *Men of the Same Name* and Antisthenes in his *Successions of Philosophers*, he travelled into Egypt to learn geometry from the priests, and he also went into Persia to visit the Chaldaeans as well as to the Red Sea. Some say that he associated with the Gymnosophists in India and went to Aethiopia. Also that, being the third son, he divided the family property. **Most authorities will have it that he chose the smaller portion, which was in money, because he had need of this to pay the cost of travel;** besides, his brothers were crafty enough to foresee that this would be his choice. 36. **Demetrius estimates his share at over 100 talents, the whole of which he spent.** His industry, says the same author, was so great that he cut off a little room in the garden round the house and shut himself up there. One day his father brought an ox to sacrifice and tied it there, and he was not aware of it for a considerable time, until his father roused him to attend the sacrifice and told him about the ox.

Demetrius goes on: "**It would seem that he also went to Athens and was not anxious to be recognized, because he despised fame, and that while he knew of Socrates, he was not known to Socrates,** his words being, 'I came to Athens and no one knew me.'"
…

Demetrius of Phalerum in his *Defence of Socrates* affirms that he did not even visit Athens. This is to make the larger claim, namely, that he thought that great city beneath his notice, because he did not care to win fame from a place, but preferred himself to make a place famous.
…

He would train himself, says Antisthenes, by a variety of means to test his sense-impressions by going at times into solitude and frequenting tombs. 39. The same authority states that, when he returned from his travels, he was reduced to a humble mode of life because he had exhausted his means; and, because of his poverty, he was supported by his brother Damasus. **But his reputation rose owing to his having foretold certain future events; and after that the public deemed him worthy of the honour paid to a god.[61] There was a law, says Antisthenes, that no one who had squandered his patrimony should be buried in his native city.** Democritus, understanding this, and fearing lest he should be at the mercy of any envious or unscrupulous prosecutors, read aloud to the people his treatise, the *Great Diacosmos*, the best of all his works; and then he was rewarded with 500 talents; and, more than that, with bronze statues as well; **and when he died, he received a public funeral after a lifetime of more than a century.** 40. Demetrius, however, says that it was not Democritus himself but his relatives who read the *Great Diacosmos*, and that the sum awarded was 100 talents only; with this account Hippobotus agrees.

Aristoxenus in his *Historical Notes* affirms that Plato wished to burn all the writings of Democritus that he could collect, but that Amyclas and Clinias the Pythagoreans prevented him, saying that there was no advantage in doing so, for already the books were widely circulated. And there is clear evidence for this in the fact that Plato, who mentions almost all the early philosophers, never once alludes to Democritus, not even where it would be necessary to controvert him, obviously because he knew that he would have to match himself against the prince of philosophers, for whom, to be sure, Timon[62] has this meed of praise:[63]

> Such is the wise Democritus, the guardian of discourse, keen-witted disputant, among the best I ever read.

…

44. His opinions are these. **The first principles of the universe are atoms and empty space; everything else is merely thought to exist. The worlds are unlimited; they come into being and perish.** Nothing can come into being from that which is not nor pass away into that which is not. Further, the atoms are unlimited in size and number, and they are borne along in the whole universe in a vortex, and thereby generate all composite things – fire, water, air, earth; for even these are conglomerations of given atoms. And it is because of their solidity that these atoms are impassive and unalterable. The sun and the moon have been composed of such smooth and spherical masses [i.e.

atoms], and so also the soul, which is identical with reason. We see by virtue of the impact of images upon our eyes.

45. All things happen by virtue of necessity, the vortex being the cause of the creation of all things, and this he calls necessity. The end of action is tranquillity, which is not identical with pleasure, as some by a false interpretation have understood, but a state in which the soul continues calm and strong, **undisturbed by any fear or superstition or any other emotion.** This he calls well-being and many other names. **The qualities of things exist merely by convention; in nature there is nothing but atoms and void space.** These, then, are his opinions.

http://www.perseus.tufts.edu/hopper/text?doc=Perseus%3Atext%3A1999.01.0052%3Abook%3D4%3Asection%3D1009b

They think that the truth should not be judged by the number or fewness of its upholders; and they say that the same thing seems sweet to some who taste it, and bitter to others; so that if all men were diseased or all insane, except two or three who were healthy or sane, the latter would seem to be diseased or insane, and not the others. And further they say that many of the animals as well get from the same things impressions which are contrary to ours, and that the individual himself does not always think the same in matters of sense-perception. **Thus it is uncertain which of these impressions are true or false; for one kind is no more true than another, but equally so. And hence Democritus says[1] that either there is no truth or we cannot discover it. And in general it is because they suppose that thought is sense-perception, and sense-perception physical alteration, that they say that the impression given through sense-perception is necessarily true; for it is on these grounds that both Empedocles and Democritus and practically all the rest have become obsessed by such opinions as these.**

https://books.google.fi/books?id=MSu2w3FqepoC&lpg=PP1&hl=fi&pg=PA65#v=onepage&q&f=false

As for Democritus himself, he committed himself to a certain degree of skepticism when he declared "atoms and void to be the only existences and all else to exist by convention."45 This, however, was only individual skepticism, which did not prevent him from practicing cheerfulness (*euthamia*) any more than Pyrrho was prevented from enjoying indifference. To Epicurus, on the contrary, belief or unbelief had become a matter of morals and the happiness of mankind. **He was incapable of taking comfort in a negative attitude, as did Democritus and Pyrrho.** Thus he was compelled by the inward urge to become a pragmatist as well as a dogmatist and to insist that knowledge must not only be possible but also have relevance to action and to happiness. In this matter none of his teachers had set him an example.

A second ground of his defection from Democritus was physical determinism. **Determinism is not offensive to intellectuals, but to moral reformers it is neither conceivable nor tolerable. Moral reform is synonymous with the experience of conversion, and conversion presumes freedom of the will.** To Democritus the prime and only causation in the universe was the motion of the atoms. In this motion there was no deviation, no freedom possible. It constituted an absolute determinism. In order to open an escape from this intolerable physical necessity Epicurus postulated sufficient play in the motion of the atoms to permit of freedom of the will.46 Thus he introduced into the sum of things a new cause, human volition, which was to him at one and the same time a necessity of thought and a necessity of action. **This innovation may not be commendable in physics, but ethical considerations had become paramount and in ethics the desired end had been served by the innovation.** For this invention he was in debt to no teacher.

https://books.google.fi/books?id=Ct9K-x61CH0C&lpg=PP1&hl=fi&pg=PA73#v=onepage&q&f=false

Epicurus' own targets in his philosophical critiques had been above all the Presocratics – especially his chief forerunner Democritus, along with his own Democritean teacher Nausiphanes – and Plato.53 The contemporary Stoic school had apparently achieved prominence too late to feature as a further target. Later Epicureans adopted Epicurus' enemies as their own, but added contemporary ones, above all the Stoics.
…

On the other hand, the simple unrefined denial that anything is known was endemic in the atomist tradition to which Epicurus had aligned himself, from Democritus onwards.111 Democritus himself, whatever his final position may have been on the question, had for example written: 'This argument too shows that in reality we know nothing about anything…'112 **It seems to have been only after Epicurus' intervention that sceptics started to take a firm position on whether their scepticism was reflexive or not.** And it may well have been Epicurus' self-refutation argument that forced the issue into the open. It was at that stage, it seems, that Socrates and Metrodorus were, with hindsight, reinterpreted as belonging to one or the other camp.113
…

Self-refutation arguments as such by no means go out of fashion in this period or after,115 yet the self-refutation argument against scepticism never puts in a reappearance – except, that is, in Lucretius. There is therefore excellent reason to see Lucretius' anti-sceptical argument as one dating back to Epicurus, rather than as reflecting the debates of his own time.

https://archive.org/details/academicquestion00cice/page/56/mode/2up?view=theater

Why should I speak of Democritus? Who is there whom we can compare with him for the greatness, not merely of his genius, but also of his spirit? a man who dared to begin thus: "I am going to speak of everything." He excepts nothing, so as not to profess a knowledge of it. For indeed, what could there possibly be beyond everything? Who can avoid placing this philosopher before Cleanthes, or Chrysippus, or all the rest of his successors? men who, when compared with him, appear to me to be in the fifth class.

But he does not say this, which we, who do not deny that there is some truth, declare cannot be perceived: he absolutely denies that there is any truth. **He says that the senses are not merely dim, but utterly dark;** for that is what Metrodorus of Chios, who was one of his greatest admirers, says of them, at the beginning of his book on Nature. "I deny," says he, "that we know whether we know anything or whether we know nothing; I say that we do not even know what is ignorance and knowledge; **and that we have no knowledge whether anything exists or whether nothing does.**"

https://www.english.enoanda.cat/the_inscription.html

As for Democritus of Abdera, he did well to identify atoms as elemental, but since his conception of them was in some respects mistaken, he will be considered in the exposition of our theories.
…

Even Democritus erred in a manner unworthy of himself when he said that atoms alone among existing things have true reality, while everything else exists by convention. For, according to your account, Democritus, it will be impossible for us even to live, let alone discover the truth, since we shall be unable to protect ourselves from either fire or slaughter or [any other force].
…

If anyone adopts Democritus' theory and asserts that because of their collisions with one another the atoms have no free movement, and that consequently it appears that all motions are determined by necessity, we shall say to him: **«Do you [not] know, whoever you are, that there is actually a free movement in the atoms, which Democritus failed to discover, but Epicurus brought to light,—a swerving movement, as he proves from phenomena?» The most important consideration is this: if fate is believed in, all admonition and censure are nullified, and not even the wicked [can be justly punished, since they are not responsible for their sins.]**

https://archive.org/details/Marx_Karl_-_Doctoral_Thesis_-_The_Difference_Between_the_Democritean_and_Epicure/page/n13/mode/2up?view=theater

More satisfactory explanations are given by the author of *De placitis philosophorum*:

> Necessity is, according to Democritus, fate and law, providence and the creator of the world. But the substance of this necessity is the antitype and the movement and impulse of matter.33

A similar passage is to be found in the *Physical Selections* of Stobaeus34 and in the sixth book of the *Praeparatio evangelica* of Eusebius.35 **In the *Ethical Selections* of Stobaeus the following aphorism of Democritus is preserved**36 **– it is almost exactly repeated in the 14th book of Eusebius;**37 **human beings like to create for themselves the illusion of chance – a manifestation of their own perplexity, since chance [*Zufall*] is incompatible with sound thinking.** Simplicius similarly attributes to Democritus a passage in which Aristotle speaks of the ancient doctrine that does away with chance.38

> 37. Eusebius, *Preparation for the Gospel*, XIV, p. 782. ... **and he (i.e., Democritus) has made chance the master and ruler of the universal and divine, and has claimed that everything happens through chance. At the same time he keeps it away from human life and has decried as stupid those who proclaim it.** Indeed, at the beginning of his teachings he says: "Men like to create for themselves the illusion of chance-an excuse for their own folly; since it is natural that sound thinking is incompatible with chance; and they have said that this worst enemy of thinking rules; or rather, they accept chance instead of thinking by totally removing and abolishing sound thinking. For they do not appreciate thinking as blissful, but chance as the most reasonable."

https://books.google.fi/books?id=yjaEkWbwBm0C&lpg=PP1&hl=fi&pg=PA124#v=onepage&q&f=false

If these beings are said to affect one another by means of impact, then they must be entirely *homogeneous*: **Democritus holds fast to what Parmenides had said, that Being (ὅν) must be absolutely of the same sort at every point.** Being does not come to one point more than to the others. **If one atom were something other than that which the others are, it would be a Not-Being,** that is, something contradictory. Only our senses show us *qualitatively* determinant differences: "By convention sweet [...,] by convention bitter, by convention hot, by convention cold, by convention colour; but in reality atoms and the void. ... None of these appears according to truth but only according to opinion: the truth in real things is that there are atoms and void."24

https://archive.org/details/manhisgods00smit/page/144/mode/2up?view=theater

In this atomic scheme man's ego is but a fleeting pattern. 'All human affairs,' Democritus is alleged to have said, 'are worthy only of laughter.'
...

In all the speculations of the *physiologoi*, the gods were dismissed as no more than barbaric superstitions, or at best literary and poetic images. The first principles of Thales and the other atomists, and even of the dynamist, Heraclitus, excluded the reference of capricious deities from earth, sea, stars and life, and if the term 'god' was used it was in a secular sense, the god having been reduced to atomic dimensions, to 'the dull catalogue of common things.'
...

It is probable that Democritus escaped condemnation only because he kept away from Athens, the deistic center of Greek culture.

https://books.google.fi/books?id=gy0rDwAAQBAJ&lpg=PP1&hl=fi&pg=PA321#v=onepage&q&f=false

4TH BUYER. My god! What a contrast! This one won't stop laughing and that one looks as if he's in mourning; he's crying his eyes out. Hey, you, what's the joke?

DEMOCRITUS. The joke? That ye and all that ye do seemeth ridiculous to me.

4TH BUYER. What's that? You're laughing at us all? You consider all our affairs meaningless?

DEMOCRITUS. They *are* meaningless. For there is nothing in them to be taken seriously. The whole world is merely void, infinity, and atoms in motion.

>
> Possibly [Voltaire's] true confession of faith is contained in the words he wrote to Madame du Deffand, six years before he died: "**I knew a man who was firmly convinced that the buzz of a bee did not continue after its death.** He said, with Epicurus and Lucretius, that it was absurd to presume an unextended being; an extended being ruled, and pretty badly at that. ... He said Nature had so arranged matters that we think with our heads just as we walk with our feet. He compared us with a musical instrument which does not give forth another note when it is broken. He maintained that man—like every other animal and every plant, and perhaps every being in the world—was manifestly made so that he might be and then not be. **This man, too, when he had grown as old as Democritus, used to do as Democritus did and laugh at everything.**"

https://www.artstor.org/2016/04/21/whats-so-funny-democritus/

As classicist Mary Beard explains in *Confronting the Classics*,

> The most revealing ancient discussion of Democritus' laughing habit is found in an epistolary novel of Roman date, included among the so-called Letters of Hippocrates – a collection ascribed to the legendary founding father of Greek medicine, but in fact written centuries after his death. The fictional exchanges in this novel tell the story of Hippocrates' encounter with Democritus. In the philosopher's home city, his compatriots had become concerned at the way he laughed at everything he came across (from funerals to political success) and concluded that he must be mad. So they summoned the most famous doctor in the world to cure him. **When Hippocrates arrived, however, he soon discovered that Democritus was saner than his fellow citizens. For he alone had recognised the absurdity of human existence, and was therefore entirely justified in laughing at it.**
>
> http://attalus.org/translate/valerius8b.html#c14

> [14e.2] The breast of Alexander had an insatiable desire for praise. **When Anaxarchus his companion, on the authority of Democritus, affirmed that there were innumerable worlds, "How miserable then," said he, "am I, who have not conquered all of one!"**

https://www.perseus.tufts.edu/hopper/text?doc=Perseus%3Atext%3A1999.04.0104%3Aentry%3Dstobaeus-joannes-bio-1

STOBAEUS, JOANNES, derived his surname apparently from being a native of Stobi in Macedonia. Of his personal history we know nothing. Even the age in which he lived cannot be fixed with accuracy. He lived, at all events, later than Hierocles, whom he quotes. Probably he did not live very long after him, as he quotes no writer of a later date. **His studious avoidance of all Christian writers seems to render it probable that Stobaeus was a heathen, though his name would rather indicate a Christian, or at least the son of Christian parents.**

https://books.google.fi/books?id=i_1u3X4yqdAC&lpg=PP1&hl=fi&pg=PA45#v=onepage&q&f=false

D139. Bringing up children is risky; even with good luck it is full of strife and worry, and bad luck there is not exceeded by any other woe. IV.24-29

D140. **I do not think that one should have children;** for in having children I see many great dangers and much distress, and few blessings and those meagre and weak. IV.24.31

D141. **If anyone needs to have a child, it seems to me better that he should choose from his friends' children. That way he will get the sort of child he wants, for he can choose the one he likes;** and the one that seems suitable will follow his bidding as far as its nature allows. And this is a great difference, in that he can choose from many the one he prefers, according as he thinks it should be. But if he has one of his own, there are many dangers; for he has to make do with the one that is born to him. IV.24.32

D142. **People think of having children as necessary because of their nature and their long-established constitution. This is clear from the other animals too; they all have young in accordance with their nature, but not for any benefit.** But when they are born each one takes takes trouble to rear them as best it can and fears for them when they are little and grieves if anything happens to them. The nature of all living things is like that. **But as far as mankind are concerned the opinion has grown up that there is some advantage to be derived from one's offspring.** IV.24.33

https://en.wikisource.org/wiki/Ante-Nicene_Christian_Library/The_Miscellanies:_Book_2#cite_ref-252

Plato ranks marriage among outward good things, providing for the perpetuity of our race, and handing down as a torch a certain perpetuity to children's children. **Democritus repudiates marriage and the procreation of children, on account of the many annoyances thence arising, and abstractions from more necessary things. Epicurus agrees, and those who place good in pleasure, and in the absence of trouble and pain. According to the opinion of the Stoics, marriage and the rearing of children are a thing indifferent; and according to the Peripatetics, a good.** In a word, these, following out their dogmas in words, became enslaved to pleasures; some using concubines, some mistresses, and the most youths. And that wise quaternion in the garden with a mistress, honoured pleasure by their acts.

http://penelope.uchicago.edu/Thayer/E/Roman/Texts/Cicero/de_Finibus/5*.html#ref30

It is related of Democritus (whether truly or falsely we are not concerned to inquire) that he deprived himself of eyesight; **and it is certain that in order that his mind should be distracted as little as possible from reflection, he neglected his paternal estate and left his land uncultivated, engrossed in the search for what else but happiness?** Even if he supposed happiness to consist in knowledge, still he designed that his study of natural philosophy should bring him cheerfulness of mind; since that is his conception of the Chief Good, which he entitles *euthumia*, or often *athambia*, that is freedom from alarm. 88 But what he said on this subject, however excellent, nevertheless lacks the finishing touches; **for indeed about virtue he said very little, and that not clearly expressed. For it was later that these inquiries began to be pursued at Athens by Socrates, first in the city, and afterwards the study was transferred to the place where we now are; and no one doubted that all hope alike of right conduct and of happiness lay in virtue.**

https://archive.org/details/Marx_Karl_-_Doctoral_Thesis_-_The_Difference_Between_the_Democritean_and_Epicure/page/n13/mode/2up?view=theater

> 18. Eusebius, *Preparation for the Gospel*, X, p. 472. And somewhere he (Democritus) says proudly about himself: **"I have wandered through a larger part of the earth than any of my contemporaries, investigating the remotest things, and I have seen most climates and lands, and I have heard the**

> **most learned men, and in linear composition with demonstration no one surpassed me, not even the so-called Arsipedonapts of the Egyptians, whose guest I was when already turning eighty."** For he went as far as Babylon and Persia and Egypt, where he also studied with the Egyptian priests.

…

Democritus is supposed to have blinded himself so that the *sensuous light of the eye* would not darken the *sharpness of intellect*.20 This is the same man who, according to Cicero, wandered through half the world. But he did not find what he was looking for.

An opposite figure appears to us in Epicurus. Epicurus is *satisfied* and *blissful* in *philosophy*.

> "You must," he says, "serve philosophy so that true freedom will he your lot. He who has subordinated and surrendered himself to it does not need to wait, he is emancipated at once. For to serve philosophy is freedom itself.21 Consequently he teaches: "**Let no one when young delay to study philosophy, nor when he is old grow weary of his study. For no one can come too early or too late to secure the health of his soul.** And the man who says that the age for philosophy has either not yet come or has gone by is like the man who says that the age for happiness is not yet come to him, or has passed away."22

While Democritus, dissatisfied with philosophy, throws himself into the arms of empirical knowledge, *Epicurus has nothing but contempt for the positive sciences*, since in his opinion they contribute nothing to true perfection.23 He is called an *enemy of science*, a scorner of grammar.24

> 23. Sextus Empiricus, *Against the Professors*, I, 1. **The case against the mathematici [or: Professors of Arts and Sciences] has been set forth in a general way, it would seem, both by Epicurus and by the School of Pyrrho, although the standpoints they adopt are different.** Epicurus took the ground that the subjects taught are of no help in perfecting wisdom...
>
> 24. Ibid., p. 1 1 [I, 491. And amongst them we must place Epicurus, although he seems to be bitterly hostile to the Professors of Arts and Sciences.
>
> Ibid., p. 54 [I, 2721. ... those accusers of grammar, Pyrrho, and Epicurus...

He is even accused of ignorance. "But," says an Epicurean in Cicero, "it was not Epicurus who was without erudition, but those are ignorant who believe that what is shameful for a boy not to know ought still to be recited by the old man."25

But while Democritus seeks to learn from Egyptian priests, Persian Chaldeans and Indian gymnosophists, Epicurus prides himself on not having had a teacher, on being self-taught.26 **There are some people, he says according to Seneca, who struggle for truth without any assistance. Among these people he has himself traced out his path. And it is they, the self-taught, whom he praises most. The others, according to him, are second-rate minds.**27 **While Democritus is driven into all parts of the world, Epicurus leaves his garden in Athens scarcely two or three times and travels to Ionia, not to engage in studies, but to visit friends.**28 Finally, while Democritus, despairing of acquiring knowledge, blinds himself, Epicurus, feeling the hour of death approaching, takes a warm bath, calls for pure wine and recommends to his friends that they be faithful to philosophy.29

https://archive.org/details/in.ernet.dli.2015.55010/page/n389/mode/2up?view=theater

His range was as wide as Aristotle's, his style as highly praised as Plato's.[27] **Francis Bacon, in no perverse moment, called him the greatest of ancient philosophers.**[28]

…

So, like the heretics of Victorian England, Democritus raises upon his scandalous metaphysics a most presentable ethic. "Good actions should be done not out of compulsion but from conviction; not from hope of reward, but for their own sake. ... A man should feel more shame in doing evil before himself than before all the world."[47]

https://penelope.uchicago.edu/Thayer/E/Roman/Texts/Strabo/16B*.html#ref71

24 **The Sidonians, according to tradition, are skilled in many beautiful arts, as the poet also points out;**[72] and besides this they are philosophers in the sciences of astronomy and arithmetic, having begun their studies with practical calculations and with night-sailings; for each of these branches of knowledge concerns the merchant and the ship-owner; as, for example, geometry was invented, it is said, from the measurement of lands which is made necessary by the Nile when it confounds the boundaries at the time of its overflows.[73] This science, then, is believed to have come to the Greeks from the Aegyptians; astronomy and arithmetic from the Phoenicians; and at present by far the greatest store of knowledge in every other branch of philosophy is to be

had from these cities. **And if one must believe Poseidonius, the ancient dogma about atoms originated with Mochus, a Sidonian, born before the Trojan times.**

https://books.google.fi/books?id=EB5UvHrdMpsC&lpg=PP1&hl=fi&pg=PA7#v=onepage&q&f=false

In possession of such advantages, therefore, [Pythagoras] sailed to Sidon, **being persuaded that this was his natural country,** and also properly conceiving that he might easily pass from thence to Egypt. **Here he conversed with the prophets who were the descendants of Mochus the physiologist,** and with others, and also with the Phoenician hierophants.

https://phoenicia.org/Mochus-of-Sidon-Atomic-Theory.html

Ralph Cudworth, a Philosopher of 1671 wrote:

> "Wherefore we have made it obvious, **that that exceptionally mechanical or atomical rationality, that hath been recently reestablished via Cartesius and Gassendus, with regards to the principle substance of it, was senior to Epicurus,** as well as than Plato and Aristotle, nay, than Democritus and Leucippus additionally, its normally presumed dads. Also, thusly we have no motivation to dishonor the report of Posidonius the Stoic, who, as Strabo lets us know, confirmed this atomical rationality to have been ancienter than the seasons of the Trojan war, and first to have been brought into Greece out of Phoenicia. ... What's more, since it is sure from what we have appeared, that neither Epicurus nor yet Democritus was the primary creators of this physiology, this declaration of Posidonius the Stoic should in motivation to be conceded by us. Presently, **what can be more likely than that this Moschus the Phoenician, that Posidonius talks about, is the specific same individual with that Moschus the physiologer,** that Jamblichus specifies in the Life of Pythagoras, where he avows, that Pythagoras, living some time at Sidon in Phoenicia, spoke with the prophets that were the successors of Mochus the physiologer, and was told by them: ..."

> 20. Cudworth cites one "Mr Selden" (presumably John Selden, author of *De Diis Syris*) as approving the conjecture of "Arcerius, the publisher of Jamblichus that this Mochus was no other than the celebrated Moses of the Jews, with whose successors, the Jewish philosophers, priests and prophets, Pythagoras conversed at Sidon." (I x).

https://books.google.co.kr/books?id=kFl_DgN73UUC&lpg=PA270&hl=fi&pg=PA270#v=onepage&q&f=false

Any consideration of Abdera's history must begin with its Phoenician name. There are two other cities from Antiquity called Abdera. One was in North Africa, near Carthage,5 and the other was on the South coast of Spain.6 This latter is expressly attested as Phoenician, and issued coins with its name in Phoenician letters, or, sometimes, written twice in both the Phoenician and the Roman alphabet.7 So there is no doubt that the name Abdera is Phoenician, and this has long been recognized by good judges.8
…

We must content ourselves, therefore, with the basic fact that Abdera was named by Phoenicians, and that occurred before *c.* 654 BC, the date of the first Greek attempt to colonize the place. **The presence of Phoenicians in the area at that time is attested by Herodotus for Thasos,**19 **and their interest in Abdera is easily explained by the existence in the region of deposits of precious metals.**

> At Tyre I saw yet another temple of the so-called Thasian Heracles. **Then I went to Thasos, too, where I found a temple of Heracles built by the Phoenicians, who made a settlement there when they voyaged in search of Europe;** now they did so as much as five generations before the birth of Heracles the son of Amphitryon in Hellas.
>
> http://www.perseus.tufts.edu/hopper/text?doc=Perseus%3Atext%3A1999.01.0160%3Abook%3D5%3Achapter%3D25%3Asection%3D12

> [12] The Thasians, who are Phoenicians by descent, and sailed from Tyre, and from Phoenicia generally, together with Thasus, the son of Agenor, in search of Europa, dedicated at Olympia a Heracles, the pedestal as well as the image being of bronze. The height of the image is ten cubits, and he holds a club in his right hand and a bow in his left. **They told me in Thasos that they used to worship the same Heracles as the Tyrians, but that afterwards, when they were included among the Greeks, they adopted the worship of Heracles the son of Amphitryon.**

http://www.perseus.tufts.edu/hopper/text?doc=Perseus%3Atext%3A1999.04.0064%3Aentry%3Dabdera-geo

Abdera was the birthplace of several famous persons: among others, of the philosophers Protagoras, Democritus, and Anaxarchus. **In spite of this, its inhabitants passed into a proverb for dullness and stupidity.** (Juv. x. 50; Martial, x. 25. 4; Cic. ad Att. iv. 16, vii. 7.)

http://www.attalus.org/translate/florida.html

Protagoras was a sophist with knowledge on an extraordinary number of subjects, and one of the most eloquent among the first inventors of the art of rhetoric. **He was a fellow citizen and contemporary of the physicist Democritus, and it was from Democritus he derived his learning.**

https://penelope.uchicago.edu/Thayer/E/Roman/Texts/Gellius/5*.html#ref7

1 **They say that Protagoras, a man eminent in the pursuit of learning, whose name Plato gave to that famous dialogue of his, in his youth earned his living as a hired labourer and often carried heavy burdens on his back, being one of that class of men** 2 **whom the Greeks call ἀχθοφόροι and we Latins *baiuli*, or porters.** 3 He was once carrying a great number of blocks of wood, bound together with a short rope, from the neighbouring countryside into his native town of Abdera. 4 It chanced at the time that **Democritus, a citizen of that same city, a man esteemed before all others for his fine character and his knowledge of philosophy,** as he was going out of the city, saw Protagoras walking along easily and rapidly with that burden, of a kind so awkward and so difficult to hold together. Democritus drew near, and noticing with what skill and judgment the wood was arranged and tied, asked the man to stop and rest awhile. 5 When Protagoras did as he was asked, and Democritus again observed that the almost circular heap of blocks was bound with a short rope, and was balanced and held together with all but geometrical accuracy, he asked who had put the wood together in that way. When Protagoras replied that he had done it himself, Democritus asked him to untie the bundle and arrange it again in the same way. 6 But after he had done so, **then Democritus, astonished at the keen intellect and cleverness of this uneducated man, said: "My dear young man, since you have a talent for doing things well, there are greater and better employments which you can follow with me"; and he at once took him away, kept him at his own house, supplied him with money, taught him philosophy, and made him the great man that he afterwards became.**

7 **Yet this Protagoras was not a true philosopher, but the cleverest of sophists;** for in consideration of the payment of a huge annual fee, he used to promise his pupils that he would teach them by what verbal dexterity the weaker cause could be made the stronger, **a process which he called in Greek: τὸν ἥττω λόγον κρείττω ποιεῖν, or "making the worse appear the better reason."**

http://penelope.uchicago.edu/aelian/varhist1.xhtml#chap23

Among the ancient *Greeks*, *Gorgias* the *Leontine* son of *Philolaus*, and *Protagoras* son of *Democritus*, were famous as to Rhetorical opinion; yet were they as far short of others in wisedome as boies are of men. For opinion neither hears nor sees clearly: whence it oftentimes erres, overprizing some things, undervaluing others.

https://en.wikisource.org/wiki/Lives_of_the_Eminent_Philosophers/Book_IX#Protagoras

51. Protagoras was the first to maintain that there are two sides to every question, opposed to each other, and he even argued in this fashion, being the first to do so. **Furthermore he began a work thus: "Man is the measure of all things, of things that are that they are, and of things that are not that they are not." He used to say that soul was nothing apart from the senses, as we learn from Plato in the *Theaetetus*,[71] and that everything is true. In another work he began thus: "As to the gods, I have no means of knowing either that they exist or that they do not exist. For many are the obstacles that impede knowledge, both the obscurity of the question and the shortness of human life."** 52. For this introduction to his book the Athenians expelled him; and they burnt his works in the market-place, after sending round a herald to collect them from all who had copies in their possession.
...

53. **He too first introduced the method of discussion which is called Socratic.** Again, as we learn from Plato in the *Euthydemus*,[74] he was the first to use in discussion the argument of Antisthenes which strives to prove that contradiction is impossible, and the first to point out how to attack and refute any proposition laid down: so Artemidorus the dialectician in his treatise In *Reply to Chrysippus*. He too invented the shoulder-pad on which porters carry their burdens, so we are told by Aristotle in his treatise *On Education*; for he himself had been a porter, says Epicurus somewhere.[75] **This was how he was taken up by Democritus, who saw how skilfully his bundles of wood were tied.**

---

https://archive.org/details/in.ernet.dli.2015.55010/page/n393/mode/2up?view=theater

It is a reproof to those who think of Greece as synonymous with Athens, that none of the great Hellenic thinkers before Socrates belonged to that city, and only Plato after him. The fate of Anaxagoras and Socrates indicates that religious conservatism was stronger in Athens than in the colonies, where geographical separation had broken some of the bonds of tradition. Perhaps Athens would have remained obscurantist and intolerant to the point of stupidity had it not been for **the growth of a cosmopolitan trading class, and the coming of the Sophists to Athens.**
…

Protagoras, the most renowned of the Sophists, was born in Abdera a generation before Democritus. In his lifetime he was the better known of the two, and the more influential; we surmise his repute from the furore created by his visits to Athens.*[84] Even Plato, who was not often intentionally fair to the Sophists, respected him, and described him as a man of high character. **In the Platonic dialogue that is named after him Protagoras makes a much better showing than the argumentative young Socrates; here it is Socrates who talks like a Sophist, and Protagoras who behaves like a gentleman and a philosopher,** never losing his temper, never jealous of another's brilliance, never taking the argument too seriously, and never anxious to speak.
…

Diogenes Laertius accuses him of being the first to "arm disputants with the weapon of sophism," a charge that would have pleased Socrates; but Diogenes adds that Protagoras "was also the first to invent that sort of argument which is called Socratic"[88] —which might not have pleased Socrates.

It was but one of his many distinctions that he founded European grammar and philology. He treated of the right use of words, says Plato,[89] and was the first to distinguish the three genders of nouns, and certain tenses and moods of verbs.[90] **But his chief significance lay in this, that with him, rather than with Socrates, began the subjective standpoint in philosophy.** Unlike the Ionians he was less interested in things than in thought—i.e., in the whole process of sensation, perception, understanding, and expression. Whereas Parmenides rejected sensation as a guide to truth, Protagoras, like Locke, accepted it as the only means of knowledge, and refused to admit any transcendental—suprasensual—reality. No absolute truth can be found, said Protagoras, but only such truths as hold for given men under given conditions; contradictory assertions can be equally true for different persons or at different times.[91] All truth, goodness, and beauty are relative and subjective; "man is the measure of all things—of those that are, that they are, and of those that are not, that they are not."[92] **To the historical eye a whole world begins to tremble when Protagoras announces this simple principle of humanism and relativity; all established truths and sacred principles crack; individualism has found a voice and a philosophy; and the supernatural bases of social order threaten to melt away.**
…

They applied analysis to everything; they refused to respect traditions that could not be supported by the evidence of the senses or the logic of reason; **and they shared decisively in a rationalist movement that finally broke down, among the intellectual classes, the ancient faith of Hellas.**

> https://biblehub.com/jeremiah/10-11.htm
>
> **Thus you shall say to them: "The gods that have not made the heavens and the earth shall perish from the earth and from under these heavens."**

"The common opinion" of his time, says Plato, derived "the world and all animals and plants ... and inanimate substances from ... some spontaneous and unintelligent cause."[102] **Lysias tells of an atheistic society that called itself the *kakodaimoniotai*, or Devils' Club, and deliberately met and dined on holydays set apart for fasting.[103] Pindar, at the opening of the fifth century, accepted the oracle of Delphi piously; Aeschylus defended it politically; Herodotus, about 450, criticized it timidly; Thucydides, at the end of the century, openly rejected it.** Euthyphro complained that when in the Assembly he spoke of oracles, the people laughed at him as an antiquated fool.[104]

The Sophists must not be blamed or credited for all of this; much of it was in the air, and was a natural result of growing wealth, leisure, travel, research, and speculation. **Their role in the deterioration of morals was likewise contributory rather than basic; wealth of itself, without the aid of philosophy, puts an end to puritanism and stoicism.** But within these modest limits the Sophists unwittingly quickened

disintegration. Most of them, barring a thoroughly human love of money, were men of high character and decent life; **but they did not transmit to their pupils the traditions or the wisdom that had made or kept them reasonably virtuous despite their discovery of the secular origin and geographical mutability of morals.** Their colonial derivation may have led them to underestimate the value of custom as a peaceful substitute for force or law in maintaining morality and order.
...

The announcement of the relativity of knowledge did not make men modest, as it should, but disposed every man to consider himself the measure of all things; every clever youth could now feel himself fit to sit in judgment upon the moral code of his people, reject it if he could not understand and approve it, and then be free to rationalize his desires as the virtues of an emancipated soul. The distinction between "Nature" and convention, **and the willingness of minor Sophists to argue that what "Nature" permitted was good regardless of custom or law,** sapped the ancient supports of Greek morality, and encouraged many experiments in living.
...

They were the intellectual representatives of their time, sharing its passion for the free intellect; **like the Encyclopedists of Enlightenment France they swept away the dying past with magnificent *élan*, and did not live long enough, or think far enough, to establish new institutions in place of those that loosened reason would destroy. In every civilization the time comes when old ways must be re-examined if the society is to readjust itself to irresistible economic change;** the Sophists were the instrument of this re-examination, but failed to provide the statesmanship for the readjustment. It remains to their credit that they powerfully stimulated the pursuit of knowledge, and made it fashionable to think. From every corner of the Greek world they brought new ideas and challenges to Athens, and aroused her to philosophical consciousness and maturity. **Without them Socrates, Plato, and Aristotle would have been impossible.**

https://archive.org/details/completeworksrie033168mbp/page/n363/mode/2up?view=theater

The "*Sophist*" is still quite Hellenic—as are also Anaxagoras, Democritus, and the great Ionians; but only as transitional forms. **The *polis* loses its faith in the unity of its culture, in its rights of dominion over every other *polis*. ... Cultures, that is to say, "the gods," are exchanged, and thus the belief in the exclusive prerogative of the *deus autochthonus* is lost. Good and Evil of whatever origin get mixed:** the boundaries separating good from evil gradually *vanish*. ... This is the "Sophist."

>
> **This belief however, the honour paid to national Gods, the sure assumption of the truth of primal race-traditions, had formed the bond of all community.** Was this now rent and hooted as a heresy, at least the core of that religion had come to light as unconditioned, actual, naked *Man;* **but this Man was no longer the associate man, united by the bond of racial fellowship:** only the *absolute, egoistic, solitary unit,*—man beautiful and naked, but loosed from the beauteous bond of brotherhood.

https://www.perseus.tufts.edu/hopper/text?doc=Perseus%3Atext%3A1999.01.0247%3Abook%3D1%3Achapter%3D3

3. **And to me the imbecility of ancient times is not a little demonstrated also by this [that followeth]. For before the Trojan war nothing appeareth to have been done by Greece in common;** [2] nor indeed was it, as I think, called all by that one name of Hellas; nor before the time of Hellen, the son of Deucalion, was there any such name at all.
...

This is conjectured principally out of Homer. [3] For though born long after the Trojan war, yet he gives them not anywhere that name in general, nor indeed to any but those that with Achilles came out of Phthiotis and were the first so called; but in his poems he mentioneth Danaans, Argives, and Achaeans. **Nor doth he likewise use the word barbarians; because the Grecians, as it seemeth unto me, were not yet distinguished by one common name of Hellenes, oppositely answerable unto them.**
...

5. **For the Grecians in old time, and such barbarians as in the continent lived near unto the sea or else inhabited the islands after once they began to cross over one to another in ships, became thieves** and went abroad under the conduct of their most puissant men, both to enrich themselves and to fetch in maintenance for the weak, and falling upon towns unfortified and scatteringly inhabited, rifled them and made this the best means of their living, **being a matter at that time nowhere in disgrace but rather carrying with it something of glory.**
...

6. For once they were wont throughout all Greece to go armed because their houses were unfenced and travelling was unsafe, and accustomed themselves, like the barbarians, to the ordinary wearing of their armour. [2] And the nations of Greece that live so yet, do testify that the same manner of life was anciently universal to

all the rest. [3] **Amongst whom the Athenians were the first that laid by their armour and growing civil, passed into a more tender kind of life.**
…

[4] **But the moderate kind of garment, and conformable to the wearing of these times, was first taken up by the Lacedaemonians, amongst whom also, both in other things and especially in the culture of their bodies, the nobility observed the most equality with the commons.** [5] The same were also the first that when they were to contend in the Olympic games stripped themselves naked and anointed their bodies with ointment; **whereas in ancient times the champions did also in the Olympic games use breeches, nor is it many years since this custom ceased.** Also there are to this day amongst the barbarians, especially those of Asia, prizes propounded of fighting with fists and of wrestling, and the combatants about their privy parts wear breeches in the exercise. [6] **It may likewise by many other things be demonstrated that the old Greeks used the same form of life that is now in force amongst the barbarians of the present age.**

https://www.sacred-texts.com/cla/fsgr/fsgr06.htm

The historian of early Greece must find himself often on the watch for a particular cardinal moment, generally impossible to date in time and sometimes hard even to define in terms of development, when the clear outline that we call Classical Greece begins to take shape out of the mist. It is the moment when, as Herodotus puts it, 'the Hellenic race was marked off from the barbarian, as more intelligent and more emancipated from silly nonsense'.39_1 **In the eighth century B.C., for instance, so far as our remains indicate, there cannot have been much to show that the inhabitants of Attica and Boeotia and the Peloponnese were markedly superior to those of, say, Lycia or Phrygia, or even Epirus.** By the middle of the fifth century the difference is enormous. On the one side is Hellas, on the other the motley tribes of 'barbaroi'.
…

In all probability if a Greek of the fifth century, like Aeschylus or even Pindar, had met a group of the real Hellenes or Achaioi of the Migrations, he would have set them down as so many obvious and flaming barbarians.

https://anastrophe.uchicago.edu/cgi-bin/perseus/citequery3.pl?dbname=GreekNov21&getid=1&query=Hdt.%201.60

When this offer was accepted by Pisistratus, who agreed on these terms with Megacles, they devised a plan to bring Pisistratus back which, to my mind, was so exceptionally foolish that it is strange **(since from old times the Hellenic stock has always been distinguished from foreign by its greater cleverness and its freedom from silly foolishness)** that these men should devise such a plan to deceive Athenians, said to be the subtlest of the Greeks.

https://archive.org/details/playsandpuritan02kinggoog/page/n227/mode/2up?view=theater

Have they not held that, on the whole, the problems of human nature and human history have been sufficiently solved by Gibbon and Voltaire, Gil Blas and Figaro; **that our forefathers were silly barbarians; that this glorious nineteenth century is the one region of light, and that all before was outer darkness,** peopled by 'foreign devils,' Englishmen, no doubt, according to the flesh, but in spirit, in knowledge, in creed, in customs, so utterly different from ourselves that we shall merely show our sentimentalism by doing aught but laughing at them?

https://en.wikisource.org/wiki/Schopenhauer_as_Educator#4

We are feeling the consequences of the doctrine, preached lately from all the housetops, that the state is the highest end of man and there is no higher duty than to serve it: I regard this not a relapse into paganism, but into stupidity. A man who thinks state-service to be his highest duty, very possibly knows no higher one; yet there are both men and duties in a region beyond,—and one of these duties, that seems to me at least of higher value than state-service, is to destroy stupidity in all its forms—and this particular stupidity among them. **And I have to do with a class of men whose teleological conceptions extend further than the well-being of a state, I mean with philosophers—and only with them in their relation to the world of culture, which is again almost independent of the "good of the state."**

https://archive.org/details/in.ernet.dli.2015.22149/page/n363/mode/2up?view=theater

474. THE DEVELOPMENT OF THE MIND FEARED BY THE STATE.—The Greek *polis* was, like every organising political power, exclusive and distrustful of the growth of culture; its powerful fundamental impulse seemed almost solely to have a paralysing and obstructive effect thereon. **It did not want to let any history or any becoming have a place in culture; the education laid down in the State laws was meant to be obligatory on all generations to keep them at *one* stage of development. Plato also, later on, did not desire it to be otherwise in his ideal**

State. *In spite of* the polis culture developed itself in this manner; indirectly to be sure, and against its will, the polis furnished assistance because the ambition of individuals therein was stimulated to the utmost, so that, having once found the path of intellectual development, they followed it to its farthest extremity.

https://archive.org/details/completeworksrie033168mbp/page/n369/mode/2up?view=theater

The Sophists were Greeks: **when Socrates and Plato adopted the cause of virtue and justice, they were *Jews* or I know not what.** *Grote's* tactics in the defence of the Sophists are false: he would like to raise them to the rank of men of honour and moralisers—but it was their honour not to indulge in any humbug with grand words and virtues.

https://archive.org/details/greeks-romans-germans/page/195/mode/2up?view=theater

Platonists and Hellenists argued that in the Third Reich, students needed to be introduced to Plato in high school, for, as Adolf Rusch, a professor of classical literature at the Mommsen gymnasium in Berlin-Grunewald, declared, he as nothing less than "the teacher of the German man."19 In an article with that very title, **Rusch argued that the new German school must forget about the interests of the individual and focus solely on the group, the *Volksgemeinschaft*. Plato was just the man to combat "the sophistic," an expression of "outrageous individualism."** Rather than "the maxim according to which man is the measure of all things," he believed that man existed "wholly within the order of the world" – that is, the order of the polis. …

As an implacable enemy of the feeble, compassionate humanism of the Enlightenment, Günther argued that Plato's ideas had been opposed by none other than **the Sophists, who were "men of the Asiatic race, as racial science has taught us."**66 A secondary-school textbook proclaimed that while the Greeks had indeed been receptive to the Sophists' individualism, it was only because their blood had already been diluted, as could be deduced by the strict determinism that governed the spirit of the race: "**The sophistic is completely foreign to Nordic thought and proves to be a product of the race of Asia Minor, which habitually debates concepts and questions inherited wisdom in order to destroy it.** The influence of this philosophy could grow only because the Greeks had become unfaithful to their origins. If they had remained a people of pure race, the accent that [the Sophists] placed on the exceptionality of the individual and his rights would have seemed incomprehensible to them."67

Part of this paragraph is a virtual copy of a passage written by Hans Günther himself.68 Ever faithful to his racial symptomatology, Günther considered the sophistic "completely impregnated with a non-Hellenic spirit."69

https://books.google.fi/books?id=tSE6DwAAQBAJ&lpg=PT200&hl=fi&pg=PT76#v=onepage&q&f=false

One should be wary of taking modern philosophy's claim to public-spiritedness at full face value. The fact that Descartes terms his own autobiography a fable or history may be intended to warn the attentive reader that the founder of modern philosophy is quite consciously leading the ordinary men of "good sense" to whom he directs his appeal down the primrose path. In assessing the French philosopher's ultimate purpose, one must not suppose that those who first advocated philosophy's emancipation from clerical tutelage were somehow more egalitarian than their classical forerunners. Though he joined Machiavelli in professing a dedication to "the greatest common benefit of each," Descartes openly argued that "the greatest good that there can be in a state is for it to possess true philosophers." In taking this stand, he asserted not the utility but the dignity of the life of the mind. **It is philosophy "alone," he wrote, "that distinguishes us from the most savage and barbarous of men. Each nation is civilized and polished in proportion to the quality of the philosophy engaged in there."**172 **In private, the French philosopher was even willing to entertain the possibility that there might exist "a man worth more, in himself alone, than the rest of his city." In such a situation, he added, "he would not be correct in being willing to sacrifice himself to save it."**173 Between the populist rhetoric deployed to justify the modern scientific project and the gigantine pride and ambition that animate it, there is a considerable gap.

https://books.google.fi/books?id=Zymp_kM33ZcC&lpg=PP1&hl=fi&pg=PA97#v=onepage&q&f=false

Xenophon described the situation elegantly by posing a rhetorical question. **"How could human beings be more easily defeated in battle," he wrote, "than when each begins to take counsel in private concerning his own safety?"**44 This was the type of deliberation which the *pólis* had to attempt to suppress.

> **Paoli said, "If a man would preserve the generous glow of patriotism, he must not reason too much. Mareschal Saxe reasoned; and carried the arms of France into the heart of Germany, his own country. I act from sentiment, not from reasonings."**

http://garynorth.com/freebooks/docs/html/gnbd/appendix_e.htm

Political success in Athens was based on a man's ability as a public speaker. This led to the rise of the sophists, **who sold the skills of rhetoric to the highest bidders--the superlawyers of their day.** Historian Morton Smith writes that

> "*Athenians were litigious, and any man might find himself compelled to argue for his fortune, if not his life, before a court of several hundred of his fellow citizens. It was necessary to speak for oneself, though a writer might be hired to prepare the speech**. By their studies of rhetoric, argument (whence logic), and grammar, the sophists laid the basis of Greek higher education, from which was to come the mediaeval university program.** By their immediate teaching, however, they--intentionally or unintentionally--obscured the traditional patterns of Greek morality and raised up a generation of skeptics prepared to argue for any action which seemed to their own interest.*"(30)

Otto Scott is even more to the point: "These *sophistae* (teachers of wisdom) taught young adults, for the first time in history. They charged enormous sums: Protagoras demanded 10,000 drachmas ($100,000--or the equivalent of a modern university [education]) for the education of a single pupil. **The Sophists introduced civilization's first 'enlightenment' which questioned tradition, religion, morals and all values.**"(31) **In short, they were the law school professors of their day: they undermined moral law.**

https://en.wikipedia.org/wiki/Sisyphus_fragment

The fragment was preserved in the works of the Pyrrhonist philosopher Sextus Empiricus. Jan N. Bremmer proposed that it was composed in the 5th-century BCE by a Greek playwright, either Critias or Euripides.[1] **Charles H. Kahn speculates that the author could have been Democritus, as he did not live in Athens and thus had nothing to fear of Athenian impiety laws.**[2] Further, the concepts contained within the Sisyphus fragment echo a fragment from Democritus preserved slightly earlier in the same text.

> And there are some who have supposed that we have arrived at the conception of Gods from those events in the world which are marvelous; **which opinion seems to have been held by Democritus, who says—"For when the men of old time beheld the disasters in the heavens, such as thunderings and lightnings, and thunderbolts and collisions between stars, and eclipses of sun and moon, they were affrighted, imagining the Gods to be the causes of these things."**[2]

...

Karl Popper in his The Open Society and its Enemies noted a 'striking' similarity between the passage ascribed to Critias, and the views Plato, Critias's nephew, developed in his two dialogues, the Republic and the Laws regarding the Noble lie.[24]

https://people.wku.edu/jan.garrett/302/critias.htm

> A time there was when disorder ruled
> Human lives, which were then, like lives of beasts,
> Enslaved to force; nor was there then reward
> For the good, nor for the wicked punishment.
> Next, it seems to me, humans established laws
> For punishment, that justice might rule
> Over the tribe of mortals, and wanton injury be subdued;
> And whosoever did wrong was penalized.
> Next, as the laws held [mortals] back from deeds
> Of open violence, but still such deeds
> Were done in secret,—then, I think,
> Some shrewd man first, a man in judgment wise,
> Found for mortals the fear of gods,
> Thereby to frighten the wicked should they
> Even act or speak or scheme in secret.
> ...
>
> Even if you plan in silence some evil deed
> It will not be hidden from the gods: for discernment
> Lies in them. So, speaking words like these,
> **The sweetest teaching did he introduce,**
> **Concealing truth under untrue speech.**

https://oll.libertyfund.org/title/acton-the-history-of-freedom-and-other-essays#lf0030_label_020

According to the Sophists, there is no duty above expediency and no virtue apart from pleasure. Laws are an invention of weak men to rob their betters of the reasonable enjoyment of their superiority. It is better to inflict than to suffer wrong; and as there is no greater good than to do evil

without fear of retribution, so there is no worse evil than to suffer without the consolation of revenge. Justice is the mask of a craven spirit; injustice is worldly wisdom; and duty, obedience, self-denial are the impostures of hypocrisy. **Government is absolute, and may ordain what it pleases, and no subject can complain that it does him wrong, but as long as he can escape compulsion and punishment, he is always free to disobey.** Happiness consists in obtaining power and in eluding the necessity of obedience; and he that gains a throne by perfidy and murder, deserves to be truly envied.

https://books.google.fi/books?id=_M_E5QczOBAC&lpg=PP1&hl=fi&pg=PA595#v=onepage&q&f=false

> Proceeding to details, I may say first that there is strong evidence that at least in Plato's (and Aristotle's) time, the problem of equalitarianism was clearly seen to be concerned with two fully analogous distinctions, that between *Greeks and barbarians* on the one side and that between *masters (or free men) and slaves* on the other; cp. with this note 13 to chapter 5. Now we have very strong evidence that the fifth-century Athenian movement against slavery was not confined to a few intellectualists like Euripides, Alcidamas, Lycophron, Antiphon, Hippias, etc., but that it had considerable practical success.

https://books.google.fi/books?id=GlfUVeQHLFUC&lpg=PA68&pg=PA69#v=onepage&q&f=false

What I mean is this: Is [good birth] something valuable and worthwhile or, as Lycophron the sophist wrote, something altogether worthless? Comparing it with other goods he asserts: "Now the nobility of good birth is obscure, and its grandeur a matter of words," on the grounds that preference for it looks to opinion, whereas in fact there is no difference between the ignoble and the well-born.

https://en.wikipedia.org/wiki/Lycophron_(sophist)

This statement may indicate that Lycophron shared the beliefs of Antiphon, that (regardless of their ancestry) both Greeks and barbarians are born with the same capacities: an egalitarian belief that was a minority view in the 5th century BC.[1][3] He is also known for his statement (reproduced by Aristotle, in the latter's Politics, 1280b10), that "*law is only a convention, a surety to another of justice*".[4] Also translated as "*a guarantor of men's rights against one another*". He thus believed that law is a matter of agreement, a social convention and not a natural or universal standard **(there is no evidence that Lycophron rejected the idea that law is a universal standard – indeed his view appears far more universalist than that of Aristotle, in that Lycophron proposes a single standard, what would now be called the non aggression principle, in relation to all states).** In this respect his views on law are similar to those of Protagoras.[1][5]

>
> But the most important thing they do not mention. **If men formed the community and came together for the sake of wealth, their share in the state is proportionate to their share in the property,** so that the argument of the champions of oligarchy would appear to be valid—namely that in a partnership with a capital of 100 minae[2] it would not be just for the man who contributed one mina to have a share whether of the principal or of the profits accruing equal to the share of the man who supplied the whole of the remainder; **but if on the other hand the state was formed not for the sake of life only but rather for the good life (for otherwise a collection of slaves or of lower animals would be a state, but as it is, it is not a state, because slaves[3] and animals have no share in well-being or in purposive life), and if its object is not military alliance for defence against injury by anybody, and it does not exist for the sake of trade and of business relations[4]—for if so, Etruscans and Carthaginians and all the people that have commercial relations with one another would be virtually citizens of a single state; at all events they have agreements about imports and covenants as to abstaining from dishonesty and treaties of alliance for mutual defence;** [1280b] [1] but they do not have officials common to them all appointed to enforce these covenants, but different officials with either party, nor yet does either party take any concern as to the proper moral character of the other, nor attempt to secure that nobody in the states under the covenant shall be dishonest or in any way immoral, but only that they shall not commit any wrong against each other. All those on the other hand who are concerned about good government do take civic virtue and vice into their purview. **Thus it is also clear that any state that is truly so called and is not a state merely in name must pay attention to virtue; for otherwise the community becomes merely an alliance, differing only in locality from the other alliances, those of allies that live apart. And the law is a covenant or, in the phrase of the sophist Lycophron,[1] a guarantee of men's just claims on one another, but it is not designed to make the citizens virtuous and just.**

https://books.google.fi/books?id=Zymp_kM33ZcC&lpg=PP1&hl=fi&pg=PA34#v=onepage&q&f=false

Despite the general accord that reigned throughout all of Greece, there were men who rejected the primacy of politics and war. **Euripides's Theseus hints at their presence in Athens when he remarks that, in a free city, a man lacking the desire for eminence can choose to remain silent.**122 Lycophron appears to have been such a man, and Aristippus another. If Aristotle and Xenophon can be trusted, neither had much use for the middle ground provided by the public arena. Yet, to the best of our knowledge, no Greek thinker, not even these, ever elaborated a *public-spirited political* philosophy grounded in liberal principles. **Lycophron did treat the *pólis* as little more than "a military alliance (*summachía*)," and he reportedly argued that the law was merely "a covenant … a pledge to respect each other's rightful claims" and not an instrument "able to make the citizens good and just."**123 **This denial that the *pólis* is a moral community certainly foreshadows the social-contract theories developed by Thomas Hobbes and his successors. But there is something missing: Lycophron's account is wholly descriptive and never prescriptive.**

https://en.wikisource.org/wiki/1911_Encyclop%C3%A6dia_Britannica/Hippias_of_Elis

HIPPIAS OF ELIS, Greek sophist, was born about the middle of the 5th century B.C. and was thus a younger contemporary of Protagoras and Socrates. He was a man of great versatility and won the respect of his fellow-citizens to such an extent that he was sent to various towns on important embassies. At Athens he made the acquaintance of Socrates and other leading thinkers. **With an assurance characteristic of the later sophists, he claimed to be regarded as an authority on all subjects, and lectured, at all events with financial success, on poetry, grammar, history, politics, archaeology, mathematics and astronomy.**

http://www.perseus.tufts.edu/hopper/text?doc=Perseus%3Atext%3A1999.01.0178%3Atext%3DProt.%3Asection%3D337c

When Prodicus had thus spoken, quite a number of the company showed their approval; then after Prodicus the learned Hippias[1]
spoke: Gentlemen, he said, who are here present, **I regard you all as kinsmen and intimates and fellow-citizens by nature, not by law:** [337d] **for like is akin to like by nature, whereas law, despot of mankind, often constrains us against nature.** Hence it would be shameful if we, while knowing the nature of things, should yet—being the wisest of the Greeks, and having met together for the very purpose in the very sanctuary of the wisdom of Greece, and in this the greatest and most auspicious house of the city of cities—display no worthy sign of this dignity, [337e] but should quarrel with each other like low churls.

> **συγγενεῖς**: **it was the cardinal point of the sophistic ethics, that positive laws are arbitrary restrictions, imposed upon men by powerful individuals or by the majority, with the purpose simply of putting them down, and of restraining the natural rights of the individual, i.e. those things which he desires and regards as his rights.** That Hippias also taught this is shown by Xen. *Mem.* iv. 4.14 ff.
>
> https://www.gutenberg.org/cache/epub/1177/pg1177-images.html#link2H_4_0006
>
> Then Hippias: **Well, but laws, Socrates, how should any one regard as a serious matter either the laws themselves, or obedience to them, which laws the very people who made them are perpetually rejecting and altering?**

https://books.google.fi/books?id=Rq5hg4d54m4C&lpg=PA2&hl=fi&pg=PA2#v=onepage&q&f=false

The more "modern" concern about the difference between actually prevailing laws and certain laws which cannot be abrogated or changed by human authorities began to be recognized in the fifth century B.C. Hippias (ca. 460-390 B.C.) spoke about a divine law that can never and nowhere be superseded, and under Socratic influence began to associate the divine or natural law with a universal abstract Form of Law.6

https://iep.utm.edu/hippias/

Hippias appears to have originated the idea of natural law as the foundation of morality, distinguishing nature from the arbitrary conventions or fashions, differing according to the different times or regions in which they arise, imposed by arbitrary human enactment, and often unwillingly obeyed. He held that there is an element of right common to the laws of all countries and constituting their essential basis. **He held also that the good and wise of all countries are naturally akin and should regard one another as citizens of a single state. This idea was subsequently developed by the Cynic and still more by the Stoic schools, passing from the latter to the jurists, in whose hands it became the great instrument for converting Roman law into a legislation for a people.**

https://en.wikipedia.org/wiki/Sophistic_works_of_Antiphon#Antiphon_the_Sophist

A treatise known as *On Truth*, of which only fragments survive, is attributed to Antiphon the Sophist. It is of great value to political theory, as it appears to be a precursor to natural rights theory. The views expressed in it suggest its author could not be the same person as Antiphon of Rhamnus, since it was interpreted as affirming strong egalitarian and libertarian principles appropriate to a democracy – but antithetical to the oligarchical views of one who was instrumental in the anti-democratic coup of 411 like Antiphon of Rhamnus.[6]
...

On Truth juxtaposes the repressive nature of convention and law (νόμος) with "nature" (φύσις), especially human nature. Nature is envisaged as requiring spontaneity and freedom, in contrast to the often gratuitous restrictions imposed by institutions:

> **Most of the things which are legally just are [none the less] ... inimical to nature.** By law it has been laid down for the eyes what they should see and what they should not see; for the ears what they should hear and they should not hear; for the tongue what it should speak, and what it should not speak; for the hands what they should do and what they should not do ... and for the mind what it should desire, and what it should not desire.[8]

https://www.iep.utm.edu/sophists/#SH2c

The biographical details surrounding Antiphon the sophist (c. 470-411 B.C.) are unclear – one unresolved issue is whether he should be identified with Antiphon of Rhamnus (a statesman and teacher of rhetoric who was a member of the oligarchy which held power in Athens briefly in 411 B.C.E.). However, since the publication of fragments from his *On Truth* in the early twentieth century he has been regarded as a major representative of the sophistic movement.

***On Truth*, which features a range of positions and counterpositions on the relationship between nature and convention (see section 3a below), is sometimes considered an important text in the history of political thought because of its alleged advocacy of egalitarianism:**

> Those born of illustrious fathers we respect and honour, whereas those who come from an undistinguished house we neither respect nor honour. In this we behave like barbarians towards one another. **For by nature we all equally, both barbarians and Greeks, have an entirely similar origin:** for it is fitting to fulfil the natural satisfactions which are necessary to all men: all have the ability to fulfil these in the same way, and in all this none of us is different either as barbarian or as Greek; for we all breathe into the air with mouth and nostrils and we all eat with the hands (quoted in Untersteiner, 1954).

Whether this statement should be taken as expressing the actual views of Antiphon, or rather as part of an antilogical presentation of opposing views on justice remains an open question, as does whether such a position rules out the identification of Antiphon the sophist with the oligarchical Antiphon of Rhamnus.

https://books.google.fi/books?id=GlfUVeQHLFUC&lpg=PP1&hl=fi&pg=PA110#v=onepage&q&f=false

The views put forward in the papyrus fragments of the *Truth* are indeed radical, but not necessarily to be associated with ultrademocratic opinions any more than with the critics of Athenian democratic society in the late fifth century. In any case Antiphon would probably have regarded himself, not as an antidemocrat, but as a reformer of democracy. If the critical attitude to contemporary views of *dikaion*, "justice," in the same fragments seem contrary to the extremely conventional views of law expessed in the speeches, **there is no reason to think that the composer of a speech for a client to deliver before an Athenian jury would feel it necessary or desirable to credit his client with anything more than the most conventional attitude to law and religion, whether or not he held such an attitude himself.** Nor are the opinions of the *Concord* on education, psychology, and sociology really at variance with the criticisms of the *Truth*. Much has been made of the so-called inconsistencies between the *Truth* and the speechs on the one hand and the *Concord* on the other,1 but there is nothing which rules out a single author.

Antiphon, put together again, is in himself a striking figure, **a man whose talents might well have been, as Thucydides says they were, both admired and feared by his contemporaries.** He illustrates the wide range of indigenous intellectual activity at Athens before and at the outset of the Peloponnesian War, and more than any other person enables its map to be drawn. He also offers a striking contrast and comparison with Socrates, with whom he shared that intellectual climate, as he shared the fate of trial and death at the hands of an Athenian jury.

https://books.google.fi/books?id=tAeFipOVx4MC&lpg=PA16&hl=fi&pg=PA17#v=onepage&q&f=false

Second, **the opposition between public assent to laws but private freedom from restraint can be paralleled in the work of the contemporary sophist Antiphon, who stated that justice would be most advantageous to a man if "he were to <u>regard the laws as great in the presence of witnesses, but nature as great when deprived of witnesses</u>"** (F 44(a), I, 13-23 Pendrick).

https://books.google.fi/books?id=as_OTst8jvoC&lpg=PP1&hl=fi&pg=PA29#v=onepage&q&f=false

Anytus has made two related claims about the teaching of virtue: First, he rejects the idea that the sophists are capable of teaching virtue to anyone, and he condemns all those cities who "allow them [the

sophists] to enter and do not drive them out, whether it is a foreigner (*xenos*) or a local (*astos*) who tries to act in this way."43 Anytus may have had the sort of sophist in mind who appears in the almost exactly contemporary *Dissoi Logoi*, a sophistic treatise written about 400 BCE in the Doric dialect. Under the lemma "Concerning Whether Wisdom and Virtue are Teachable," the anonymous author sets out to demonstrate that virtue can be learned. Against those who argue that we are born with innate knowledge of things, the author uses the example of language:

> If someone is not persuaded that we learn our words but thinks that we are born knowing them, let him form a judgment from what follows: **if someone should send a child away to the Persians as soon as he was born and bring him up there, hearing nothing of the Greek tongue, he would speak Persian. And if one were to bring a Persian child here, he would speak Greek.** We learn our words in this fashion and we do not know who our teachers are.44

The idea that social practices (such as virtue and language) are a matter of convention and not somehow innate defined much sophistic thought. Similarly, in another section of the *Dissoi Logoi*, "Concerning Seemly and Disgraceful," we read that "what is noble" is not an absolute standard but rather dependent upon local values. While the Spartans consider it seemly for young girls to go about with bare arms and no tunics, to the Ionians this is a disgraceful practice; the Spartans think it foolish for children to learn to read and play music, while the Ionians value such training for the young. The Thracians tattoo their young girls, while others use the tattoo to stigmatize criminals. In a passage clearly cribbed from Herodotus, the *Dissoi Logoi* points out that the custom of the Massagetae of eating their dead is abhorrent to the Greeks**. In other words, whereas cultural relativism was a central tenet of sophistic teaching, Platonic ontology demands that the philosopher search for absolutes. As Socrates demonstrates at length in the *Gorgias*, the sophist is incapable of teaching virtue since he has no knowledge of its essence.** The claims of the sophists to be able to teach virtue depend upon their conviction that *aretê* is both learned and culturally contingent. On the falsity of the sophists' pedagogical claims, Socrates and Anytus are on the same page, even if Anytus failed to understand Socrates' antipathy toward the sophists.

> (1) Twofold arguments concerning the good and the bad are put forward in Greece by those who philosophize. **Some say that the good is one thing and the bad another, but others say that they are the same, and that a thing might be good for some persons but bad for others, ot at one time good and at another time bad for the same person.** (2) I myself side with those who hold the latter opinion, and I shall examine it, using as an example human life and its concern for food, drink, and sexual pleasures: these things are bad for a man if he is sick but good if he is healthy and needs them.

https://books.google.fi/books?id=INcgAwAAQBAJ&lpg=PP1&pg=PA137#v=onepage&q&f=false

The rhetorician can manipulate conventional appearances for his own sake or that of his clients. Finding himself in a given city, he can adapt to the coloration of the local circumstances like a chameleon. **He can defend that city's justice in his speeches or undermine it, depending on the client's needs. Protagoras argues that any given city's conventions about virtue can be "picked up" by an exposure to the locality, like children pick up language, denying Socrates' attempt to connect a knowledge of virtue to a rigorous and universally valid standard of reason** of the kind prefigured by the arts, one that does not change from place to place.27 In a similar manner, when Gorgias says in reply to Socrates' question about whether he teaches justice that he can indeed give a plausible defense of however the city he happens to be in understands its morality (460). **He does not fathom Socrates' implication that there could be a universally valid knowledge of *politike* that, like geometry or astronomy, would transcend mere local custom and prejudice,** showing genuine perplexity for the first time when Socrates introduces this notion to Polus (463). **For Gorgias, as a student of the primordialist ontology, local custom and prejudice is all justice could ever mean as a phenomenon.**

https://en.wikisource.org/wiki/1911_Encyclop%C3%A6dia_Britannica/Alcidamas

ALCIDAMAS, of Elaea, in Aeolis, Greek sophist and rhetorician, flourished in the 4th century B.C. **He was the pupil and successor of Gorgias** and taught at Athens at the same time as Isocrates, whose rival and opponent he was.
...

Of other works only fragments and the titles have survived: **Μεσσηνιακὸς, advocating the freedom of the Messenians and containing the sentiment that "all are by nature free";** a *Eulogy of Death*, in consideration of the wide extent of human sufferings; a Τέχνη or instruction-book in the art of rhetoric; and a Φυσικὸς λόγος.

http://www.perseus.tufts.edu/hopper/text?doc=Perseus%3Atext%3A1999.01.0160%3Abook%3D9%3Achapter%3D15%3Asection%3D6

[6] On the statue of Epaminondas is an inscription in elegiac verse relating among other things that he founded Messene, and that through him the Greeks won freedom. The elegiac verses are these: —

> "By my counsels was Sparta shorn of her glory,
> And holy Messene received at last her children.
> By the arms of Thebe was Megalopolis encircled with walls,
> And all Greece won independence and freedom."

https://books.google.fi/books?id=OirJPP6mOkEC&lpg=PP1&hl=fi&pg=PA60#v=onepage&q&f=false

Both Plato and Aristotle, as we shall see, refer to contemporary controversy about the rights and wrongs of slavery and the proper treatment of slaves. **In our extant evidence, however, only one lone voice is raised at this time in strong dissent from the general assumption that it is normal and right for some men to be slaves. This is a sentence from a speech by the Sophist Alcidamas, delivered after the Messenians in 369 B.C. had been freed from their subjection as helots to Sparta – an event which must have roused wide discussion, at any rate of the enslavement of Greeks by Greeks.** Championing the liberation in opposition to Isocrates, Alcidamas made one of the most categorical statements against slavery in antiquity: **'God has left all men free; nature has made no man a slave.'**7 Some lines preserved from a comedy by Anaxandrides, perhaps first performed in 352 B.C., express once more the thought that slavery is a matter of chance rather than nature; **but it seems likely that the author's main point is to satirise the ease with which slaves can become citizens by admission to the Attic deme of Sunium:**

> Slaves have no city anywhere, my friend.
> Chance gives men first this status, and then that.
> Many who have no liberty today
> Tomorrow become Sunians; the next,
> They're in the market-place. So Fortune shifts
> The helm for each.8

https://penelope.uchicago.edu/Thayer/E/Roman/Texts/Athenaeus/6E*.html#ref7

And Anaxandrides in *Anchises*[10] says; 'Slaves, my good sir, have no citizenship anywhere, yet Fortune shifts their bodies in all kinds of ways. **To-day there are many men who are not free, but to-morrow they will be registered at Sunium,**[11] **and on the day after they have full admittance to the market-place.** A divinity guides each man's helm.'

[11] The most remote deme in Attica; a preliminary step to full citizenship.

http://attalus.org/translate/valerius8a.html#c7

[7e.6] How great should we think was the zeal of Anaxagoras for learning? **When he returned home after a long journey, and saw that his estate lay untilled and deserted, he said: "I could not have been safe, unless these things were ruined." ['non essem' inquit 'ego saluus, nisi istae perissent']** That was a fitting expression of widely-sought wisdom. For if he had laboured more in the cultivation of his lands than of his mind, he would have remained master of his property at home, but would not have returned to his home as the great Anaxagoras.

https://en.wikisource.org/wiki/Lives_of_the_Eminent_Philosophers/Book_II#Anaxagoras

6. Anaxagoras,[8] the son of Hegesibulus or Eubulus, was a native of Clazomenae. He was a pupil of Anaximenes, and was the first who set mind above matter, for at the beginning of his treatise, which is composed in attractive and dignified language, he says, "All things were together; then came Mind and set them in order."
…

He was eminent for wealth and noble birth, and furthermore for magnanimity, in that he gave up his patrimony to his relations. 7. **For, when they accused him of neglecting it, he replied, "Why then do you not look after it?" And at last he went into retirement and engaged in physical investigation without troubling himself about public affairs. When some one inquired, "Have you no concern in your native land?" "Gently," he replied, "I am greatly concerned with my fatherland," and pointed to the sky.**
…

10. There is a story that he predicted the fall of the meteoric stone at Aegospotami, which he said would fall from the sun.[13] **Hence Euripides, who was his pupil, in the *Phathon* calls the sun itself a "golden clod."**[14] Furthermore, when he went to Olympia, he sat down wrapped in a sheep-skin cloak as if it were going to rain; and the rain came.

http://attalus.org/translate/valerius3b.html#c4

[4e.2] **What father Euripides had, or what mother Demosthenes had, was unknown even to the age in which they lived in. Yet the most certain opinion of the learned is, that the mother of the one sold vegetables, and the father of the other dealt in knives.** However, what can be more famous than the tragedies of the one, and the orations of the other?
...

[7e.1] Nor was Euripides to be accounted insolent at Athens, who, when the people required him to remove a sentence from a certain tragedy, **appeared upon the stage, and told them that he composed plays to teach them, not by them to be taught.** Such confidence is certainly to be praised, which weighing a man's worth, arrogates so much to itself, as to keep distant from contempt and insolence.

Thus his answer can be approved, which he gave to Alcestis the tragic poet, who taunted him, because he had not been able to compose more than three verses in the last three days, and that with a great deal of labour too, while the other boasted that he had easily written a hundred lines. **"The reason is," said Euripides, "because yours are only to last three days, and mine are to last for eternity."** For the fluent writing of the one, perished within the first bounds of memory; but the polished and constant style of the other will be carried through all ages upon the wings of time.

https://www.cambridge.org/core/books/abs/cambridge-history-of-classical-literature/sophists-and-physicians-of-the-greek-enlightenment/1838A61B516EAC84DA5BAD3C5BD90747#

Sophist basically means wise man and is the word used by Herodotus of Solon and Pythagoras, **but when Hermes hurls it at Prometheus it has already an ironic force, and the presence of sophistic concepts and catchwords in *Prometheus vinctus* suggests that the movement was already well under way at least by the early 450s.**

http://www.perseus.tufts.edu/hopper/text?doc=Perseus%3Atext%3A2008.01.0404%3Abook%3D1%3Achapter%3D7

Euripides the tragedian durst not openly declare his sentiment; the court of Areopagus terrified him. Yet he sufficiently manifested his thoughts by this method. He presented in his tragedy *Sisyphus*, the first and great patron of this opinion, and introduced himself as one agreeing with him:

> Disorder in those days did domineer,
> And brutal power kept the world in fear.

Afterwards by the sanction of laws wickedness was suppressed; but by reason that laws could prohibit only public villanies, yet could not hinder many persons from acting secret impieties, some wise persons gave this advice, that we ought to blind truth with lying disguises, and to persuade men that there is a God:

> There's an eternal God does hear and see
> And understand every impiety;
> Though it in dark recess or thought committed be.

But this poetical fable ought to be rejected, he thought, together with Callimachus, who thus saith:

> If you believe a God, it must be meant
> That you conceive this God omnipotent.

https://web.archive.org/web/20120207131036/http://www.wku.edu/~jan.garrett/lipsius1.htm

From heaven, Lipsius, from heaven are all these miseries sent. Therefore Euripides said it well and wisely, that all calamities are from God. [**Euripides' point may have been that any "god" that is responsible for evil is no god.** Lipsius apparently paraphrases Euripides from memory and gives us no reference to check.--JG]

https://www.gutenberg.org/cache/epub/55901/pg55901-images.html#link2H_4_0014

Æschylus was, head and heart, a lyric poet. **In his time, the Greeks had far more intercourse with the East than in the days of Homer; and they had not yet acquired that immense superiority in war, in science, and in the arts, which, in the following generation, led them to treat the Asiatics with contempt.** From the narrative of Herodotus it should seem that they still looked up, with the veneration of disciples, to Egypt and Assyria. At this period, accordingly, it was natural that the literature of Greece should be tinctured with the Oriental style. **And that style, we think, is discernible in the works of Pindar and Æschylus. The latter often reminds us of the Hebrew writers. The book of Job, indeed, in conduct and diction, bears a considerable resemblance to some of his dramas.** Considered as plays, his works are absurd; considered as choruses, they are above all praise. If, for instance, we examine the address of Clytemnestra to Agamemnon on his return, or the description of the seven Argive chiefs, by the principles of dramatic writing, we shall instantly condemn them as monstrous. But if we forget the characters, and think only of the poetry, we shall admit that it has never been surpassed in energy and magnificence. **Sophocles made the Greek drama as dramatic as was consistent with its original form. His portraits of men have a sort of similarity; but it is the similarity not of a painting, but of a bas-relief. It suggests a resemblance; but it does not produce an illusion. Euripides attempted to carry the reform further. But it was a task far beyond his powers, perhaps beyond any powers. Instead of correcting what was bad, he destroyed what was excellent. He substituted crutches for stilts, bad sermons for good odes.**

Milton, it is well known, admired Euripides highly, much more highly than, in our opinion, Euripides deserved. Indeed the caresses which this partiality leads our countryman to bestow on "sad Electra's poet," sometimes remind us of the beautiful Queen of Fairy-land kissing the long ears of Bottom. At all events, there can be no doubt that this veneration for the Athenian, whether just or not, was injurious to the Samson Agonistes. **Had Milton taken Æschylus for his model, he would have given himself up to the lyric inspiration, and poured out profusely all the treasures of his mind, without bestowing a thought on those dramatic proprieties which the nature of the work rendered it impossible to preserve.** In the attempt to reconcile things in their own nature inconsistent, he has failed, as every one else must have failed. We cannot identify ourselves with the characters, as in a good play. We cannot identify ourselves with the poet, as in a good ode. The conflicting ingredients, like an acid and an alkali mixed, neutralise each other. We are by no means insensible to the merits of this celebrated piece, to the severe dignity of the style, the graceful and pathetic solemnity of the opening speech, or the wild and barbaric melody which gives so striking an effect to the choral passages. **But we think it, we confess, the least successful effort of the genius of Milton.**

The Comus is framed on the model of the Italian Masque, as the Samson is framed on the model of the Greek Tragedy. It is certainly the noblest performance of the kind which exists in any language. It is as far superior to the Faithful Shepherdess, as the Faithful Shepherdess is to the Aminta, or the Aminta to the Pastor Fido. It was well for Milton that he had here no Euripides to mislead him.
...

Perhaps the gods and dæmons of Æschylus may best bear a comparison with the angels and devils of Milton. The style of the Athenian had, as we have remarked, something of the Oriental character; and the same peculiarity may be traced in his mythology. It has nothing of the amenity and elegance which we generally find in the superstitions of Greece. All is rugged, barbaric, and colossal. The legends of Æschylus seem to harmonize less with the fragrant groves and graceful porticoes in

which his countrymen paid their vows to the God of Light and Goddess of Desire, than with those huge and grotesque labyrinths of eternal granite in which Egypt enshrined her mystic Osiris, or in which Hindostan still bows down to her seven-headed idols. **His favourite gods are those of the elder generation, the sons of heaven and earth, compared with whom Jupiter himself was a stripling and an upstart,** the gigantic Titans, and the inexorable Furies. Foremost among his creations of this class stands Prometheus, half fiend, half redeemer, the friend of man, the sullen and implacable enemy of heaven.

https://archive.org/details/in.ernet.dli.2015.201719/page/n425/mode/2up?view=theater

Nevertheless tragedy also promoted, only with less abruptness and less vulgarity, the anti-national and Hellenising spirit; and in this point of view it was a circumstance of the most decisive importance, that the Greek tragic stage of this period was chiefly under the sway of Euripides (274-348/480-406).
...

But, when Euripides undertook to present man as he is, the advance was logical and in a certain sense historical rather than poetical. **He was able to destroy the ancient tragedy, but not to create the modern. Everywhere he halted half-way.**
...

While the reverential piety of the older tragedians sheds over their pieces as it were a reflected radiance of heaven; while the limitation of the narrow horizon of the older Hellenes exercises its satisfying power even over the hearer; the world of Euripides appears in the pale glimmer of speculation as much denuded of gods as it is spiritualised, and gloomy passions shoot like lightnings athwart the gray clouds.
...

All the effect in his case lies in the details; and with great art certainly every effort has in this respect been made to conceal the irreparable want of poetic wholeness. Euripides is a master in what are called effects; these, as a rule, have a sensuously-sentimental colouring, and often moreover stimulate the sensuous impression by a special high seasoning, such as the interweaving of subjects relating to love with murder or incest. The delineations of Polyxena willing to die and of Phaedra pining away under the grief of secret love, above all the splendid picture of the mystic ecstasies of the Bacchae, are of the greatest beauty in their kind; **but they are neither artistically nor morally pure, and the reproach of Aristophanes, that the poet was unable to paint a Penelope, was thoroughly well founded.**
...

But, above all, poetic effect is replaced in the tragedies of Euripides by moral or political purpose. Without strictly or directly entering on the questions of the day, and having in view throughout social rather than political questions, **Euripides in the legitimate issues of his principles coincided with the contemporary political and philosophical radicalism, and was the first and chief apostle of that new cosmopolitan humanity which broke up the old Attic national life.** This was the ground at once of that opposition which the ungodly and un-Attic poet encountered among his contemporaries, and of that marvellous enthusiasm, with which the younger generation and foreigners devoted themselves to the poet of emotion and of love, of apophthegm and of tendency, of philosophy and of humanity. **Greek tragedy in the hands of Euripides stepped beyond its proper sphere and consequently broke down; but the success of the cosmopolitan poet was only promoted by this, since at the same time the nation also stepped beyond its sphere and broke down likewise. The criticism of Aristophanes probably hit the truth exactly both in a moral and in a poetical point of view; but poetry influences the course of history not in proportion to its absolute value, but in proportion as it is able to forecast the spirit of the age, and in this respect Euripides was unsurpassed.** And thus it happened, that Alexander read him diligently; that Aristotle developed the idea of the tragic poet with special reference to him; that the latest poetic and plastic art in Attica as it were originated from him **(for the new Attic comedy did nothing but transfer Euripides into a comic form, and the school of painters which we meet with in the designs of the later vases derived its subjects no longer from the old epics, but from the Euripidean tragedy);** and lastly that, **the more the old Hellas gave place to the new Hellenism, the more the fame and influence of the poet increased,** and Greek life abroad, in Egypt as well as in Rome, was directly or indirectly moulded in the main by Euripides.

https://archive.org/details/in.ernet.dli.2015.201719/page/n451/mode/2up?view=theater

From this point of view, we shall form a juster judgment of the Hellenistic literature, and particularly of the poetry, of the Romans of this period. **If it tended to transplant the radicalism of Euripides to Rome, to resolve the gods either into deceased men or into mental conceptions, to place a denationalized Latium by the side of a denationalized Hellas, and to reduce all purely and distinctly developed national peculiarities to the problematic notion of general civilization,**

every one is at liberty to find this tendency pleasing or disagreeable, but none can doubt its historical necessity. From this point of view the very defectiveness of the Roman poetry, which cannot be denied, may be explained and so may in some degree be justified. It is no doubt pervaded by a disproportion between the trivial and often bungled contents and the comparatively finished form; but the real significance of this poetry lay precisely in its formal features, especially those of language and metre. It was not seemly that poetry in Rome was principally in the hands of schoolmasters and foreigners and was chiefly translation or imitation; but, **if the primary object of poetry was simply to form a bridge from Latium to Hellas, Livius and Ennius had certainly a vocation to the poetical pontificate in Rome, and a translated literature was the simplest means to the end.** It was still less seemly that Roman poetry preferred to lay its hands on the most worn-out and trivial originals; but in this view it was appropriate. **No one will desire to place the poetry of Euripides on a level with that of Homer; but, historically viewed, Euripides and Menander were quite as much the oracles of cosmopolitan Hellenism as the Iliad and Odyssey were the oracles of national Hellenism,** and in so far the representatives of the new school had good reason for introducing their audience especially to this cycle of literature. The instinctive consciousness also of their limited poetical powers may partly have induced the Roman composers to keep mainly by Euripides and Menander and to leave Sophocles and even Aristophanes untouched; for, **while poetry is essentially national and difficult to transplant, intellect and wit, on which the poetry of Euripides as well as of Menander is based, are in their very nature cosmopolitan.**

https://archive.org/details/in.ernet.dli.2015.156971/page/n159/mode/2up?view=theater

Tragedy flourished for just so long as it was inspired by the spirit of the Folk, and as this spirit was a veritably popular, *i.e.* a *communal* one. When the national brotherhood of the Folk was shivered into fragments, when the common bond of its Religion and primeval Customs was pierced and severed by the sophist needles of the egoistic spirit of Athenian self-dissection,—then the Folk's art-work also ceased: then did the professors and the doctors of the literary guilds take heritage of the ruins of the fallen edifice, and delved among its beams and stones; to pry, to ponder, and to re-arrange its members.

https://research.library.fordham.edu/cgi/viewcontent.cgi?article=1001&context=phil_babich

Now “Dionysus speaks the language of Apollo; and Apollo, finally, the language of Dionysus“ (21, 130/140). In short, after these “glorious experiences” (22, 132/142) of viewing tragedy, anyone who “does not feel that he is above the pathological-moral process, should despair of his aesthetic nature” (22, 133/142). **Aristotle and Lessing, naturally, did not understand tragedy: Mr. N does.**
…

In the end, Euripides himself turns out to be a mask (12, 82/83). Through him the new god, Socrates, speaks. In this old, corny fairy tale of the relationship between those two men, Mr. N thinks he has found the solution for the many mysteries posed by Euripides’s poetry, and perhaps even more so, by his character. **Mr. N’s actual reason for associating those two men is the burning hatred he feels toward both of them.** The means for venting this hatred do not embarrass him; he is happy with any means. For the most part, the poet Euripides—**as dear and familiar to antiquity as was Homer**—has had to forfeit his fame. This is partly justified, and partly because his flaws are more obvious to us than his positive qualities. Many a harsh judgment has been passed upon him (particularly following A.W. Schlegel). **But how can Mr. N have the nerve to claim that Euripides “has been … changed into a dragon by the art critics of all ages?”** (12, 82/83) **Are Aristotle and Quintilian, Lessing, Goethe, and Tieck no critics of art?**
…

But let us return to the mask of Socrates, to this association which rests on only a few comic verses which prove nothing,39 **a tradition consisting only of anecdotes, which, although only of value to the literary historians of gossip, obstruct the entire tradition of personal histories of antiquity.**40 **Then, he invents some silly saying of the oracle.**41 Now, it is not surprising that, to my knowledge, nobody has yet taken the trouble to fully refute this association. Joining the sophistic tragedian with the great sophist seemed so natural.42 It suggested itself to future generations to relate the two most popular figures of the time, both from the same city, on a personal level—especially because the comic tradition seemed to confirm this connection. But it is not too difficult to see through this mistake. **Socrates was fourteen years old when Euripides’s first play was performed.** The remains of the *Peliades* demonstrate that his style was at least as close to the style of *Medea* as *Medea*’s was to the style of the *Phoenician Women*. **The importance of Socrates cannot be proven for the time before Pericles’s death.**43 Euripides’s most important and deepest creations, such as *Medea*, *Hippolytus*, *Aiolos*, and *Bellerophontes*, *Ion*, and *Telephus* all predate this. It can be shown, then, that the declining care in the construction of the verse form, which has long been known, extended to the entire structure and even to the task in general. **Furthermore, if there were any truth to this relationship, especially to the oracle, the Socratics should have known about it. But both Plato and Xenophon nearly ignore Euripides, or else pay him no special note.** The melancholic and resigned poet, the willing student of the Sophists, could not arouse any sympathy in [Plato], the Homer

of philosophy who happened to be their most bitter critic.44 The main point, though, is that we should be able to trace Socratic influences in Euripides' worldview (as can be shown with the teachings of Anaxagoras and Protagoras or with reminiscences of what he read—he was, after all, the first book collector).45 But this is not the case. Mr. N of course boldly claims that Euripides admits to the Socratic principle that virtue is knowledge. But Mr. N does not know Euripides. For even if Euripides at one point, like Protagoras, puts forward the tenet of the teachability of virtue,46 the frequency of omissions in this regard guarantees that he assumed that every man brings into this world an unchangeable, natural predisposition47 (a view also more worthy of the great tragic poet). Tragic actions develop necessarily out of these collisions between—one might say—the personal predestinations of the characters. This view also renders it self-evident why man's striving and wrongdoing, erring and atoning, seemed hopeless and without consolation to Euripides. **And, as far as the Socratic tenet goes, Euripides expresses the exact opposite idea. After deep brooding, Phaedra claims that the misery of this world results from knowing what is right but not doing it,**48 **which is precisely the Christian view that "the mind is willing but the flesh weak."** One might reasonably assert that it is exactly this disrupted harmony between wanting and doing which he brought to the stage through his characters, his all-too-truthful characters. Try as they might, in a wild rage of passion, of love as well as of hate, to break all boundaries, in the end they learn the vanity of their striving and because of it, fade away; **they fight the same hopeless, destructive battle of the individual against the basic laws of nature and tradition, in particular regarding the relationship between the sexes.** Yes, anyone who wishes to go further could even feel tempted to recognize in this disharmony between wanting and doing the actual core, also the worm in the core, of the entire poetical nature of Euripides himself. Everything the poet wanted and knew contrasted with and was overshadowed by Aeschylean glory, by the eternally cheerful amiability of Sophocles, in harmony with himself and the whole world. **But it is not my goal to explain Euripides; I just want to show that Mr. N did not understand him and that he did not make any effort to do so either.**
…

Euripides's basic principle is allegedly that "to be beautiful everything must be intelligible." (12, 83/85) But concluding from what I just said, **he often enough acknowledged bad deeds which Socrates, as we know, denied.**50 Allegedly, it was Euripides who killed myth while actually, like no other, it was he who defined the form of myth for generations to come. **It was through him that some of the most familiar and most moving myths became part of literature and of people's general consciousness.**51
…

Mr. N's way of dealing with Sophocles is too amusing. He does not dare to condemn him but he also does not know how to hide how little he likes him. He admits that Sophocles took the first step to destroy the chorus (BT 14). Apart from this, the already well known art of silence has to suffice,52 e.g., when Euripides's characterization of Odysseus is fiercely rebuked, the even less favorable portrait in *Philoctetes* is ignored.

https://grbs.library.duke.edu/article/viewFile/4871/5431

Thanks to more than a hundred years of concentrated effort on the part of editors, literary critics, translators, and stage producers, the work of Euripides is nowadays perhaps more easily accessible and more widely appreciated than that of either Aeschylus or Sophocles. **The modern rediscovery and revival of Euripides that began during the last quarter of the nineteenth century achieved full momentum only after the traumatic experience of World War I.** Since then the vindication of Euripides has been so successful, and his place as an ancient playwright who appeals more directly to modern sensibilities than his predecessors has been so universally accepted, that it is easy to lose sight of an earlier period, ca 1800 to 1880, when his plays were distinctly less popular and when critical appreciation of them was on the whole inadequate.
…

The negative *Euripidesbild* created by Aristophanes and reinforced by the younger Schlegel pointed the way for the more painstaking and damaging criticism of the poet by August Wilhelm **in his celebrated Vienna lectures of 1808 (published in 1809), which inaugurated, in Ernst Behler's apt phrase, the nineteenth century's *damnatio* of Euripides.**17 The verdict pronounced in these lectures prejudiced the entire world of European letters against the poet. Nietzsche was no exception.
…

When [Nietzsche] entered the elite boarding school of Schulpforte in the fall of 1858, the modern depreciation of Euripides that began in Germany with Johann Gottfried Herder (1744-1803) and culminated in the Schlegels had attained the status of absolute academic orthodoxy. Two generations of schoolmasters and university professors had managed to deprive August Wilhelm's verdict of its finer, more conciliatory touches and to reduce it to a crude catalogue of the poet's worst sins against dramatic convention and good taste. The list is long and tedious, and it mixes half-truths with truisms. It blames Euripides for his realism, his rationalism, and his love of rhetoric; for

tendentiousness, sentimentality, theatricality, and indifference to dramatic unity; for irreligiosity and immorality; for his distance from Aeschylus and Sophocles and his affinity with New Comedy.
…

The proscription of Euripides was by no means confined to Germany. The prevailing attitude in England in the late 1870's is vividly illustrated in an episode recalled by Jane Harrison, then an avant-garde student at Newnham Hall, Cambridge. There she reluctantly met William Ewart Gladstone, once and future Prime Minister and one of the most prolific Homerists of the Victorian age, and provoked him with her progressive views on Greek literature: **"He sat down and asked me who was my favourite Greek author. Tact counselled Homer, but I was perverse and not quite truthful, so I said 'Euripides'. Aeschylus would have been creditable, Sophocles respectable, but the sceptic Euripides! It was too much, and with a few words of warning he withdrew."**23

https://archive.org/details/in.ernet.dli.2015.55010/page/n455/mode/2up?view=theater

But it would be foolish to judge Euripides chiefly as a playwright; his ruling interest is not dramatic technique but philosophical inquiry and political reform. **He is the son of the Sophists, the poet of the Enlightenment, the representative of the radical younger generation that laughed at the old myths, flirted with socialism, and called for a new social order in which there should be less exploitation of man by man, of women by men, and of all by the state.** It is for these rebel souls that Euripides writes; for them he adds his skeptical innuendoes, and inserts a thousand heresies between the lines of supposedly religious plays. **He covers his tracks with pious passages and patriotic odes; he presents a sacred myth so literally that its absurdity is manifest and yet his orthodoxy cannot be impeached; he gives the body of his plays over to doubt, but surrenders the first and last words to the gods.** His subtlety and brilliance, like those of the French Encyclopedists, is due in some part to the compulsion laid upon him to speak his mind while saving his skin.
…

Almost alone among the great writers of his time he dares to attack slavery; during the Peloponnesian War it became obvious that most slaves were such not by nature but by the accidents of life. **He does not recognize any natural aristocracy; environment rather than heredity makes the man. The slaves in his dramas play important parts, and often speak his finest lines.**
…

He does not clearly tell us what his belief is, perhaps because he feels that the evidence does not lend itself to clear belief; **but his most characteristic expressions are those of the vague pantheism that was now replacing polytheism among the educated Greeks.**
…

After his death he achieved popularity even in Athens. **The ideas for which he had fought became the dominant conceptions of the following centuries, and the Hellenistic age looked back to him and to Socrates as the greatest intellectual stimuli that Greece had ever known.** He had dealt with living problems rather than "dead tales of minstrelsy," and it took the ancient world a long time to forget him. **The plays of his predecessors slipped into oblivion while his own were repeated in every year, and wherever the Greek world had a stage.** When, in the collapse of that expedition to Syracuse (415) whose failure had been forecast in *The Trojan Women,* the captive Athenians faced a living death as chained slaves in the quarries of Sicily, those were given their freedom (Plutarch tells us) who could recite passages from the plays of Euripides.[123] The New Comedy molded itself upon his dramas, and grew out of them; one of its leaders, Philemon, said, "If I were sure that the dead have consciousness, I would hang myself to see Euripides."[124] **The revival of skepticism, liberalism, and humanitarianism in the eighteenth and nineteenth centuries made Euripides almost a contemporary figure, more modern than Shakespeare.**

There is one thing in slavery that brings shame, [855] **the name; in all other respects a good slave is no worse than the free-born.**

https://www.independent.org/pdf/tir/tir_25_3_02_baumgarth.pdf

Pheidippides gets his father to admit that he beat his son during his childhood for his son's own good: he was wiser than the child. Currently, however, Pheidippides is wiser than his dad, whose elderly status constitutes a second childhood (1414-418). **Such wisdom gives the son the natural right to punish the father for his own good, to correct his ignorance.**
…

Call to mind, again, what event initiated Pheidippides's beating of his father: **it was Pheidippides's attempt to prove the superiority of Euripides over Aeschylus by way of citing a passage from the former poet that involved incest between a brother and his sister.** Given that context,

Strepsiades's thought moves in an alarming direction from the justification of mother beating: **the barnyard birds not only assault their parents but also mate with them and with their siblings.**

http://www.perseus.tufts.edu/hopper/text?doc=Perseus%3Atext%3A1999.01.0241%3Acard%3D1399

Phid. **Was it not then a man like you and me, who first proposed this law, and by speaking persuaded the ancients? Why then is it less lawful for me also in turn to propose henceforth a new law for the sons, that they should beat their fathers in turn?** But as many blows as we received before the law was made, we remit: and we concede to them our having been thrashed without return. **Observe the cocks and these other animals, how they punish their fathers; and yet, in what do they differ from us, except that they do not write decrees?**
…

Strep. Since I am justly entitled to chastise you; and you to chastise your son, if you should have one.

Phid. But if I should not have one, I shall have wept for nothing, and you will die laughing at me.

https://books.google.fi/books?id=INcgAwAAQBAJ&lpg=PP1&pg=PA135#v=onepage&q&f=false

Although a "small" part of art is connected to nature, according to the Athenian Stranger's rehearsal of the ontology of the motion-men, the realm of convention including justice, piety, and moderation has no basis in nature as an underlying matrix of origination at all. Nature as origination does well up *into* the realm of *nomos*, however. Each city evolves from its unique and unfathomable origins in local "motions" to embody its own special "way." **The realm of convention is "authoritative" (*kurios*) for as long as it lasts. In other words, although motions issue out of chance, whatever settled form they eventually achieve must exist according to necessity, because it cannot be other than it is until the temporary concatenation of motions making it up dissolve back into the flux of becoming.**23 The city's way is authoritative while it lasts, because no conventional view of justice can be transcended in the direction of the eternal and universal truth, inasmuch as justice possesses a wholly phenomenal and local existence confined to the realm of temporal mutability. Accordingly, as Socrates has Protagoras put it in the *Theaetetus*, the characterization of a city's way of life including its view of morality is not "true" – because the truth about nature is that "nothing is" – but an assessment of that way of life can be "correct," inasmuch as it is rooted in that city's unique historical way of life. As as advisor (like Protagoras was to Pericles), the Sophist can help a city better and more clearly pursue is own given way, whatever that has turned out to be.24

> 24. Dodds translates *nomos* as "the conglomerate," a web of interlocking social, religious, legal, and customary prohibitions against vice and impiety. **He also argues that not only those whom we now term the Sophists but the earlier natural philosophers and cosmologists including Heracleitus had been deeply subversive of traditional and conventional morality.** Dodds (1984) pp. 21ff.

Some of the motion-men such as Protagoras tried to defend the realm of convention by arguing that, precisely because its natural underpinnings are in violent strife, we should cling all the more dearly to whatever bulwark of order the city has achieved over time (this is the implication of his myth in the *Protagoras* [320c-323c]). As a fragment attributed to Antiphon put it: "nothing is worse for mankind than anarchy. Hence our forefathers instilled obedience into their children, so that when they grow up they might not be overcome by any great change of fortune (61)." **Others, however, used the primordialist ontology as the basis for a direct assault on all conventional morality in the name of selfish individualism and, taken to its logical extreme, tyranny.** According to the Athenian Stranger, the most consistent implication of the view of nature as motion is indeed the praise of "getting the better" of others as the only truly natural way of life.

https://books.google.fi/books?id=INcgAwAAQBAJ&lpg=PP1&hl=fi&pg=PA373#v=onepage&q&f=false

The Heracleitean belief that permanence was a mere shell or husk temporarily masking a more profound mutability led, in Plato's and Aristotle's judgment, to the belief that the passions are the part of human life corresponding to the great motions that underlie and generate the visible world and that their limitless gratification constitutes the only natural way to live. Not surprisingly, Machiavelli does return in part to this pre-Socratic and Sophistical view. But he does not merely return to it. The pre-Socratics and Sophists had argued that this primordialist ontology rendered pointless any attempt to account for intrinsic ethical or rational distinctions among the visible, completed forms of constitutions. As Thrasymachus puts it in his general definition of government, behind the façade of the various constitutions, the ruling element pursues its own advantage and designates this as just, gulling the ruled into going along with it. **"Justice" is universally "the advantage of the stronger": the specific regime principles themselves are mere accidental local coloration and custom. At bottom, the pre-Socratics and Sophists think, the natural life of "getting the better" can be lived without any instrinsic connection to the kind of constitution. One can get along in a democracy, oligarchy, monarchy, or what have you**

by aping the local customs and taking advantage of others where one can safely get away with it. The only political way of life that is in complete harmony with nature is that of the tyrant, which for Plato and Aristotle amounts to the destruction of all politics as shared rule or as rule with an ethical responsibility toward the souls of the ruled. **As a kind of antipolitics, tyranny is simply the nature of man as it was understood by the Sophists showing itself openly in its pure individuated selfishness.**

It is important to note that the Sophists' indifference to the distinctions among regimes is not Machiavelli's view. **Although he does not account for distinctions among kinds of governments on the same basis as Plato or Aristotle, he is far from regarding those distinctions as unimportant. Whereas the Sophists avoided this type of debate over the classification of regimes on the grounds that they were all merely conventional, and therefore equally arbitrary,** Machiavelli immerses himself in it as fully as Plato, Aristotle, or Polybius. He regards certain kinds of constitutions as being very much preferable to others, **for he does not believe it is possible for human nature to achieve "virtue" in his much modified sense of the term in pure isolation from other people in a political association.** Machiavelli is in this sense very much a "classical" thinker and not at all a "pre-Socratic."
…

I would argue that, as a consequence, **from Machiavelli's viewpoint, Socrates was correct when he argued to Gorgias that, far from being a mere kaleidoscope of arbitrary local conventions and a trick-bag of rhetorical manipulations, *politike* was a genuine science to which rhetoric was merely subordinate (*Gorgias* 463). The residue of this Platonic elevation of the art of ruling to rigorous knowledge lurks in Machiavelli's conversion of statecraft to the effective and methodical employment of the will.** Whereas Plato saw in the claims of *politike* to genuine knowledge an intimation of the objectively enduring cosmic mind that linked the soul to the wider world, Machiavelli converts statesmanship into a rational project for the imposition of order, organization, and control on a refractory nature. Rightly from Machiavelli's perspective, **Plato and Aristotle had argued that the Sophists could not address the sources of disorder in political life because they identified human excellence with isolated self-preservation and pleasure,** abstracting human nature from the whole welter of relations among citizens and between ruler and ruled. Machiavelli would agree with the classics that the pre-Socratics strayed too far from observable political reality, that they set up too simplistic a dichotomy between nature and convention, when in truth – as Socrates tried to convince Callicles – human nature is so constituted as to find its own prospect for satisfaction in and through convention, through cooperation with others; **that indeed the specific *politeia* under which a man lives, or aspires to live, will be mirrored in his very soul** (*Gorgias* 513).
…

There is a return here to one of the crucial arguments with which Socrates sought to persuade Callicles and Glaucon of the inadequacy of the Sophists' account of justice as a compact made by naturally selfish individuals. **Unlike Antiphon and some of the Sophists who, like Hobbes later, believed that all people are motivated by self-preservation, Callicles and Glaucon (like other of the Sophists and their followers) tended to supplement this unedifying version of the social contract by stressing an important exception to it. They focus on the few "real men" (*andres*) who would have never agreed to it in the first place,** preferring always to rule than be ruled and willing to court the consequent dangers (*Gorgias* 483; *Republic* 359a-c). We have observed in earlier chapters that the Sophists were hampered in giving a fully persuasive account of the qualities of soul that would characterize such a person, the natural master who is noble by nature rather than by convention. Because of their dichotomous distinction between human nature as motivated by prepolitical drives for survival, power and pleasure, and convention as uniformly artificial and unconnected with any natural need, the Sophists had little basis on which to account for the observable qualities and psychological subtleties of superior statesmanship in the world around them. **They admired power, but they tended to depict it in crude subpolitical terms: in Callicles' speech, the natural master is rather like a petty thief, a stealer of cattle, except that he carries off his thefts on a grand scale.** Only an understanding of everyday observable politics – its laws, its customs, its education, and the kinds of human character its principle of justice solicits – can explain how this crude Herculean master could evolve into a subtle and sophisticated ruler like Pericles.

By making the city prior to the individual and by arguing that, contrary to the Sophists, we cannot understand the nature of the individual until we understand the soul "writ large" as the city, Socrates can provide this psychological account of leadership in a far more compelling way than can the Sophists. Callicles and Glaucon are both drawn to tyranny, certainly to being the leading statesman. **But they want such political mastery to entail the noble and admirable qualities of a fully developed and civilized character – skill at governing, generosity to friends, a degree of philosophical cultivation, an exposure to the fine arts, cultivated conversation, and the merited admiration of their fellow citizens or subjects for doing large and good things for their country.** This erotic longing to find a naturally satisfying way of life *within* fully evolved conventional political existence, a way of life that unifies and consummates the talents and virtues solicited by conventional political life, is

what Socrates plays upon. He wants to convince them that, instead of seeing convention as an antonym for nature, a realm of primitive passions and conflict standing across a gulf from an evolved city, they should join Socrates in searching for a specific set of conventions that in contrast to defective sets, allows human nature to fulfill itself *within* the *politeia* in a way that it never could in the subpolitical state of nature.

https://archive.org/details/memoirsrecollect01sg/page/76/mode/2up?view=theater

> Such was, however, the blindness of princes and of the great: **they had favored the progress of knowledge, and required a passive obedience, that can only exist in a state of ignorance. They wished to enjoy all the luxeries provided for them by civilization and arts, and would not suffer learned men, artists, or enlightened plebeians, to emerge from a condition bordering upon slavery.** They imagined, in short, what was quite impossible, that the light of reason could spread its brilliancy without dispelling the clouds of prejudices originating in ages of barbarism.

https://books.google.fi/books?id=INcgAwAAQBAJ&lpg=PP1&hl=fi&pg=PA408#v=onepage&q&f=false

According to the Sophists, one can react to the meaning of nature as chance by 1) private vice and the manipulation of convention through rhetoric to create a public appearance of virtue, 2) the defense of convention as a bulwark against the chaos of the state of nature, or 3) embracing tyranny as the most natural way of life. But because the Sophists tend to see nature as the upsurge of spontaneous motions, they doubt that it can be methodically controlled on the political level. Those who claim that it can run into difficulties. **Hence, for example, Thrasymachus's search for a *techne* of injustice is frustrated by Socrates' demonstration that *techne* is self-forgetting, not self-aggrandizing, and leads to order, harmony, and beneficence.** Protagoras, more insightful, doubts that statecraft is rigorous knowledge at all, seeing it as more akin to a local "way," like picking up a language, analogous perhaps to Burkean "prejudice."

Machiavelli is after much bigger stakes than any of these varieties of ancient conventionalism. In his new science of politics, the disorder of nature is the *source* of political power, stability, and rationality. It can be tapped and channeled by correctly designed institutions. **By imitating the impetuosity of Fortuna, we can gain methodical control over "her" reverses by anticipating them, preempting them and fighting back.** It is the belief in fixed conventions – in political order – that leads to decay, chaos, and weakness and does not, as Protagoras maintained, act as a bulwark against them. **So chance (*tuche*) does not have to be fenced off or concealed under a rhetorical guise that preserves *nomos*. Instead, Machiavelli says: Let chance in; let selective spurts of chaos invigorate and set in motion the levers of power. Statecraft will be more methodical and more consistent if we allow politics to be empowered by disorder.**

https://en.wikisource.org/wiki/1911_Encyclop%C3%A6dia_Britannica/Marx,_Heinrich_Karl

> In the same year as Darwin's epoch-making work on the origin of species there appeared also Marx's work *Zur Kritik der politischen Ökonomie*, where he explains in concise sentences in the preface **that philosophy of history which has for the theory of the transformation or evolution of social organisms the same significance that the argument of Darwin had for the theory of the transformation of biological organisms.**

https://www.garynorth.com/freebooks/docs/pdf/marx_religion_of_revolution.pdf

> Unquestionably, there is a religious element in Marxism. But to classify him as an Old Testament prophetic figure is to miss the essential nature of the Marxist message. ***What Marxism represents is a secular throwback to the chaos cults of the ancient world*, and not a modern school of the prophets.**
> ...
>
> **Marx *did* share with the ancients a belief in a past Golden Age, as we have seen; at some point in man's history, albeit a primitive culture, man's world was without alienation.** The coming age will be superior, of course, because mankind will also control the former chaos of the environment around him. In his posthumously published manuscripts, *Grundrisse der Kritik der Politischen Ökonomie* (1857-58), Marx sketched some of his ideas on the primitive communal social structure, **and as E. J. Hobsbawm has pointed out, Marx's own interests after the publication of *Capital* (1867) were "overwhelmingly concerned with this stage of social development. ..."**142 Engels shared Marx's interest, and he also pictured a primitive Golden Age in his *Origin of the Family, Private Property and the State* (1884).143

https://www.iep.utm.edu/protagor/#SH3c

Although Protagoras himself seemed to respect, and even revere the customs of human justice (as a great achievement), some of the younger followers of Protagoras and the other Older Sophists concluded that the arbitrary nature of human laws and customs implies that they can be ignored at will, a position that was held to be one of the causes of the notorious amorality of such figures as Alcibiades.

http://www.perseus.tufts.edu/hopper/text?doc=Perseus%3Atext%3A1999.01.0134%3Abook%3D1%3Acard%3D206

But the son of Peleus again addressed with violent words the son of Atreus, and in no way ceased from his wrath: “Heavy with wine, with the face of a dog but the heart of a deer, [225] never have you had courage to arm for battle along with your people, or go forth to an ambush with the chiefs of the Achaeans. That seems to you even as death. Indeed it is far better throughout the wide camp of the Achaeans to deprive of his prize whoever speaks contrary to you. [230] **People-devouring king, since you rule over nobodies; else, son of Atreus, this would be your last piece of insolence.** But I will speak out to you, and will swear thereto a mighty oath: by this staff, that shall never more put forth leaves or shoots since first it left its stump among the mountains, [235] nor shall it again grow green, for the bronze has stripped it on all sides of leaves and bark, and now the sons of the Achaeans carry it in their hands when they act as judges, those who guard the ordinances that come from Zeus; and this shall be for you a mighty oath. **Surely some day a longing for Achilles will come upon the sons of the Achaeans** [240] **one and all, and on that day you will not be able to help them at all, for all your grief, when many shall fall dying before man-slaying Hector.** But you will gnaw the heart within you, in anger that you did no honour to the best of the Achaeans.”

https://www.perseus.tufts.edu/hopper/text?doc=Perseus%3Atext%3A1999.01.0134%3Abook%3D22%3Acard%3D1

Then with a mighty burst of anger spake to him swift-footed Achilles: [15] “Thou hast foiled me, thou god that workest afar, most cruel of all gods in that thou hast now turned me hither from the wall; else had many a man yet bitten the ground or ever they came into Ilios. **Now hast thou robbed me of great glory, aud them hast thou saved full easily, seeing thou hadst no fear of vengeance in the aftertime.** [20] **Verily I would avenge me on thee, had I but the power.**”

https://archive.org/details/newscienceofgiam030174mbp/page/n247/mode/2up?view=theater

And as for glory, this same Achilles, because of a personal grievance, (Agamemnon having wrongfully taken his Briseis from him), **considers himself badly treated by gods and men alike,** demands of Jove that he be restored to honor, withdraws his men from the allied army and his ships from the fleet, and allows Hector to make a slaughter of the Greeks. **Thus in defiance of the devotion that a man owes his fatherland he insists on avenging a personal offense by the ruin of his entire nation.** Indeed, he is not ashamed to rejoice with Patroclus over Hector’s slaughter of the Greeks, and, what is much graver, this man who carries in his heels the fate of Troy expresses the disgraceful wish to Patroclus that all, Greeks and Trojans alike, may die in the war, leaving only the two of them alive.

> http://www.perseus.tufts.edu/hopper/text?doc=Perseus%3Atext%3A1999.01.0134%3Abook%3D16%3Acard%3D74
>
> For I would, O father Zeus, and Athene, and Apollo, **that no man of the Trojans might escape death, of all that there are, neither any of the Argives, but that we twain might escape destruction,** [100] **that alone we might loose the sacred diadem of Troy.**

https://books.google.fi/books?id=Zymp_kM33ZcC&lpg=PP1&hl=fi&pg=PA135#v=onepage&q&f=false

Tyrtaeus’s debt to Homer was enormous. That much is obvious from his diction alone. But despite all that he owed to his great predecessor, the Spartan poet rejected the Homeric precedent and radically altered the heroic ethic. **Tyrtaeus did not glorify that Achilles who had valued his own honor above the interest of the Achaean host;** nor did he celebrate the exploits of Odysseus “the man of many ways” who wandered through “the cities of many men and learned their minds.” **He heaped praise not on the great individual who sought “to be the best and to excel all others,”** but on the citizen who never traveled abroad except on campaign and who fought gamely alongside his companions in the city’s hoplite phalanx.99

https://harvardpress.typepad.com/hup_publicity/2018/05/alcibiades-in-the-shadow-of-achilles-david-stuttard.html

Even from childhood, he seems to have been motivated not by contemporary values of *demokratia* (literally ‘People Power’) but by the creed of the Homeric heroes whose blood pumped in his veins, **the creed that urged them ‘*aien aristeuein kai hupeirochon emmenai allon*’, ‘always to be best and to surpass all others’.** Now, the most famous of all the Greek heroes, whose father sent him off to Troy with these very words, was not in fact one of Alcibiades’ supposed ancestors. It was Achilles, and what

I'd like to do in this talk is not simply give a potted biography of Alcibiades, but rather to explore how Alcibiades did everything he could to live up to Achilles' creed, and how—in doing so—**he set himself on a path that would see him not only mirroring or surpassing many of Achilles' triumphs but repeating many of the Homeric hero's mistakes.**

https://www.perseus.tufts.edu/hopper/text?doc=Perseus%3Atext%3A1999.01.0176%3Atext%3DAlc.%201%3Asection%3D105a

For I believe, if some god should ask you: "Alcibiades, do you prefer to live with your present possessions, or to die immediately if you are not to have the chance of acquiring greater things?" I believe you would choose to die. But let me tell you what I imagine must be the present hope of your life. You think that if you come shortly before the Athenian Assembly—which [105b] you expect to occur in a very few days—**you will stand forth and prove to the people that you are more worthy of honor than either Pericles or anyone else who has ever existed,** and that having proved this you will have the greatest power in the state; and that if you are the greatest here, you will be the same among all the other Greeks, and not only Greeks, but all the barbarians who inhabit the same continent with us. And if that same god should say to you again, that you are to hold sway here in Europe, [105c] but are not to be allowed to cross over into Asia and to interfere with the affairs of that region, I believe you would be equally loth to live on those sole conditions either—**if you are not to fill, one may say, the whole world with your name and your power; and I fancy that, except Cyrus and Xerxes, you think there has never existed a single man who was of any account.** So then that this is your hope, I know well enough; I am not merely guessing.

> https://penelope.uchicago.edu/Thayer/E/Roman/Texts/Plutarch/Lives/Nicias*.html#ref45
>
> Before the assembly had met at all, **Alcibiades had already corrupted the multitude and got them into his power by means of his sanguine promises,** so that the youth in their training-schools and the old men in their work-shops and lounging-places would sit in clusters drawing maps of Sicily, charts of the sea about it, and plans of the harbours and districts of the island which look towards Libya. 2 **For they did not regard Sicily itself as the prize of the war, but rather as a mere base of operations, purposing therefrom to wage a contest with the Carthaginians and get possession of both Libya and of all the sea this side the Pillars of Heracles.**

https://books.google.fi/books?id=INcgAwAAQBAJ&lpg=PP1&hl=fi&pg=PA48#v=onepage&q&f=false

In Aristophanes' parody of their relationship in the *Clouds*, Pheidippides, the Alcibiades stand-in, begins, prior to any exposure to the "sophist" Socrates, as an unthinking libertine and spoiled rich kid. **Once exposed to Socrates, when he reemerges from the "thinkery" (*phrontisterion*) of Socrates' pale-faced crew, he begins to justify his vices with the theoretical language of the distinction between nature and convention, thereby suggesting the possibility that the Aristophanean Socrates may have deepened Pheidippides' corruption by giving it a philosophical basis.** The Platonic Socrates' first encounter with Alcibiades contains a kindred ambiguity. **Socrates prods Alcibiades into confessing that he has a passion to rule not merely in Athens but over the whole world** (104-105). But it is not clear how precisely or self-consciously the youth had formed this ambition for himself beforehand.20 Socrates wants to expand the horizons of the promising young aristocrat beyond Athens, using the two paradigmatic and superior regimes of Sparta and Persia to convince Alcibiades that he needs to make a study of the art of ruling, inasmuch as they embody the best republic and the best monarchy, respectively (121-124). **But by stimulating Alcibiades' ambition to soar above the local level to the universal so as to engage him in pursuing knowledge about the whole, including or through the medium of *politike*, it is not inconceivable that Alcibiades retained the global ambition to which Socrates inspired him without fully cultivating the longing for universally valid knowledge which Socrates hoped would be its final aim,** just as in Diotima's Ladder, the longing for immortality through political honor is the way station to the philosophic life.
…

Alcibiades' lament decades later in the *Symposium* that he wants Socrates when he courts the Demos and wants the Demos when he is with Socrates may be in part self-serving, presenting as an agonizing and tragically moving failure what in fact is his own strong preference for politics over philosophy. **But it may also suggest that the universality of Athenian imperialism, whose main exponent he was – according to Thucydides, after Sicily he planned to conquer Carthage, telling the people that there was no natural limit on their empire (6.18.5-16) – substituted for the universality of philosophy's search for wisdom that was only partially successfully implanted by Socrates in his soul.** If so, Socrates may have soured both alternatives for Alcibiades, dooming him to act on his stronger impulses for political action while cursed with knowing that life to be second rate.

https://books.google.fi/books?id=Zymp_kM33ZcC&lpg=PP1&hl=fi&pg=PA247#v=onepage&q&f=false

> 100. Cf. Hom. *Il*. 6.208 and 9.443 with *Od*. 11.488-91: **in the story which he tells Alcinous, Odysseus represents Achilles as having repudiated after death the heroic ethic by which he was guided in life.** Achilles reportedly said that he would prefer the indignity of being a thete on earth – even a thete forced to serve a man so poor that he lacked an estate – to the privilege of being king over the dead.

http://www.perseus.tufts.edu/hopper/text?doc=Perseus%3Atext%3A1999.01.0168%3Abook%3D3%3Asection%3D386b

"And again if he believes in the reality of the underworld and its terrors,[1] do you think that any man will be fearless of death and in battle will prefer death to defeat and slavery?" "By no means." "Then it seems we must exercise supervision[2] also, in the matter of such tales as these, over those who undertake to supply them and request them not to dispraise in this undiscriminating fashion the life in Hades but rather praise it, [386c] **since what they now tell us is neither true nor edifying to men who are destined to be warriors.**" "Yes, we must," he said. "Then," said I, **"beginning with this verse we will expunge everything of the same kind:**

> "Liefer were I in the fields up above to be serf to another
> Tiller of some poor plot which yields him a scanty subsistence,
> Than to be ruler and king over all the dead who have perished,

https://wikirouge.net/texts/en/Letter_to_Karl_Marx,_November_19,_1844

This egoism is simply the essence of present society and present man brought to consciousness, the ultimate that can be said against us by present society, the culmination of all the theory intrinsic to the prevailing stupidity. But that's precisely what makes the thing important, more important than Hess, for one, holds it to be. We must not simply cast it aside, but rather use it as the perfect expression of present-day folly **and, while inverting it, continue to build on it. This egoism is taken to such a pitch, it is so absurd and at the same time so self-aware, that it cannot maintain itself even for an instant in its one-sidedness, but must immediately change into communism.** In the first place it's a simple matter to prove to Stirner that his egoistic man is bound to become communist out of sheer egoism. That's the way to answer the fellow.

In the second place he must be told that in its egoism the human heart is of itself, from the very outset, unselfish and self-sacrificing, so that he finally ends up with what he is combating. These few platitudes will suffice to refute the one-sidedness. But we must also adopt such truth as there is in the principle. And it is certainly true that we must first make a cause our own, egoistic cause, before we can do anything to further it – **and hence that in this sense, irrespective of any eventual material aspirations, we are communists out of egoism also, and it is out of egoism that we wish to be human beings, not mere individuals.**

> [So if], through paying attention to the arguments of Aristippus, we take care of the body, [choosing] all the pleasure derived from drink, food and [sexual acts] and indeed absolutely all the things which no longer [give enjoyment after the happening], **but neglect the soul, we shall deprive ourselves of the greatest pleasures.**

https://books.google.fi/books?id=Zymp_kM33ZcC&lpg=PP1&hl=fi&pg=PA35#v=onepage&q&f=false

Nor can such an outlook be found in Aristippus. There is, in fact, no indication that he was interested in political problems at all. Yet he was a devotee of personal liberty. **He reportedly argued that, lying between the alternatives of slavery and rule, there was a middle path of freedom (*eleuthería*) – of freedom from the agony of servitude and from the burdens of political participation as well.** "Not for a moment do I place myself in the ranks of those wishing to rule," Aristippus remarks.

> For, in light of the great effort required to provide for oneself, it seems to me be the height of folly not to be satisfied with this, but to take on as well the additional burden of making provision for the needs of the other citizens. How would it not be great folly for a man to give up many of the things that he wants and to incur, as head (*prostátēs*) of the city, the danger of trial if he fails to accomplish all that the city wishes? **The cities think it proper to make use of their rulers just as I make use of my household slaves.** For I think proper for my servants to equip me in abundance with those things I need, but not themselves to lay hands on anything; and the cities think it necessary for their rulers to provide them with as many good things as possible and to abstain themselves from their enjoyment. Should there be those wishing to make trouble for themselves and for others, I would educate them and

> class them with those fitted to rule. But I would rank myself with those wishing to live as easily and as pleasantly as possible.

Socrates found this argument unsatisfactory. It would be fine, he retorts, if one encountered no human beings on the path intermediate between slavery and rule. The strong, he warns, have a way of enslaving those who abstain from political life. **For Aristippus, however, the danger of enslavement was not a serious problem: "To avoid it," he explains, "I do not lock myself up in my own city, but am a stranger (*xénos*) everywhere."** When Socrates responds that the *xénos* is, in all cities, an easy mark with little chance of defending himself, Aristippus shifts his ground, tacitly acknowledging that the middle path of liberty is an illusion. **He is apparently unaware that the polity itself can be refashioned to provide for the needs of those "wishing to live as easily and as pleasantly as possible."** Many centuries would pass before the invention of "a new science of politics" aimed solely at the protection of life, liberty, and the pursuit of happiness.
…

The way of life advocated by Xenophon's Socrates is by no means above reproach – **particularly in a world made safe for the likes of Aristippus.**

https://en.wikisource.org/wiki/Lives_of_the_Eminent_Philosophers/Book_II#Aristippus

65. Aristippus was by birth a citizen of Cyrene and, as Aeschines informs us, was drawn to Athens by the fame of Socrates. **Having come forward as a lecturer or sophist, as Phanias of Eresus, the Peripatetic, informs us, he was the first of the followers of Socrates to charge fees and to send money to his master.** And on one occasion the sum of twenty minae which he had sent was returned to him, Socrates declaring that the supernatural sign would not let him take it; the very offer, in fact, annoyed him. **Xenophon was no friend to Aristippus; and for this reason he has made Socrates direct against Aristippus the discourse in which he denounces pleasure.**[63]
…

66. He was capable of adapting himself to place, time and person, and of playing his part appropriately under whatever circumstances. Hence he found more favour than anybody else with Dionysius, because he could always turn the situation to good account. **He derived pleasure from what was present, and did not toil to procure the enjoyment of something not present. Hence Diogenes called him the king's poodle.**[65]

> 65. **Or "royal cynic."** It is impossible to preserve the *double entendre* here, for κύων, dog, also means "cynic"; in fact the very name of that sect proclaims that they gloried in their dog-like attributes, especially in snarling and biting.

…

He bore with Dionysius when he spat on him, and to one who took him to task he replied, **"If the fishermen let themselves be drenched with sea-water in order to catch a gudgeon, ought I not to endure to be wetted with negus in order to take a blenny?"**

68. Diogenes, washing the dirt from his vegetables, saw him passing and jeered at him in these terms, "If you had learnt to make these your diet, you would not have paid court to kings," to which his rejoinder was, "And if you knew how to associate with men, you would not be washing vegetables." **Being asked what he had gained from philosophy, he replied, "The ability to feel at ease in any society."**
…

Being once asked what advantage philosophers have, he replied, "Should all laws be repealed, we shall go on living as we do now."
…

71. It happened once that he set sail for Corinth and, being overtaken by a storm, he was in great consternation. Some one said, **"We plain men are not alarmed, and are you philosophers turned cowards?" To this he replied, "The lives at stake in the two cases are not comparable."**
…

Being asked on one occasion what is the difference between the wise man and the unwise, **"Strip them both," said he, "and send them among strangers and you will know."**
…

74. To one who accused him of living with a courtesan, he put the question, "Why, is there any difference between taking a house in which many people have lived before and taking one in which nobody has ever lived?" The answer being "No," he continued, "Or again, between sailing in a ship in which ten thousand persons have sailed before and in one in which nobody has ever sailed?" "There is no

difference." **"Then it makes no difference," said he, "whether the woman you live with has lived with many or with nobody."**
…

He enjoyed the favours of Laïs, as Sotion states in the second book of his *Successions of Philosophers*. 75. To those who censured him his defence was, "I have Lais, not she me; **and it is not abstinence from pleasures that is best, but mastery over them without ever being worsted.**" To one who reproached him with extravagance in catering, he replied, "Wouldn't you have bought this if you could have got it for three obols?" The answer being in the affirmative, "Very well, then," said Aristippus, **"I am no longer a lover of pleasure, it is you who are a lover of money."**
…

Those who went through the ordinary curriculum, but in their studies stopped short at philosophy, he used to compare to the suitors of Penelope. For the suitors won Melantho, Polydora and the rest of the handmaidens, but were anything but successful in their wooing of the mistress.
…

Someone accused him of exposing his son as if it was not his offspring. Whereupon he replied, **"Phlegm, too, and vermin we know to be of our own begetting, but for all that, because they are useless, we cast them as far from us as possible."**
…

The disciples of Aristippus were his daughter Arete, Aethiops of Ptolemais,[73] and Antipater of Cyrene. **The pupil of Arete was Aristippus, who went by the name of mother-taught, and his pupil was Theodorus, known as the atheist,** subsequently as "god."
…

Those then who adhered to the teaching of Aristippus and were known as Cyrenaics held the following opinions. They laid down that there are two states, pleasure and pain, the former a smooth, the latter a rough motion, **and that pleasure does not differ from pleasure nor is one pleasure more pleasant than another.** 87. The one state is agreeable and the other repellent to all living things. However, the bodily pleasure which is the end is, according to Panaetius in his work *On the Sects*, not the settled pleasure following the removal of pains, or the sort of freedom from discomfort which Epicurus accepts and maintains to be the end.
…

Pleasure is good even if it proceed from the most unseemly conduct, as Hippobotus says in his work *On the Sects*. For even if the action be irregular, still, at any rate, the resultant pleasure is desirable for its own sake and is good.
…

They assert that some people may fail to choose pleasure because their minds are perverted; **not all mental pleasures and pains, however, are derived from bodily counterparts. For instance, we take disinterested delight in the prosperity of our country which is as real as our delight in our own prosperity.**
…

They affirm that mental affections can be known, but not the objects from which they come; **and they abandoned the study of nature because of its apparent uncertainty, but fastened on logical inquiries because of their utility. But Meleager in his second book *On Philosophical Opinions*, and Clitomachus in his first book *On the Sects*, affirm that they maintain Dialectic as well as Physics to be useless, since, when one has learnt the theory of good and evil, it is possible to speak with propriety, to be free from superstition, and to escape the fear of death.** 93. **They also held that nothing is just or honourable or base by nature, but only by convention and custom. Nevertheless the good man will be deterred from wrong-doing by the penalties imposed and the prejudices that it would arouse.**
…

The school of Hegesias, as it is called, adopted the same ends, namely pleasure and pain. **In their view there is no such thing as gratitude or friendship or beneficence, because it is not for themselves that we choose to do these things but simply from motives of interest, apart from which such conduct is nowhere found.** 94. They denied the possibility of happiness, for the body is infected with much suffering, while the soul shares in the sufferings of the body and is a prey to disturbance, and fortune often disappoints. From all this it follows that happiness cannot be realized. Moreover, life and death are each desirable in turn. But that there is anything naturally pleasant or unpleasant they deny; when some men are pleased and others pained by the same objects, this is owing to the lack or rarity or surfeit of such objects. Poverty and riches have no relevance to pleasure; for neither the rich nor the poor as such have any special share in pleasure. 95. **Slavery and freedom,**

nobility and low birth, honour and dishonour, are alike indifferent in a calculation of pleasure. To the fool life is advantageous, while to the wise it is a matter of indifference. The wise man will be guided in all he does by his own interests, for there is none other whom he regards as equally deserving. For supposing him to reap the greatest advantages from another, they would not be equal to what he contributes himself. They also disallow the claims of the senses, because they do not lead to accurate knowledge.
…

Theodorus was a man who utterly rejected the current belief in the gods. And I have come across a book of his entitled *Of the Gods* which is not contemptible. From that book, they say, Epicurus borrowed most of what he wrote on the subject.

98. Theodorus was also a pupil of Anniceris and of Dionysius the dialectician, as Antisthenes mentions in his Successions of Philosophers. **He considered joy and grief to be the supreme good and evil,** the one brought about by wisdom, the other by folly. Wisdom and justice he called goods, and their opposites evils, pleasure and pain being intermediate to good and evil.
Friendship he rejected because it did not exist between the unwise nor between the wise; with the former, when the want is removed, the friendship disappears, whereas the wise are self-sufficient and have no need of friends. It was reasonable, as he thought, for the good man not to risk his life in the defence of his country, for he would never throw wisdom away to benefit the unwise.

99. **He said the world was his country. Theft, adultery, and sacrilege would be allowable upon occasion, since none of these acts is by nature base, if once you have removed the prejudice against them, which is kept up in order to hold the foolish multitude together.** The wise man would indulge his passions openly without the least regard to circumstances. Hence he would use such arguments as this. "Is a woman who is skilled in grammar useful in so far as she is skilled in grammar?" "Yes." "And is a boy or a youth skilled in grammar useful in so far as he is skilled in grammar?" "Yes." 100. "Again, is a woman who is beautiful useful in so far as she is beautiful? And the use of beauty is to be enjoyed?" "Yes." When this was admitted, he would press the argument to the conclusion, namely, **that he who uses anything for the purpose for which it is useful does no wrong.** And by some such interrogatories he would carry his point.
…

101. However, Theodorus, sitting on one occasion beside Euryclides, the hierophant, began, "Tell me, Euryclides, who they are who violate the mysteries?" Euryclides replied, "Those who disclose them to the uninitiated." "Then you violate them," said Theodorus, "when you explain them to the uninitiated." **Yet he would hardly have escaped from being brought before the Areopagus if Demetrius of Phalerum had not rescued him.** And Amphicrates in his book *Upon Illustrious Men* says he was condemned to drink the hemlock.

102. For a while he stayed at the court of Ptolemy the son of Lagus, and was once sent by him as ambassador to Lysimachus. And on this occasion his language was so bold that Lysimachus said, "Tell me, are you not the Theodorus who was banished from Athens?" To which he replied, "Your information is correct, for, when Athens could not bear me any more than Semele could Dionysus, she cast me out." And upon Lysimachus adding, "Take care you do not come here again," "I never will," said he, "unless Ptolemy sends me." **Mithras, the king's minister, standing by and saying, "It seems that you can ignore not only gods but kings as well," Theodorus replied, "How can you say that I ignore the gods when I regard you as hateful to the gods?"** He is said on one occasion in Corinth to have walked abroad with a numerous train of pupils, and Metrocles the Cynic, who was washing chervil, remarked, "You, sophist that you are, would not have wanted all these pupils if you had washed vegetables." Thereupon Theodorus retorted, "And you, if you had known how to associate with men, would have had no use for these vegetables." 103. A similar anecdote is told of Diogenes and Aristippus, as mentioned above.[74]

Such was the character of Theodorus and his surroundings. At last he retired to Cyrene, where he lived with Magas and continued to be held in high honour. The first time that he was expelled from Cyrene he is credited with a witty remark: "Many thanks,[75] men of Cyrene," said he, "for driving me from Libya into Greece."

AMONG those Disciples of *Socrates*, who were the Founders of new Sects, we have also *Aristippus*; Chief of the *Cyrenaicks*. *He* a *had the Character of* ***an agreeable Deboshee, a polite Libertine; and a Man of Address, who knew the World,*** *and perfectly understood how to carry himself. Altho' the* Cyrenaicks *were for gratifying Nature, in every Thing she could desire; they did not however assume to themselves the Impudence of the* Cynicks. **They entirely rejected the Law of Nature; b and according to them, Civil Laws and Custom, were the only Foundation of Justice and Honesty.**

...

This Sect was divided into several finall Branches; one of which made open Profession of downright Atheism; and in consequence thereof maintain'd, that f ***a Sage might steal, commit Adulteries, and Sacrileges, whenever he had convenient Opportunities so to do; those Things being evil only, said they, in the Opinion of the Vulgar; which was invented to keep Fools in Awe.***

https://archive.org/details/alexandriaandher00kinguoft/page/60/mode/2up?view=theater

These hapless caricaturists of the dialectic of Plato, and the logic of Aristotle, careless of any vital principles or real results, ready enough to use fallacies each for their own party, and openly proud of their success in doing so, were assisted by worthy compeers of an outwardly opposite tone of thought, the Cyrenaics, Theodorus and Hegesias. **With their clique, as with their master Aristippus, the senses were the only avenues to knowledge; man was the measure of all things; and "happiness our being's end and aim."** Theodorus was surnamed the Atheist; and, it seems, not without good reason; for he taught that there was no absolute or eternal difference between good and evil; nothing really disgraceful in crimes; no divine ground for laws, which according to him had been invented by men to prevent fools from making themselves disagreeable; on which theory, laws must be confessed to have been in all ages somewhat of a failure. **He seems to have been, like his master, an impudent light-hearted fellow, who took life easily enough, laughed at patriotism, and all other high-flown notions, boasted that the world was his country, and was no doubt excellent after-dinner company for the great king.**

https://www.gutenberg.org/cache/epub/2333/pg2333-images.html#link2H_4_0001

So wide was the difference between the Italians and their neighbors. A similar difference existed between the Greeks of the second century before Christ, and their masters, the Romans. The conquerors, brave and resolute, faithful to their engagements, and strongly influenced by religious feelings, were, at the same time, ignorant, arbitrary, and cruel. With the vanquished people were deposited all the art, the science, and the literature of the Western world. In poetry, in philosophy, in painting, in architecture, in sculpture, they had no rivals. **Their manners were polished, their perceptions acute, their invention ready; they were tolerant, affable, humane; but of courage and sincerity they were almost utterly destitute. Every rude centurion consoled himself for his intellectual inferiority, by remarking that knowledge and taste seemed only to make men atheists, cowards and slaves.** The distinction long continued to be strongly marked, and furnished an admirable subject for the fierce sarcasms of Juvenal.

The citizen of an Italian commonwealth was the Greek of the time of Juvenal and the Greek of the time of Pericles, joined in one. Like the former, he was timid and pliable, artful and mean. But, like the latter, he had a country. Its independence and prosperity were dear to him.

https://archive.org/details/in.ernet.dli.2015.231118/page/n539/mode/2up?view=theater

The new sophists, like the old, had no common doctrine, phrased their teaching eloquently, drew large audiences, and attained in many cases high social status, imperial favor, or great wealth. **They differed from the earlier Sophists in seldom questioning religion or morality;** they were more interested in form and style, in oratorical technique and skill, than in the great questions that had shaken the beliefs and morals of the world; **indeed, the new sophists were warm defenders of the ancient faith.** Philostratus has preserved for us the lives of the leading sophists of this age; let one example suffice. Adrian of Tyre studied rhetoric at Athens and rose to the state chair of rhetoric there; he opened his inaugural address with the proud words, **"Once again letters have come from Phoenicia."** He rode to his lectures in a carriage with silver harness, in rich attire, and gleaming with gems. When Marcus Aurelius visited Athens he tested Adrian by asking him to improvise an oration on a difficult theme; Adrian carried the matter off so well that Marcus loaded him with honors, silver and gold, houses and slaves. Promoted to the chair of rhetoric at Rome, Adrian's lectures, though in Greek, proved so alluring that senators adjourned their sessions, and the populace deserted the pantomimes, to go and hear him.[19] **Such a career almost announces the death of philosophy; it had been swallowed up in an ocean of rhetoric,** and had ceased to think when it learned to speak.

171. The worship of classical antiquity, as it was to be seen in Italy, may be interpreted as the only earnest, disinterested, and fecund worship which has yet fallen to the lot of antiquity. It is a splendid example of Don Quixotism; and philology at best is such Don Quixotism. **Already at the time of the Alexandrian savants, as with all the sophists of the first and second centuries, the Atticists, &c., the scholars are imitating something purely and simply chimerical and pursuing a world that never existed.** The same trait is seen throughout antiquity: the manner in which the Homeric heroes were copied, and all the intercourse held with the myths, show traces of it. **Gradually all Greek antiquity has become an object of Don Quixotism. It is impossible to understand our modern world if we do not take into account the enormous influence of the purely fantastic.**

---

https://en.wikisource.org/wiki/Lives_of_the_Eminent_Philosophers/Book_II#Archelaus

16. Archelaus,[23] the son of Apollodorus, or as some say of Midon, was a citizen of Athens or of Miletus; he was a pupil of Anaxagoras, who[24] first brought natural philosophy from Ionia to Athens. Archelaus was the teacher of Socrates. **He was called the physicist inasmuch as with him natural philosophy came to an end, as soon as Socrates had introduced ethics. It would seem that Archelaus himself also treated of ethics, for he has discussed laws and goodness and justice; Socrates took the subject from him and, having improved it to the utmost, was regarded as its inventor. Archelaus laid down that there were two causes of growth or becoming, heat and cold; that living things were produced from slime; and that what is just and what is base depends not upon nature but upon convention.**

"Socrates however (was the) first (who) called philosophy down from heaven, and placed it in cities, and introduced it even in homes, and drove (it) to inquire about life and customs and things good and evil." (Cicero, *Tusculan Disputations* 5.4.10)

Socrates autem primus philosophiam devocavit e caelo et in urbibus conlocavit et in domus etiam introduxit et coegit de vita et moribus rebusque bonis et malis quaerere.

https://books.google.fi/books?id=khpY2fQaIg0C&lpg=PP1&hl=fi&pg=PA51#v=onepage&q&f=false

As Plato and Xenophon make us aware in innumerable passages, Socrates did not waste one single opportunity to learn from the Sophists, to question their alleged wisdom and elusive knowledge, to engage them in elenchical disputations, and, on occasion, to expose what he perceived to be their emptiness before crowds of attentive young listeners. The Socratic presence, indeed, cannot be grasped if the Sophistical background of Socrates' intellectual excursions is not taken into account, for much of what Socrates thought and said was for the purpose of forcing his contemporaries to transcend the relativistic and nihilistic impasse that Sophistical philosophy had brought into the scene. **Having much in common with the Sophists, Socrates turned out to be the anti-Sophist par excellence.**38

https://archive.org/details/in.ernet.dli.2015.85694/page/n479/mode/2up?view=theater

Plato puts these remarkable words in the mouth of a Sophist: "All you who are here, I regard as related to each other. Nature, in default of law, has made you citizens. But the law, that tyrant of man, does violence to nature on many occasions." Thus to oppose nature to law and custom was to attack the ancient political system at its foundation. In vain did the Athenians banish Protagoras and burn his writings: the blow had been struck: the result of the teachings of the Sophists had been immense. The authority of the old institutions perished with the authority of the national gods, and the habit of free examination became established in men's homes and in the public squares.

Socrates, while reproving the abuse which the Sophists made of the right to doubt, was still of their school. Like them he rejected the empire of tradition, and believed that the rules of conduct were graven in the human conscience. **He differed from them only in this; he studied conscience religiously, and with a firm desire to find there an obligation to be just and to do good.** He ranked truth above custom, and justice above the law. He separated morals from religion: **before him, men never thought of a duty except as a command of the ancient gods.** He showed that the principle of duty is in the human mind. In all this, whether he wished it or not, he made war upon the city worship. **In vain he took pains to be present at all the festivals and took part in the sacrifices;**

his belief and his words contradicted his conduct. He founded a new religion, which was the opposite of the city religion. He was justly accused of not adoring the gods whom the state adored.

> https://www.garynorth.com/freebooks/docs/html/gnbd/appendix_e.htm
>
> It was in this period of defeat and despair that Athens executed Socrates in 399 B.C. **He had been perceived by many critics as a Sophist. They were essentially correct: he was, in fact, a sophisticated dialectician who defended the existence a hypothetical realm of absolute knowledge but also insisted that no one, including himself, had been able to enter it -- a sophist's ploy if there ever was one.** He was also a political authoritarian.[32] In terms of his philosophical undermining of Greek religion, **the Athenians' perception of Socrates was correct. He was guilty as charged.** (He was also a defender of pederasty with adolescents, but that did not bother Athenians any more than it bothers his apologists today.)[33]

https://books.google.fi/books?id=yjaEkWbwBm0C&lpg=PP1&hl=fi&pg=PA148#v=onepage&q&f=false

[George] Grote has clarified the Sophists; according to the usual notions they are a sect; according to him, a class, an estate.19 According to the standard view they disperse morally corruptive teachings, “sophistical propositions.” They were regular teachers of customs, neither above nor below the level of the times, according to Grote. Plato and his successors were aristocratic teachers, according to the standard view, the established clergy of the Greek nation, and the Sophists [were] the alternative thinkers. [In fact], **the Sophists were the clergy, and Plato [was] the alternative thinker – the socialist who attacked the Sophists (as he attacks the poets and statesmen) not as a special sect but rather as one of the persistent estates of society. For the uneducated masses, Socrates was indistinguishable from the Sophists:** in general, entirely naive custom requires no teacher; the more elevated the teacher, the more offensive. There tragedy and comedy are sufficient – that is the standpoint of Aristophanes. **He sketches the image of an Enlightenment figure in Socrates; characteristics of the Sophists and of Anaxagoras are transferred to him. But the Sophists distinguish themselves in that they completely meet the needs, that they deliver what they promise. In contrast no one could say why Socrates taught, he himself excluded.** Wherever he went he produced the feeling of ignorance; he embittered men and made them greedy for knowledge.

https://books.google.fi/books?id=INcgAwAAQBAJ&lpg=PP1&hl=fi&pg=PA222#v=onepage&q&f=false

It is clear from the Platonic dialogues that Socrates encouraged all of his interlocutors to distinguish between happiness by nature and happiness by convention, **not in order to encourage them to identify the natural life with *pleonexia*, but on the contrary, to enable them to grasp that mastery was itself the aim of most conventional accounts of the good life, to be contrasted with the naturally superior happiness of philosophizing.** In other words, contrary to the Sophists’ depiction of a naturally enlightened few who pursued mastery and a pusillanimous majority who clung to conventional morality and safety, in Socrates’ diagnosis of the ills of the cities, most people were conflicted about these aims. **The desire for mastery was itself in a way vulgar and demotic. Hence, the inevitable dissatisfaction of Callicles who, as a prospective “best man,” can in Socrates’ judgment only assert his natural excellence by pandering to that same pusillanimous majority** (*Gorgias* 513, 521). Socrates presents philosophy as a way of life that, in the devotion to all its passions to the love of wisdom, **thereby sluicing eros and thumos off from the temptations of tyranny and *pleonexia*, entails the civic virtues of justice and moderation as well.** In this way, he can plausibly present the philosophic life as the best guardian of justice, protecting it from the assaults of the Sophists and the “motion-men,” as well as the best curative therapy for the proto-tyrant (*Republic* 485d-486b).

Nevertheless, **the Platonic Socrates’ defense of justice on philosophical grounds is not the same as believing in it out of custom, habit, and veneration for tradition,** just like the Just Argument in the *Clouds*. Before Socrates can defend justice as natural, he must concede, even stimulate, an awareness of the distinction of between true justice or happiness and their merely conventional versions. **However, while calling the desirability of tyranny into question, that probing into the difference between natural and conventional happiness also calls into question ordinary morality, patriotism, the love of family, and piety. As we earlier observed, the opening move in the *Republic* to examine justice on the analogy of an art subverts property rights almost instantly (including the usefulness of wealth in propitiating the gods through sacrifice). By the time the best regime is set in place, every source of ordinary human decency flowing from family affection and respect for tradition has been abolished** (*Republic* 449c-d, 472 c-e, 462c-d). Socrates must tempt the young to abandon conventional justice to a degree, so as to ground natural justice more firmly in their characters through a vision of the soul and of the whole that connects it to the transcendent truth. This means that, in some way, he *is* subverting the conventional decencies, just as a great teacher whom a student ends up loving more than his own father (like Xenophon’s story of Tigranes and the “Armenian Socrates” *is* in some sense a corrupter of the youth.

http://www.perseus.tufts.edu/hopper/text?doc=Perseus%3Atext%3A1999.01.0170%3Atext%3DApol.%3Asection%3D23b

Now from this investigation, men of Athens, [23a] many enmities have arisen against me, and such as are most harsh and grievous, so that many prejudices have resulted from them and I am called a wise man. For on each occasion those who are present think I am wise in the matters in which I confute someone else; **but the fact is, gentlemen, it is likely that the god is really wise and by his oracle means this: "Human wisdom is of little or no value."** And it appears that he does not really say this of Socrates, but merely uses my name, [23b] and makes me an example, as if he were to say: "This one of you, O human beings, is wisest, who, like Socrates, recognizes that he is in truth of no account in respect to wisdom."

Therefore I am still even now going about and searching and investigating at the god's behest anyone, whether citizen or foreigner, who I think is wise; and when he does not seem so to me, I give aid to the god and show that he is not wise. And by reason of this occupation **I have no leisure to attend to any of the affairs of the state worth mentioning,** or of my own, but am in vast poverty [23c] on account of my service to the god.

And in addition to these things, **the young men who have the most leisure, the sons of the richest men, accompany me of their own accord, find pleasure in hearing people being examined, and often imitate me themselves, and then they undertake to examine others; and then, I fancy, they find a great plenty of people who think they know something, but know little or nothing.** As a result, therefore, those who are examined by them are angry with me, instead of being angry with themselves, and say that "Socrates is a most abominable person [23d] and is corrupting the youth."

And when anyone asks them "by doing or teaching what?" they have nothing to say, but they do not know, and that they may not seem to be at a loss they say these things that are handy to say against all the philosophers, "the things in the air and the things beneath the earth" and "not to believe in the gods" and "to make the weaker argument the stronger."

Burnyeat recognizes how intertwined the city's way of life and religion are:

> Recall how closely a Greek community's sense of its own identity and stability is bound up with its religious observances and the myths that support them. If Socrates rejects the city's religion, he attacks the city. Conversely, if he says the city has got its public and private life all wrong, he attacks religion; for its life and its religion are inseparable. **Let our jurors ask themselves this question: What would be left of traditional (fifth century) religion, hence what would be left of traditional (fifth century) Athenian life, if the city accepted Socrates' view that what divinity demands from human beings is not propitiation and sacrifices, festivals, and processions, but the practice of moral philosophy?**40

> http://www.perseus.tufts.edu/hopper/text?doc=Perseus%3Atext%3A1999.01.0170%3Atext%3DEuthyph.%3Asection%3D5d

> *Euthyphro:* Well then, I say that holiness is doing what I am doing now, **prosecuting the wrongdoer who commits murder or steals from the temples or does any such thing, whether he be your father,** [5e] **or your mother or anyone else,** and not prosecuting him is unholy. And, Socrates, see what a sure proof I offer you,—a proof I have already given to others,—that this is established and right and that we ought not to let him who acts impiously go unpunished, no matter who he may be. Men believe [6a] that Zeus is the best and most just of the gods, **and they acknowledge that he put his father in bonds because he wickedly devoured his children, and he in turn had mutilated his father for similar reasons;** but they are incensed against me because I proceed against my father when he has done wrong, and so they are inconsistent in what they say about the gods and about me.

> *Socrates:* Is not this, Euthyphro, the reason why I am being prosecuted, because when people tell such stories about the gods I find it hard to accept them? And therefore, probably, people will say I am wrong. Now if you, who know so much about such things, [6b] accept these tales, I suppose I too must give way. For what am I to say, who confess frankly that I know nothing about them? **But tell me, in the name of Zeus, the god of friendship, do you really believe these things happened?**

> *Euthyphro:* Yes, and still more wonderful things than these, Socrates, which most people do not know.
>
> *Socrates:* **And so you believe that there was really war between the gods, and fearful enmities and battles and other things of the sort, such as are told of by the poets and represented in varied designs** [6c] **by the great artists in our sacred places and especially on the robe which is carried up to the Acropolis at the great Panathenaea?**

...

If interpreted strictly as heterodoxy there can be little doubt that he is guilty of the charge. Even a sympathetic primary source such as Plato's *Apology* seems to confirm Socrates' guilt.50 Vlastos points out,

> It would be hard to find a human female acting more viciously than this goddess [Hera] does in the myths. What would be left of her and of the other Olympians if they were required to observe the stringent norms of Socratic virtue which require every moral agent, human or divine, to act only to cause good to others, never evil, regardless of provocation? [...] Their ethical transformation would have become tantamount to the destruction of the old gods, the creation of new ones – which is precisely what Socrates takes to be the sum and substance of the accusation at his trial.51

...

Nussbaum, however, argues for a striking difference between the chorus of *Clouds* and the *daimonion* that Socrates mentions in the *Apology*: "the *daimonion* of Plato's Socrates is no standard tutelary deity at all, but an ironic way of alluding to the supreme authority of dissuasive reason and elenctic argument."60 And in opposition to the notoriety that Edmunds argues for, she asserts that "it would not be difficult for [...] any other Athenian [...] to conclude that what is really happening is that reason itself is being made the new god."61

https://archive.org/details/in.ernet.dli.2015.55010/page/n411/mode/2up?view=theater

Coming at the close of the Sophistic period, he perceived that the Sophists had created one of the most critical situations in the history of any culture—the weakening of the supernatural basis of morals. Instead of a frightened return to orthodoxy, he moved forward to the profoundest question that ethics can ask: is a natural ethic possible? Can morality survive without supernatural belief? Can philosophy, by molding an effective secular moral code, save the civilization which its freedom of thought has threatened to destroy? When, in the *Euthyphro,* Socrates argues that the good is not good because the gods approve of it, but that the gods approve of it because it is good, he is proposing a philosophical revolution. **His conception of good, so far from being theological, is earthly to the point of being utilitarian.** Goodness, he thinks, is not general and abstract, but specific and practical, “good for something.” Goodness and beauty are forms of usefulness and human advantage; **even a dung basket is beautiful if it is well formed for its purpose.**[176]

...

“It is absurd,” says Xenophon’s Socrates, “to choose magistrates by lot where no one would dream of drawing lots for a pilot, a mason, a flute-player, or any craftsman at all, though the shortcomings of such men are far less harmful than those that disorder our government.”[179]

...

Nothing could save Athens, he thought, except government by knowledge and ability; and this was no more to be determined by voting than the qualifications of a pilot, a musician, a physician, or a carpenter. Nor should power or wealth choose the officials of the state; **tyranny and plutocracy are as bad as democracy; the reasonable compromise is an aristocracy in which office would be restricted to those mentally fit and trained for it.**[181]

> https://www.gutenberg.org/cache/epub/1177/pg1177-images.html#link2H_4_0005
>
> **They are not kings or rulers (he said) who hold the sceptre merely, or are chosen by fellows out of the street,** (12) **or are appointed by lot, or have stepped into office by violence or by fraud; but those who have the special knowledge** (13) **how to rule.** Thus having won the admission that it is the function of a ruler to enjoin what ought to be done, and of those who are ruled to obey, he proceeded to point out by instances that in a ship the ruler or captain is the man of special knowledge, to whom, as an expert, the shipowner himself and all the others on board obey.
> ...
>
> **And thus, in the art of spinning wool, he liked to point out that women are the rulers of men—and why? because they have the knowledge of the art, and men have not.**

Despite these criticisms of Athenian democracy Socrates recognized its advantages, and appreciated the liberties and opportunities that it gave him. **He smiled at the tendency of some followers to preach a "return to Nature," and adopted towards Antisthenes and the Cynics the same attitude that Voltaire would take towards Rousseau**—that with all its faults civilization is a precious thing, not to be abandoned for any primeval simplicity.[182]

Nevertheless the majority of the Athenians looked upon him with irritated suspicion. The orthodox in religion considered him to be the most dangerous of the Sophists; **for while he observed the amenities of the ancient faith he rejected tradition, wished to subject every rule to the scrutiny of reason, founded morality in the individual conscience rather than in social good or the unchanging decrees of heaven,** and ended with a skepticism that left reason itself in a mental confusion unsettling to every custom and belief.

https://archive.org/details/politicalideasof0000drur/page/94/mode/2up?view=theater

At least in theory, the doctrine of the classic natural right is for Strauss identical with the absolute right of the wise to rule.20 It finds its 'complete answer' in the rule of the wise. Wisdom being superior not only to unwisdom but to law, it would be unnatural to limit the rule of the wise either by law or by the consent of the unwise. As Strauss writes:

> **It would be absurd to hamper the free flow of wisdom by any regulations;** hence the rule of the wise must be *absolute rule*. It would be equally absurd to hamper the free flow of wisdom by consideration of the unwise wishes of the unwise; **hence the wise rulers ought not to be responsible to their unwise subjects.**21

…

According to Strauss, Xenophon's message is this: the wise do not despise tyranny for the same reasons others find it objectionable. **In other words, they do not object to the forceful or fraudulent way the tyrant came to be power; nor do they object to the innumerable crimes he has committed; nor to the fact that he rules in the absence of law. What they despise about tyranny is what they despise about every form of government – namely, its failure to listen to the counsel of the wise.** The wise are not so naïve as to think that political affairs can be devoid of force, fraud and injustice; nor are they naïve enough to think that a particular form of government is best. Magistrates are not made good rulers by being duly elected; nor does a king possess the art of governing simply because he has inherited his crown according to the accepted rules of succession. How one acquires power makes no difference. 'Constitutional rule,' or acquiring power by constitutional means, is not essentially more legitimate than tyrannical rule.23 **Any rule is legitimate only to the extent that it 'listens to the counsel of the wise.'**24 **Knowledge is alone the true title to rule.**25

> https://books.google.fi/books?id=Mau9wgEACAAJ&lpg=PP1&hl=fi&pg=PA199#v=onepage&q&f=false
>
> The republican maxim "salus populi suprema lex" [the well-being of the people is the highest law], as Cicero expressed it, d'Holbach embraced wholeheartedly. **Every enlightened regime which functions "à l'aide d'une legislation éclairée" [that works with the help of enlightened legislation] is good, every unenlightened regime is malign irrespective of how it is structured.**137

…

Most men despise tyranny because it is rule in the absence of law. But this fact does not disturb the wise. They are painfully aware of what Strauss calls the 'problematic' character of the rule of law.28 **Strauss is not very explicit about this, but he makes it clear that absolute rule without law, if it is wise, is infinitely superior to the rule of law. Therein rests what Strauss refers to as the 'tyrannical teaching' of Plato and Xenophon.**

http://www.anthonyflood.com/bahnsensocratesorchrist03.htm

Whereas the Council of Chalcedon declared that in *Christ* the eternal and temporal are united without intermixture, Socrates proclaimed that the eternal and temporal are combined in *man* by way of admixture.[29] And so it is that Socrates was the prophet of the religion of immanent reason.
…

The result of Socrates' stress upon the intellect and his equation of virtue and knowledge was the doctrine that no man knowingly does evil. This point is argued in the *Gorgias*. Socrates said that all men desire to act for the sake of some good, and hence any man who acts wrongly must be acting in ignorance of the evil he does (in which case punishment should aim at rehabilitation through education). **If "virtue is the knowledge of the good," then an unvirtuous act is one done without knowledge of the good;** thus no man deliberately or knowingly does evil. Wrongdoing must be involuntary or, ignorant.

> https://www.academia.edu/7531536/Plotinus_and_the_Platonic_Response_to_Stoicism
>
> Since Plotinus follows Plato in holding that all wrongdoing is done out of ignorance, we should designate the ignorance of the malefactor as culpable.16

> 16. **See Plato *Ap*. 37A5; *Gorg*. 488A3; *Protag*. 345D8, 358C7; Rep. 589C6; *Tim*. 86D2, E1; *Lg*. 731C-D for the claim, held to unwaveringly by Plato, that *oudeis hekōn hamartanei* ("no one errs willingly").**

https://books.google.fi/books?id=5X-46TqjDv0C&lpg=PP1&hl=fi&pg=PA47#v=onepage&q&f=false

> As we shall see in more detail in later chapters, **the Stoics follow Socrates in holding a unified, monistic conception of the soul and an intellectualist account of the relationship between knowledge and action.** Socrates is famous for asserting that virtue is constituted by knowledge, that if one knows that *x* is right then one will necessarily do *x*. This, in turn, forms the basis for Socrates' famous denial of weakness of will: no one ever does wrong willingly and always acts in accordance with what they believe to be right.

...

"Socrates was destined to restore order out of chaos because, though with Sophists appealing to the self, he appealed to the self as carrying within itself the universal principle of reason and order."[37]
...

In the *Phaedo*, Socrates says that the philosopher who seeks knowledge is always pursuing death, seeing that the body hinders the soul's search for knowledge; the attempt to apprehend the forms and thereby find knowledge is an attempt to leave behind the historical world of particulars. Therefore, Van Til rightly parallels Socrates to his Sophist opponents:

> The objectivity for knowledge and ethics ... which Socrates found by appealing to reason as the universal aspect in man, turns out to be an empty form, **and there is no connection of this abstract universal with particulars except in terms of an irrational principle.** In other words, Socrates, as well as the Sophists, has finally come back to the realm of pure contingency. **Thus we are back to the Sophistic notion that in practice there is no known validity to any moral law except what man, irrational in his individuality, is willing to approve.[43]**

...

Socrates was the prophet of the religion of sovereign, self-sufficient, authoritative reason; to put it as Werner Jaeger does,

> **Socrates was apostle of moral liberty, *bound by no dogma*, fettered by no traditions, *standing free on his own feet*, *listening only to the inner voice* of conscience—preaching *the new religion of this world*, and a heaven to be found in this life by our own spiritual strength, not through grace but through tireless striving to perfect our own nature.[45]**

The *religion of this worla* has a definite doctrine of authority; whether in epistemology or any other field, the *voice of authority* must be found in *man himself*. **Socrates would not have man relinquish his autonomy at any cost. If man is to follow the gods, it must be on man's own terms—namely, that the gods first be scrutinized and approved by the rational judgment of man. In Athens, the views of deity were expressed through the public opinion of the democracy. Socrates resisted such dogma in favor of a more self-conscious and consistent religion of autonomy**—for which he finally stood trial. J.T. Forbes has aptly commented:

> **The question of the seat of authority has lasted through the ages, and the Socratic transference of it to the reflective reason, of which his very discussions on piety and justice were the claim,** demanded an insight and moral earnestness too great for the mass of his fellows. [Yet] the trend of progress of the human mind was with him.[46]

Socrates was a pioneer and religious apologist for the religion of the world; his martyred blood served as just so much seed for spreading the gospel of man's epistemological self-authority, a dogma which he had brought to purest expression.

https://books.google.fi/books?id=Mau9wgEACAAJ&lpg=PP1&hl=fi&pg=PA903#v=onepage&q&f=false

> By 1839, prodded by Bauer, it seemed bizarre to the young Marx that anyone should think there exists a meaningful analogy between Socrates and Christ. **"If there is an analogy between Socrates and Christ, this could only be in this sense that Socrates is philosophy embodied while Christ is religion personified."**19

...

His autonomous apologetic was a strange combination of omnicompetent reason and mysticism, faith in himself alone, yet ready trust in the divine. To protect his autonomy

Socrates was forced back and forth between the poles of rationality and irrationality. “What Socrates did was to rationalize the known, and to make the mysterious the divine.”[51]

---

http://penelope.uchicago.edu/Thayer/E/Roman/Texts/Plutarch/Lives/Cato_Major*.html

He married a wife who was of gentler birth than she was rich, thinking that, although the rich and high-born may be alike given to pride, still, women of high birth have such a horror of what is disgraceful that they are more obedient to their husbands in all that is honourable. 2 He used to say that the man who struck his wife or child, laid violent hands on the holiest of holy things. **Also that he thought it more praiseworthy to be a good husband than a good senator, nay, there was nothing else to admire in Socrates of old except that he was always kind and gentle in his intercourse with a shrewish wife and stupid sons.**
...

23 1 This he did, not, as some think, out of personal hostility to Carneades, but because he was wholly averse to philosophy, and made mock of all Greek culture and training, out of patriotic zeal. **He says, for instance, that Socrates was a mighty prattler, who attempted, as best he could, to be his country's tyrant, by abolishing its customs, and by enticing his fellow citizens into opinions contrary to the laws.**

https://www.tertullian.org/fathers/julian_apostate_letter_to_themistius.htm

But if we conceive this to be true, or that only those are happy who administer public affairs and who are in authority and rule over many, what then are we to say about Socrates? As for Pythagoras and Democritus and Anaxagoras of Clazomenae, you will perhaps say that they were happy in another sense of the word, because of their philosophic speculations. But as for Socrates who, having rejected the speculative life and embraced a life of action, had no authority over his own wife or his son, can we say of him that he governed even two or three of his fellow-citizens? Then will you assert that since he had no authority over any one he accomplished nothing? **On the contrary I maintain that the son of Sophroniscus[29] performed greater tasks than Alexander, for to him I ascribe the wisdom of Plato, the generalship of Xenophon, the fortitude of Antisthenes, the Eretrian[30] and Megarian[31] philosophies, Cebes, Simmias,[32] Phaedo and a host of others; not to mention the offshoots derived from the same source, the Lyceum, the Stoa and the Academies. Who, I ask, ever found salvation through the conquests of Alexander?** What city was ever more wisely governed because of them, what individual improved? Many indeed you might find whom those conquests enriched, but not one whom they made wiser or more temperate than he was by nature, if indeed they have not made him more insolent and arrogant. **Whereas all who now find their salvation in philosophy owe it to Socrates.** And I am not the only person to perceive this fact and to express it, for Aristotle it seems did so before me, when he said that he had just as much right to be proud of his treatise on the gods as the conqueror[33] of the Persian empire. And I think he was perfectly correct in that conclusion.

> 33. Alexander; Julian seems to be misquoting Plutarch, *Moralia* 78d.

For military success is due to courage and good fortune more than anything else or, let us say, if you wish, to intelligence as well, though of the common everyday sort. **But to conceive true opinions about God is an achievement that not only requires perfect virtue, but one might well hesitate whether it be proper to call one who attains to this a man or a god.** For if the saying is true that it is the nature of everything to become known to those who have an affinity with it, then he who comes to know the essential nature of God would naturally be considered divine.

https://www.gutenberg.org/cache/epub/2333/pg2333-images.html#link2H_4_0008

The spirit which appears in the passage of Seneca to which we have referred tainted the whole body of the ancient philosophy from the time of Socrates downwards, and took possession of intellects with which that of Seneca cannot for a moment be compared. It pervades the dialogues of Plato. It may be distinctly traced in many parts of the works of Aristotle. **Bacon has dropped hints from which it may be inferred that, in his opinion, the prevalence of this feeling was in a great measure to be attributed to the influence of Socrates. Our great countryman evidently did not consider the revolution which Socrates effected in philosophy as a happy event, and constantly maintained that the earlier Greek speculators, Democritus in particular, were, on the whole, superior to their more celebrated successors.***

> * *Novum Organum*, Lib. i. Aph. 71, 79. *De Augmentis*, Lib. iii. Cap. iv. De principiis, atque originibus. *Cogitata et visa*. Redargutio philosophiarum.

> http://attalus.org/translate/valerius3b.html#c4

> [4e.1] But to join foreign examples to the Romans: Socrates, who was not only by common consent of all persons, but also by the oracle of Apollo judged to be the wisest among men, was born of Phaenarete a midwife, and Sophroniscus a stone-cutter; yet he came to be one of the most resplendent lights of glory, and deservedly so. **For when the wits of most learned men were**

busied in pointless disputations – who endeavoured to set forth the measurements of the sun, moon, and the rest of the stars, rather by multiplicity of words, than certain arguments, for they undertook to tell the dimensions of the whole world – he diverted men from these unlearned errors, and taught them to dive into the nature of man, and the secret thoughts that lay hidden in his breast. So that if virtue should be esteemed for itself, he was the master who best taught the rules of life.

https://archive.org/details/completeworksrie033168mbp/page/n383/mode/2up?view=theater

(Physicists and medical men are hated.) Socrates, Aristippus, the Megarian school, the Cynics, Epicurus) and Pyrrho—a general onslaught upon knowledge in favour of *morality*.
…

443. **At bottom, morality is *hostile* to science:** Socrates was so already too—and the reason is, that science considers certain things important which have no relation whatsoever to "good" and "evil," and which therefore reduce the gravity of our feelings concerning "good" and "evil." What morality requires is that the whole of a man should serve it with all his power: it considers it waste on the part of a creature that *can ill afford waste,* when a man earnestly troubles his head about stars or plants. That is why science very quickly declined in Greece, **once Socrates had inoculated scientific work with the disease of morality.** The mental altitudes reached by a Democritus, a Hippocrates, and a Thucydides, have not been reached a second time.

https://ncse.ngo/review-creationism-and-its-critics-antiquity

Rather than relying on the voluminous, but also problematic, evidence of the Platonic dialogues for his Socrates, **Sedley turns to Xenophon's defense of Socrates against the charges of impiety in his *Memorabilia*. "Xenophon's Socrates," Sedley proclaims, "is a fundamentally anti-scientific creationist"** (p 78). Our uniquely human attributes (intellect, hands, upright posture) and the clear evidence that other animals exist for our use are evidenced to develop an explicitly "anthropocentric teleology" (p 80). **Much later in the narrative we are shown how this very passage serves as a source for Stoic theology** (p 212-25), while passages in Aristotle discussing the same human attributes lead Sedley, with far less plausibility, to ascribe the same sort of teleology to the Stagirite (p 201-3). But Aristotle and the Stoics must wait. **I am convinced by the portrait of Socrates painted here, in part because we hear echoes of these arguments in Plato's Socrates as well.**

https://archive.org/details/deciveorcitizen00inhobb/page/6/mode/2up?view=theater

Which kinde of doctrine (excepting what relates to Christian Religion) the most antient Sages did judge fittest to be delivered to posterity, **either curiously adorned with Verse, or clouded with Allegories, as a most beautifull and hallowed mystery of Royall authority; lest by the disputations of private men, it might be defiled;** Other philosophers in the mean time, to the advantage of mankinde, did contemplate the faces, and motions of things; others, without disadvantage, their natures, and causes. **But in after times, Socrates is said to have been the first, who truly loved this civill Science,** although hitherto not throughly understood, yet glimmering forth as through a cloud in the government of the Common weale, and that he set so great a value on this, that utterly abandoning, and despising all other parts of philosophy, he wholly embraced this, as judging it onely worthy the labour of his minde. After him comes Plato, Aristotle, Cicero, and other philosophers, as well Greeke, as Latine. **And now at length all men of all Nations, not only philosophers, but even the vulgar, have, and doe still deale with this as a matter of ease, exposed and prostitute to every Mother-wit, and to be attained without any great care or study.**

https://archive.org/details/newscienceofgiam030174mbp/page/n247/mode/2up?view=theater

On the other hand, they have applied to these matters three ideas proper to their own refined and learned minds: the first, that of a justice reasoned on maxims of Socratic morals; the second, that of a glory which is the fame of benefits done to the human race; and the third, the desire for immortality. By following these errors and applying these ideas, they have believed that the kings or other great personages of ancient times consecrated themselves and their families (as well as their entire patrimonies and substance) to bring happiness to the poor, who are always the majority in any city or nation.

667 Yet concerning Achilles, the greatest of the Greek heroes, Homer tells us of three of his qualities which were in complete contrast with the three ideas of the philosophers. As regards justice, in speaking with Hector, who proposes that the victor in the fight shall bury the vanquished, **he forgets their equality of rank and the common lot [of men] (two considerations which naturally induce men to recognize justice)** and makes the following savage reply: "When have men ever made pacts with lions? And when were wolves and lambs ever of one mind?"

https://archive.org/details/in.ernet.dli.2015.218820/page/n343/mode/2up?view=theater

In the centre of Greek history, chronologically as well as intellectually, stands the mysterious figure of Socrates, who had a good deal to say to his fellow-countrymen about these things. **Nietzsche, as everyone knows, saw in him a typical decadent, even a criminal, and called his dialectic the victory of mob-resentment; already ninety years ago Carlyle, without any detailed knowledge, led only by his gifts of instinct, expressed the opinion that Socrates with his eternal logic-chopping heralded the end of the true Greek culture.**

https://jewishreviewofbooks.com/articles/2397/twilight-of-the-anti-semites/

At the peak of Wagner's public influence, in 1870, **Nietzsche delivered a lecture on "Socrates and Tragedy" in which he insisted that the "Jewish press" would have deleterious effects on German art in the same way that Socratism had destroyed authentic Greek tragedy. Nietzsche seems to have believed that connecting his academic work on philology and aesthetics to Wagnerian anti-Semitism would impress his new friends.** But, to the contrary, the Wagners thought that Nietzsche had taken a step too far. While agreeing with the main point he was making, Cosima wrote to Nietzsche that his lecture was "much too new to be understood by the audience" and that it could jeopardize the Wagners' entire "program." He dutifully removed the anti-Semitic spur in the published edition of the lecture.

https://books.google.fi/books?id=QL9MFJqMrB0C&lpg=PP1&hl=fi&pg=PA63#v=onepage&q&f=false

Beyond this, he associates Socratism with Alexandria and Rome, and implicitly with the French Enlightenment, which lionized Socrates as one of its cardinal saints and heroes.

Some of these associations Nietzsche adopted from early romanticism, particularly from writings of Friedrich and August Schlegel; others were original to him.63 Among the latter is a point that was somewhat submerged in *The Birth of Tragedy*, but much more salient in an earlier lecture Nietzsche gave at the Freie Akademische Gesellschaft in Basel (1 February 1870), with the title "Socrates and Tragedy." **Here he rehearsed many of the arguments of his first book, but at one critical juncture he went considerably further when, echoing Wagner's obsessions, he identified Socratism with "the modern Jewish press," which he treated as the prime enemy of great tragic art in the present.**64 This went beyond the bounds of propriety and prompted severe criticism. Even though Wagner supported Nietzsche's argument, he wrote to his young admirer and counseled him to be more circumspect in his public pronouncements.65 **The phrasing Nietzsche adopted in *The Birth of Tragedy* – more oblique and opaque, but eminently legible by the man to whom this work was dedicated – came in response to that suggestion.**

2. This irreverent belief that the great sages were decadent types, first occurred to me precisely in regard to that case concerning which both learned and vulgar prejudice was most opposed to my view. **I recognised Socrates and Plato as symptoms of decline, as instruments in the disintegration of Hellas, as pseudo-Greek, as anti-Greek** ("The Birth of Tragedy," 1872).

https://www.gutenberg.org/cache/epub/51356/pg51356-images.html#FNanchor_19_21

In very truth, Plato has given to all posterity the prototype of a new form of art, the prototype of the *novel* which must be designated as the infinitely evolved Æsopian fable, **in which poetry holds the same rank with reference to dialectic philosophy as this same philosophy held for many centuries with reference to theology: namely, the rank of *ancilla.*** This was the new position of poetry into which Plato forced it under the pressure of the demon-inspired Socrates.
...

Let us but realise the consequences of the Socratic maxims: "Virtue is knowledge; man only sins from ignorance; he who is virtuous is happy": these three fundamental forms of optimism involve the death of tragedy. For the virtuous hero must now be a dialectician; there must now be a

necessary, visible connection between virtue and knowledge, between belief and morality; **the transcendental justice of the plot in Æschylus is now degraded to the superficial and audacious principle of poetic justice with its usual *deus ex machina*.**

https://www.gutenberg.org/cache/epub/51356/pg51356-images.html#Footnote_21_23

One sought, therefore, for an earthly unravelment of the tragic dissonance; **the hero, after he had been sufficiently tortured by fate, reaped a well-deserved reward through a superb marriage or divine tokens of favour.** The hero had turned gladiator, on whom, after being liberally battered about and covered with wounds, freedom was occasionally bestowed. The *deus ex machina* took the place of metaphysical comfort. **I will not say that the tragic view of things was everywhere completely destroyed by the intruding spirit of the un-Dionysian: we only know that it was compelled to flee from art into the under-world as it were, in the degenerate form of a secret cult. Over the widest extent of the Hellenic character, however, there raged the consuming blast of this spirit, which manifests itself in the form of "Greek cheerfulness," which we have already spoken of as a senile, unproductive love of existence;** this cheerfulness is the counterpart of the splendid "naïveté" of the earlier Greeks, which, according to the characteristic indicated above, must be conceived as the blossom of the Apollonian culture growing out of a dark abyss, as the victory which the Hellenic will, through its mirroring of beauty, obtains over suffering and the wisdom of suffering. The noblest manifestation of that other form of "Greek cheerfulness," the Alexandrine, is the cheerfulness of the *theoretical man*: it exhibits the same symptomatic characteristics as I have just inferred concerning the spirit of the un-Dionysian:—it combats Dionysian wisdom and art, it seeks to dissolve myth, **it substitutes for metaphysical comfort an earthly consonance, in fact, a *deus ex machina* of its own, namely the god of machines and crucibles, that is, the powers of the genii of nature recognised and employed in the service of higher egoism;** it believes in amending the world by knowledge, in guiding life by science, **and that it can really confine the individual within a narrow sphere of solvable problems, where he cheerfully says to life: "I desire thee: it is worth while to know thee."**
…

Our whole modern world is entangled in the meshes of Alexandrine culture, and recognises as its ideal the *theorist* equipped with the most potent means of knowledge, and labouring in the service of science, of whom the archetype and progenitor is Socrates. All our educational methods have originally this ideal in view: **every other form of existence must struggle onwards wearisomely beside it, as something tolerated, but not intended.**
…

Now, we must not hide from ourselves what is concealed in the heart of this Socratic culture: Optimism, deeming itself absolute! Well, we must not be alarmed if the fruits of this optimism ripen,—if society, **leavened to the very lowest strata by this kind of culture,** gradually begins to tremble through wanton agitations and desires, if the belief in the earthly happiness of all, if the belief in the possibility of such a general intellectual culture is gradually transformed **into the threatening demand for such an Alexandrine earthly happiness, into the conjuring of a Euripidean *deus ex machina.*** Let us mark this well: **the Alexandrine culture requires a slave class, to be able to exist permanently: but, in its optimistic view of life, it denies the necessity of such a class, and consequently, when the effect of its beautifully seductive and tranquillising utterances about the "dignity of man" and the "dignity of labour" is spent, it gradually drifts towards a dreadful destination.** There is nothing more terrible than a barbaric slave class, who have learned to regard their existence as an injustice, and now prepare to take vengeance, not only for themselves, but for all generations. In the face of such threatening storms, who dares to appeal with confident spirit to our pale and exhausted religions, which even in their foundations have degenerated into scholastic religions?—**so that myth, the necessary prerequisite of every religion, is already paralysed everywhere, and even in this domain the optimistic spirit—which we have just designated as the annihilating germ of society—has attained the mastery.**

While the evil slumbering in the heart of theoretical culture gradually begins to disquiet modern man, and makes him anxiously ransack the stores of his experience for means to avert the danger, though not believing very much in these means; while he, therefore, begins to divine the consequences his position involves: great, universally gifted natures have contrived, with an incredible amount of thought, to make use of the apparatus of science itself, in order to point out the limits and the relativity of knowledge generally, and thus definitely to deny the claim of science to universal validity and universal ends: with which demonstration the illusory notion was for the first time recognised as such, which pretends, with the aid of causality, to be able to fathom the innermost essence of things. **The extraordinary courage and wisdom of *Kant* and *Schopenhauer* have succeeded in gaining the most difficult victory, the victory over the optimism hidden in the essence of logic,** which optimism in turn is the basis of our culture.
…

But now that the Socratic culture has been shaken from two directions, and is only able to hold the sceptre of its infallibility with trembling hands,—once by the fear of its own conclusions which it at length begins to surmise, and again, because it is no longer convinced with its former naïve trust of the eternal validity of its foundation,—it is a sad spectacle to behold how the dance of its thought always rushes longingly on new forms, to embrace them, and then, shuddering, lets them go of a sudden, as Mephistopheles does the seductive Lamiæ. It is certainly the symptom of the "breach" which all are wont to speak of as the primordial suffering of modern culture that the theoretical man, alarmed and dissatisfied at his own conclusions, no longer dares to entrust himself to the terrible ice-stream of existence: he runs timidly up and down the bank. He no longer wants to have anything entire, with all the natural cruelty of things, so thoroughly has he been spoiled by his optimistic contemplation. Besides, **he feels that a culture built up on the principles of science must perish when it begins to grow *illogical,*** that is, to avoid its own conclusions.

https://www.gutenberg.org/cache/epub/51356/pg51356-images.html#FNanchor_23_26

Let us recollect furthermore how Kant and Schopenhauer made it possible for the spirit of *German philosophy* streaming from the same sources **to annihilate the satisfied delight in existence of scientific Socratism** by the delimitation of the boundaries thereof; how through this delimitation an infinitely profounder and more serious view of ethical problems and of art was inaugurated, which we may unhesitatingly designate as *Dionysian* wisdom comprised in concepts.

https://research.library.fordham.edu/cgi/viewcontent.cgi?article=1001&context=phil_babich

> Yes, my friends, believe with me in Dionysian life and the rebirth of tragedy. **The age of the Socratic man is over;** [This strange species of man is also called theoretical man, critic, optimist, non-mystic—all those are quite horrifying things. **But with the exception of the musicians of the future, everything that participates in Hellenic culture since Socrates belongs to this group.** It is also since Socrates that there is something like an “Alexandrian culture” most keenly expressed as culture of the opera] put on wreaths of ivy, put the thyrsus into your hand, and do not be surprised when tigers and panthers lie down, fawning, at your feet.

So says Aristophanes’ *Frogs*:

> Right it is and befitting,
> Not, by Socrates sitting,
> Idle talk to pursue,
> Stripping tragedy-art of
> All things noble and true.
> Surely the mind to school
> Fine-drawn quibbles to seek,
> Fine-set phrases to speak,
> Is but the part of a fool!8

…

A life ruled by thought! **Thinking serves life, while among all previous philosophers life had served thought and knowledge:** here the proper life appears as a purpose; there proper knowledge [is seen as] the highest.

Thus Socratic philosophy is absolutely *practical*: it is hostile to all knowledge unconnected to ethical implications. <u>It is *for everyone* and *popular* because it holds that virtue may be taught.</u> It does not appeal to genius and the highest powers of knowledge. Previously simple custom and religious subscription sufficed; the philosophy of the Seven Sages was merely the vitally practical morality so highly esteemed throughout Greece made into formulas. Now the resolution of moral instinct enters: bright knowledge should be the sole merit, but with bright knowledge humanity has virtue as well, for this is the essentially Socratic belief, that knowledge and morality conjoin. **Now the reversal of this proposition is revolutionary in the highest degree: everywhere luminous knowledge does not exist is the bad (also evil or the ill, τό κακόν). Here Socrates becomes the critic of his times: he investigates how far it behaves from dark drives and how far it behaves from knowledge, thereby yielding the democratic result that the lowest manual laborer stands higher than the statesman, orator, and artist of his times.** A carpenter, coppersmith, navigator, and physician are taken, and their technical knowledge is tested – [each] can cite the persons from whom he learned the means. In contrast, everyone had an opinion concerning [the questions], What is Justice? What is piety? What is democracy? What is law? Yet Socrates found only darkness and ignorance. **Socrates claims the role of a learner, but he persuades his interlocutors of their own rashness.**

His next step was therefore to arrive at a definition from the moral, social, and political realm; in this regard his method was dialectical or epagogic. The entire world of human affairs (ἀνθρώπινα) reveals itself to him as a world of ignorance; there are words but no concepts tightly connected to them. **His task was to order this world, thinking that mankind could do no other than live virtuously if it were so ordered.**

https://archive.org/details/humanalltohuman033380mbp/page/n221/mode/2up?view=theater

I cannot persuade myself that the history of the Greeks followed that natural course for which it is so celebrated. They were much too variously gifted to be *gradual* the orderly manner of the tortoise when running a race with Achilles, and that is called natural development. **The Greeks went rapidly forward, but equally rapidly downwards; the movement of the whole machine is so intensified that a single stone thrown amid its wheels was sufficient to break it. Such a stone, for instance, was Socrates; the hitherto so wonderfully regular, although certainly too rapid, development of the philosophical science was destroyed in one night. It is no idle question whether Plato, had he remained free from the Socratic charm, would not have discovered a still higher type of the philosophic man, which type is for ever lost to us.** We look into the ages before him as into a sculptor's workshop of such types. The fifth and sixth centuries B.C. seemed to promise something more and higher even than they produced; they stopped short at promising and announcing. And yet there is hardly a greater loss than the loss of a type, of a new, hitherto undiscovered highest *possibility of the philosophic life:*—Even of the older type the greater number are badly transmitted; it seems to me that all philosophers, from Thales to Democritus, are remarkably difficult to recognise, but whoever succeeds in imitating these figures walks amongst specimens of the mightiest and purest type. This ability is certainly rare, it was even absent in those later Greeks, who occupied themselves with the knowledge of the older philosophy; **Aristotle, especially, hardly seems to have had eyes in his head when he stands before these great ones. And thus it appears as if these splendid philosophers had lived in vain, or as if they had only been intended to prepare the quarrelsome and talkative followers of the Socratic schools.** As I have said, here is a gap, a break in development; some great misfortune must have happened, and the only statue which might have revealed the meaning and purpose of that great artistic training was either broken or unsuccessful; what actually happened has remained for ever a secret of the workshop.

86. SOCRATES.—**If all goes well, the time will come when, in order to advance themselves on the path of moral reason, men will rather take up the *Memorabilia* of Socrates than the Bible, and when Montaigne and Horace will be used as pioneers and guides for the understanding of Socrates, the simplest and most enduring of interpretative sages.** In him converge the roads of the most different philosophic modes of life, which are in truth the modes of the different temperaments, crystallised by reason and habit and all ultimately directed towards the delight in life and in self. The apparent conclusion is that the most peculiar thing about Socrates was his share in all the temperaments. Socrates excels the founder of Christianity by virtue of his merry style of seriousness and by that wisdom of sheer roguish pranks which constitutes the best state of soul in a man. Moreover, he had a superior intelligence.

https://archive.org/details/dawnofday029675mbp/page/n27/mode/2up?view=theater

Let us not be deceived as to the motives of that moral law which requires, as an indication of morality, obedience to custom in the most difficult cases! **Self-conquest is required, not by reason of its useful consequences for the individual; but that custom and tradition may appear to be dominant, in spite of all individual counter desires and advantages. The individual shall sacrifice himself—so demands the morality of custom.**

On the other hand, **those moralists who, like the followers of Socrates, recommend self-control and sobriety to the *individual* as his greatest possible advantage and the key to his greatest personal happiness, are *exceptions*—and if we ourselves do not think so, this is simply due to our having been brought up under their influence.** They all take a new path, and thereby bring down upon themselves the utmost disapproval of all the representatives of the morality of custom. They sever their connection with the community, as immoralists, and are, in the fullest sense of the word, evil ones. **In the same way, every Christian who "sought, above all things, his *own* salvation," must have seemed evil to a virtuous Roman of the old school.**

In *Le Procès de Socrate: Examen critique des thèses socratiques* (The Trial of Socrates: Critical inquiry into the Socratic propositions), 1889, Sorel's first major work, the traditional image of the heroic Socrates confronting death was rejected. He became the traducer of the values of heroic Greek culture, one of the quibblers and deceivers and wordmongers of the rising urban civilization of Hellas who ultimately brought about its doom.

Strauss follows Nietzsche in thinking that the 'contemporary West' is the embodiment of 'Socratic culture'. Socrates is the 'turning point' of our civilization, nay the 'vortex of world history', and therefore the 'most questionable phenomenon of antiquity'.77 To understand ourselves, we must understand him.

Following one of the Islamic philosophers, Strauss believes that Socrates must have undergone a 'conversion'.78 The early Socrates portrayed by Aristophanes in the *Clouds* is a Sophist. The Socrates portrayed in the dialogues of Plato and Xenophon has been converted. **The Aristophanean Socrates, not the Platonic-Xenophontic Socrates, is responsible for inaugurating what Nietzsche called 'Socratic culture' and what Strauss simply calls modernity.** Therefore, in Strauss's view, Nietzsche rightly attacks the young Socrates as does Aristophanes.
…

The young Socrates is the embodiment of the scientific spirit. **He is green, foolish and degenerately modern.**80 He embodies the optimistic rationalism that characterizes modernity. In other words, he believes that the true is in perfect harmony with the good and the beautiful (i.e. there is nothing 'savage' about the truth).81
…

For Strauss, the young Socrates is the embodiment of the scientific spirit: he is 'anerotic' and 'a-music'; in other words, he is characterized by a most 'inhuman asceticism'.99 His pupils are pale and sickly; they are not permitted to go out into the fresh air, but spend all their time in the 'think-tank' or Thinkery. **His 'zeal' in the pursuit of learning leads him to lead a hard ascetic life characterized by a lack of gymnastics, sexual abstinence, frugality, endurance and continence.**100 He is concerned with truth above beauty. He fails to understand that a culture needs beauty more than it needs truth and ugliness. **By the same token, he fails to recognize that the truth is ugly and destructive.** His dedication to truth is altogether consuming. He is oblivious to its effects on those around him. In spite of his immoderate love of truth, Socrates is not an erotic lover of knowledge for its own sake (i.e. for the sake of the pleasures of contemplation). **For the Aristophanean Socrates, knowledge is a means to the 'relief of man's estate'; it is sought for the sake of 'higher egoism', or collective selfishness.**

Strauss describes the young Socrates as a Promethian benefactor of mankind (and therefore not the godlike sage that he later becomes). **He offers man the light of knowledge without thinking of the unpalatable results of mass enlightenment.** Socrates, like Prometheus, is a fool; only our 'modernity' leads us to labor under the illusion that a Promethian is a hero. Aristophanes knows better. The destruction of the Thinkery by fire at the end of the play is mean to teach Socrates a lesson – namely that his pious devotion to science leads inevitably to his own destruction as well as that of the city.

Strauss concludes that the young Socrates is quintessentially 'modern' in his unconcealed debunking of the gods, his suicidal dedication to truth, his rationalist optimism and his scientific asceticism.
…

In summary, Socrates is the pivotal figure in the drama of Western civilization. The story begins with an early state of innocence that is disrupted by the discovery of nature and the emergence of philosophy. In the beginning knowledge was the preserve of rare sages but later, it was popularized and as a result vulgarized. **Socrates was the decisive figure in this process because the scientific spirit he represented dethroned the gods and undermined the 'Just Speech'. He erroneously believed that neither the gods nor the 'Just Speech' are necessary, but that science alone is the means to salvation.** Aristophanes prophesied that the outcome would be disastrous. He tried to mitigate the danger by ridiculing Socrates. But the damage was already done. Even Socrates's own conversion could not reverse it. We are the heirs of Socrates. **We have deified the man that Athens so wisely condemned.**

https://archive.org/details/TheMythOfTheTwentiethCentury_400/page/n89/mode/2up?view=theater

In the end, **we have only the Platonic reaction which strove to attain by artifice what the blood alone was already too weak to achieve.** The Nordic Greek recognised no separate priestly caste. His priests came from the aristocratic families. His singers and poets related to him the deeds and acts of his heroes and his gods. The free Greek spirit was as alien to dogmatism as was the earlier Indian and the later Teuton. Gymnastics and music were the substance of his education, and these established the necessary prerequisites for the production of the hoplite, the citizen of the state. **Only a Sokrates could preach such insanity as: virtue could be taught and imparted to all men, an idea further refined by Platon. He who should really understand the nature of the world of ideas must of necessity be virtuous. With the promulgation of such an individualistic and faceless worldview, the axe was truly laid at the roots of Greek life.**

https://archive.org/details/TheMythOfTheTwentiethCentury_400/page/n215/mode/2up?view=theater

Platon glorified the hair splitter. **In the Platonic dialogues Sokrates declared that a written paper roll could entice him away from the most beautiful natural surroundings. In the midst of the**

extroverted Grecian worldview, this was an admission of the dullest pedantry, yet Sokrates was an example of the spiritual racial strength of genius. However strong his moral philosophy was, Sokrates still failed in the field of aesthetics because of his insistence on universalism. In the devout and beautiful Greek life of old, struggle seemed to be an eternal natural law to the Hellenes in which Pallas Athena herself served. A new epoch of Greek history did not begin with Sokrates, but with him a completely different man entered Hellenic life. **Admittedly, he inherited the sacred traditions of Athens, of Homeros, of the tragedians, of Perikles and the builders of the Acropolis. Admittedly, he took part himself as a soldier in the struggles for political power, but, nevertheless, Sokrates is the ungenial – although noble – brave man of another non Greek race.** He lived in a time when Athens had embarked on false paths, wherein its once aristocratic democracy in which only Greeks, never foreigners, could participate, had begun its slide down into the abyss of chaos. Under the tyranny of the demagogues the great Alkibiades was banished and the entire Athenian army perished before Syracuse, and almost all other conquests were lost. The triumphant aristocrats then made the democrats drink poison by the hundreds. Later, they met the same fate themselves. Aristophanes mocked ancient tradition. The new teachers, Gorgias, Protagoras, and so on, took pride in the new, naked, beautiful forms. **Then the alien man, characterised a thousand times in Greek literature, stepped to the fore. The new alien race unfolded its degenerate values, shaping Greek culture.** The Greek values of sobriety and heroism were replaced. **Sokrates substituted dialectics for substance, the ugly for the beautiful, and academic discussion for heroism.** Beyond this, he sought the good in itself, preached the community of the good, and gathered around him a disputing new Greek generation.

Once Perikles, as lord of Athens, had to beg the court for its indulgence in granting civil rights to his son born of his foreign wife. This was granted him in an exceptional case. This strict racial law, made under Perikles himself, vanished with the progressive impoverishment of the blood of Athens. **But it was Sokrates, the non Greek, who, in a time of decomposition, gave it a death blow.** The idea of a community of the good resulted in a new human classification, not according to races and peoples, but according to individual man. **With the collapse of Athenian racial democracy, Sokrates became the international social democrat of his day. His personal courage and cleverness gave his racially destructive teaching its self advertising blessing. It was his disciple, Antisthenes, the son of a hither Asiatic slave woman, who then drew so many conclusions from Sokrates's ideas and ventured forth to preach the destruction of all barriers between races and peoples in the name of human progress.**

It was because of Platon that Sokrates was immortalised, and is, even today, honoured by armchair great men. Greek genius must recognise Platon as the man who, in the midst of a great decomposition, represented sober prudence. He loved this man, Sokrates, and so created an eternal monument for him. Platon placed the words of his own soul in the mouth of Sokrates. Thus, the true Sokrates vanished from the world. Only a few passages in Platon truly refer to him. **In the *Phaedon*, for example, Platon relates that Sokrates had admitted that he possessed no aptitude for investigation of organic events.** The true nature of things for Sokrates therefore consisted ultimately not in their investigation by observation, but in our thinking about them. One should not ruin one's eyes by viewing things to excess. If man wishes to discover whether the earth is flat or round then it does not suit him to carry on research. Rather, he should ask: What does reason say of this? Is it rational to conceive the earth as the centre of the universe? **While Platon certainly invented this passage, it fits the same Sokrates who turned his gaze away from a racially beautiful Greece in order to talk of a universal abstract mankind, a brotherhood of the good. Here he turned away from the sun of observation to look at the shadows of dogma. As the Jewish dogma has corrupted religion, so Platon's scientific method, hostile to life, has corrupted European philosophy. Aristoteles was its systematic diffuser, and Hegel its last great pupil. Logic is the science of god, said Hegel. These words are an affront to a truly Nordic religion. It is the antithesis of all that is truly German and all that was truly Greek. These words are truly Socratic.** It is not surprising therefore that university professors have canonised Hegel along with Sokrates.

Beauty of soul and beauty of physical appearance certainly do not always coincide. But with Sokrates this was the case. Through an environment where Eros and the Nordic racial beauty of blond Aphrodite ruled, passed the same ideal of beauty, forming and shaping the real Greek world. The ideal was always the slim, white skinned and blond creature – from Dionys of Euripides to the dear little blond heads in Aristophanes' s *The Birds*. **In the midst of all this, the uncouth type of the satyr appears like the symbol of what is alien. In the new, Asiatic Greek world, beauty vanished.** The ugly and all that is repellent to the eye replaced natural beauty in later Greek art. The preaching of the rational good was the parallel phenomenon of Greek racial and spiritual disintegration. **The philosophical good then destroyed the racial good as the idea of beauty. Heroic ideas no longer supported the state and social life. The greatest symbol of this new, hostile, racially unconscious chaotic group – the antithesis of the Hellenic racial soul – was Sokrates.**

Viewed from this aspect of historical development, such a genius as Platon appears to have squandered his entire spirit on this man and presents him with immortality. Platon was essentially an aristocrat, an Olympian fighter, a formative artist, and a profound thinker. At the end of

his life he wished to save his people racially by enacting a powerful constitution. None of this was Socratic; it was the last great flowering of the Hellenic spirit. Praxiteles later formulated a protest against all Socraticism. This was the swansong of Nordic Greek racial beauty. In art this was paralleled by the creation of the magnificent Nike of Samothrace. **But Sokrates remained a symbol of decline. Hellas disappeared in racial chaos. In place of the proud Athenians the universally despised hither Asians populated the provinces.** The Greeks allowed these characterless racial inferiors to educate them. They drove the true Greeks away when they tired of them.

Sokrates triumphed while Hellas perished. Healthy human understanding had destroyed genius in one last great hour. What was ugly became the norm; true beauty was only the good.

https://archive.org/details/greeks-romans-germans/page/211/mode/2up?view=theater

The repudiation of Socrates by scholars of Plato under the Third Reich was virtually universal. Only Hans Bogner recommended that his Greek class read Plato's *Apology*, which celebrated the figure of a master of whom it could be said Plato was "the most faithful disciple"117 or even an "evangelist."118 Bogner presented an image, as positive as it was rare, of Socrates taking up the sword of dialectic against foreign Sophists who were corrupters of the polis, in an uphill battle against the decline of Athens.

He was truly the only one. **In his take on Platonic racism, Günther completed his tour de force without mentioning Socrates one single, treacherous time in more than a hundred pages.**119
...

For Rosenberg, Socrates heralded the advent of the Stoics, in that he established the basis for Greek philosophical individualism. By teaching that virtue could be learned, Socrates undermined the elitist foundations of Greek inegalitarianism:124 Socrates proposed a new conception of humanity, "a new human classification, not according to races and peoples, but according to individual man. With the collapse of Athenian social democracy, Socrates became the international Social Democrat of his day."125

This deleterious individualism had produced as its monstrous offspring the Western individualistic humanism of more recent centuries, which, **"like Socrates, looked toward man, not the Greek, the German, the Jew, or the Chinese,"**126 and which Günther denounced with the vigor of a Joseph de Maistre.

This unitarian conception of the human community, which destroyed the strict hierarchical and inegalitarian vision that traditionally characterized the Greeks, was taken up by Antisthenes, the true disciple and continuation of Socrates and his legacy.127 Alfred Rosenberg accordingly absolved Plato of any accusations of Socratism: **"It was his disciple Antisthenes, the son of a Hither-Asiatic slave woman, who then drew so many conclusions from Socrates' ideas and ventured forth to preach the destruction of all barriers between races and peoples in the name of human progress."**128
...

From the moment that Socrates, and later the Stoics, proclaimed that the individual was the source of all value, the notions of people and race necessarily lost theirs.

---

http://penelope.uchicago.edu/Thayer/E/Roman/Texts/Dionysius_of_Halicarnassus/14*.html#ref6

One could name countless blunders of this sort made by these cities, **but I pass over them since it grieves me to mention even these instances. For I would distinguish Greeks from barbarians, not by their name nor on the basis of their speech, but by their intelligence and their predilection for decent behaviour, and particularly by their indulging in no inhuman treatment of one another. All in whose nature these qualities predominated I believe ought to be called Greeks, but those of whom the opposite was true, barbarians.** 6 Likewise, their plans and actions which were reasonable and humane, I consider to be Greek, but those which were cruel and brutal, particularly when they affected kinsmen and friends, barbarous.

https://en.wikisource.org/wiki/Juvenal_and_Persius/The_Satires_of_Juvenal/Satire_8

Though you deck your hall from end to end with ancient waxen images, Virtue is the one and only true nobility. [nobilitas sola est atque unica virtus] Be a Paulus, or a Cossus, or a Drusus in character; rank them before the statues of your ancestors; let them precede the fasces themselves when you are Consul. **You owe me, first of all things, the virtues of the soul;** prove yourself stainless in life, one who holds fast to the right both in word and deed, and I acknowledge you as a lord; all hail to you, Gaetulicus, or you, Silanus, or from whatever stock you come, if you have proved yourself to a rejoicing country a rare and illustrious citizen, we would fain cry what Egypt shouts when Osiris has been found.[8] **For who can be called "noble" [generosum] who is unworthy of his race, [genere] and distinguished in nothing but his name?**
...

Tell me, thou scion of the Trojans, who deems a dumb animal well-born unless it be strong? [dic mihi, Teucrorum proles, animalia muta quis generosa putet nisi fortia.] It is for this that we commend the swift horse whose speed sets every hand aglow, and fills the Circus with the hoarse shout of victory; that horse is noblest, on whatever pasture reared, whose rush outstrips the rest, and whose dust is foremost upon the plain. **But the offspring of Coryphaeus[10] or Hirpinus[10] comes to the hammer if Victory light but seldom on his car: no respect is there paid to ancestors, no favour is shown to Shades!** The slow of foot, that are fit only to turn a miller's wheel, pass, for a mere nothing, from one owner to another, and gall their necks against the collar.
...

I would rather that Thersites were your father if only you were like the grandson of Aeacus,[65] and could wield the arms of Vulcan, than that you should have been begotten by Achilles and be like Thersites. Yet, after all, however far you may trace back your name, however long the roll, you derive your race from an ill-famed asylum: the first of your ancestors, whoever he was, was either a shepherd or something that I would rather not name.

http://classics.mit.edu/Apuleius/apol.1.1.html

24. **As to my birthplace, you assert that my writings prove it to lie right on the marches of Numidia and Gaetulia, for I publicly described myself as half Numidian, half Gaetulian in a discourse delivered in the presence of that most distinguished citizen Lollianus Avitus. I do not see that I have any more reason to be ashamed of that than had the elder Cyrus for being of mixed descent, half Mede, half Persian. A man's birthplace is of no importance, it is his character that matters. We must consider not in what part of the world, but with what purpose he set out to live his life. Sellers of wine and cabbages are permitted to enhance the value of their wares by advertising the excellence of the soil whence they spring, as for instance with the wine of Thasos and the cabbages of Phlius.** For those products of the soil are wonderfully improved in flavour by the fertility of the district which produces them, the moistness of the climate, the mildness of the winds, the warmth of the sun, and the richness of the soil. But in the case of man, the soul enters the tenement of the body from without. What, then, can such circumstances as these add to or take away from his virtues or his vices? **Has there ever been a time or place in which a race has not produced a variety of intellects, although some races seem stupider and some wiser than others?** The Scythians are the stupidest of men, and yet the wise Anacharsis was a Scyth. The Athenians are shrewd, and yet the Athenian Meletides was a fool.

https://philarchive.org/archive/BROSTC-2v1

Socrates believes that his dialectical examinations in pursuit of wisdom and virtue are aimed at making people better and count as attempts at the true political expertise: **“I think that I am among the few Athenians—not to say the only one—to undertake the true political expertise and to engage in political matters, and I am alone among Athenians today.”**25 Socrates claims that his *elenctic* mission is genuinely political, whereas ordinary public life in Athens falls short.

When Socrates rejects ordinary politics and takes up extraordinary politics, he is trading in local commitments for cosmopolitan ones. This point is not mysterious: ordinary politics is tied to the reach of the *polis*, whereas extraordinary politics is not. Socrates himself recognizes the cosmopolitan nature of his extraordinary politics; he characterizes his mission of examining others in cosmopolitan terms: “Thus, even now I still go around seeking these things, and in accordance with the god I search after *anyone*, whether fellow citizen or foreigner, whom I think is wise.”26 It is natural to read this claim as an expression of Socrates’s unquenchable thirst for wisdom, but this does not exhaust his meaning. For Socrates believes that his search for wisdom also provides the greatest service to those he examines.27 After all, this is why he considers his work genuinely political and why he calls himself the god’s greatest gift to Athens.28 So his refusal to limit his *elenctic* mission to Athenians is also a commitment to benefit foreigners alongside fellow citizens—this is the cosmopolitanism of Socrates’s extraordinary politics.

Perhaps this explicit commitment to cosmopolitanism has been passed over in so much scholarly silence because it has been thought to be an isolated remark. But this is a mistake: Socrates’s refusal to limit his extraordinary political activity to conventional political boundaries is not an accidental or passing feature of his ethics. **Central to Socrates’s inquiries is his insistence that conventional distinctions among human beings—men and women, old and young, free and slave, citizen and foreigner—are (at least in some important respects) irrelevant.** This is especially clear in his conversation with Meno.29

> 29. **The same orthodoxy which counts Plato’s early dialogues as our best source for the historical Socrates generally regards the *Meno* as a “transitional” dialogue,** partly reflecting the philosophy of Socrates and partly reflecting the philosophy of Plato as it would be developed in the middle-period dialogues. *See supra* note 5 and accompanying text. I take it that the passages I point to from the *Meno* are genuinely Socratic.

When Meno conventionally defines virtue in separate terms as the virtue of a man, the virtue of a woman, the virtue of a child, etc.,30 Socrates chides him,31 and leads him toward the conclusion that "all human beings [*pãntew ênyrvpoi*] are good in the same way, for by achieving the same goals they become good."32 And Meno's very next definition of virtue runs into a similar problem: virtue cannot be "the ability to rule over human beings"33 if the same account of virtue is supposed to apply to a child or a slave.34 **Elsewhere, too, Socrates insists that conventional distinctions hold no water (or at least no wine) when he says that men and women have the same happiness**35 **and that virtue can be recognized in both Athenians and foreigners and in both free persons and slaves.**36

This evidence might be thought to come up short of underwriting a perfectly cosmopolitan scope for Socrates's extraordinary political mission. First, none of these passages explicitly extends Socrates's universalism about virtue to non-Greeks, as opposed to Greek foreigners. It might then be thought that there are limits to Socratic cosmopolitanism. But this seems to me to be excessively uncharitable. **The objection *assumes* that Socrates would disallow the full extension of the capacity for virtue even though his reasoning with Meno clearly supports the full extension. We do better by taking Socrates at his word when he says that "all human beings [*pãntew ênyrvpoi*] are good in the same way."**37
…

Consider the frequent Socratic injunction against harming another human being. **Socrates and Crito agree that one ought never commit an injustice [*édike›n*] or do a wrong [*kakourge›n*] even if one has been done an injustice or been wronged.**39 **Socrates argues against Polemarchus that "it is the function not of the just person to harm [*blãptein*] either a friend or anyone else, but of his opposite, the unjust person."**40 And Socrates relies on similar claims in his attempt to prove to Polus that it is better to suffer injustice than to commit it.41 In all of these texts, Socrates seems committed to the claim that a person ought not harm another human being, regardless of whether the other is male or female, free or slave, Greek or non-Greek, etc. There is no whisper of a carve-out allowing the just to harm some subset of human beings. So we can conclude that Socrates is committed to at least the following minimal claim of moral cosmopolitanism: human beings have some obligations toward every other human being.

https://www.gutenberg.org/cache/epub/1177/pg1177-images.html#link2H_4_0003

The student of human learning expects, he said, to make something of his studies for the benefit of himself or others, as he likes. Do these explorers into the divine operations hope that when they have discovered by what forces the various phenomena occur, they will create winds and waters at will and fruitful seasons? Will they manipulate these and the like to suit their needs? or has no such notion perhaps ever entered their heads, and will they be content simply to know how such things come into existence? But if this was his mode of describing those who meddle with such matters as these, he himself never wearied of discussing human topics. What is piety? what is impiety? What is the beautiful? what the ugly? What the noble? what the base? What are meant by just and unjust? what by sobriety and madness? what by courage and cowardice? What is a state? what is a statesman? what is a ruler over men? what is a ruling character? **and other like problems, the knowledge of which, as he put it, conferred a patent of nobility on the possessor,** (16) **whereas those who lacked the knowledge might deservedly be stigmatised as slaves.**

> http://www.perseus.tufts.edu/hopper/text?doc=Perseus%3Atext%3A1999.01.0208%3Abook%3D1%3Achapter%3D1%3Asection%3D16
>
> His own conversation was ever of human things. The problems he discussed were, What is godly, what is ungodly; what is beautiful, what is ugly; what is just, what is unjust; what is prudence, what is madness; what is courage, what is cowardice; what is a state, what is a statesman; what is government, and what is a governor;—**these and others like them, of which the knowledge [εἰδότας] made a "gentleman," [καλοὺς κἀγαθοὺς] in his estimation, while ignorance [ἀγνοοῦντας] should involve the reproach of "slavishness." [ἀνδραποδώδης]**

…

But there was a passage from Homer (32) for ever on his lips, as the accuser tells us—the passage which says concerning Odysseus,

> *What prince, or man of name,*
> *He found flight-giv'n, he would restrain with words of gentlest blame:*
>
> *"Good sir, it fits you not to fly, or fare as one afraid,*
> *You should not only stay yourself, but see the people stayed."*
>
> *Thus he the best sort us'd; the worst, whose spirits brake out in noise, (33)*

> *He cudgell'd with his sceptre, chid, and said,*
>
> *"Stay, wretch, be still,*
> *And hear thy betters; thou art base, and both in power and skill*
> *Poor and unworthy, without name in counsel or in war.*
>
> *We must not all be kings.*

The accuser informs us that Socrates interpreted these lines as though the poet approved the giving of blows to commoners and poor folk. **Now no such remark was ever made by Socrates; which indeed would have been tantamount to maintaining that he ought to be beaten himself.** What he did say was, that those who were useful neither in word nor deed, who were incapable of rendering assistance in time of need to the army or the state or the people itself, **be they never so wealthy,** ought to be restrained, and especially if to incapacity they added effrontery.

As to Socrates, he was the very opposite of all this—he was plainly a lover of the people, and indeed of all mankind.

> http://www.perseus.tufts.edu/hopper/text?doc=Perseus%3Atext%3A1999.01.0208%3Abook%3D1%3Achapter%3D2%3Asection%3D60
>
> [60] But Socrates, at least, was just the opposite of all that: **he showed himself to be one of the people and a friend of mankind. [φανερὸς ἦν καὶ δημοτικὸς καὶ φιλάνθρωπος ὤν] "*kaí demotikós kaí filánthropos*"**

---

https://archive.org/details/in.ernet.dli.2015.41741/page/n323/mode/2up?view=theater

The word "*tao*" underwent in the Late period of China just the same continuous alteration of its fundamental content, and in the same mechanistic direction, as the word "Logos" in the history of Classical thought from Heraclitus to Posidonius, and as the word "Force" between Galileo's day and ours. **That which once had been grandly moulded myth and cult is called, in this "religion of educated people," *Nature* and *Virtue*—but this Nature is a reasonable mechanism, and this Virtue is knowledge.**1 **Confucius and Buddha, Socrates and Rousseau are at one in this.**

http://www.san.beck.org/C%26S-Compared.html

Both Confucius and Socrates lived in cultures where hereditary privilege was the main factor in social status. **Neither of them was extremely high-born, but they certainly were not peasants either. Confucius as one of the many lower aristocrats was just high enough where he would be considered as a possible official in the government, but not high enough so that he was automatically given a position.** Due to his economic circumstances he spent some time working with his hands and in business. Socrates was a citizen, but neither was he related to a ruling family. He probably worked as a stone-mason; he fought in battle not as an officer, but as a citizen soldier.
...

The gentleman or superior man of Confucius and the gentleman or good and beautiful man of Socrates both had tremendous impact in changing their culture's values from the nobility of birth to the nobility of good character.

https://ancientciivilizationsvc9.blogspot.com/2009/11/merit-system.html

Many European and American admirers such as Voltaire and H.G. Creel point to the revolutionary idea of replacing nobility of blood with nobility of virtue. *Jūnzǐ* (□□, lit. "lord's child"), which originally signified the younger, non-inheriting, offspring of a noble, became, in the works of Confucius, an epithet having much the same meaning and evolution as the English term, "gentleman". **A virtuous plebeian who cultivates his qualities may be a "gentleman", while a shameless son of the king is only a "small man".**

[15:39] The Master said: "In teaching people, there is no discrimination (of class, type, etc.)"

https://taiwantoday.tw/news.php?unit=20,29,35,45&post=25860

Advocating that "in educating there should be no distinction of classes," Confucius was the first person to bring the knowledge previously reserved for the temples of the ruling class to the marketplace of the common man.

This quotation shows the readiness of Confucius to impart instruction: **“From the man bringing his bundle of dried flesh for my teaching upwards, I have never refused instruction to anyone.”** (It was the rule of ancient times that when one party waited on another, he should carry some present or offering. Pupils did so when they first waited on their teacher. Of such offerings, one of the lowest was a bundle of strips of dried flesh.) **He had taught, over a period of 40 years, some 3,000 pupils, of whom 72 had mastered the “six arts” – ritual, music, archery, charioteering, history and mathematics.** They came from all over China, not just the state of Lu, his native place, but from Wei, Chi, Chin, Cheng, Tsin, Sung, Wu and Yueh. This was something unheard of before him. **The popularization of learning produced the unexpected effect of cultural unity for China,** coming some 300 years before Chin Shih Huang, the first emperor of China, united the country. From the 2nd century B.C. to the present day, Confucianism has been synonymous with learning. **Confucius was also revered by the illiterate millions who could not read his Classics but nonetheless practiced what he stood for.**

http://www.acmuller.net/con-dao/analects.html#div-12

[12:5] Sima Niu, upset, said: “Everyone has brothers, I alone have none.”

Zi Xia said, “I have heard this proverb:”

> Life and death are up to Fate.
> Wealth and honor are held by Heaven.

“**If the noble man is reverent without lapse, and courteous to everyone within the frame of propriety, everything within the four seas will be his brother.** Why should a noble man be concerned about not having brothers?”

http://www.acmuller.net/con-dao/analects.html#div-18

[17:2] The Master said: **“People are similar by nature, but through habituation become quite different from each other.”** Confucius said: “Only the most wise and the most foolish do not change.”

http://www.gnxp.com/blog/2007/06/on-confucian-human-nature.php

I was reading The Chinese Experience, a cultural history, when I was struck by something in the chapter on Confucianism:

> ... **The belief that all men are born equal and are infinitely perfectible is a basic and profoundly humanistic Confucian doctrine, which is not paralleled in the main Christian tradition, which holds that all men are of equal *value*, rather than that they are born with similar characteristics.** The belief goes back to the *Analects*, which includes the saying, 'By nature men are close to each other; through experience they become remote from each other' ...

The generality of this is not surprising to me. **If you read histories of the intellectual ferment in early 20th century China you note that it was the conservative and reactionary Mandarin class who argued most vociferously against the European ideas regarding the racial chain of being and eugenics.** Instead, liberal progressives were open to Western science, which implied innate between group and within group differences, while the Confucians were immovable form their time tested *tabula rasa* dogma.

Of course, to some extent both groups were guilty of overreach, the Confucians rejected the new science which did point to heritable aspects of human nature and reality of individual differences (though to be fair, their moral-political system was the most robust our species has seen, persisting across 2,000 years). As for the racial science of the early 20th century, it was a coarse and clumsy beast which was vulnerable to the rise of the the *tabula rasa* methodologies in the human sciences, from behaviorism to Boasian cultural anthropology. **But I do think it is important to note that in Geography of Thought Richard Nisbett reports that East Asians are still far more likely to attribute individual performance to context, circumstance and effort than innate aptitudes when compared to Westerners.** My comment a few weeks ago on Confucianism in China was predicated in part on hints like this that the pre-Communist cultural sensibilities have persisted down to the present day. **Many scholars argue that the ostensibly revolutionary Cultural Revolution was at the heart Confucian, placing emphasis on moral worth & will as opposed to technical efficiency & pragmatism. Sometimes you really have to look between the pages of the book to see that the title is deceptive.**

https://plato.stanford.edu/entries/mohism/

Mohism originates in the teachings of Mo Di, or “Mozi” (“Master Mo,” fl. ca. 430 BCE), from whom it takes its name. Mozi and his followers initiated philosophical argumentation and debate in China. **They were the first in the tradition to engage, like Socrates in ancient Greece, in an explicit, reflective search for objective moral standards and to give step-by-step, tightly reasoned**

arguments for their views, though their reasoning is sometimes simplistic or rests on doubtful assumptions.
…

A strong argument can be made that it is Mozi, not Confucius, who deserves the title of China's first philosopher. Before the rise of the Mohist school, *Ru* or so-called "Confucian"[2] thought seems to have consisted mostly of wise aphorisms offering moral coaching aimed at developing virtuous performers of social roles as described in traditional *li* (norms of ritual propriety).

> 2. **"Confucianism," the conventional English rendering of *Ru*, is in fact a poor equivalent for the Chinese term, which has a connotation more similar to "classicist" or "ritualist."** In the Chinese tradition, Confucius is the most famous of the *Ru*, but the word '*Ru*' itself does not allude directly to Confucius or his teachings.

…

The Mohist texts provide only the barest handful of clues about Mozi's life. One passage depicts King Hui of Chu (488-432 BCE) refusing to grant him an audience because of his low social status. Several anecdotes in the *Mozi* and other early texts depict him as a master craftsman and military engineer. The *Huainanzi,* a Han dynasty text, claims that Mozi was an apostate *Ru* (Confucian), but the *Mozi* itself provides no particular reason to believe this. **A more likely conjecture, supported by the frequency of references to the crafts in Mohist texts, is that he was originally an artisan of some kind, probably a carpenter. Indeed, the many examples alluding to crafts, mechanics, trade, work, and economic hardship, the apparent "critical outsider" stance of the earliest Mohist texts, and the nearly total absence of references to the *li* (courtly ritual, ceremony, etiquette) so central to Confucian thought all tend to suggest that Mohism emerged from a rising class of craftsmen, merchants, and soldiers that grew in size and political influence during the Warring States era, a time of rapid social and political change.**
…

A Han dynasty text collected in the *Zhuangzi* claims that many Mohists believed it was their duty to emulate the legendary altruistic labors of the ancient sage king Yu:

> **Many of the Mohists of later ages wear furs and rough clothing, clogs and grass slippers, never resting day or night, taking self-sacrifice as the highest. They say, "One who cannot do this is not following the way of Yu and doesn't deserve to be called a Mohist."** … They press each other forward in self-sacrifice until there's no flesh left on their calves or hair on their shins. (*Zhuangzi,* Book 33, "Under Heaven")

Such external testimony—albeit from an unsympathetic source—presents a minor puzzle in the interpretation of Mohist thought, **for the texts preserved in the *Mozi* do not directly advocate self-sacrificing altruism, and at least one clearly rejects it.** The same *Zhuangzi* passage tells us that different groups of Mohists disagreed strongly concerning the details of Mohist doctrine; perhaps this was one of the issues about which they differed.
…

"**Promoting the Worthy**" and "**Identifying Upward.**" The purpose of government is to achieve a stable social, economic, and political order (*zhi*, pronounced "jr") by promulgating a unified conception of morality (*yi*). This task of moral education is to be carried out by encouraging everyone to "identify upward" to the good example set by social and political superiors and by rewarding those who do so and punishing those who do not. Government is to be structured as a centralized, bureaucratic state led by a virtuous monarch and managed by a hierarchy of appointed officials. **Appointments are to be made on the basis of competence and moral merit, without regard for candidates' social status or origins.**

"**Inclusive Care**" and "**Condemning Aggression.**" To achieve social order and exemplify the key virtue of *ren* (benevolence, goodwill), people must inclusively care for each other, having as much concern for others' lives, families, and communities as for their own, and in their relations with others seek to benefit them. **Military aggression is wrong for the same reasons that theft, robbery, and murder are:** it harms others in pursuit of selfish benefit, while ultimately failing to benefit Heaven, the spirits, or society as a whole.

"**Moderation in Use**" and "**Moderation in Burial.**" To benefit society and care for the welfare of the people, wasteful luxury and useless expenditures must be eliminated. Seeking always to bring wealth to the people and order to society, the *ren* (benevolent) person avoids wasting resources on extravagant funerals and prolonged mourning **(customs promoted by the Ru and others).**

"**Heaven's Intent**" and "**Understanding Ghosts.**" Heaven is the noblest, wisest moral agent, so its intent is a reliable, objective standard of what is morally righteous (*yi*) and must be respected. Heaven

rewards those who obey its intent and punishes those who defy it, hence people should strive to be benevolent and do what is righteous. **Social and moral order (*zhi*) can be advanced by encouraging belief in ghosts and spirits who reward the good and punish the wicked.**

"**Condemning Music**" and "**Condemning Fatalism.**" The benevolent (*ren*) person opposes the extravagant musical entertainment and other luxuries enjoyed by rulers and high officials, **because these waste resources that could otherwise be used for feeding and clothing the common people.** Fatalism is not *ren*, because by teaching that our lot in life is predestined and human effort is useless, it interferes with the pursuit of economic wealth, a large population, and social order (three primary goods that the benevolent person desires for society). Fatalism fails to meet a series of justificatory criteria and so must be rejected.

When an audience with the ruler of a state was secured, different doctrines might be advocated first, depending on the circumstances in that state:

> If the state is in disorder, then expound "promoting the worthy" and "identifying upward"; if the state is poor, then expound "moderation in use" and "moderation in burial"; **if the state overindulges in musical entertainment, then expound "condemning music" and "condemning fate";** if the state is dissolute and indecorous, expound "honoring Heaven" and "serving ghosts"; if the state is devoted to aggression and intimidation, then expound "inclusive care" and "condemning aggression." (Book 49, "Questions of Lu").[3]

…

To the suggestion that tradition can serve as a reliable moral standard, they respond by distinguishing between traditional customs and morality as such, pointing out that conformity to tradition is not in itself sufficient to ensure moral correctness. **They make this point by considering—at roughly the same time Herodotus was raising similar issues in Greece—the challenge to parochial conceptions of what is right posed by the existence of disparate cultural practices.**

> Now those who uphold rich burials and prolonged mourning say: "If rich burials and prolonged mourning turn out not to be the Way of the sage-kings, then how do we explain why the gentlemen of the central states perform them without ceasing and maintain them without choosing something else?!"
>
> Our Master Mozi said, "This is what's called deeming their habits convenient and their customs righteous. **In the past, east of Yue there was the country of Gai Shu. When their eldest son was born, they chopped him up and ate him, calling this 'advantageous to the younger brothers.' When their grandfather died, they carried off their grandmother and abandoned her, saying, 'One cannot live with the wife of a ghost.'** These practices superiors took as government policy and subordinates took as custom, performing them without ceasing and maintaining them without choosing something else. Yet how could these really be the Way of benevolence and righteousness?!" (Book 25, "Moderation in Burial")

…

The text concludes that "of these three, parents, teachers, and rulers, none is acceptable as a model for order." An objective standard is needed, one that is not morally fallible in the way that any particular individual role model or cultural tradition might be. The Mohists propose that we can find such a standard by considering the attitudes of an ideally impartial, benevolent, and reliable moral agent: *Tian* (Heaven, nature, the sky), whom they revere as a quasi-personal god.

> That being so, then what is acceptable to take as a model for order? So I say, Nothing is like modeling on Heaven. **Heaven's conduct is broad and impartial; its favors are rich and incur no debt; its brightness endures without fading.** So the sage-kings modeled themselves on it. (Book 4, "Models and Standards")

…

***Fa* is among the key notions through which Mohism had an important influence on the late Warring States Confucian thinker Xunzi and his student Han Fei, leading representative of a style of realpolitik thought that later became known as the *fa jia* (school of *fa*, often translated as "legalism").**

…

The following passage explains the role of "Heaven's intent" as an ethical *fa* by likening it to the compass, a model against which the wheelwright compares objects to distinguish whether they are round or not.

> **Thus our Master Mozi's having Heaven's intent, to give an analogy, is no different from the wheelwright's having a compass or the carpenter's having a set square.** Now the

> wheelwright grasps his compass and uses it to measure the round and not round in the world, saying, “What conforms to my compass, call it ‘round,’ what doesn’t conform to my compass, call it ‘not round.’” Hence round and not round can both be known. What is the reason for this? It’s that the *fa* for “round” is clear. (Book 27, “Heaven’s Intent”)

…

In arguing against fatalism, for example, they contend that **(1) historical examples show that security and order depend on government policy, not fate: the ancient sage kings achieved peace and security under the same social conditions in which the tyrants brought turmoil and danger. (2) No one has ever actually seen or heard fate. (3) Fatalism has detrimental social consequences: If people listen to the fatalists, they will devote no effort to being virtuous or industrious.** (Oddly, the Mohists overlook the obvious fatalist rejoinders that the tyrants’ failure and sages’ success were predestined, that fate is not a physical object, and that some people are fated to be diligent, others not.) Similarly, in arguing for the existence of ghosts and spirits who reward the good and punish the wicked, the Mohists point out that **(1) the sage kings all venerated the ghosts and spirits; (2) countless well-known stories report cases in which ghosts have been seen and heard; and (3) the teaching that ghosts and spirits reward the worthy and punish the wicked has beneficial social consequences, as fear of punishment will deter people from wrongdoing.**

In contexts where empirical support is irrelevant, only the first and third standards are applied. In condemning elaborate musical shows, for instance, the writers contend that levying taxes to pay for expensive musical instruments contradicts the deeds of the sage-kings, who would tax the people only to pay for practical items such as boats and carts, which benefit everyone. Grand concerts and feasts are pleasant, but on balance they do not benefit the populace, since they interfere with work and waste resources that could otherwise be devoted to food and clothing.

…

Moreover, the Mohists seem to overlook the possibility of conflicts between the three, **such as the likelihood that certain practices of the ancient sage-kings might not benefit society today.** The third standard probably takes priority over the others, since the first stipulates only that we find some “root” in the (presumably benevolent) deeds of the sages, not that we imitate them slavishly, **and since, in a remarkable passage in Book 31 (“Elucidating Ghosts”), Mozi is depicted as arguing that even if there really are no ghosts and spirits, we should still behave as if there are, because of the social benefit that ensues.**

…

The plurality of moral standards thus leads to contention, belligerence, and wasted resources. For simplicity, we will quote mainly from the first of the three versions of the theory, which describes the state of primal anarchy in this way:

> Our Master Mozi stated, In antiquity, when people first arose, before there were penal codes and government, probably the saying was, “People have different norms of righteousness (*yi*).” Hence for one person, one norm; for two people, two norms; for ten people, ten norms—the more people, the more too the things they called ‘righteous’. Hence people deemed their norm right and by it deemed others’ norms wrong, so in interacting they deemed each other—wrong. **Thus, inside the family, fathers and sons, elder and younger brothers became resentful and scattered, unable to remain together with each other peacefully. The people of the world all injured each other with water, fire, and poison.** It reached the point that, having surplus strength, they couldn’t use it to labor for each other; letting surplus resources rot, they didn’t share them with each other; and concealing good *dao* (ways), they didn’t teach them to each other. The disorder (*luan*) in the world was like that among the birds and beasts. (Book 11, “Identifying Upward”)

…

To assist him in unifying the world’s morality, the sovereign, or “Son of Heaven,” appoints three dukes, **who help him to divide the world into myriad states and appoint a lord for each.** These lords in turn appoint other officials down to the level of the district, village, or clan head, until a complete hierarchical political system is established.

…

The village head leads his village to emulate the district head, who in turn leads his district to emulate the lord of the state. The lords of states lead their people to emulate the Son of Heaven, who brings order to all under heaven. The Son of Heaven is still fallible, however, and so cannot be the highest moral paragon. Above him is Heaven (*Tian*), to which the people must ultimately conform. In the Mohist myth, politics is not distinct from ethics and religion, **and unlike in Hobbes, the sovereign’s power is not absolute, for he must answer to independent moral standards.**

> **If the people of the world all identify upward with the Son of Heaven but don't identify upward with Heaven, then disasters still will not go away.** Now if in the heavens whirlwinds and bitter rain come again and again, this is how Heaven punishes the people for not identifying upward with Heaven. (Book 11, "Identifying Upward")

…

The individualist stance of the selfish, rational egoist does not occur to the Mohists as an alternative to be addressed or refuted. Nor do they see room for a distinction between public and private morality, between values that everyone must share in order to maintain a stable society and values about which individuals can disagree without disrupting social harmony.

The Mohists devote little or no attention to the rights, liberty, or equality of individuals, nor even to the question of what the most fulfilling kind of individual life is. They simply assume that the best life is one of adherence to *yi* (morality, duty) and thus of promoting overall utility. The paradigmatic individual—the benevolent person (*ren ren*)—is one who devotes himself to "promoting the benefit of and eliminating harm to the world." Legitimate individual interests are identified through the individual's role in the social project. The Mohists, like the Confucians, see individuals as largely constituted by the hierarchical, relational social roles they occupy, such as ruler or subject, father or son, elder or younger brother, male or female, elder or youth, or member of a family or community. It is primarily as occupants of such roles that individuals have ethical norms to follow and interests to pursue.

This communitarian focus is a major point of contrast with Western social contract theories and utilitarian political theory. Utilitarians and social contract theorists (excepting perhaps Rousseau) typically treat individuals' interests as primary and construct social good out of individual good. **The state is justified because it promotes individuals' rights and interests better than any alternative.** For the Mohists, by contrast, the state is instrumentally justified because social order (*zhi*) is an intrinsic good, sought by all, and government by a hierarchy of moral leaders is needed to achieve it.

…

Mohist political theory probably strongly influenced later Warring States political thinkers, such as the Confucian Xunzi and his two most famous students, the realpolitik theorist Han Fei and the statesman Li Si, political architect of China's first empire. Yet this strand of authoritarian political thought did not lack critics. The Mohist conception of social order (*zhi*), along with those of Xunzi and Han Fei, epitomize views that are attacked sharply in ancient Daoist texts such as the *Daodejing* and *Zhuangzi*. By contrast, some parts of the *Zhuangzi* imply a relatively liberal political stance, on which individuals would probably be allowed the maximum amount of liberty compatible with avoiding social conflict.

…

The other prominent Mohist political doctrine, "promoting the worthy," contends that to ensure the success of the state in securing wealth, a large population, and social order, appointments to the bureaucracy must be based on ethical merit and professional ability. Talented commoners should be considered for office as well as those from elite backgrounds (particularly kinsmen of the ruler). **This doctrine is partly a response to new administrative challenges arising from population growth, economic expansion, and interstate military rivalry, which called for a move beyond the traditional feudal system and the development of a more specialized, professional cohort of government officials.** It is also a reaction against nepotism and incompetence and an appeal for greater equality of opportunity for those of non-elite origin, such as the Mohists themselves.

Above all, however, the doctrine is an important complement to the Mohist moral education and incentive system, an integral part of the implementation of the unified moral norms the Mohists see as crucial to social order and political legitimacy. For the system to work, it must be perceived as applying consistent, unified norms to promote and reward the worthy while offering a fair opportunity for advancement to all. Otherwise, those below will may be unable to identify with the system and thus may see no reason to emulate their superiors or cooperate with the state. **Consistent with their communitarian orientation, the Mohists' defense of equality of opportunity does not rest on the individualist view that, other things being equal, people intrinsically deserve to be treated similarly.** The argument is rather that the utility of the state and society is promoted by employing the most qualified candidates, without regard for their social background, both because of their competence and because the state must be publicly perceived as enforcing unified, consistent standards.

…

Unlike the classical utilitarianism of Bentham and Mill, Mohist consequentialism seeks to promote not individual happiness, but a range of goods, many of them public or collective. The general notion of "benefit" refers to an objective list of three sorts of goods: **material wealth, a large population or family, and social order.** These goods provide relatively concrete moral criteria. Practices and

institutions that tend to advance them are benevolent and righteous; those that do not are malicious and wrong.

> Might it be that, supposing we model ourselves on their statements, use their plans, and have rich burials with prolonged mourning, this can really enrich the poor, increase the few, secure the endangered, and bring order to the disordered? Then this is benevolent, righteous, and the task of a filial son. In planning for others, it is unacceptable not to encourage it. The benevolent will promote it throughout the world, establish it and make the people praise it, and never abandon it.
>
> On the other hand, suppose that, modeling ourselves on their statements, using their plans, and having rich burials and prolonged mourning, this really cannot enrich the poor, increase the few, secure the endangered, and bring order to the disordered. Then this is not benevolent, not righteous, and not the task of a filially devoted son. In planning for others, it is unacceptable not to discourage it. The benevolent will seek to eliminate it from the world, abandon it and make people deem it wrong, and never do it. (Book 25, "Moderation in Burial")

…

Contrary to a common misperception, Mohist ethics does not advocate that we treat everyone alike, but only that we have similar moral concern for everyone.

…

The ethical guideline for which the Mohists are most well known is *jian ai*, sometimes translated as "universal love" but probably better rendered as "inclusive care." *Jian* (together, jointly) in this context has the connotation of including everyone in society together within a whole. **Like the English 'care', *ai* (love, care) is ambiguous, since it may refer to a range of attitudes from strong affection to detached concern.** In Mohist texts the word typically seems to refer to a dispassionate concern about the welfare of its object.

Inclusive care was generally not the doctrine that attracted criticism from the Mohists' contemporaries. **Ancient critics objected mostly to their frugal, austere lifestyle, opposition to music, and plain burial practices, which recognized no differences in social rank. Little was said about their core ethical doctrines. The exception was Mencius, who is reported to have equated inclusive care with renouncing one's father (for this reason, he dismissed Mozi as a "beast").** Many later Confucian critics have followed Mencius in focusing on inclusive care, maintaining that it runs counter to human nature.

…

The Mohists contrast inclusive concern with an attitude they call "exclusion" **(*bie*, distinguishing or separating off as "other").** This attitude is not, as sometimes thought, one of distinguishing differences of degree in our concern for others, according to the closeness of their relation to us. Indeed, the Mohists never seriously consider that alternative.[16] **Rather, *bie* refers to "despising and hurting others," excluding them from moral consideration altogether.** So the Mohists' case is for inclusive care as against complete disregard for others.

…

Oddly, then, the consequences and examples of inclusive care described elsewhere in the texts suggest that the practical requirements of the doctrine are not especially burdensome. Indeed, the specific examples given largely conform to what many citizens of contemporary Western liberal democracies would consider commonsense moral decency. The actual practice of inclusive care seems to demand no more than the absence of harm or hostility to others; virtuous performance of our social roles as ruler, subject, father, son, or brother, thus contributing to the welfare of our family and community; helping friends and neighbors in need; and assisting the elderly, solitary, and orphaned, who have no family to care for them. **Since lacking a family is identified as the main reason people are likely to need assistance, we can infer that the Mohists take the family to be the primary institution for meeting people's needs, and that in practice inclusive care normally involves caring chiefly for our own family. The only individuals expected to work equally on behalf of everyone are government leaders, who are responsible for benefiting all of their subjects. So we find a gap between the description of inclusive care as the attitude of caring equally for everyone and the practical examples in the texts. The latter suggest that inclusive care does not require extensive self-sacrifice or altruism, but is mainly a matter of looking after our family, neighbors, and community and not interfering with others as they attempt to do the same.**

The later Mohist texts provide an explanation of this disparity, though one might dispute whether we are justified in reading the later doctrine into the earlier essays. **Fragments preserved in the *Da Qu*, Book 44 of the *Mozi*, maintain that we are to care equally for everyone, but to benefit some people more and others less, depending on the nature of their relation to us. Equal care does not entail equal treatment.** How we treat people is determined by the notion of righteousness (*yi*),

which is based on intrinsic goods such as social order (*zhi*), the Mohists' conception of which, as we saw above, entails that we do more for those standing in close relationships to us. The later Mohist view is roughly that attributed to a Mohist named Yi Zhi in a dialogue in the *Mencius* (3A:5): **"In care, no degrees; in practice, begin from what is close."**
…

The first and most obvious objection is that inclusive care is too difficult. In response, the Mohists claim that in fact it is far less difficult than other deeds rulers have led their people to perform in the past, such as sacrificing their lives, limiting their diets, and wearing rough clothing. **Inclusive care seems difficult only because people don't recognize that it is to their long-term benefit. If, as Mohist political theory proposes, institutions are set up to encourage cooperation and prevent abuse, then "within a generation" people can be led to practice it, because several existing lines of motivation will converge to support it.** First, people naturally tend to emulate admired and respected leaders, so if rulers encourage inclusive care, people will tend to practice it. Second, rulers can institute rewards and punishments so that practicing inclusive care is in everyone's short-term self-interest. Third, people naturally tend to reciprocate good treatment, so caring for and benefiting others is in our long-term self-interest.
…

The last objection considered is that inclusive care may fail to benefit one's parents and thus interfere with filial piety. **The Mohists' response is that a filial son would desire that others care about and benefit his parents. An effective way to achieve this end, they contend, is by caring for and benefiting others' parents, leading others to reciprocate in kind.** (Here, as in their reply to the first objection, the Mohists make the plausible assumption that humans have a natural tendency toward reciprocity.)
…

Heaven's intention can serve as a fundamental ethical *fa* (model, standard), one that is clear and easy for anyone to apply, just as a craftsman's measuring tools are.

> **Thus our Master Mozi's having Heaven's intention, to give an analogy, is no different from the wheelwright's having a compass or the carpenter's having a set square.** … Above, he uses it to measure how the kings, dukes, and great men of the world administer the penal codes and government; below, he uses it to gauge how the myriad people of the world engage in writings and studies and present statements and discussions. Observe their conduct; if it follows Heaven's intention, call it good intentions and conduct; if it opposes Heaven's intention, call it bad intentions and conduct. Observe their statements and discussions; if they follow Heaven's intention, call them good statements and discussions; if they oppose Heaven's intention, call them bad statements and discussions. Observe their penal codes and government; if they follow Heaven's intention, call them good penal codes and government; if they oppose Heaven's intention, call them bad penal codes and government. So he sets this up as a *fa* (model), establishes this as a standard, and uses it to measure the benevolence (*ren*) and unbenevolence of the kings, dukes, great men, secretaries, and ministers in the world, and, to give an analogy, it is like dividing black from white.

…

Still, there are strong grounds for denying that the Mohists hold a divine command theory. First, the texts never analyze, define, or explain the notion of righteousness (*yi*) in terms of Heaven's intention. To the contrary, all four of the texts about Heaven's intention assign it an epistemic role, as a test or criterion by which to distinguish right from wrong. They argue that Heaven's intention can be taken as a model (*fa*) or canon (*jing*) of righteousness (*yi*). This claim asserts an extensional equivalence, not an analysis, definition, or exposition. **The point is that Heaven's intention and 'righteousness' distinguish the same things, not that what is righteous is so because it is Heaven's intention. Even the claim that righteousness "issues from" Heaven need not be read as implying anything stronger than that a righteous society can exist only when people all follow the model or example set by Heaven's intentions and conduct.**

Second, and more important, the Mohists give independent moral reasons to support their claim that Heaven's intention is a reliable moral guide. Their grounds are not simply the religious belief that Heaven must be obeyed because it is a deity or because it punishes disobedience. Rather, they argue that Heaven is a guide to what is benevolent and righteous because it is a supremely noble, wise, impartial, benevolent, and reliable agent. Their reasons apply evaluative concepts of benevolence, righteousness, good government, and social order (*zhi*) that are independent of Heaven's intention. To support their contention that Heaven desires what is righteous (*yi*), for example, they characterize righteousness as comprising life, wealth, and order and claim that Heaven desires these. **Phrased in terms of the *Euthyphro* dilemma, their stance is fairly clear: What is righteous is not righteous *because* Heaven intends it. Rather, Heaven intends it because it is righteous.** Heaven's conduct and intentions exemplify moral norms that hold independently of its intent.

Given how the Mohists' conception of Heaven fits into the framework of their ethics, the appeal to Heaven to justify and explicate their normative stance risks circularity. **Their conception of Heaven is in effect that of a morally ideal sovereign, whom they characterize as wise or all-knowing, all-embracing, benevolent, generous, and impartial.** The Mohists imply that the correct moral norms are those that such an agent would follow or intend that human beings follow. The problem is that the characteristics they build into this conception of an ideal agent are just those they already hold should be articulated by a satisfactory ethical theory, such as impartial, benevolent concern for the welfare of all. **Arguably, then, the appeal to Heaven does not justify Mohist ethics so much as simply illustrate or articulate it.**
…

With a handful of exceptions, Mohist ethics dismisses aesthetic value and overlooks the psychophysical fulfillment achieved through the exercise of acquired skills—goods that are central to the Confucian and Daoist ways of life. Little attention is devoted to individual happiness or fulfillment or to articulating a conception of well-rounded human excellence. Moreover, the Mohist conception of morality can at times seem aggressively one-sided and burdensome. One passage in the *Mozi* presents a conception of ideal human flourishing as a life of complete devotion to moral duty:

> When silent, ponder; when speaking, instruct; when acting, work. Make these three alternate and surely you will be a sage. You must eliminate happiness and eliminate anger, eliminate joy and eliminate sorrow, eliminate fondness and eliminate dislike, and use benevolence and righteousness. Your hands, feet, mouth, nose, and ears undertaking righteousness, surely you will be a sage. (Book 47, "Valuing Righteousness")

…

To be fair, however, the Mohists' minimalist conception of welfare may have been a reasonable response to the difficult social and economic circumstances in which they lived, particularly as representatives of sub-elite social classes. Their texts imply an environment in which hardship due to poverty, poor harvests, cold, hunger, or war is never far off. So naturally they focus on the basic goods needed for physical and economic security: a stable government, material wealth, strong family bonds, and charity to neighbors in need. **Mohism is in effect a refugee ethic, born from hard times, that values material welfare and parsimony above all else.** Their doctrine of "Moderation in Use" advocates eliminating all luxuries—particularly those of the aristocracy—and reducing consumption of food, clothing, and housing to the minimum level needed for basic comfort. **If conditions are really as harsh as the Mohists imply—a premise that Xunzi, a friend of the aristocracy, will deny—then their narrow focus is defensible,** and in arguing that elaborate musical shows and burial practices are wasteful and immoral, for instance, they are on firm ground. The problem is that the Mohists never reflect on the possibility that in more prosperous and egalitarian conditions, music and other cultural activities could be valuable contributions to human well-being.

If Mohist ethics faces a problem of moral motivation, it is probably because their impoverished conception of human welfare excludes too much that people genuinely value. **When the *Zhuangzi* criticizes the Mohists for "going against the heart of all under heaven," it is not referring to inclusive care, but to their severe, frugal lifestyle. As Xunzi said, "Mozi was blinkered by utility and did not recognize adornment"** (*Xunzi*, Book 21, "Dispelling Blindness").
…

***Tian* does not exist outside of time, space, or nature, nor is it considered perfect or unchanging. It is not the creator of nature, but rather *is* nature, or part thereof. (Combined with '*di*' (earth), the word '*tian*' forms the compound '*tian-di*' (sky-and-earth), which refers to the natural world.) *Tian* is personified as a sociopolitical authority, but it is considerably less anthropomorphic than the Judeo-Christian God. It has desires and intentions, and it speaks, but only as if thinking to itself, not directly to humans.** *Tian* generally does not inform humans of its desires or intentions by revelation (though in crises it may dispatch a spirit envoy, such as a fantastic talking bird). **Rather, we must discern them for ourselves by observing its behavior. Humans sacrifice to *Tian*, but usually do not pray to it or address it directly.** However, we do have an implicit agreement with
Tian that if we conform to its desires, it will reward us in turn. Specifically, care for and benefit to others will be rewarded, contempt and injury punished.

The Mohists have no concept of religious salvation or of another realm to which we go after death. (*Tian* is of course not a transcendent place or realm but an embodiment of nature.) When people die, they become ghosts, which exist within the natural world. Unlike in Christianity, people are not rewarded or punished in the next world for their deeds in this one. **Rather, the Mohists insist that *Tian* and the ghosts will reward and punish people while they are alive.** As one might expect, this belief was strongly challenged by the Mohists' opponents, who pointed out instances in

which it is at odds with everyday experience. **Unfortunately, the Mohist responses to these criticisms in the end amount mainly to ad hoc excuses.**

Despite the genuine tone of reverence in the Mohists' descriptions of *Tian*, some readers find Mohist religion to lack the sense of holiness, religious awe, and spiritual transcendence that contemporary Westerners customarily associate with religion, particularly in contrast with Confucian appreciation of the beauty of ritual or Daoist wonder at the mysteries of nature. The mundane tone of their religious thought is perhaps partly due to the Mohists' general disregard of aesthetic and cultural value. **Yet it would be indefensibly parochial to expect them to conform to a modern Westerner's conception of religiosity, since the comparatively mundane character of Mohist religion is typical of much traditional Chinese folk religion.**
…

This status is attested by no less an authority than Mencius, who lamented that "the statements of Mo Di and Yang Zhu [another rival thinker] fill the world," and by the attention Xunzi devotes to refuting Mohist economic doctrines. Though their importance is routinely slighted in Confucian-biased accounts of Chinese thought, the Mohists articulated much of the theoretical framework of early Chinese epistemology, logic, political theory, and ethics. **Their ideas were a crucial stimulus for Mencius, Xunzi, the Daoists, and the so-called "legalist" political thinkers, all of whom either borrowed Mohist ideas or developed their own views partly in reaction to them.** One sign of the Mohists' status is that their shared critics typically paired them with the Confucians (*Ru*) as a bloc, referring to the two as *Ru-Mo*, the two "moralizing" schools devoted to *ren* (benevolence) and *yi* (righteousness). **Confucianism owes an unacknowledged debt to Mohism for its notion of comprehensive moral concern, as reflected, for instance, in Mencius's doctrine of extending our natural concern for kin so that it reaches everyone.** The phrase "inclusive care" begins to appear in Confucian texts toward the end of the Warring States era—a late passage in the *Xunzi* refers to "comprehensive benefit and inclusive care" (Book 25)—and by the Han dynasty, we find the Confucian Gongsun Hong explaining the virtue of *ren* (benevolence) in explicitly Mohist terms, as "extending benefit and eliminating harm, inclusively caring without partiality" (*Han Shu*, Vol. 58).[18]

With few exceptions, Chinese thought after the Han turned away from the Mohists' epistemological, semantic, and logical interests to focus on moral metaphysics and moral psychology, thus passing over what might have been their chief legacy. **Hence Mohism is sometimes depicted as a splinter movement not genuinely representative of the Chinese philosophical tradition. This view is false and anachronistic, however.** Much of what is plausible or intriguing in Mohist thought directly reflects concepts, assumptions, and problems that were elements of mainstream Warring States intellectual discourse.

Following the unification of China under the Qin dynasty (221-207 BCE), the Mohist movement declined, eventually vanishing altogether by the middle of the Western Han (206 BCE-24 CE). After Confucianism won imperial favor in 136 BCE, Confucius gradually came to be venerated as China's greatest sage. Mozi and his school fell into neglect and obscurity, their texts largely unread. Centuries later, **the bulk of the *Mozi* was nearly lost to history, surviving only because it had been copied into a massive collection of Daoist scripture.** Interest in Mohism revived only late in the Qing dynasty (1644-1911 CE), when scholars, stimulated partly by contact with the West, went looking for untapped intellectual resources in their own tradition, particularly materials related to science and logic.

A number of factors can be cited to explain Mohism's decline and disappearance. **Graham is probably right, for instance, to suggest that after the Qin unification, the Mohists lost the political influence they had exerted as expert craftsmen and defense specialists who helped smaller states survive during the Warring States era** (1989, p. 34). But the major factor is probably that as a social and philosophical movement, Mohism gradually collapsed into irrelevance. **By the middle of the former Han dynasty, the more appealing aspects of Mohist thought were all shared with rival schools. Their core ethical doctrines had largely been absorbed into Confucianism, though in a modified and unsystematic form.** Key features of their political philosophy were probably shared with most other political thinkers, and their trademark opposition to warfare had been rendered effectively redundant by unification. **The philosophy of language, epistemology, metaphysics, and science of the later Mohist Canons were recorded in difficult, dense texts that would have been nearly unintelligible to most readers (and that in any case quickly became corrupt). What remained as distinctively Mohist was a package of harsh, unappealing economic and cultural views, such as their obsession with parsimony and their rejection of music and ritual.** Compared with the classical learning and rituals of the Confucians, the speculative metaphysics of Yin-Yang thinkers, and the romantic nature mysticism and literary sophistication of the Daoists, Mohism offered little to attract adherents, especially politically powerful ones.
…

Unwilling or unable to modify their doctrines or to develop new positions in response to their changing social and intellectual setting, the Mohists probably died out in the imperial era because their Warring States reformist social and political platform had become obsolete.

http://www.silkqin.com/02qnpu/32zczz/mozihanyu.htm

Confucians criticize Mohists for "Obeying One's Superior," "Universal Love," "Honoring the Worthy" and "Understanding Ghosts."[1]

Yet Kongzi was "in awe of great people."[2] When he resided in a state he did not condemn its Chief Counselors. The *Spring and Autumn Annals* criticized ministers who usurped power. Is this not "Agreeing with One's Superior"?

Kongzi "cared broadly" and "was close to the benevolent." He regarded "benefiting broadly" and "saving the masses" as being a sage. Is this not "Impartial Caring"?

Kongzi "treated worthies as worthy." He praised his disciples according to four qualities, and "lamented an age too decadent for words." Is this not "Honoring the Worthy"?

Kongzi "performed sacrifices as if present," criticizing performing sacrifices as if one were not there, saying, "If I perform sacrifices, then I shall receive good fortune." Is this not "Understanding Ghosts"?

Confucians and Mohists are the same in approving of Yao and Shun, and are the same in disapproving of Jie and Tyrant Zhou. They are the same in cultivating oneself and rectifying one's heart in order to bring order to the world and the state.

How is it, then, that they are not pleased with one another? **I believe that the dispute basically began when later students each advanced the theories of their teacher, and condemned the Way of the other teacher. Kongzi would definitely have employed Mozi; Mozi would definitely have employed Kongzi. If they had not employed each other they would have been unworthy to be Confucians or Mohists.**

> [Translator's Comment: *If Han Yu had read the Mohist essays carefully, he would have seen that they explicitly condemn Confucian doctrines and even impugn the character of Kongzi himself. (It is possible, as A.C. Graham has suggested, that the Mohist writings were actually not available for Han Yu to consult, and that he only knew the titles of some of the essays.)* ***What is most interesting about "On Reading Mozi" is not that Han Yu is mistaken, though. What is interesting is that even a harsh critic of Buddhism like Han Yu had been so influenced by Buddhist ideas that he did not see a fundamental tension between universal love and Confucian filial piety.*** *Confucians have always thought we should have some concern for everyone ("Within the Four Seas, all are brothers," says Analects 12.5). But they have also stressed our special obligations to our loved ones (**"Does [the Mohist] truly hold that one's affection for one's elder brother's son is like one's affection for one's neighbor's baby?"** Mengzi asks rhetorically in passage 3A5).* ***The influence of Buddhist ideals pushes Confucianism more toward universal love, and School of the Way ("Neo-Confucian") philosophers wrestle with how to reconcile universal love with filial piety.*** *See, for example, Zhang Zai's "Western Inscription" and Cheng Yi's "Letter in Response to Yang Shi's Letter on the 'Western Inscription.'"*]

These are in fact of this sort: that Plato in his great number of works nowhere makes mention of Xenophon, nor, on the other hand, does Xenophon mention Plato in his writings, although both men, and in particular Plato in the dialogues which he wrote, mention many followers of Socrates.
...

Moreover, they think that this also is added to what I have already said: **that Xenophon, in the book which he wrote as records of the sayings and doings of Socrates,[2] asserts that Socrates never discussed the causes and laws of the heavens and of nature, and that he never touched upon or approved the other sciences, called by the Greeks μαθήματα which did not contribute to a good and happy life;** accordingly, he says that those who have attributed discourses of that kind to Socrates are guilty of a base falsehood. “But when Xenophon wrote this,” they say, “he of course refers to Plato, in whose works Socrates discourses on physics, music and geometry.”

Plato himself was enthralled by the vague figure of Pythagoras. At every turn he takes from him—in his scorn of democracy, his yearning for a communistic aristocracy of philosopher rulers, his conception of virtue as harmony, his theories of the nature and destiny of the soul, his love of geometry, and his addiction to the mysticism of number.

And wise men tell us, Callicles, that heaven and earth [508a] **and gods and men are held together by communion and friendship,** by orderliness, temperance, and justice; and that is the reason, my friend, why they call the whole of this world by the name of order,[1] not of disorder or dissoluteness. **Now you, as it seems to me, do not give proper attention to this, for all your cleverness, but have failed to observe the great power of geometrical equality amongst both gods and men: <u>you hold that self-advantage is what one ought to practice, because you neglect geometry.</u>**

> 1. **Κόσμος (“order”) was the name first given to the universe by the Pythagoreans.**

Plato was the culmination of a development that began with Parmenides; he played Hegel to Parmenides’ Kant; and though he scattered condemnation lavishly, he never ceased to reverence his metaphysical father. In the little town of Elea, on the western coast of Italy, 450 years before Christ, there began for Europe that philosophy of idealism which was to wage through every subsequent century an obstinate war against materialism.* The mysterious problem of knowledge, the distinction between noumenon and phenomenon, between the unseen real and the unreal seen, was flung into the caldron of European

thought, and was to boil or simmer there through Greek and medieval days until, in Kant, it would explode again in a philosophical revolution.

As Kant was "awakened" by Hume, so Parmenides was aroused to philosophy by Xenophanes; perhaps his was one of many minds stirred by Xenophanes' declaration that the gods were myths, and that there was only one reality, which was both world and God. Parmenides studied with the Pythagoreans also, and absorbed something of their passion for astronomy.

https://books.google.fi/books?id=yjaEkWbwBm0C&lpg=PP1&hl=fi&pg=PA167#v=onepage&q&f=false

Modern academic philosophy, however, especially in the person of Immanuel Kant, sought to divert attention from the Greeks (and from the ancient Chinese) toward a national German philosophy. **Nor did the later Greeks themselves help in their estimation of earlier thinkers: "Initially Kantian philosophy closed our eyes to the seriousness of the Eleatics; even the later Greek systems (Aristotle) regarded the Eleatic problems too superficially."**

Having rejected these misconceptions and misdirections, Nietzsche must detail his case for the value of the pre-Platonics. **Before that case is developed over a semester of lectures, he must address a question no doubt plaguing everyone in his audience:**

> Now it remains to be explained why I am considering "pre-Platonic" philosophers as a group and not pre-Socratics. **Plato is the first grand *mixed character* both in his philosophy and in his philosophical typology. Socratic, Pythagorean, and Heraclitean elements are unified in his theory of the Ideas:** it should not, without further qualification, be called an original conception. Also, as a human being he possesses the traits of the regally proud Heraclitus; of the melancholy, secretive, and legislative Pythagoras; and of the reflective dialectician Socrates. **All subsequent philosophers are of this sort of mixed philosophical type.** In contrast, this series of pre-Platonics presents the pure and unmixed types, in terms of philosopheme as well as of character. Socrates is the last in this series. Whoever wishes to do so may call them all "one-sided." In any case, they are genuine "discoverers." **For all those afterward, it became infinitely easier to philosophize.** They [the pre-Platonics] had to find the path from myth to laws of nature, from image to concept, from religion to science.

The *Nachlaß* offers a note explaining Plato as a mixed type. **Plato was a Heraclitean at first and consequently a skeptic; everything, even thought, is in flux. He is brought by Socrates to see the persistence of goodness, which was accepted as Being.** Through Pythagoras's transmigration of the soul, he could answer how we already know something of the Ideas.26 In another note Nietzsche writes, "**I am speaking of the pre-Platonics, because open hostility to, the negation of, culture begins with Plato.** I want to know, though, how philosophy which is not an enemy, behaves toward a culture at hand or in development: **here [Plato] is the philosopher as poison-mixer to culture.**"27 (In the next note Nietzsche simply gives a possible title for "The Pre-Platonic Philosophers": "The Philosopher as Physician to Culture." We see already a trope used throughout the later, better-known works: "we physicians.")

With this stipulation Nietzsche distinguished himself from the received manners of terminology and method, but then again, everything about his approach challenged the common opinion that the Greeks, especially the pre-Socratics, offer only quaint fragments of parchment of no currency to modern thought, especially to thought as developed as Kantianism, the centerpiece of German spirit for many at that time. Thus he returns again to dismiss sentiments we now find so implausible:

> "It is true misfortune that we have so little left from these original philosophers, and we involuntarily measure them too modestly, **whereas from Plato onwards voluminous literary legacies lie before us.** Many [scholars] would assign the books [of the pre-Platonics] to their own providence, a fate of the books [*fatum libellorum*]. **This could only be malicious, though, if it deprives us of Heraclitus, the wonderful poem of Empedocles, [or] the writings of Democritus, which the ancients compared to Plato, and if it wants to spoil them for us by means of the Stoics, Epicureans, and Cicero.**"

https://en.wikisource.org/wiki/Lives_of_the_Eminent_Philosophers/Book_III

He mixed together doctrines of Heraclitus, the Pythagoreans and Socrates. **In his doctrine of sensible things he agrees with Heraclitus, in his doctrine of the intelligible with Pythagoras, and in political philosophy with Socrates.**

9. Some authorities, amongst them Satyrus, say that he wrote to Dion in Sicily instructing him to purchase three Pythagorean books from Philolaus for 100 minae. For they say he was well off, having received from Dionysius over eighty talents. This is stated by Onetor in an essay upon the theme, "Whether a wise man will make money."

…

He made three voyages to Sicily, the first time to see the island and the craters of Etna: on this occasion Dionysius, the son of Hermocrates, being on the throne, forced him to become intimate with him. **But when Plato held forth on tyranny and maintained that the interest of the ruler alone was not the best end, unless he were also pre-eminent in virtue, he offended Dionysius, who in his anger exclaimed, "You talk like an old dotard." "And you like a tyrant," rejoined Plato.** 19. At this the tyrant grew furious and at first was bent on putting him to death; then, when he had been dissuaded from this by Dion and Aristomenes, he did not indeed go so far but handed him over to Pollis the Lacedaemonian, who had just then arrived on an embassy, with orders to sell him into slavery. And Pollis took him to Aegina and there offered him for sale.
…

20. Anniceris the Cyrenaic happened to be present and ransomed him for twenty minae – according to others the sum was thirty minae – and dispatched him to Athens to his friends, who immediately remitted the money. But Anniceris declined it, saying that the Athenians were not the only people worthy of the privilege of providing for Plato. **Others assert that Dion sent the money and that Anniceris would not take it, but bought for Plato the little garden which is in the Academy.** Pollis, however, is stated to have been defeated by Chabrias and afterwards to have been drowned at Helice,[16] his treatment of the philosopher having provoked the wrath of heaven, as Favorinus says in the first book of his *Memorabilia*.

> 16. In the tidal wave which swallowed up ten Lacedaemonian triremes in the great earthquake of 372 B.C.: Aelian, *Hist. Animal.* xi. 19.

21. Dionysius, indeed, could not rest. On learning the facts he wrote and enjoined upon Plato not to speak evil of him. And Plato replied that he had not the leisure to keep Dionysius in his mind.

The second time he visited the younger Dionysius, requesting of him lands and settlers for the realization of his republic. Dionysius promised them but did not keep his word. Some say that Plato was also in great danger, being suspected of encouraging Dion and Theodotas in a scheme for liberating the whole island; on this occasion Archytas the Pythagorean wrote to Dionysius, procured his pardon, and got him conveyed safe to Athens.
…

23. The third time he came to reconcile Dion and Dionysius, but, failing to do so, returned to his own country without achieving anything. And there he refrained from meddling with politics, although his writings show that he was a statesman. **The reason was that the people had already been accustomed to measures and institutions quite different from his own. Pamphila in the twenty-fifth book of her *Memorabilia* says that the Arcadians and Thebans, when they were founding Megalopolis, invited Plato to be their legislator; but that, when he discovered that they were opposed to equality of possessions, he refused to go.**[17]

> http://penelope.uchicago.edu/aelian/varhist2.xhtml#chap42
>
> The fame of *Plato* and renown of his Vertue came to the *Arcadians* and *Thebans*, who thereupon sent Embassadours earnestly to request him to come over to them, not onely to instruct their young men in Philosophy, but, which was a higher concernment, to ordain Laws. They were ready to have obtained what they desired of him; for the son of *Aristo* was pleased with the invitation, and intended to yield to them. **He asked the Embassadours how they stood affected to Equality of estates: when understanding by them that they were so averse from it, as not to be by any means induced thereto, he refused to goe.**

…

And, as he was the first to attack the views of almost all his predecessors, the question is raised why he makes no mention of Democritus.
…

And it seems that Xenophon was not on good terms with him. At any rate, they have written similar narratives as if out of rivalry with each other, a *Symposium*, a *Defence of Socrates*, and their moral treatises or *Memorabilia*.[41] Next, the one wrote a *Republic*, the other a *Cyropaedia*. And in the *Laws*[42] Plato declares the story of the education of Cyrus to be a fiction, for that Cyrus did not answer to the description of him. **And although both make mention of Socrates, neither of them refers to the other, except that Xenophon mentions Plato in the third book of his *Memorabilia*.** 35. It is said also that Antisthenes, being about to read publicly something that he had composed, invited Plato to be present. And on his inquiring what he was about to read, Antisthenes replied that it was something about the impossibility of contradiction. "How then," said Plato, "can you write on this subject?" thus showing him that the argument refutes itself. Thereupon he wrote a dialogue

against Plato and entitled it *Sathon*. After this they continued to be estranged from one another. **They say that, on hearing Plato read the *Lysis*, Socrates exclaimed, "By Heracles, what a number of lies this young man is telling about me!"** For he has included in the dialogue much that Socrates never said.
…

Now where he has a firm grasp Plato expounds his own view and refutes the false one, but, if the subject is obscure, he suspends judgement. His own views are expounded by four persons, Socrates, Timaeus, the Athenian Stranger,[57]
the Eleatic Stranger.[58] These strangers are not, as some hold, Plato and Parmenides, but imaginary characters without names,[59] for, even when Socrates and Timaeus are the speakers, it is Plato's doctrines that are laid down.
…

56. But, just as long ago in tragedy the chorus was the only actor, and afterwards, in order to give the chorus breathing space, **Thespis devised a single actor, Aeschylus a second, Sophocles a third, and thus tragedy was completed, so too with philosophy: in early times it discoursed on one subject only, namely physics, then Socrates added the second subject, ethics, and Plato the third, dialectics, and so brought philosophy to perfection.**
…

67. The doctrines he approved are these.[66] **He held that the soul is immortal, that by transmigration it puts on many bodies,[67] and that it has a numerical first principle, whereas the first principle of the body is geometrical;[68]** and he defined soul as the idea of vital breath diffused in all directions. He held that it is self-moved and tripartite, the rational part of it having its seat in the head, the passionate part about the heart, while the appetitive is placed in the region of the navel and the liver.[69]
…

78. On good and evil he would discourse to this effect. **He maintained that the end to aim at is assimilation to God,** that virtue is in itself sufficient for happiness, but that it needs in addition, as instruments for use, first, bodily advantages like health and strength, sound senses and the like, and, secondly, external advantages such as wealth, good birth and reputation. But the wise man will be no less happy even if he be without these things.
…

And in the dialogues he conceived righteousness to be the law of God because it is stronger to incite men to do righteous acts, that malefactors may not be punished after death also. 80. **Hence to some he appeared too fond of myths. These narratives he intermingles with his works in order to deter men from wickedness, by reminding them how little they know of what awaits them[92] after death.** Such, then, are the doctrines he approved.
…

Monarchy is either regulated by law or hereditary. **At Carthage the kingship is regulated by law, the office being put up for sale.[94]**

> 94. **Plato probably refers to Carthage when he mentions *purchasable* kingship, ὠνηταὶ βασιλεῖαι, amongst barbarians, *Rep.* 544 d.** Aristotle repeats the epithet in his description of the Carthaginian constitution, *Pol.* ii. 11, 1273 a 36. Polybius says that at Carthage magistrates attain office, δῶρα φανερῶς διδόντες, vi. 56. 4.

83. But the monarchy in Lacedaemon and in Macedonia is hereditary, for they select the king from a certain family. **A tyranny is that form in which the citizens are ruled either through fraud or force by an individual.**
…

There are three species of justice. One is concerned with gods, another with men, and the third with the departed. For those who sacrifice according to the laws and take care of the temples are obviously pious towards the gods. Those again who repay loans and restore what they have received upon trust act justly towards men. Lastly, those who take care of tombs are obviously just towards the departed.
…

Nobility has four divisions. First, when the ancestors are gentle and handsome and also just, their descendants are said to be noble. Secondly, when the ancestors have been princes or magistrates, their descendants are said to be noble. The third kind arises when the ancestors have been illustrious; for instance, through having held military command or through success in the national games. For then we call the descendants noble. 89. **The last division includes the man who is himself of a generous**

and high-minded spirit. He too is said to be noble. And this indeed is the highest form of nobility. Thus, of nobility, one kind depends on excellent ancestors, another on princely ancestors, a third on illustrious ancestors, while the fourth is due to the individual's own beauty and worth.

https://archive.org/details/in.ernet.dli.2015.231132/page/n529/mode/2up?view=theater

As the fourth century progressed, a real credit system developed: the bankers, instead of advancing cash, issued letters of credit, money orders, or checks; wealth could now pass from one client to another merely by entries in the banker's books.[13] Businessmen or bankers issued bonds for mercantile loans, and every large inheritance included a number of such bonds. **Some bankers, like the ex-slave Pasion, developed so many connections, and acquired by a discriminating honesty so widespread a reputation for reliability, that their bond was honored throughout the Greek world. Pasion's bank had many departments and employees, mostly slaves;** it kept a complex set of books, in which every transaction was so carefully recorded that these accounts were usually accepted in court as indisputable evidence.
…

The change from landed to movable wealth produced a feverish struggle for money, and the Greek language had to invent a word, *pleonexia*, to denote this appetite for "more and more," and another word, *chrematistike,* for the busy pursuit of riches. Goods, services, and persons were increasingly judged in terms of money and property. Fortunes were made and unmade with a new rapidity, and were spent in lavish displays that would have shocked the Athens of Pericles.
…

In this conflict more and more of the intellectual classes took the side of the poor.[21] **They disdained the merchants and bankers whose wealth seemed to be in inverse proportion to their culture and taste; even rich men among them, like Plato, began to flirt with communistic ideas.**

https://archive.org/details/in.ernet.dli.2015.55010/page/n557/mode/2up?view=theater

Even Plato was moved by the Cynic ideal. In the second book of the *Republic*[59] he describes with relish and sympathy a communistic and naturalistic Utopia. He rejects it, and goes on to portray a "second-best" state; but when he comes to picture his philosopher-kings we find the Cynic dream—of men without property and without wives, dedicated to plain living and high philosophy—capturing the citadel of the finest imagination in Greek history. Plato's plan for a communistic aristocracy was the brilliant endeavor of a rich conservative to reconcile his scorn of democracy with the radical idealism of his time.

https://archive.org/details/in.ernet.dli.2015.55010/page/n571/mode/2up?view=theater

In his declining years, still longing to be a legislator, **Plato offered a third-best state. The *Laws*, besides being the earliest extant classic of European jurisprudence, is an instructive study in the senile aftermath of youthful romanticism.**
…

Since obedience to parents and the laws can be secured only through supernatural sanctions and aids, the state shall determine what gods are to be worshiped, and how, and when. **Any citizen who questions this state religion is to be imprisoned; if he persists he is to be killed.**[138]

A long life is not always a blessing; **it would have been better for Plato to have died before writing this indictment of Socrates, these prolegomena to all future Inquisitions.**
…

The *Laws* offers the surrender of a dying Athens that had completely lived to a Sparta that, ever since Lycurgus, had been dead. **When Athens' most famous philosopher could find so little to say for freedom Greece was ripe for a king.**
…

But it was his fate that he was a logician as well as a poet; that he was the most brilliant reasoner of antiquity, subtler than Zeno of Elea or Aristotle; that he loved philosophy more than he loved any woman or any man; **and that in the end, like Dostoevski's Grand Inquisitor, he concluded to a suppression of all free reasoning, a conviction that philosophy must be destroyed in order that man may live.** He himself would have been the first victim of his Utopias.

https://penelope.uchicago.edu/Thayer/E/Roman/Texts/Plutarch/Lives/Nicias*.html#ref57

The first man to put in writing the clearest and boldest of all doctrines about the changing phases of the moon was Anaxagoras. But he was no ancient authority, nor was his doctrine in high repute. It was still under seal of secrecy, and made its way slowly among a few only, who received it with a certain caution rather than with implicit confidence. 3 Men could not abide the natural philosophers and "visionaries," as they were then called,

for that they reduced the divine agency down to irrational causes, blind forces, and necessary incidents. Even Protagoras had to go into exile,[58] Anaxagoras was with difficulty rescued from imprisonment by Pericles,[59] and Socrates, though he had nothing whatever to do with such matters, nevertheless lost his life[60] because of philosophy. 4 **It was not until later times that the radiant repute of Plato, because of the life the man led, and because he subjected the compulsions of the physical world to divine and more sovereign principles, took away the obloquy of such doctrines as these, and gave their science free course among all men.**

http://www.perseus.tufts.edu/hopper/text?doc=Perseus%3Atext%3A1999.01.0166%3Abook%3D12%3Asection%3D948b

Rhadamanthys deserves admiration for the way in which, as we are told, he judged cases of law, **in that he perceived that the men of his time had a clear belief in the existence of gods,—and naturally so, seeing that most men at that time were the offspring of gods, he himself among others, as the story declares.** Probably he thought that he ought not to entrust lawsuits to any man, but only to gods, from whom he obtained verdicts that were both simple and speedy; for he administered an oath [948c] to the disputants regarding each matter in dispute, and thus secured a speedy and safe settlement. **But nowadays, when, as we say,[1] a certain section of mankind totally disbelieve in gods, and others hold that they pay no regard to us men, while a third party, consisting of the most and worst of men, suppose that in return for small offerings and flatteries the gods lend them aid in committing large robberies, and often set them free from great penalties,**—under such conditions, for men as they now are, the device of Rhadamanthys would no longer be appropriate in actions at law. [948d] **Since, therefore, the opinions of men about the gods have changed, so also must their laws change.**

http://www.perseus.tufts.edu/hopper/text?doc=Perseus%3Atext%3A1999.01.0168%3Abook%3D9%3Asection%3D578d

“From individual wealthy private citizens in our states who possess many slaves. For these resemble the tyrant in being rulers over many, only the tyrant's numbers are greater.[1]” “Yes, they are.” **“You are aware, then, that they are unafraid and do not fear their slaves?” “What should they fear?” “Nothing,” I said; “but do you perceive the reason why?” “Yes, because the entire state** [578e] **is ready to defend each citizen.”**
…

“But now suppose,” said I, “that god established round about him numerous neighbors who would not tolerate the claim of one man to be master of another,[2] but would inflict the utmost penalties on any such person on whom they could lay their hands.” “I think,” he said, [579b] **“that his plight would be still more desperate, encompassed by nothing but enemies.”** “And is not that the sort of prison-house in which the tyrant is pent, being of a nature such as we have described and filled with multitudinous and manifold terrors and appetites? **Yet greedy[1] and avid of spirit as he is, he only of the citizens may not travel abroad or view any of the sacred festivals[2] that other freemen yearn to see, but he must live for the most part cowering in the recesses of his house like a woman,[3]** [579c] envying among the other citizens anyone who goes abroad and sees any good thing.”

https://books.google.fi/books?id=OirJPP6mOkEC&lpg=PP1&hl=fi&pg=PA72#v=onepage&q&f=false

Plato believed that the first need of human society, the essential remedy for its contemporary ills, was unity and concord; yet he was equally insistent on divisions that separate men. The combination may seem paradoxical, but it was no more than a variation on the traditional Greek outlook, which from Homer onwards had divided men into high and low, good and bad, worthy and worthless, and held that is is through the acceptance of such distinctions, the recognition that all men are *not* equal, that peace and harmony in the community are to be maintained. **We have seen that in the fifth century B.C., and especially during its last decades, this tradition had become weaker and lost much of its hold on the Greek mind. Plato wanted to restore it.**

To this extent his political thinking was traditional and can be called ‘reactionary.’ In another, and to his contemporaries probably more obvious way it was revolutionary, in that although of high birth and wealthy family himself, Plato rejected birth or property as the ground of discrimination, and followed Socrates in seeking a new basis in the inner character and mentality of men themselves. Socrates had held that true wisdom, the right use of reason, was the real hall-mark of quality among human beings – not possessions or noble blood or the pretended knowledge of those usually regarded as wise. Plato carried this view further by moulding it into a coherent picture of human society, based not on tradition or convention but on nature, and related to an interpretation of reality as a whole.
…

Although Plato sees education as the most important thing in life for those who can profit by it, **he has no belief, like Isocrates, that teaching can raise large numbers of men to higher levels of understanding. Those to whom nature has given the ability to become philosophers are very few, and this will always be so.**
…

Plato's answer to the political problems resulting from the decline of the old aristocracy was a new aristocracy of real wisdom – **not of 'wise statesmen' in the accepted sense, nor of men trained in the 'practical wisdom' of Isocrates, but of wisdom derived from knowledge of universal truth.**

https://www.perseus.tufts.edu/hopper/text?doc=Perseus%3Atext%3A1999.01.0058%3Abook%3D2%3Asection%3D1261a

For example, it is possible for the citizens to have children, wives and possessions in common with each other, as in Plato's *Republic*, in which Socrates says that there must be community of children, women and possessions. Well then, which is preferable, the system that now obtains, or one conforming with the regulation described in the *Republic*[1]?
…

Yet it is clear that if the process of unification advances beyond a certain point, the city will not be a city at all for a state essentially consists of a multitude of persons, and if its unification is carried beyond a certain point, **city will be reduced to family and family to individual,** [20] **for we should pronounce the family to be a more complete unity than the city, and the single person than the family;** so that even if any lawgiver were able to unify the state, he must not do so, for he will destroy it in the process.
…

Also it is curious that a theorist who makes the sons common property only debars lovers from intercourse and does not prohibit love, nor the other familiarities, which between father and son or brother and brother are most unseemly, since even the fact of love between them is unseemly. **And it is also strange that he deprives them of intercourse for no other reason except because the pleasure is too violent; and that he thinks it makes no difference that the parties are in the one case father or son and in the other case brothers of one another. And it seems that this community of wives and sons is more serviceable for the Farmer class than for the Guardians;** [1262b] [1] **for there will be less friendship among them if their children and women are in common, and unfriendliness in the subject classes is a good thing with a view to their being submissive to authority and not making revolution.**
…

Yet the general mass of the citizens of the other classes make almost the bulk of the state, and about these no definite regulations are laid down, as to whether the Farmers also are to have their property in common or to hold it in private ownership, and also whether community of wives and children is to apply to them or not. For if the Farmers are to have the same complete communism, what will be the difference between them and the Guardian class? or what advantage will they gain by submitting to their government? or what consideration will induce them to submit to [20] the government, **unless the Guardians adopt some clever device like that of the Cretans? These have conceded to their slaves all the same rights as they have themselves except that they are forbidden gymnastic exercises and the possession of arms.** But if the family life and property of the Farmers are to be such as they are in other states, what sort of communism will there be? For there will inevitably be two states in one, and these antagonistic to one another. For Socrates makes the Guardians a sort of garrison, while the Farmers, Artisans and other classes are the citizens.[1]
…

The Republic discussed by Socrates therefore possesses these difficulties and also others not smaller than these.

And almost the same holds good of the *Laws* also, which was written later, so that it will be advantageous to make some small examination of the constitution described in that book as well. For in the *Republic* Socrates has laid down details about very few matters—regulations about community of wives and children and about property, and the structure of the constitution (for the mass of the population is divided into two parts, one forming the Farmer class and the other the class that defends the state in war, and there is a third class drawn from these latter that forms the council and governs the state), but about the Farmers and the Artisans, whether they are excluded from government or have some part in it, and whether these classes also are to possess arms and to serve in war with the others or not, on these points Socrates has made no decision, but though he thinks that the women ought to serve in war with the Guardians and share the same education, the rest of the discourse he has filled up with external topics, and about the sort of education which it is proper for the Guardians to have.[16]

[1265a] [1] **But though the *Laws* consists for the most part of a treatise on law, the author has said a little about the form of the constitution, and in a desire to make this more suitable for adoption by actual states he brings it round by degrees back to the other form, that of the *Republic*. For except community in wives and property, he assigns all his other regulations in the same form to both states, for he prescribes for both the same scheme of education, and a life detached from menial tasks, and similarly as regards common meals, except that in the state described in the *Laws* he says there are to be common meals for women also,** and he makes the *Republic* consist of a class possessing arms that numbers a thousand, but the state of the *Laws* has five thousand.
…

And it is also strange that although equalizing properties the writer does not regulate the number of the citizens, but leaves the birth-rate uncontrolled, on the assumption that it will be sufficiently levelled up to the same total owing to childless marriages, however many children are begotten, [1265b] [1] because this seems to take place in the states at present. But this ought to be regulated much more in the supposed case than it is now, for now nobody is destitute, because estates are divided among any number, but then, as division of estates will not be allowed, the extra children will necessarily have nothing, whether they are fewer in number or more. **And one might think that restriction ought to be put on the birth-rate rather than on property, so as not to allow more than a certain number of children to be produced, and that in fixing their number consideration should be paid to the chances of its happening that some of the children born may die, and to the absence of children in the other marriages;** but for the matter to be left alone, as it is in most states, is bound to lead to poverty among the citizens, and poverty produces sedition and crime.

https://archive.org/details/in.ernet.dli.2015.55010/page/n569/mode/2up?view=theater

First, he fancies, we must find a good king who will let us experiment with his people. Then we must send away all the adults except those necessary to maintain order and teach the young, for the ways of their elders would corrupt the young into an image of the past. **To all the young, of whatever sex or class, twenty years of education will be given.** It will include the teaching of myths—not the immoral myths of the old faith, but new myths that may tame the soul into obedience to parents and the state.* **At twenty all are to be given physical, mental, and moral tests. Those that fail will become the economic classes of our state—businessmen, workingmen, farmers; they will have private property, and different degrees of wealth (within limits) according to their ability; but there will be no slaves.** The survivors of the first test will receive ten further years of education and training. At thirty they will be tested again. **Those that fail will become soldiers; they shall have no private property, and shall not engage in business, but shall live in a military communism.** Those that pass the second test will now (and none before) take up for five years the study of "divine philosophy"[125] in all its branches, from mathematics and logic to politics and law. At thirty-five the survivors, with all their theory on their heads, will be flung into the practical world to earn their living and make themselves a place. At fifty such of them as are still alive shall become, without election, members of the guardian or ruling class.

They shall have all powers, but no possessions. There will be no laws; all cases and issues will be decided by the philosopher-kings according to a wisdom untrammeled by precedent. Lest they abuse these powers, they shall have no property, no money, no families, no permanent individual wives; **the people will hold the power of the purse, the soldiers the power of the sword. Communism is not democratic, it is aristocratic; the common soul is incapable of it; only soldiers and philosophers can bear it.** As for marriage, it must in all classes be strictly regulated by the guardians as a eugenic sacrament: "The best of either sex should be united with the best as often as possible, and the inferior with the inferior; and they are to rear the offspring of one sort of union, but not of the other; for this is the only way of keeping the flock in prime condition."[126] All children are to be brought up by the state, and given equal educational opportunity; classes are not to be hereditary. **Girls shall have an equal chance with boys, and no office in the state shall be closed to women because they are women.**

https://books.google.fi/books?id=as_OTst8jvoC&lpg=PP1&hl=fi&pg=PA35#v=onepage&q&f=false

In the fifth book of the *Republic*, after a certain amount of tongue-in-cheek defensive posturing, Socrates raises the question of whether their hypothetical city ought to make use of female as well as male guardians.

> **Do we think that the females of our watchdogs ought to keep watch over the same things as our male watchdogs? Do we think that they ought to hunt as well and do other things in common [with the males]? Or do we think that the females ought to keep watch at home (*οἰκουρεῖν ἔνδον*) since they are incapable (*ἀδυνάτους*) – on account of the bearing and rearing of puppies – and that the male will work and keep watch over all the concerns of the flocks?**56

Of course, Glaucon answers, female dogs ought to guard the herd alongside the males and are trained to do it. **Likewise, Socrates continues, the women of the ideal city who possess the nature of guardians must receive the same *paideia* as the men if they are to become guardians of the city;** this is an astonishing idea that leads Socrates to discuss which tasks, by nature, women are capable of performing.
…

Socrates now points out that when they agreed that those with similar natures ought to perform the same social tasks, they did not mean that male and female must be, by nature, entirely alike *in every possible way*. The question, rather, is whether the difference between male and female is relevant to the performance of social and political tasks. Socrates has here formulated an idea that Aristotle would refer to as "proportionate equality" that is neither oligarchic nor democratic. **Although Socrates accepts the premise that those who possess the best natures ought to rule the city, he accepts neither the democratic claim that all free men are equally capable of political behavior nor the aristocratic notion that noble birth entails superiority over the lower born. Socrates charts a radically different course. Like Aristotle's "aristocrat," Socrates maintains that the "best" should rule, but at the same time he denies that there are those who are noble "by nature" (as he remarked in the *Meno*). In the *Republic*, Socrates advocates neither democracy nor aristocracy but "philosophocracy."**
…

Socrates' discussion of the nature of women and social organization in the *Republic* is deeply idiosyncratic – so much so that **such perceptive critics as Allan Bloom**60 **and Arlene Saxonhouse**61 **have refused to accept the idea that Socrates could possibly have expected to be taken seriously in the fifth book of the *Republic*.**

> 60. Bloom, *Republic of Plato* 380-382: "**Book V is preposterous, and Socrates expects it to be ridiculed. It provokes both laughter and rage in its contempt for convention and nature, in its wounding of all the dearest sensibilities of masculine pride and shame, the family, and statesmanship and the city. As such it can only be understood as Socrates' response to his most dangerous accuser, Aristophanes, and his contest with him.** … Socrates with an air of utmost seriousness undertakes absurd considerations; in this he is already comic." **Bloom reads Book V as a response to the feminist dystopia imagined by Aristophanes in the *Ecclesiazousai*.**
>
> 61. Saxonhouse, "The Philosopher and the Female" 190: "[I] cannot accept the view that Socrates wishes to emancipate the Athenian woman." **Saxonhouse reads Book V as an intentional travesty: Socrates pushes his logic about the nature of the soul to such an absurd point that the feasibility of the entire exercise of the *Republic* is called into question.**

https://books.google.fi/books?id=E2G6wM-yRmEC&lpg=PP1&hl=fi&pg=PA104#v=onepage&q&f=false

The initial reception of Plato's *Republic* in fifteenth-century Europe was turbulent. It could not be assimilated casually like the works of Aristophanes and Lucian, whose obscenities were dismissed, overlooked, or expurgated as extrinsic – the privilege of jesters – while what was considered their moral teaching was appreciated and imitated. **Plato, whose dialogues pretended to impart true doctrine about virtuous conduct, was encroaching upon a domain where the Church allowed neither alternatives nor flippancy.**
…

When manuscript translations of the *Republic* into Latin began to be diffused in fifteenth-century Italy, **the manifest contradiction between the ideal society of Plato and the *Ethics* and *Politics* of Aristotle, which had been an accepted part of Christian culture for more than two hundred years** and had been newly translated by the Florentine humanist Leonardo Bruni in 1414 and 1437, became the focus of spirited controversy. The original motive for Pier Decembrio's translation of the *Republic* in 1437 was, he confessed, a desire to compare on his own the text of Aristotle's attack on Plato in the *Politics* with what Plato himself had written about the community of women and property in the fifth book, though Decembrio had access to the Latin version prepared three decades earlier by his father, Umberto Decembrio, and the Greek scholar Manuel Chrysoloras. **After the Council of Trent (1545-1563), with its formal incorporation of Aristotle and the Scholastics as orthodoxy, there were times when an acknowledged adherence to Plato in any area of thought could be dangerous:** Witness the condemnation of the *Nova Philosophia* of Francesco Patrizi, Bishop of Cherso, and its inclusion on the Index of Prohibited Books.
…

The plain reason for the difference between the medieval and the Renaissance Platos was that knowledge of his writings, once limited to secondary sources **(except for the *Timaeus* and parts of the *Phaedo*)** was now augmented by the dialogues themselves either in Greek or in Latin. After the publication of Marsilio Ficino's translation of the Platonic corpus in 1484 – a fateful year for European culture – doctrines that had once been discussed on the basis of mere hearsay or critical accounts like that of Aristotle or

excerpts preserved in the Church Fathers became available in their totality, along with commentaries and summaries.
…

Even on casual acquiantance, Plato's vision of the ideal city was embarrassing to humanists who adored the spiritual beauties of his other writings. **Leonardo Bruni refused to translate the *Republic* because, he said, "there are many things in these books that, to our ways, are loathsome," and for the honor of Plato it was better to leave them alone.**10

https://books.google.fi/books?id=E2G6wM-yRmEC&lpg=PP1&hl=fi&pg=PA153#v=onepage&q&f=false

Often the treatises focused on Aristotle's critique of Plato's *Republic*, and the Italian authors, officials in city-states, **understandably tended to side with the preserver of private property against the idea of communism, which they discussed as though Plato would have applied it to the whole society.**

285. WHETHER PROPERTY CAN BE SQUARED WITH JUSTICE.—When the injustice of property is strongly felt (and the hand of the great clock is once more at this place), we formulate two methods of relieving this injustice: **either an equal distribution, or an abolition of private possession and a return to State ownership. The latter method is especially dear to the hearts of our Socialists, who are angry with that primitive Jew for saying, "Thou shalt not steal." In their view the eighth[27] commandment should rather run, "Thou shalt not possess."—The former method was frequently tried in antiquity, always indeed on a small scale, and yet with poor success.** From this failure we too may learn. "Equal plots of land" is easily enough said, but how much bitterness is aroused by the necessary division and separation, by the loss of time-honoured possessions, how much piety is wounded and sacrificed! We uproot the foundation of morality when we uproot boundary-stones. Again, how much fresh bitterness among the new owners, how much envy and looking askance! For there have never been two really equal plots of land, and if there were, man's envy of his neighbour would prevent him from believing in their equality. **And how long would this equality, unhealthy and poisoned at the very roots, endure?** In a few generations, by inheritance, here one plot would come to five owners, there five plots to one. Even supposing that men acquiesced in such abuses through the enactment of stern laws of inheritance, the same equal plots would indeed exist, but there would also be needy malcontents, owning nothing but dislike of their kinsmen and neighbours, and longing for a general upheaval.—**If, however, by the second method we try to restore ownership to the community and make the individual but a temporary tenant, we interfere with agriculture.** For man is opposed to all that is only a transitory possession, unblessed with his own care and sacrifice. With such property he behaves in freebooter fashion, as robber or as worthless spendthrift. When Plato declares that self-seeking would be removed with the abolition of property, we may answer him that, if self-seeking be taken away, man will no longer possess the four cardinal virtues either; as we must say that the most deadly plague could not injure mankind so terribly as if vanity were one day to disappear. Without vanity and self-seeking what are human virtues? By this I am far from meaning that these virtues are but varied names and masks for these two qualities. Plato's Utopian refrain, which is still sung by Socialists, rests upon a deficient knowledge of men. He lacked the historical science of moral emotions, the insight into the origin of the good and useful characteristics of the human soul. **He believed, like all antiquity, in good and evil as in black and white—that is to say, in a radical difference between good and bad men and good and bad qualities.**—In order that property may henceforth inspire more confidence and become more moral, we should keep open all the paths of work for small fortunes, but should prevent the effortless and sudden acquisition of wealth. Accordingly, we should take all the branches of transport and trade which favour the accumulation of large fortunes—especially, therefore, the money market—out of the hands of private persons or private companies, and look upon those who own too much, just as upon those who own nothing, as types fraught with danger to the community.

496. THE EVIL PRINCIPLE.—**Plato has marvellously described how the philosophic thinker must necessarily be regarded as the essence of depravity in the midst of every existing society: for as the critic of all its morals he is naturally the antagonist of the moral man, and, unless he succeeds in becoming the legislator of new morals, he lives long in the memory of men as an instance of the "evil principle."** From this we may judge to how great an extent the city of Athens, although fairly liberal and fond of innovations, abused the reputation of Plato during his lifetime. What wonder then that he—who, as he has himself recorded, had the "political instinct" in his body—**made three different attempts in Sicily, where at that time a united Mediterranean Greek State appeared to be in process of formation? It was in this State, and with its assistance, that Plato thought he could do for the Greeks what Mohammed did for the Arabs several centuries later:** viz. establishing both minor and more important customs, and especially regulating the daily life of every man. His ideas were quite practicable just as certainly as those of Mohammed were practicable; for even much more incredible ideas, those of Christianity, proved themselves to be practicable! **a few hazards less and a few hazards more—and then the world would have witnessed the Platonisation of Southern Europe; and, if we suppose that this state of things had continued to our own days, we should probably be worshipping Plato now as the "good principle."** But he was unsuccessful, and so his traditional character remains that of a dreamer and a Utopian—stronger epithets than these passed away with ancient Athens.

In particular, Hadas claims that Judaism adopted what 'Plato himself summarized [as] the objectives of his program', in the following well-known passage:

> "The principle thing is that no one, man or woman, should ever be without an officer set over him, and that none should get the mental habit of taking any step, whether in earnest or in jest, on his individual responsibility. In peace as in war he must live always with his eyes on his superior officer... **In a word, we must train the mind not to even consider acting as an individual or know how to do it.**" (*Laws*, 942ab)

If the word 'rabbi' is substituted for 'an officer' we will have a perfect image of classical Judaism.

>
> Military organization is the subject of much consultation and of many appropriate laws. The main principle is this—**that nobody, male or female, should ever be left without control, nor should anyone, whether at work or in play, grow habituated in mind to acting alone and on his own initiative, but he should live always, both in war** [942b] **and peace, with his eyes fixed constantly on his commander and following his lead;** and he should be guided by him even in the smallest detail of his actions—for example, to stand at the word of command, and to march, and to exercise, to wash and eat, to wake up at night for sentry-duty and despatch-carrying, and in moments of danger to wait for the commander's signal before either pursuing or retreating before an enemy; and, in a word, [942c] **he must instruct his soul by habituation to avoid all thought or idea of doing anything at all apart from the rest of his company, so that the life of all shall be lived en masse and in common;** for there is not, nor ever will be, any rule superior to this or better and more effective in ensuring safety and victory in war.

The first example takes us to Athens in 392 B.C. during the great urban Dionysia, when Aristophanes presented his comedy *Ecclesiazusae* or *The Congresswomen.* Here he depicts a teaching fashionable in the Athens of the time. The plot is as follows: The women of the city, wearing beards and dressed in men's clothing, come to the assembly and by a majority vote pass a resolution transferring all power in the state to women. **They use this power to introduce a series of measures, which are expounded in a dialogue between Praxagora, the leader of the women, and her husband, Blepyros.** Here are several quotations.

PRAXAGORA:

> **Compulsory Universal Community Property is what I propose to propose; across-the-board Economic Equality, to fill those fissures that scar our society's face. No more the division between Rich and Poor.** ...
> ... We'll wear the same clothes, and share the same food. ...
> ... My initial move will be to communalize land, and money, and all other property, personal and real.

BLEPYROS:

> But take the landless man who's invisibly wealthy... because he hides his silver and gold in his pockets. What about him?

PRAXAGORA:

> He'll deposit it all in the Fund. ...
> **... I'll knock out walls and remodel the City into one big happy household, where all can come and go as they choose. ...**
> **... I'm pooling the women, creating a public hoard for the use of every man who wishes to take them to bed and make babies.**

BLEPYROS:

> A system like this requires a pretty wise father to know his own children.

PRAXAGORA:

> But why does he need to? Age is the new criterion: Children will henceforth trace their descent from all men who *might* have begot them. ...

BLEPYROS:

> Who's going to work the land and produce the food?

PRAXAGORA:

> **The slaves. This leaves you just one civic function: When the shades of night draw on, slip sleekly down to dinner. ...**
>
> **... <u>The State's not going to stint. Its hand is full and open, its heart is large, it'll stuff its menfolk free of charge</u>, then issue them torches when dinner's done and send them out to hunt for fun.** (2: pp. 43-51)

...

We see concealed in Marx's Hegelian phraseology and Aristophanes' buffoonery almost the same program:

1. Abolition of private property.
2. Abolition of the family--i.e., communality of wives and disruption of the bonds between parents and children.
3. Purely material prosperity.

It would even be possible to say that both programs coincide perfectly, were it not for one place in the *Ecclesiazusae*. In answer to Blepyros's question as to who will do the plowing, Praxagora replies: "Slaves!" **Here she proclaims the fourth point of the program, and a most significant one--liberation from the necessity of work. Interestingly enough, on this point Herbert Marcuse, the best-known of the neo-Marxists and one of the leaders of the New Left in the U.S.A., differs from Marx.**

For instance, in his essay "The End of Utopia," **Marcuse says that "it is no accident that for modern avant garde left intellectuals the works of Fourier have become relevant again. Fourier did not flinch where Marx was insufficiently bold. He spoke of a society where work would become play."** And elsewhere in the same essay: "New technical potentialities lead to oppression unless there develops a vital need for the abolition of alienating work." (4: pp. 75, 77)

Students wondering how university officials today can support policies that viciously disparage and persecute men's sexuality should study Hesiod's *Theogony*. That influential work, written in Greek nearly 2700 years ago, **depicts the earth goddess Gaia plotting to castrate Uranus, the sky god, who was both her son and her husband.**

https://www.perseus.tufts.edu/hopper/text?doc=Perseus%3Atext%3A1999.01.0130%3Acard%3D104

After them was born Cronos the wily, youngest and most terrible of her children, and he hated his lusty sire.
…

And again, three other sons were born of Earth and Heaven, great and doughty beyond telling, Cottus and Briareos and Gyes, presumptuous children. [150] From their shoulders sprang a hundred arms, not to be approached, and fifty heads grew from the shoulders upon the strong limbs of each, and irresistible was the stubborn strength that was in their great forms. For of all the children that were born of Earth and Heaven, [155] these were the most terrible, and they were hated by their own father from the first. And he used to hide them all away in a secret place of Earth so soon as each was born, and would not suffer them to come up into the light: and Heaven rejoiced in his evil doing. But vast Earth [160] groaned within, being straitened, and she thought a crafty and an evil wile. Forthwith she made the element of grey flint and shaped a great sickle, and told her plan to her dear sons. And she spoke, cheering them, while she was vexed in her dear heart: [165] "My children, gotten of a sinful father, if you will obey me, we should punish the vile outrage of your father; for he first thought of doing shameful things." So she said; but fear seized them all, and none of them uttered a word. **But great Cronos the wily took courage and answered his dear mother:** [170] **"Mother, I will undertake to do this deed, for I reverence not our father of evil name, for he first thought of doing shameful things."**

So he said: and vast Earth rejoiced greatly in spirit, and set and hid him in an ambush, and put in his hands [175] a jagged sickle, and revealed to him the whole plot. And Heaven came, bringing on night and longing for love, and he lay about Earth spreading himself full upon her.[1] Then the son from his ambush stretched forth his left hand and in his right took the great long sickle [180] with jagged teeth, and swiftly lopped off his own father's members and cast them away to fall behind him.

First of all [110] the deathless gods who dwell on Olympus made **a golden race of mortal men <u>who lived in the time of Cronos when he was reigning in heaven.</u> And they lived like gods** [115] **without sorrow of heart, remote and free from toil and grief: miserable age rested not on them; but with legs and arms never failing they made merry with feasting beyond the reach of all evils. When they died, it was as though they were overcome with sleep, and they had all good things; for the fruitful earth unforced bare them fruit abundantly and without stint.** They dwelt in ease and peace upon their lands with many good things, [120] rich in flocks and loved by the blessed gods. But after the earth had covered this generation —they are called pure spirits dwelling on the earth, and are kindly, delivering from harm, and guardians of mortal men; [125] for they roam everywhere over the earth, clothed in mist and keep watch on judgements and cruel deeds, givers of wealth; for this royal right also they received;—then they who dwell on Olympus made a second generation which was of silver and less noble by far.

Stranger: You have followed my account very well. [271d] No, the life about which you ask, when all the fruits of the earth sprang up of their own accord for men, did not belong at all to the present period of revolution, but this also belonged to the previous one. **For then, in the beginning, God ruled and supervised the whole revolution,** and so again, in the same way, all the parts of the

universe were divided by regions among gods who ruled them, and, moreover, the animals were distributed by species and flocks among inferior deities as divine shepherds, each of whom was in all respects the independent guardian of the creatures under his own care, [271e] **so that no creature was wild, nor did they eat one another, and there was no war among them, nor any strife whatsoever.** To tell all the other consequences of such an order of the world would be an endless task. But the reason for the story of the spontaneous life of mankind is as follows: **God himself was their shepherd, watching over them, just as man, being an animal of different and more divine nature than the rest, now tends the lower species of animals. And under his care there were no states,** [272a] **nor did men possess wives or children; for they all came to life again out of the earth, with no recollection of their former lives. So there were no states or families, but they had fruits in plenty from the trees and other plants, which the earth furnished them of its own accord, without help from agriculture.** And they lived for the most part in the open air, without clothing or bedding; for the climate was tempered for their comfort, and the abundant grass that grew up out of the earth furnished them soft couches. [272b] That, Socrates, was the life of men in the reign of Cronus; but the life of the present age, which is said to be the age of Zeus, you know by your own experience.

https://penelope.uchicago.edu/Thayer/E/Roman/Texts/Plutarch/Lives/Cimon*.html#ref8

And yet we know that Lichas the Spartan became famous among the Hellenes for no other reason than that he entertained the strangers at the boys' gymnastic festival; but the generosity of Cimon surpassed even the hospitality and philanthropy of the Athenians of olden time. 6 For they—and their city is justly very proud of it—spread abroad among the Hellenes the sowing of grain and the lustral uses of spring waters, and taught mankind who knew it not the art of kindling fire. **But he made his home in the city a general public residence for his fellow citizens, and on his estates in the country allowed even the stranger to take and use the choicest of the ripened fruits, with all the fair things which the seasons bring. Thus, in a certain fashion, he restored to human life the fabled communism of the age of Cronus,—the golden age. [τρόπον τινὰ τὴν ἐπὶ Κρόνου μυθολογουμένην κοινωνίαν εἰς τὸν βίον αὖθις κατῆγεν.]**

https://www.tertullian.org/fathers/martial_epigrams_book12.htm

LXII. TO SATURN, ON BEHALF OF PRISCUS TERENTIUS.

Great king of the ancient world, and of the primitive state of things, under whose rule quiet repose prevailed, and labour was unknown; [nec labor ullus erat] nor was the thunder-bolt of Jove frequently used, nor lived there those who were deserving of it; and the earth yielded its riches, without being cloven down to the infernal regions; [Scissa nec ad Manes, sed sibi dives humus] come, propitious and gracious, to this solemn festival of Priscus; it befits you to be present at your own sacred rites.

https://www.sacred-texts.com/cla/luc/wl4/wl422.htm

But it occurred to me to reserve these few days for the employments I have mentioned; during them I resume my authority, that men may remember what life was like in my days, when all things grew without sowing or ploughing of theirs--no ears of corn, but loaves complete and meat ready cooked--, when wine flowed in rivers, and there were fountains of milk and honey; **all men were good and all men were gold.** Such is the purpose of this my brief reign; therefore the merry noise on every side, the song and the games; **therefore the slave and the free as one. When I was king, slavery was not.**

https://www.sacred-texts.com/cla/luc/wl4/wl423.htm

'And certify them,' he said, 'that if they do not hereafter, this sharp sickle that I bear is no toy; 'twere odd if I could maim therewith Uranus my father, but not do as much for the rich that transgress my laws; they shall be fitted to serve the Mother of the Gods with alms-box and pipe and timbrel.' Thus he threatened; wherefore ye will do well to observe his decrees.

> FIRST TABLE OF THE LAWS
>
> All business, be it public or private, is forbidden during the feast days, save such as tends to sport and solace and delight. Let none follow their avocations saving cooks and bakers.
>
> **All men shall be equal, slave and free, rich and poor, one with another.**
>
> Anger, resentment, threats, are contrary to law.

http://www.murraymoerman.com/3downloads/books/R.J.Rushdoony-The-Religion-of-Revolution.pdf

In the Second Table of the Laws as cited by Lucian of Samosata, the first law required that the rich, before Saturnalia began, shall record a tithe of their income, properties and clothing, which tithe must be disposed of on the eve of the festival. The rich must also pay the rents and debts of the poor. Gifts must be sent to the poor, and any rich man who, having given away liberally, failed to do so "with glad countenance…be it known to him that he hath incurred that penalty of the sickle, though he himself hath sent all he should…"3 **The sickle, *atharme*, or magic knife, is an ancient symbol of magical power,** whereby the "evil" ones are instantly dissolved or destroyed by the possessor of the sickle.4
…

The link these ancient religions of chaos and the modern revolutionary movements is a very close and real one. The symbols themselves have remained constant throughout the centuries, among them being the ancient Phrygian cap of liberty (i.e. liberty from law, the liberty of chaos) which cap has found its way on to certain U.S. coins, the sickle or *atharme*, the hammer (an ancient symbol of the destroying power of lightning on the one hand, and of antinomian sexual fertility on the other), and others as well.

https://www.newadvent.org/cathen/06132a.htm

There can be little doubt—and medieval censors themselves freely recognized the fact—that the license and buffoonery which marked this occasion had their origin in pagan customs of very ancient date. John Beleth, when he discusses these matters, entitles his chapter "De quadam libertate Decembrica", and goes on to explain: "now the license which is then permitted is called Decembrian, because it was customary of old among the pagans that during this month slaves and serving-maids should have a sort of liberty given them, and should be put upon an equality with their masters, in celebrating a common festivity." (P.L. CCII, 123).
…

The central idea [of the Feast of Fools] seems always to have been that of the old Saturnalia, i.e. a brief social revolution, in which power, dignity or impunity is conferred for a few hours upon those ordinarily in a subordinate position. Whether it took the form of the boy bishop or the subdeacon conducting the cathedral office, **the parody must always have trembled on the brink of burlesque, if not of the profane.**

https://orthosphere.wordpress.com/2016/02/01/pushing-the-eschaton/

It is in the discourse of the Right a commonplace that liberal policies implement Ponzi schemes; **that their wild prodigality can be justified only on the basis of magical thinking which supposes that economic and cultural goods pour forth inexhaustibly from some mysterious cornucopia,** rather than as products of unstinting, intelligent, diligent, difficult, costly labor rightly and prudently directed.
…

The liberal rejection of the traditions, customs, morality, and sexual orders **developed over millennia of scarcity and insecurity** makes some sense when we consider that scarcity and insecurity seem to have been more or less routed in the West since WWII.

https://archive.org/details/mephistophelesan0000elia/page/124/mode/2up?view=theater

In the years 1944-5, a strange new cult appeared in the island of Espirito Santo, one of the New Hebrides. A certain Tsek, the founder of the cult, sent the following message round the villages: men and women must take off and throw away their cache-sexe and take off their pearl necklaces and other ornaments. “Destroy all these objects,” he added, “which you got from the Whites, also all mats and basket-making tools. **Burn your houses and build two large dormitories in each village: one for the men and the other for the women.** Couples must no longer sleep together at night. Build also a large kitchen, in which you will prepare your meals while it is still daylight; it is strictly forbidden to cook during the night. Stop working for the Whites. Slaughter all domestic animals: pigs, dogs, cats, etc.” **Tsek also ordered the suppression of many tribal taboos: for example, the prohibition of marriage within the totemic group, the obligation to buy a wife,** the segregation of the young mother after childbirth. Funerary customs were also to be changed; a dead man must no longer be buried in his hut but exposed on a wooden platform in the jungle. **But the most sensational part of Tsek’s message what that “America” would soon arrive in the island; all adepts of the cult would receive enormous quantities of goods; and what is more, they would never die, they would live for ever.**1
…

Let us note immediately that the nudist cult of Espirito Santo continued to spread for several years. In 1948, Graham Miller noted that the further inland one went, the more powerful it was. A third of the population had joined it. **A common language, called *Maman* had been adopted by its members, although the villages belonged to different linguistic groups. A new unity – of a religious order – has been formed**

outside the traditional tribal structures. The members of the sect are convinced of the excellence of the new order and the badness of the old. The Christianity spread by the missionaries is openly repudiated. The centres of the new cult are located in villages in the centre of the island which probably no White has ever visited.1 Like all the other millenarist movements of Oceania, this cult is anti-White in character.

Nevertheless, its success is not assured. Now that the enthusiasm of the early days is over a certain resistance seems to be appearing. The promised Utopia has not been realized; on the other hand, the gigantic destruction of goods has impoverished whole regions. **Furthermore, the natives object to the nudism and orgiastic promiscuity. For, according to one of Graham Miller's informants, the real reason for the nudism is the encouragement of orgy. The founder of the cult himself is alleged to have said that the sexual act, being a natural function, should be performed publicly and in daylight, after the fashion of dogs and birds. All the women and girls belong, without distinction, to all the men.**2

Justifiably, the natives, including even some followers of the cult, had been upset by the holocaust of their possessions and the sexual promiscuity. For eschatological nudism and the destruction of goods and tools had no sense except as ritual acts portending and preparing for a new era of prosperity, liberty, blessedness and eternal life.
...

Once the old order is abolished the laws, rules and taboos will lose their reason. The prohibitions and customs sanctioned by tradition will give place to absolute liberty; in the first place to sexual liberty, to orgy.
...

So the *malamala*, or nudists of Espirito Santo, try to make their sexual conduct like that of the animals, that is to say to cast away all shame, for they consider themselves without sin. This too is why they expect both immortality and the coming of the Americans loaded with gifts. It is hard to say whether, in the mind of the cult's founder, immortality is one of the Americans' presents or if it is the spontaneous result of the coming of the eschatological Kingdom. In either case, immortality and an abundance of food are the outstanding syndromes of Paradise. **Man lives for ever and in the most perfect happiness, since he eats without having to work and love is freed of its traditional prohibitions.**
...

In nearly all the "cargo-cults" the rejection of Christianity is more or less categorical.
...

Furthermore, in a number of cases, millenarist movements have also rejected the traditional forms of Melanesian religion. **The masks of the secret societies have been destroyed and women allowed to participate in the esoteric ceremonies. The traditional religion has sometimes been completely abandoned.** Not that the natives have become a-religious overnight and thrown aside both Christianity and their ancestral religion in a single gesture. On the contrary, this reversal has marked the resurgence of a truer religious life, infinitely more creative because nourished by a prophetic millenarist experience. The people were preparing for the Kingdom – **and all religious forms of the past had to be abolished.** They were expecting a new life, regenerated from the roots, an existence doubly precious because it proclaimed itself blessed and without end. **We have noticed the same phenomenon in the nudist cult of Espirito Santo, which rejected Christianity, the ethical and economic values of the Whites, and the traditional tribal customs and prohibitions, all at once.** They were preparing for the return of Paradise.

https://archive.org/details/hindumannerscust1906dubo/page/286/mode/2up?view=theater

Amongst the abominable rites practised in India is one which is only too well known; it is called *sakti-puja*; *sakti* meaning strength or power.1 Sometimes it is the wife of Siva to whom this sacrifice is offered; sometimes they pretend that it is in honour of some invisible power. The ceremony takes place at night with more or less secrecy. The least disgusting of these orgies are those where they confine themselves to eating and drinking everything that the custom of the country forbids, and where men and women, huddled together in indiscriminate confusion, openly and shamelessly violate the commonest laws of decency and modesty.

> 1. It is more correctly described as 'the power or energy of the god as represented in some of the many female forms.' **It has been estimated that of the Hindus in Bengal, about three-fourths are devoted to the worship of *sakti*, though the forms of worship vary greatly.** In Bengal the *Vamacharis* observe the most disgusting rites of all.—Ed.

The *Namadharis*, or followers of Vishnu, are the most frequent perpetrators of these disgusting sacrifices. **People of all castes, from the Brahmin to the Pariah, are invited to attend.** When the company are assembled, all kinds of meat, including beef, are placed before the idol of Vishnu. Ample provision is also made of arrack, toddy and opium, and any other intoxicating drug they can lay their hands on. The whole is then offered to Vishnu.
...

They persuade themselves that under these circumstances they do not contract impurity by eating and drinking in so revolting a manner. When they are all completely intoxicated, men and women no longer

keep apart, but pass the rest of the night together, giving themselves up without restraint to the grossest immorality without any risk of disagreeable consequences. **A husband who sees his wife in another man's arms cannot recall her, nor has he the right to complain; for at those times every woman becomes common property. Perfect equality exists among all castes, and the Brahmin is not of higher caste than the Pariah.**
…

Strange to say, it is the Brahmins, and very often the women of this caste, who are frequently the most ardent promoters of these Bacchanalian orgies. However, debauches of this kind entail such heavy expenses as fortunately to prevent their frequent recurrence.

https://archive.org/details/in.ernet.dli.2015.55010/page/n215/mode/2up?view=theater

We have left for the last the most troublesome, the most popular, the most difficult to classify, of all the Greek gods. **Only late in his career was Dionysus received into Olympus.**
…

The priests of Delphi and the rulers of Athens tried to keep the cult at a distance, but failed; all they could do was to adopt Dionysus into Olympus, Hellenize and humanize him, give him an official festival, and turn the revelry of his worshipers from the mad ecstasy of wine among the hills into the stately processions, the robust songs, and the noble drama of the Great Dionysia. For a while they won Dionysus over to Apollo, but in the end Apollo yielded to Dionysus' heir and conqueror, Christ.

https://books.google.fi/books?id=OirJPP6mOkEC&lpg=PP1&hl=fi&pg=PA37#v=onepage&q&f=false

A parallel passage survives from the *Tereus* of Sophocles, which may have been produced about the same time. Although the play's theme seems to have set Greek civilisation and savagery in strong contrast with each other, **the chorus, probably Bacchic worshippers from Thrace, express the egalitarian and unifying spirit which seems to have characterised the worship of their god.** Derivation from common ancestor – probably father Heaven and mother Earth – makes all men one: 'There is one human race. A single day brought us all forth from our father and mother. **No man is born superior to another.** But one man's fare is a doom of unhappy days, another's is success; and on others the yoke of slavery's hardship falls' (fr. 532.)

https://www.brusselsjournal.com/node/4689

In the twilight of the *polis*-phase of Greek existence, in the aftermath of the catastrophic wars between Athens and Sparta, and under the looming shadow of Macedonian hegemony, **Euripides draws a picture of a state in precipitous dissolution, gripped by a combination of religious mania and petulant rebellion against the limitations of civic life.** The source of the crisis is the siren-call of a wandering stranger who urges the women of Thebes to renounce civic order as the equivalent of unbearable tyranny and to desert their city for the sake of orgiastic Amazonism in the surrounding countryside.
…

In Nietzsche's words: **"So also in the German Middle Ages singing and dancing crowds, ever increasing in number, were whirled from place to place under this same Dionysian impulse."** Thus, "in the dancers of St. John and St. Vitus, we rediscover the Bacchic choruses of the Greeks, with their early history in Asia Minor, as far back as Babylon and the orgiastic Sacaea." **Perhaps also in revolutionary disintegration, as in Paris in 1789, or in the Central European Soviets after 1918, the Dionysian wrath against the *principium individuationis* reappears.**

http://www.perseus.tufts.edu/hopper/text?doc=Perseus%3Atext%3A1999.02.0166%3Abook%3D39%3Achapter%3D13

Then Hispala set forth the origin of the mysteries. [8] **At first, she said, it was a ritual for women,**[2] **and it was the custom that no man should be admitted to it.** There had been three days appointed each year on which they held initiations into the Bacchic rites by day; it was the rule to choose the matrons in turn as priestesses. [9] **Paculla Annia, a Campanian, she said, when priestess, had changed all this as if by the advice of the gods; for she had been the first to initiate men, her sons, Minius and Herennius Cerrinius;** she had held the rites by night and not by day, and instead of a mere three days a year she had established five days of initiation in every month. [10] From the time that the rites were performed in common,[3] men mingling with women and the freedom of darkness added, no form of crime, no sort of wrongdoing, was left untried. **There were more lustful practices among men with one another than among women. If any of them were disinclined to endure abuse or reluctant to commit crime, they were sacrificed as victims.** [11] **To consider nothing wrong, she continued, was the highest form of religious devotion among them. [plura virorum inter sese quam feminarum esse stupra. si qui minus patientes dedecoris sint et pigriores ad facinus, pro victimis immolari. nihil nefas ducere, hanc summam inter eos religionem esse.]** Men, as if insane, with fanatical tossings of their bodies, would utter prophecies. [12] Matrons in the dress of Bacchantes, with dishevelled hair and carrying

blazing torches, would run down to the Tiber, and plunging their torches in the water (because they contained live sulphur mixed with calcium) would bring them out still burning.[4] [13] Men were alleged to have been carried off by the gods who had been bound to a machine and borne away out of sight to hidden caves: they were those who had refused either to conspire or to join in the crimes or to suffer abuse. [14] **Their number, she said, was very great, almost constituting a second state; among them were certain men and women of high rank.** Within the last two years it had been ordained that no one beyond the age of twenty years should be initiated: boys of such age were sought for as admitted both vice and corruption.

http://www.perseus.tufts.edu/hopper/text?doc=Perseus%3Atext%3A1999.02.0166%3Abook%3D39%3Achapter%3D15

15. When the magistrates had been dispatched to these posts, the consuls mounted the Rostra and called an informal meeting[1] of the people, and, when the consul had finished the regular formula of prayer which magistrates are accustomed to pronounce before they address the people, he thus began: [2] "Never for any assembly, citizens, has this formal prayer to the gods been not only so suitable but even so necessary, a prayer which reminds us that these are the gods whom our forefathers had appointed to be worshipped, to be venerated, to receive our prayers, not those gods [3??] who would drive our enthralled minds with vile and alien rites, as by the scourges of the Furies, to every crime and every lust.
…

[8] As regards their number, if I shall say that there are many thousands of them, it cannot but be that you are terrified, unless I shall at once add to that who and of what sort they are. [9] First, then, a great part of them are women, and they are the source of this mischief; **then there are men very like the women, debauched and debauchers,** fanatical, with senses dulled by wakefulness, wine, noise and shouts at night. [10] The conspiracy thus far has no strength, but it has an immense source of strength in that they grow more numerous day by day.
…

[12] Of what sort do you[5] think are, first, gatherings held by night, second, meetings of men and women in common?[6] If you knew at what ages males were initiated, you would feel not only pity for them but also [13] shame. **Do you think, citizens, that youths initiated by this oath should be made soldiers? That arms should be entrusted to men mustered from this foul** [14] **shrine? Will men debased by their own debauchery and that of others fight to the death on behalf of the chastity of your wives and children?**
…

It is already too great to be purely a private matter: its objective is the control of the state. [4] Unless you are on guard betimes, citizens, as we hold this meeting in the day-time, summoned by a consul, in accordance with law, so there can be one held at night. **Now, as single individuals, they stand in fear of you,** gathered here all together in this assembly: presently, when you have scattered to your homes and farms, they will have come together and they will take measures for their own safety and at the same time for your[1] destruction: **then you, as isolated individuals, will have to fear them as a united body.**

https://books.google.fi/books?id=OAwtAgAAQBAJ&lpg=PR1&hl=fi&pg=PA154#v=onepage&q&f=false

> 113. Thersites is usually represented unfavorably as the dour Cynic, e.g., Lucian, *Vit. auct.* 7; *Pisc.* 37; *Fug.* 30; *Ind.* 7.

https://sacred-texts.com/cla/luc/wl3/wl302.htm

He had a good word for Thersites, as a cynic and a leveller.

https://www.perseus.tufts.edu/hopper/text?doc=Perseus%3Atext%3A1999.01.0134%3Abook%3D2%3Acard%3D188

Now the others sate them down and were stayed in their places, only there still kept chattering on **Thersites of measureless speech, whose mind was full of great store of disorderly words, wherewith to utter revilings against the kings, idly, and in no orderly wise,** [215] **but whatsoever he deemed would raise a laugh among the Argives.** Evil-favoured was he beyond all men that came to Ilios: he was bandy-legged and lame in the one foot, and his two shoulders were rounded, stooping together over his chest, and above them his head was warped, and a scant stubble grew thereon. [220] **Hateful was he to Achilles above all, and to Odysseus, for it was they twain that he was wont to revile; but now again with shrill cries he uttered abuse against goodly Agamemnon.** With him were the Achaeans exceeding wroth, and had indignation in their hearts.

Long before Socrates was executed, some of his companions had become notorious for aping his manner and appearance. Aristophanes made fun of them by turning "Socrates" into a comic term in *The Birds* (produced in 414 B.C.E.), where we are told of odd people in Athens who "wear long hair, go hungry and wild, socratize – and carry sticks!" It is not quite clear what socratizing amounts to here, though apparently it is associated with being harsh, unkempt, and a bit of a spectacle. Plato and Xenophon confirm that some of Socrates' most ardent admirers deserved this reputation, but of the most important Socratics, only Antisthenes (ca. 445-365 B.C.E.) fit the comic image.

> http://www.perseus.tufts.edu/hopper/text?doc=Perseus%3Atext%3A1999.01.0026%3Acard%3D1263
>
> [1280] Before your city was built, all men had a mania for Sparta; long hair and fasting were held in honor, men went dirty like Socrates and carried staves.

Two decades older than Plato and Xenophon, Antisthenes may have been the most prominent of the Socratics for a decade or more following Socrates' execution.
...

Unlike Plato and Xenophon, Antisthenes came under Socrates' influence as an adult, after already embarking on a career as an orator in emulation of Gorgias, and his primary intellectual interests always remained ethics and politics.
...

The second aspect of Socratic strength showed itself in the rejection on convention and artificial social distinctions. **Antisthenes seems to have drawn cosmopolitan consequences from this critique of convention, arguing that virtue was the same for Greeks and barbarians as well as for men and women.**

Perhaps the most striking feature of Antisthenes' appropriation of Socrates, however, was his denial that speaking and learning are important prerequisites for the development of virtue. Rather, the strength and independence necessary are primarily matters of training and exertion, not of understanding. Antisthenes thus seems to have allowed the example of Socrates' freedom to wholly eclipse the example of his wisdom. The Cynics further developed this particular approach to Socratic virtue. **They in turn became an important influence on the Stoics, though Stoicism tried to distance itself from Cynicism's anti-intellectual tendencies and to ground the ascetic and cosmopolitan aspects of Socratic strength in a different conception of wisdom.**

https://ses.library.usyd.edu.au/bitstream/handle/2123/16595/Kennedy_WJ_Thesis%20Final.pdf;jsessionid=53C5547FDC8004C0B81C0FD9D182C192?sequence=1

Elizabeth Irwin mounts a persuasive case that, in fact, Antisthenes himself was an illegitimate *nothos* who was affected by Pericles' law, and it was this that excluded him from political life and prompted his harsh criticism of the democracy (2015b, esp. 90-93). Naming a son after his father was 'much less common' than naming him after one of his grandfathers, uncles, and so on (Matthews 2012, 1022). So by analogy with Pericles son of Pericles (Plu. *Per.* 27) his name in itself perhaps offers circumstantial evidence that he was a *nothos*. However, there is no direct evidence that Antisthenes' status as a citizen was ever called into question and there is no record of him being called a *nothos*.

https://en.wikisource.org/wiki/On_the_Firmness_of_the_Wise_Man#XVIII.

Antisthenes was reproached with his mother being a barbarian and a Thracian; he answered that the mother of the gods, too, came from Mount Ida. **[Antistheni mater barbara et Thraessa obiciebatur: respondit et deorum matrem Idaeam esse.]**

https://penelope.uchicago.edu/Thayer/E/Roman/Texts/Plutarch/Moralia/De_exilio*.html#ref124

17 1 **But "exile" is a term of reproach.[125] Yes, among fools, who make terms of abuse of "pauper," "bald," "short," and indeed "foreigner" and "immigrant." But those who are not carried away by such considerations admire good men, even if they are poor or foreigners or exiles.** Nay, do we not observe that like the Parthenon and the Eleusinium, so the Theseum is saluted with reverence by all? Yet Theseus was banished from Athens, though it is because of him that Athens is now inhabited; and that city was lost to him which he did not take possession of, but himself created. What glory remains to Eleusis, if we are to be ashamed of Eumolpus, who, a migrant from Thrace, initiated and still initiates the Greeks into the mysteries? **Whose son was Codrus, who became king? Was it not of Melanthus, an exile from Messenê? Do you not commend Antisthenes' retort to the man who remarked, "Your mother is a Phrygian": "So too is the Mother of the Gods"?[126]** Why then do not you, when "exile" is cast in your teeth, make a similar reply: "So too the father of Heracles the victorious was an exile, so too the grandsire[127] of Dionysus, when sent out to find Europa, like her, did not return, though 'Phoenician born,' but by coming to Thebes expatriated his 'descendant,'[128]

> Euhius Dionysus,
> Rouser of women,
> Him that is adored in frenzy"?[129]

[128] Adapted by Plutarch from the *Phrixus* of Euripides: Nauck, *Trag. Graec. Frag.*, Eur. 819.3:

> **Φοῖνιξ πεφυκώς, ἐκ δ' ἀμείβεται γένος**
> **Ἑλληνικόν**
>
> **"Phoenician born, his race he did exchange**
> **For Greek."**

https://en.wikisource.org/wiki/Lives_of_the_Eminent_Philosophers/Book_VI#Antisthenes

1. Antisthenes,[1] the son of Antisthenes, was an Athenian. It was said, however, that he was not of pure Attic blood. **Hence his reply to one who taunted him with this: "The mother of the gods too is a Phrygian."[2] For his mother was supposed to have been a Thracian.** Hence it was that, when he had distinguished himself in the battle of Tanagra,[3] he gave Socrates occasion to remark that, if both his parents had been Athenians, he would not have turned out so brave. **He himself showed his contempt for the airs which the Athenians gave themselves on the strength of being sprung from the soil by the remark that this did not make them any better born than snails or wingless locusts.**

> https://en.wikipedia.org/wiki/Autochthon_(ancient_Greece)#Athenian_autochthony_concept
>
> The Athenians of the 5th and 4th centuries BCE, during the age of Athenian Empire, claimed with pride to be an autochthonous nation that had never changed their place of habitation.[11][12] According to Thucydides, Attica, where Athens is located, had known few migrations due to the poverty of the soil.[13] They had personified their autochthony in the form of Erechtheus or Cecrops I and wore golden *tettiges*,[14] or cicada-shaped ornaments in their hair as a token representing their belief that, like cicadas, Athenians were born from the soil and thus had always lived in Attica.[15][16]
> ...
>
> Separate from the political ideology of autochthonism, this concept of Athenian autochthony has been linked to the rise of Athenian democracy. **In contrast to the previous regime of Tyrants and Oligarchs, and their strict power hierarchies, autochthony was as an argument for democracy and egalitarianism. All Athenians were earth-brothers and thus deserved to have equal access to political power.[18]**
>
> The "autochthony" of the Athenians was a common theme on vase paintings, in political rhetoric, and on the tragic stage.[19] In the epideictic oration of Panegyricus,[20] Isocrates addressed to his countrymen with the following passage:
>
> > **for we did not became dwellers in this land by driving others out of it, nor by finding it uninhabited, nor by coming together here a motley horde composed of many races;** but we are of a lineage so noble and so pure that throughout our history we have continued in possession of the very land which gave us birth, since we are sprung from its very soil and are able to address our city by the very names which we apply to our nearest kin; **for we alone of all the Hellenes have the right to call our city at once nurse and fatherland and mother.**

2. To begin with, he became a pupil of Gorgias the rhetorician, and hence the rhetorical style that he introduces in his dialogues, and especially in his *Truth* and in his *Exhortations*.
...

He lived in the Peiraeus, and every day would tramp the five miles to Athens in order to hear Socrates. **From Socrates he learned his hardihood, emulating his disregard of feeling, and thus he inaugurated the Cynic way of life. He demonstrated that pain is a good thing by instancing the great Heracles and Cyrus, drawing the one example from the Greek world and the other from the barbarians.**
...

4. When he was being initiated into the Orphic mysteries, the priest said that those admitted into these rites would be partakers of many good things in Hades. "Why then," said he, "don't you die?" **Being reproached because his parents were not both free-born, "Nor were they both wrestlers," quoth he, "but yet I am a wrestler."**
...

Favourite themes[8] with him were the following. **He would prove that virtue can be taught; that nobility belongs to none other than the virtuous.** 11. And he held virtue to be sufficient in itself to ensure happiness, since it needed nothing else except the strength of a Socrates. And he maintained that virtue is an affair of deeds and does not need a store of words or learning; **that the wise man is self-sufficing, for all the goods of others are his;** that ill repute is a good thing and much the same as pain; **that the wise man will be guided in his public acts not by the established laws but by the law of virtue;** that he will also marry in order to have children from union with the handsomest women; furthermore that he will not disdain to love, for only the wise man knows who are worthy to be loved.

12. Diocles records the following sayings of his: **To the wise man nothing is foreign** or impracticable.

> https://www.gutenberg.org/files/22188/22188-h/22188-h.htm#torm_tag22
>
> MEN. Have you so much leisure, Chremes, from your own affairs, that you can attend to those of others—those which don't concern you?
>
> CHREM. **I am a man,23 *and* nothing that concerns a man do I deem a matter of indifference to me.** Suppose that I wish either to advise *you* in this matter, or to be informed *myself*: if *what you do* is right, that I may do the same; if it is not, *then* that I may dissuade you.
>
> > 23. *I am a man*)—Ver. 77. "Homo sum: humani nihil a me alienum puto." **St. Augustine says, that at the delivery of this sentiment, the Theatre resounded with applause;** and deservedly, indeed, for it is replete with the very essence of benevolence and disregard of self.

...

Esteem an honest man above a kinsman. Virtue is the same for women as for men. Good actions are fair and evil actions foul. **Count all wickedness foreign and alien.**
...

14. Of all the Socratics Antisthenes alone is praised by Theopompus, who says he had consummate skill and could by means of agreeable discourse win over whomsoever he pleased. And this is clear from his writings and from Xenophon's *Banquet*. **It would seem that the most manly section of the Stoic School owed its origin to him.** Hence Athenaeus the epigrammatist writes thus of them:[9]

> Ye experts in Stoic story, ye who commit to sacred pages most excellent doctrines - that virtue alone is the good of the soul: for virtue alone saves man's life and cities. But that Muse[10] that is one of the daughters of Memory approves the pampering of the flesh, which other men have chosen for their aim.

15. **Antisthenes[11] gave the impulse to the indifference of Diogenes, the continence of Crates, and the hardihood of Zeno, himself laying the foundations of their state.** Xenophon calls him the most agreeable of men in conversation and the most temperate in everything else.

https://books.google.fi/books?id=khpY2fQaIg0C&lpg=PP1&hl=fi&pg=PA51#v=onepage&q&f=false

It is, moreover, unquestionable that there are traces of Sophistical thought in Antisthenes' philosophy: there is a skeptical bent, a rejection of universals, an ostensive theory of definition, **a refusal to place human customs and values on the same level as what is natural,** and an insistence on interpreting mythological traditions in an allegorical way.

https://books.google.fi/books?id=khpY2fQaIg0C&lpg=PP1&hl=fi&pg=PA59#v=onepage&q&f=false

What is important to bear in mind is that the three stages of Antisthenes' development that we have identified, namely, the Sophistical, the Socratic, and the Cynic, should not be understood as three consecutive and exclusive stages, but rather as three levels of intellectual growth in which earlier ideas and tendencies are subsumed and integrated into later ones. **Thus, Antisthenes the Sophist is followed by Antisthenes the Socratic *and* the Sophist, and Antisthenes the Socratic *and* the Sophist is succeeded by *Antisthenes the Cynic who is also both Socratic and Sophistical.* There is, then, a line of ideological continuity, which explains how it was possible for him to write Sophistical tracts, Socratic dialogues, and Cynic diatribes during his last twenty or thirty years.**

https://books.google.fi/books?id=khpY2fQaIg0C&lpg=PP1&hl=fi&pg=PA56#v=onepage&q&f=false

After the death of Socrates, as a scholar had noted,43 "Antisthenes was subject to no restraints." He took on the Cynic uniform, and began at once his campaign against the world, a campaign which amounted to "hating all the order or structure achieved in the world."44
…

Suddenly, the doctrines associated with Socrates became exaggerated and were carried to their extreme consequences. Socrates' ironic mood and good humor were replaced by an uninviting earnestness, and a frowning and unforgiving attitude of contempt. His uncertainties and hesitations were relegated to the background, in order to give place to an implacable stance of moral intransigence. **His respect for the laws and his deference towards the State were buried under an avalanche of revolutionary sentiments, and the polity in which Antisthenes had lived in relative freedom, became his enemy. In a word, Antisthenes the Cynic was born.** The prophecy uttered by Socrates before the Athenian jury that sentenced him to death was about to be fulfilled. This prophecy, as stated by Socrates, was recorded by Plato (*Apology* 39c-d): younger critics, harsher than Socrates himself, would rise up in order to undermine the foundations of the Athenian world.

> http://www.perseus.tufts.edu/hopper/text?doc=Perseus%3Atext%3A1999.01.0170%3Atext%3DApol.%3Asection%3D39c
>
> [39c] And now I wish to prophesy to you, O ye who have condemned me; for I am now at the time when men most do prophesy, the time just before death. And I say to you, ye men who have slain me, that punishment will come upon you straight-way after my death, far more grievous in sooth than the punishment of death which you have meted out to me. **For now you have done this to me because you hoped that you would be relieved from rendering an account of your lives, but I say that you will find the result far different. Those who will force you to give an account will be more numerous than heretofore;** [39d] **men whom I restrained, though you knew it not; and they will be harsher, inasmuch as they are younger, and you will be more annoyed.**

Antisthenes now emerges as the relentless critic sent by God to punish the Athenians and indeed the entire world. He spares nobody, and no institution is sacrosanct or untouchable in his eyes. He rejects *all* political arrangements, and, considering himself to be above and outside of the law, proclaims himself king. His mission is none other than to destroy "the decrepit trappings of a dying society"46 – a dying society at least from the perspective of a Cynic.

For his task as a destroyer of his social and political world, Antisthenes has at his disposal several powerful weapons: first, his early training under the tutelage of the Sophists, from whom he learned to speak and write as an accomplished rhetorician, and from he received lessons in skepticism and in the logic that he would develop in his own radical way; second, his acquaintance with Socrates, from whom he received lessons in philosophy, and from whom he learned to distinguish what is real from what only appears real, as well as a host of ideas that he would incorporate into his own Cynic program: and third, his mood of disappointment with and estrangement from the world at large. He had never fit comfortably within the Athenian polity: as a bastard, he must have often felt out of place in the world in which he chose to live, but which he never accepted. This world, which had compelled him to remain an outsider, was, moreover, the same world that had sentenced Socrates, whom he loved so much, to an ignominious death.
…

For him, accordingly, the key philosophical questions are not What is it that I can know about the World? or What is the structure of the universe? or What is the nature of reality? or even What does human existence mean?: but rather **What is the best and most rational way *for me* to conduct myself in a world that is filled with confusion and obfuscation?** How can I attain happiness and serenity in the midst of so much blind and uncontrolled striving on the part of those who surround me? **How can I liberate myself from the social and political fetters with which the irrationality of the human world seeks to immobilize me?** To what extent can my example as a free spirit illuminate the path of others, so that they, too, may set themselves free?

…

Gomperz described Antisthenes' ethical stance in these words:

> An insatiable thirst for freedom, a profound sensitiveness to the ills of life, **an unshakable faith in the majesty and all-sufficiency of reason, and a corresponding abysmal contempt for all traditional ideals,** such are the mood and convictions which lie at the roots of Cynicism.76

> "***Inside every cynical person, there is a disappointed idealist.***"—George Carlin

Here we have the kernel of Antisthenes' thought. He presents himself to us as a man who experiences the suffocating effect of the atmosphere of his social and political world. **On account of his illegitimate birth, he has always been an outsider, and he views the world in which he lives as a foreign land, a sort of wasteland.** Beyond the frontiers of Attica, the wasteland extends itself in all directions. **He is endowed with an unusual gift, which from another perspective can be regarded as a curse: a tremendous lucidity or clarity of mind.**77 This gift has been embellished and fortified by his Sophistical training and particularly by his experience of the Socratic presence. He looks around himself and recognizes hardly any redeeming features in the human world, which, as Schopenhauer would say, is bankrupt. **Religious beliefs have no appeal to him; in fact, he finds them meaningless. The gods may not be more than expeditious inventions fabricated by the ruling class in order to control and stupefy the human herd. This idea he may have learned from Critias' *Sisyphus*.**78
…

Antisthenes feels entrapped in so abominable a world. All around him there is senseless human noise. In whatever direction he turns, he finds inexorably the same enthroned nonsense. Even his best friend, Socrates, is gone, removed from life by a world that could not tolerate him. What, then, will he do? He may entertain the idea of ending his life right then and there, but he chooses to linger in the world for a while, because he thinks that despite of this, he can change the currency of world, at least for himself, by declaring himself an absolute rebel, the Absolute Dog.
…

He presents himself to us, therefore, as a thoroughly negative man. **But the true rebel is he who refuses to accept the world but does *not* abandon the world.** That is, in the act of refusal, and precisely because of the refusal, and while shouting "no," the rebel also says "yes." He is, therefore, all appearances notwithstanding, *an idealist*, that is, a man with a mission who is moved by ideals. He defaces and even throws away the existing currency in order to begin the process of minting and circulating some other currency, namely, *his very own*. And this is what Antisthenes intends to do and actually does. But what can *his* currency be? What new coins is this bastard son of a Thracian slave, who teaches in the Cynosarges and calls himself "the Absolute Dog," who walks about in a torn cloak and carries a staff and a wallet – what coins does he propose to circulate, now that he has thrown away the old ones?
…

Perhaps the most important of his ideals is the recognition of reason as the sole criterion of the worth of human actions, ideas, and feelings. Nothing can be undertaken and nothing can be even entertained until reason – personal reflection and thoughtfulness – has delivered a positive dictum. Hence, neither tradition nor emotion can have a determining role in human behavior.
…

In Diogenes Laertius (VI. 2) we are told that according to Antisthenes, virtue is the same for women as for men, because virtue can be acquired regardless of sexual, racial, or even the cultural differences. Whether Greek or Barbarian, man or woman, master or slave, virtue is accessible to every human being. The same can be said of vice, which is also taught: vicious people become vicious through their own choices and as a result of the pressures of the social world.

> https://en.wikisource.org/wiki/1911_Encyclop%C3%A6dia_Britannica/Valerius_Maximus
>
> **Nothing is known of his personal history except that his family was poor and undistinguished, and that he owed everything to Sextus Pompeius (consul A.D. 14), proconsul of Asia, whom he accompanied to the East in 27. This Pompeius was a kind of minor Maecenas,** and the centre of a literary circle to which Ovid belonged; he was also the intimate of the most literary prince of the imperial family, Germanicus.
> …
>
> But it is as a chapter in the history of the Latin language that the work of Valerius chiefly deserves study. Without it our view of the transition from classical to silver Latin would be much more imperfect than it is. In Valerius are presented to us, in a rude and palpable form, all the rhetorical

tendencies of the age, unsobered by the sanity of Quintilian and unrefined by the taste and subtlety of Tacitus.

http://attalus.org/translate/valerius3a.html#c3

[3e.7] **Such things as those arise from minds high and full of knowledge: but this is no less to be admired in a slave. A barbarian slave, grieving at the killing of his master, forthwith set upon Hasdrubal, and slew him.** And although after being arrested he was tormented in all manner of ways, yet he constantly retained in his mouth the joy which he had in his revenge.

Virtue therefore, not fastidious in how it is attained, allows itself to be possessed by those who have vigorous spirits; nor does it afford a portion of itself large or thrifty according to the difference of the persons, but being open equally to all, it values the aspirations that you have more than your worth. [sed omnibus aequaliter exposita quid cupiditatis potius quam quid dignitatis attuleris aestimat] And therefore it leaves you to determine the weight of its benefits, so that you may carry away with you just as much as your spirit is able to bear.

Therefore it happens many times, that men born of humble parentage reach the highest places of honour and preferment; and on the contrary, that men of most noble extraction, falling into some disgrace, change that splendour which they received from their ancestors into darkness. This will appear more apparent by the examples.

https://books.google.fi/books?id=khpY2fQaIg0C&lpg=PP1&hl=fi&pg=PA69#v=onepage&q&f=false

For the development of reason, the individual needs only himself. The world can prove to be an obstacle, for which reason it is necessary to bracket away the world in order to neutralize its influence. The Cynic must learn not to need the world, and to be willing and able to dispense with what the world offers, such as possessions, wealth, honors, positions, pleasures (which produce the illusion of happiness), and even knowledge. The Cynic must become, therefore, self-sufficient and must practice *αὐτάρκεια*, that is, self-sufficiency and self-government: **he owes nothing to anyone, needs nothing from anyone, and is under the control of no one. He is the absolute monarch of himself.**

https://www.pagebypagebooks.com/Gilbert_K_Chesterton/Orthodoxy/The_Maniac_p1.html

I said to him, "Shall I tell you where the men are who believe most in themselves? For I can tell you. I know of men who believe in themselves more colossally than Napoleon or Caesar. I know where flames the fixed star of certainty and success. I can guide you to the thrones of the Super-men. **The men who really believe in themselves are all in lunatic asylums.**"
...

Imagination does not breed insanity. Exactly what does breed insanity is reason. Poets do not go mad; but chess-players do. Mathematicians go mad, and cashiers; but creative artists very seldom.
...

The poet only desires exaltation and expansion, a world to stretch himself in. The poet only asks to get his head into the heavens. **It is the logician who seeks to get the heavens into his head. And it is his head that splits.**
...

Every one who has had the misfortune to talk with people in the heart or on the edge of mental disorder, knows that their most sinister quality is a horrible clarity of detail; a connecting of one thing with another in a map more elaborate than a maze.

https://books.google.fi/books?id=khpY2fQaIg0C&lpg=PP1&hl=fi&pg=PA61#v=onepage&q&f=false

The gods converge into one universal God, unknown and unfathomable, infinitely removed from human existence, and yet somehow the source and basis of all things, a sort of rational structure of the cosmos.

This aspect of Antisthenes' thought contains the seeds of the anti-religious stance that constitutes one of the distinguishing characteristics of Cynicism. For the Cynics, the anthropomorphism and ritualism of conventional religions are of no value; they represent a manifestation of the state of obfuscation of human existence, and nothing else. "According to *νόμος* (custom or convention)," Antisthenes maintained, "there are many gods, but in nature there is only one." This theme presupposes a clear distinction between convention and nature: **what is true according to custom and what is true according to nature may or may not be the same; the former is relative and ethnocentric,**

while the latter is one and universal. Beneath the myths and beliefs about the gods, bewildering and varied as they are, there may lurk a universal reality that is accessible only to reason. The Sophists recognized the relativistic value of all customs and belief – hence their skepticism towards religion, which is succinctly expressed in a fragment preserved from Protagoras' *On the Gods*:

> About the gods, I am not able to know whether they exist or do not exist, nor what they are like in form; for the factors preventing knowledge are many; the obscurity of the subject, and the shortness of human life.

The second part – **the suspicion that a higher reality hovers above us and behind the myths of the poets –** was generally *not* taught by the Sophists, who remained skeptical about such matters. But Antisthenes had the opportunity to learn it from Socrates. **For beneath the *apparent* skepticism of Socrates, there is a conviction about the existence of God or some form of universal divine reality. Thus, the rhetorical and Sophistical lessons learned by Antisthenes were corrected and expanded upon by the lessons he learned from Socrates, and it is here that we find the source of the monotheistic (or perhaps pantheistic) frame of reference that sustained his philosophical activities.**

https://books.google.fi/books?id=vq1wWM4MseoC&lpg=PP1&hl=fi&pg=PA68#v=onepage&q&f=false

When dealing with this matter, it is crucial to differentiate between Antisthenes and other Cynics, since, so far as we can tell from the texts that have survived, Antisthenes' distinction between two levels – one of the unique god, one of the many gods – is not shared by the later Cynics. Furthermore, **Antisthenes is the only Cynic to have worked out a theory of the gods, and a language appropriate to speaking of them. In the strict sense of the word, he was the only theologian among them and also the only one, it seems, of whom we can say that he believed in the existence of a divinity.**
...

If Lactantius reports his views correctly when attributing to him the idea that the gods of popular belief are many,123 but the creator of the universe is singular,124 then it is difficult, so far as Antisthenes is concerned, not to do so, though I agree with Brancacci's slightly qualified view: "This notion has some legitimacy, provided that the 'monotheistic idea' is given a narrow reading, which is to say that of a philosophical criticism put forward within a context of polytheistic theory and having meaning only within this context. At the same time, if it is true to say that monotheism, according to the strict definition of the term, supposes an absolute distinction between God and the world, then clearly one would not dream of ascribing to Antisthenes a transcendental vision of God, given the close relationship he established between the concepts of 'god' and 'nature.'"125

On this point, **I would wish to say that Antisthenes' principal contribution to Cynicism lies in the distinction he established between nature and culture, giving greater importance to nature, and downgrading culture or custom.** Without this point of departure, on which all Cynic morality is based, Diogenes' philosophy could never have existed, nor could there have been any defacing of the currency.

https://oll.libertyfund.org/title/cicero-on-the-nature-of-the-gods#lf0040_head_016

Antisthenes, again, destroys the significance and essential nature of the gods when he declares in the work entitled "On Natural Philosophy," that there are many gods believed in by the people, but only one that is known to nature.

Atque etiam Antisthenes in eo libro, qui physicus inscribitur popularis, deos multos, naturalem unum esse dicens tollit vim et naturam deorum.

https://en.wikisource.org/wiki/Ante-Nicene_Christian_Library/The_Miscellanies:_Book_5#cite_ref-160

And the Socratic Antisthenes, paraphrasing that prophetic utterance, "To whom have ye likened me? saith the Lord,"[161] says that **"God is like no one; wherefore no one can come to the knowledge of Him from an image."**

https://en.wikisource.org/wiki/The_Divine_Institutes/Part_I#Chap._V.:_Of_the_testimonies_of_poets_and_philosophers

Antisthenes maintained that the gods of the people were many, but that the God of nature was one only; that is, the Fabricator of the whole universe.

Antisthenes multos quidem esse populares deos, unum tamen naturalem, summae totius artificem.

https://books.google.fi/books?id=_M_E5QczOBAC&lpg=PP1&hl=fi&pg=PA595#v=onepage&q&f=false

> 48. **We know (from Cicero, *De Natura Deorum*, and Philodemus, *De Pietate*, that Antisthenes was a monotheist; and the form in which he expressed his monotheism (there is only One God 'according to nature', i.e., to truth, although there are many 'according to convention') shows that he had in mind the opposition *nature–convention* which, in the mind of a former member of the school of Gorgias and contemporary of Alcidamas and Lycophron (cp. note 13 to chapter 5), must have been connected with *equalitarianism*. This in itself does not of course establish the conclusion that the half-barbarian Antisthenes believed in the brotherhood of Greeks and barbarians. Yet it seems to me extremely likely that he did.**

https://books.google.fi/books?id=_M_E5QczOBAC&lpg=PP1&hl=fi&pg=PA237#v=onepage&q&f=false

A similar result was produced by Aristotle's doctrine of definition. First it led to a good deal of hairsplitting. But later, philosophers began to feel that one cannot argue about definitions. In this way, essentialism not only encouraged verbalism, but it also led to the disillusionment with argument, that is, with reason. **Scholasticism and mysticism and despair in reason, these are the unavoidable results of the essentialism of Plato and Aristotle.** And Plato's open revolt against freedom becomes, with Aristotle, a secret revolt against reason.

As we know from Aristotle himself, essentialism and the theory of definition met with strong opposition when they were first proposed, especially from Socrates' old companion Antisthenes, whose criticism seems to have been most sensible.54 **But this opposition was unfortunately defeated. The consequences of this defeat for the intellectual development of mankind can hardly be overrated.**

https://en.wikipedia.org/wiki/Life_of_Plato#Family

Plato's father was Ariston, of the deme of Colytus. According to a tradition, reported by Diogenes Laërtius but disputed by Wilamowitz-Moellendorff, **Ariston traced his descent from the king of Athens, Codrus, and the king of Messenia, Melanthus.[13] Codrus himself was a demigod fathered by the God of the sea Poseidon.[14] These claims are not however exploited in the philosopher's dialogues.[15]** Plato's mother was Perictione, whose family boasted of a relationship with the famous Athenian lawmaker and lyric poet Solon.[13] Solon's heritage can be traced back to Dropides, Archon of the year 644 b.c. Perictione was sister of Charmides and cousin of Critias, both prominent figures of the Thirty Tyrants, the brief oligarchic regime, which followed on the collapse of Athens at the end of the Peloponnesian war (404-403 BC).[16]

...

In contrast to his reticence about himself, Plato used to introduce his distinguished relatives into his dialogues, or to mention them with some precision: Charmides has one named after him; Critias speaks in both *Charmides* and *Protagoras*; Adeimantus and Glaucon take prominent parts in the *Republic*.[25] From these and other references one can reconstruct his family tree, and this suggests a considerable amount of family pride. According to John Burnet, **"the opening scene of the *Charmides* is a glorification of the whole [family] connection ... Plato's dialogues are not only a memorial to Socrates, but also the happier days of his own family".[26]**

https://www.perseus.tufts.edu/hopper/text?doc=Perseus%3Atext%3A1999.01.0168%3Abook%3D5%3Asection%3D473c

"I am on the very verge," said I, "of what we likened to the greatest wave of paradox. But say it[1] I will, even if, to keep the figure, it is likely to wash[2] us away on billows of laughter and scorn. Listen." "I am all attention," he said. **"Unless," said I, "either philosophers become kings**[3] [473d] **in our states or those whom we now call our kings and rulers take to the pursuit of philosophy seriously and adequately, and there is a conjunction of these two things, political power and philosophic intelligence, <u>while the motley horde of the natures who at present pursue either apart from the other are compulsorily excluded</u>, there can be no cessation of troubles, dear Glaucon, for our states, nor, I fancy, for the human race either.** Nor, until this happens, will this constitution which we have been expounding in theory [473e] ever be put into practice within the limits of possibility and see the light of the sun. **But this is the thing that has made me so long shrink from speaking out, because I saw that it would be a very paradoxical saying.** For it is not easy[1] to see that there is no other way of happiness either for private or public life."

https://books.google.fi/books?id=_M_E5QczOBAC&lpg=PP1&hl=fi&pg=PA593#v=onepage&q&f=false

The phrase which, for stylistic reasons, I have put in brackets, is important, for in it *Plato demands the suppression of all 'pure' philosophers* (and unphilosophical politicians). A more literal translation of the phrase would be this: 'while the many' (who have) 'natures' (disposed or gifted) 'for drifting along, nowadays, in one alone of these two, *are eliminated by force*'.
…

Whom does Plato wish to suppress? I believe that 'the many' whose limited or incomplete talents or 'natures' Plato condemns here are identical (as far as philosophers are concerned) with the 'many whose natures are incomplete', mentioned in *Republic*, 495d; and also with the 'many' (professed philosophers) 'whose wickedness is inevitable', mentioned in 489e (cp. also 490e/491a); cp. notes 47, 56, and 59 to this chapter (and note 23 to chapter 5). The attack is, therefore, directed on the one hand against the 'uneducated' democratic politicians, on the other hand most probably against the half-Thracian Antisthenes, the 'uneducated bastard', the equalitarian philosopher;
…

Regarding the two passages from the *Republic*, we must remember that, according to the tradition, Antisthenes was a 'bastard' (his mother came from barbarian Thrace), and that he taught in the Athenian gymnasium reserved for 'bastards'. Now we find, in *Republic* 535e, f. cp. end of the note 52 to this chapter), an attack which is so specific that an individual person must be intended. **Plato speaks of 'people who dabble in philosophy without being restrained by a feeling of their own unworthiness', and he contends that 'the baseborn should be debarred' from doing so.** He speaks of the people as 'unbalanced' (or 'skew' or 'limping') in their love of work and of relaxation; and becoming more personal, he alludes to somebody with a 'crippled soul' who, though he loves truth (as a Socratic would), does not attain it, since he 'wallows in ignorance' (probably because he does not accept the theory of Forms); and he warns the city not to trust such limping 'bastards'. I think it likely that Antisthenes is the object of this undoubtedly personal attack; **the admission that the enemy loves truth seems to me an especially strong argument, occurring as it does in an attack of extreme violence.** But if this passage refers to Antisthenes, then it is very likely that a very similar passage refers to him also, viz. *Republic*, 495d/e, where Plato again describes his victim as possessing a disfigured or crippled soul as well as body. **He insists in this passage that the object of his contempt, in spite of aspiring to be a philosopher, is so depraved that he is not even ashamed of doing degrading ('banausic'; cp. note 4 to this chapter 11) manual labour. Now we know of Antisthenes that he recommended manual labour, which he held in high esteem (for Socrates' attitude, cp. Xenophon, *Mem.*, II, 7, 10),** and that he practised what he taught; a further strong argument that the man with the crippled soul is Antisthenes.

Now in the same passage, *Republic*, 495d, there is also a remark about 'the many whose natures are incomplete', and who nevertheless aspire to philosophy. This seems to refer to the same group (the 'Antistheneans' of Aristotle) of 'many natures' whose suppression is demanded in *Republic*, 473c-e, discussed in note 44 to this chapter.

https://www.perseus.tufts.edu/hopper/text?doc=Perseus%3Atext%3A1999.01.0168%3Abook%3D6%3Asection%3D491a

"We have, then," I said, "to contemplate the causes of the corruption of this nature in the majority, while a small part escapes,[1] even those whom men call not bad but useless; and after that in turn [491a] we are to observe those who imitate this nature and usurp its pursuits **and see what types of souls they are that thus entering upon a way of life which is too high[1] for them and exceeds their powers,** by the many discords and disharmonies of their conduct everywhere and among all men bring upon philosophy the repute of which you speak."

https://www.perseus.tufts.edu/hopper/text?doc=Perseus%3Atext%3A1999.01.0168%3Abook%3D7%3Asection%3D535c

"In the first place," [535d] I said, "the aspirant to philosophy must not limp[1] in his industry, in the one half of him loving, in the other shunning, toil. **This happens when anyone is a lover of gymnastics and hunting and all the labors of the body, yet is not fond of learning or of listening[2] or inquiring, but in all such matters hates work.** And he too is lame whose industry is one-sided in the reverse way." "Most true," he said. "Likewise in respect of truth," I said, **"we shall regard as maimed** [535e] **in precisely the same way the soul that hates the voluntary lie and is troubled by it in its own self and greatly angered by it in others, but cheerfully accepts the involuntary falsehood[1] and is not distressed when convicted of lack of knowledge, but wallows in the mud of ignorance as insensitively as a pig.[2]"**

https://www.perseus.tufts.edu/hopper/text?doc=Perseus%3Atext%3A1999.01.0168%3Abook%3D6%3Asection%3D495c

“And plausibly,” said I; “for other mannikins, observing that the place is unoccupied and full of fine terms and pretensions, [495d] **just as men escape from prison to take sanctuary in temples, so these gentlemen joyously bound away from the mechanical[1] arts to philosophy, those that are most cunning in their little craft.**[2] For in comparison with the other arts the prestige of philosophy even in her present low estate retains a superior dignity; and this is the ambition and aspiration of that multitude of pretenders unfit by nature, whose souls are bowed and mutilated[3] by their vulgar occupations[4] [495e] even as their bodies are marred by their arts and crafts. Is not that inevitable?” “Quite so,” he said. **“Is not the picture which they present,” I said, “precisely that of a little bald-headed tinker[1] who has made money and just been freed from bonds and had a bath and is wearing a new garment and has got himself up like a bridegroom and is about to marry his master's daughter** [496a] **who has fallen into poverty and abandonment?”** “There is no difference at all,” he said. **“Of what sort will probably be the offspring of such parents?” “Will they not be bastard[1] and base?” “Inevitably.”**

1. It is probably fanciful to see in this an allusion to the half-Thracian Antisthenes.

---

https://www.sacred-texts.com/cla/fsgr/fsgr07.htm#an_fr_87_1

And late in life, after the fall of Athens and the condemnation and death of his master, the man underwent a curious change of heart. **He is taunted more than once with the lateness of his discovery of truth,87_2 and with his childish subservience to the old *jeux d'esprit* of the Sceptics which professed to prove the impossibility of knowledge.87_3 It seems that he had lost faith in speculation and dialectic and the elaborate superstructures which Plato and others had built upon them;** and he felt, like many moralists after him, a sort of hostility to all knowledge that was not immediately convertible into conduct.
…

There was in Athens a gymnasium built for those who were base-born and could not attend the gymnasia of true citizens. It was called Kynosarges and was dedicated to the great bastard, Heracles. Antisthenes, though he had moved hitherto in the somewhat patrician circle of the Socratics, remembered how that his mother was a Thracian slave, and set up his school in Kynosarges among the disinherited of the earth. He made friends with the 'bad,' who needed befriending. He dressed like the poorest workman. He would accept no disciples except those who could bear hardship, and was apt to drive new-comers away with his stick. Yet he also preached in the streets, both in Athens and Corinth. He preached rhetorically, with parables and vivid emotional phrases, compelling the attention of the crowd. **His eloquence was held to be bad style, and it started the form of literature known to the Cynics as χρεία, 'a help', or διατριβή, 'a study', and by the Christians as ὁμιλία, a 'homily' or sermon.**

This passionate and ascetic old man would have attracted the interest of the world even more, had it not been for one of his disciples. This was a young man from Sinope, on the Euxine, whom he did not take to at first sight; the son of a disreputable money-changer who had been sent to prison for defacing the coinage. Antisthenes ordered the lad away, but he paid no attention; he beat him with his stick, but he never moved. He wanted 'wisdom', and saw that Antisthenes had it to give. **His aim in life was to do as his father had done, to 'deface the coinage', but on a much larger scale. He would deface all the coinage current in the world. Every conventional stamp was false.**
…

There was a huge earthen pitcher—not a tub—outside the Temple of the Great Mother; the sort of vessel that was used for burial in primitive Greece and which still had about it the associations of a coffin. Diogenes slept there when he wanted shelter, and it became the nearest approach to a home that he had. Like a dog he performed any bodily act without shame, when and where he chose. He obeyed no human laws because he recognized no city. He was *Cosmopolîtes*, Citizen of the Universe; all men, and all beasts too, were his brothers. He lived preaching in the streets and begging his bread; except that he did not 'beg', he 'commanded'. Other folk obeyed his commands because they were still slaves, **while he 'had never been a slave again since Antisthenes set him free'.**
…

The salvation for man was to return to Nature, and Diogenes interpreted this return in the simplest and crudest way. **He should live like the beasts, like primeval men, like barbarians.** Were not the beasts blessed, ῥεῖα ζώοντες like the Gods in Homer? And so, though in less perfection, were primitive

men, not vexing their hearts with imaginary sins and conventions. Travellers told of savages who married their sisters, or ate human flesh, or left their dead unburied. Why should they not, if they wished to? **No wonder Zeus punished Prometheus the Fire-Bringer, who had brought all this progress upon us and left man civilized and more unhappy than any beast! He deserved his crag and his vulture!**

https://books.google.fi/books?id=vq1wWM4MseoC&lpg=PP1&hl=fi&pg=PA414#v=onepage&q&f=false

Who was the first Dog? Opinions are divided between Antisthenes – **a follower of Socrates whose claim is based on a tradition of ancient sources, the only defect of which is that they are late (Epictetus, Dio Chrysostom, Aelian, Diogenes Laertius, Stobaeus, and the Suda)** – and Diogenes of Sinope, whose claim is supported by modern scholarship.1

https://books.google.fi/books?id=khpY2fQaIg0C&lpg=PP1&hl=fi&pg=PA67#v=onepage&q&f=false

Diogenes exaggerated the doctrines of Antisthenes, just as the latter had exaggerated the teachings of Socrates: nevertheless, in the attempt to recreate Antisthenes' ethics, we often find ourselves thinking of Diogenes, almost as if we were in the presence of the one and the same philosopher.

https://archive.org/details/historyofcynicis032872mbp/page/n49/mode/2up?view=theater

But there was this difference – Diogenes was less hampered than Socrates by the ties of family or civic life or the influence of national tradition.

> https://theamericansun.com/2021/10/19/failed-egoists-the-irrelevance-of-right-nietzscheanism/
>
> **For Stirner, Socrates was a sap who was enslaved by his own fixed ideas, reifying a foreign interest over his own egoistic interest.** There is an analogy to the two interpretations, but Stirner is the more consistently nominalistic:
>
> > "How they do praise Socrates for his conscientiousness, which makes him resist the advice to get away from the dungeon! **He is a fool that he concedes to the Athenians a right to condemn him.** Therefore it certainly serves him right; why then does he remain standing on an equal footing with the Athenians? Why does he not break with them? Had he known, and been able to know, what he was, he would have conceded to such judges no claim, no right. **That he did not escape was just his weakness, his delusion of still having something in common with the Athenians, or the opinion that he was a member, a mere member of this people.** But he was rather this people itself in person, and could only be his own judge. There was no judge over him, as he himself had really pronounced a public sentence on himself and rated himself worthy of the Prytaneum. **He should have stuck to that, and, as he had uttered no sentence of death against himself, should have despised that of the Athenians too and escaped. But he subordinated himself and recognized in the people his judge; he seemed little to himself before the majesty of the people.** That he subjected himself to might (to which alone he could succumb) as to a 'right' was treason against himself: it was virtue."

https://books.google.fi/books?id=qKiDDAAAQBAJ&lpg=PR2&hl=fi&pg=PA91#v=onepage&q&f=false

Some modern historians, **revealingly,** have tried to legitimize Diogenes by placing him within the Socratic tradition.6 **And while one must regrettably admit that there are in fact many similarities** – both men were fiercely independent thinkers, both were frank and open, both prized freedom of speech, both disregarded mass opinion, and went against the grain and substantially, both Diogenes and Socrates embraced a kind of personal austerity and an indifference to worldly honours and successes – **there remain, however, fundamental differences that are too profound and fundamental to ignore and which reveal the essential *dis*similarities of the two.**7

> https://archive.org/details/historicallectur00kinguoft/page/318/mode/2up?view=theater
>
> And what shall I say of him?—who stands alone, like Shakespeare, in his generation; possessed of colossal learning—of all science which could be gathered in his days—of practical and statesmanlike wisdom—of knowledge of languages, ancient and modern, beyond all his compeers —of eloquence, which when he speaks of pure and noble things becomes heroic, and, as it were, inspired—of scorn for meanness, hypocrisy, ignorance—of esteem, genuine and earnest, for the Holy Scriptures, and for the more moderate of the Reformers who were spreading the Scriptures in Europe,—and all this great light wilfully hidden, not under a bushel, but under a dunghill. **He is**

> **somewhat like Socrates in face, and in character likewise; in him, as in Socrates, the demigod and the satyr, the man and the ape, are struggling for the mastery. In Socrates, the true man conquers, and comes forth high and pure; in Rabelais, alas! the victor is the ape, while the man himself sinks down in cynicism, sensuality, practical jokes, foul talk.** He returns to Paris, to live an idle, luxurious life; to die—says the legend—saying, "I go to seek a great perhaps," and to leave behind him little save a school of Pantagruelists—careless young gentlemen, whose ideal was to laugh at everything, to believe in nothing, and to gratify their five senses like the brutes which perish. **There are those who read his books to make them laugh; the wise man, when he reads them, will be far more inclined to weep.**

…

So, since exaggeration is always deliberate (the word means "*to represent extravagantly; to overstate*" and it comes from the Latin *ex* meaning "out" and *agger* meaning "heap" thus to "out-heap"), **and always aware of itself, Diogenes is less a philosopher and more the original self-conscious, cynical, ironic Westerner. Cynicism, self-consciousness, and irony are, of course, three of the *essential* spiritual characteristics of the Western world in the twenty-first century.** Plato once remarked to Diogenes: "How pleasing your simplicity would be if it was not a sham."11

…

Socrates tried to see *through to* the truth, to the eternal and the unchanging, whilst Diogenes sought merely to see *through* the sham of things.15 Diogenes appears to have been sneer made manifest. Sneer: *"A brief satirical utterance that throws a contemptuous light on what it attacks without attempting to prove or disprove."*16 This is not philosophy; it is attitude, merely. **And it is a sneering contempt which Diogenes and the Cynics have evidently bequeathed to later agents of social and political change in the West.** Indeed, it was this very attitude of the Cynics that gave them their name.

https://en.wikisource.org/wiki/Lives_of_the_Eminent_Philosophers/Book_VI#Diogenes

22. Through watching a mouse running about, says Theophrastus in the Megarian dialogue, **not looking for a place to lie down in, not afraid of the dark, not seeking any of the things which are considered to be dainties,** he discovered the means of adapting himself to circumstances.

…

24. He was great at pouring scorn on his contemporaries. The school of Euclides he called bilious, and Plato's lectures waste of time, the performances at the Dionysia great peep-shows for fools, and the demagogues the mob's lacqueys. **He used also to say that when he saw physicians, philosophers and pilots at their work, he deemed man the most intelligent of all animals; but when again he saw interpreters of dreams and diviners and those who attended to them, or those who were puffed up with conceit of wealth, he thought no animal more silly.**

…

26. And one day when Plato had invited to his house friends coming from Dionysius, Diogenes trampled upon his carpets and said, "I trample upon Plato's vainglory." Plato's reply was, "How much pride you expose to view, Diogenes, by seeming not to be proud." Others tell us that what Diogenes said was, "I trample upon the pride of Plato," who retorted, "Yes, Diogenes, with pride of another sort."

…

27. Being asked where in Greece he saw good men, he replied, "Good men nowhere, but good boys at Lacedaemon."

…

29. **He would praise those who were about to marry and refrained,** those who intending to go a voyage never set sail, those who thinking to engage in politics do no such thing, **those also who purposing to rear a family do not do so,** and those who make ready to live with potentates, yet never come near them after all.

…

32. There Xeniades once asked him how he wished to be buried. To which he replied, "On my face." "Why?" inquired the other. "Because," said he, **"after a little time down will be converted into up."** This because the Macedonians had now got the supremacy, that is, had risen high from a humble position.

…

Most people, he would say, are so nearly mad that a finger makes all the difference. For, if you go along with your middle finger stretched out, some one will think you mad, but, if it's the little finger, he will not think so.
…

37. One day, observing a child drinking out of his hands, he cast away the cup from his wallet with the words, "A child has beaten me in plainness of living." He also threw away his bowl when in like manner he saw a child who had broken his plate taking up his lentils with the hollow part of a morsel of bread. **He used also to reason thus: "All things belong to the gods. The wise are friends of the gods, and friends hold things in common. Therefore all things belong to the wise."** One day he saw a woman kneeling before the gods in an ungraceful attitude, and wishing to free her of superstition, according to Zolus of Perga, he came forward and said, "Are you not afraid, my good woman, that a god may be standing behind you? – for all things are full of his presence – and you may be put to shame?"
…

All the curses of tragedy, he used to say, had lighted upon him. At all events he was

> A homeless exile, to his country dead. A wanderer who begs his daily bread.[21]

But he claimed that to fortune he could oppose courage, to convention nature, to passion reason. When he was sunning himself in the Craneum, Alexander came and stood over him and said, "Ask of me any boon you like." To which he replied, "Stand out of my light."[22]
…

The Athenians urged him to become initiated, and told him that in the other world those who have been initiated enjoy a special privilege. **"It would be ludicrous," quoth he, "if Agesilaus and Epaminondas are to dwell in the mire, while certain folk of no account will live in the Isles of the Blest because they have been initiated."**
…

When Lysias the druggist asked him if he believed in the gods, "How can I help believing in them," said he, "when I see a god-forsaken wretch like you?" Others give this retort to Theodorus. Seeing some one perform religious purification, he said, "Unhappy man, don't you know that you can no more get rid of errors of conduct by sprinklings than you can of mistakes in grammar?" He would rebuke men in general with regard to their prayers, declaring that they asked for those things which seemed to them to be good, not for such as are truly good.
…

45. Once he saw the officials of a temple leading away some one who had stolen a bowl belonging to the treasurers, and said, "The great thieves are leading away the little thief."
…

46. Being short of money, he told his friends that he applied to them not for alms, but for repayment of his due. **When behaving indecently in the marketplace, he wished it were as easy to relieve hunger by rubbing an empty stomach.**
…

50. On being asked by a tyrant what bronze is best for a statue, he replied, "That of which Harmodius and Aristogiton were moulded."
…

Being asked whether he had any maid or boy to wait on him, he said "No." "If you should die, then, who will carry you out to burial?" "Whoever wants the house," he replied.
…

As Plato was conversing about Ideas and using the nouns "tablehood" and "cuphood," he said, "Table and cup I see; but your tablehood and cuphood, Plato, I can nowise see." "That's readily accounted for," said Plato, "for you have the eyes to see the visible table and cup; but not the understanding by which ideal tablehood and cuphood are discerned." 54**. On being asked by somebody, "What sort of a man do you consider Diogenes to be?" "A Socrates gone mad," said he.**[31]

> 31. i.e. Plato. This anecdote is found in Aelian, *Var. Hist.* xiv. 33 εἰώθει δέ, φασίν, ὁ Πλάτων περὶ Διογένους λέγειν ὅτι μαινόμενος οὗτος Σωκράτης ἐστίν.

…

59. When some one expressed astonishment at the votive offerings in Samothrace, his comment was, "There would have been far more, if those who were not saved had set up offerings." But others attribute this remark to Diagoras of Melos.

…

He was returning from Lacedaemon to Athens; and on some one asking, "Whither and whence?" he replied, "From the men's apartments to the women's."
…

Asked where he came from, he said, "I am a citizen of the world."[37]

> 37. If this answer is authentic, it apparently shows that the famous term "cosmopolitan" originated with Diogenes.

…

For even the despising of pleasure is itself most pleasurable, when we are habituated to it; and just as those accustomed to a life of pleasure feel disgust when they pass over to the opposite experience, so those whose training has been of the opposite kind derive more pleasure from despising pleasure than from the pleasures themselves. This was the gist of his conversation; and it was plain that he acted accordingly, **adulterating currency in very truth, allowing convention no such authority as he allowed to natural right, and asserting that the manner of life he lived was the same as that of Heracles when he preferred liberty to everything.**

72. **He maintained that all things are the property of the wise,** and employed such arguments as those cited above. All things belong to the gods. The gods are friends to the wise, and friends share all property in common; therefore all things are the property of the wise. Again as to law: that it is impossible for society to exist without law; for without a city no benefit can be derived from that which is civilized. But the city is civilized, and there is no advantage in law without a city; therefore law is something civilized. **He would ridicule good birth and fame and all such distinctions, calling them showy ornaments of vice. The only true commonwealth was, he said, that which is as wide as the universe. He advocated community of wives, recognizing no other marriage than a union of the man who persuades with the woman who consents. And for this reason he thought sons too should be held in common.**

73. **And he saw no impropriety either in stealing anything from a temple or in eating the flesh of any animal; nor even anything impious in touching human flesh, this, he said, being clear from the custom of some foreign nations. Moreover, according to right reason, as he put it, all elements are contained in all things and pervade everything: since not only is meat a constituent of bread, but bread of vegetables; and all other bodies also, by means of certain invisible passages and particles, find their way in and unite with all substances in the form of vapour.** This he makes plain in the *Thyestes*, if the tragedies are really his and not the work of his friend Philiscus of Aegina or of Pasiphon, the son of Lucian,[43] who according to Favorinus in his *Miscellaneous History* wrote them after the death of Diogenes. He held that we should neglect music, geometry, astronomy, and the like studies, as useless and unnecessary.
…

But some say that when dying he left instructions that they should throw him out unburied, that every wild beast might feed on him, or thrust him into a ditch and sprinkle a little dust over him. But according to others his instructions were that they should throw him into the Ilissus, in order that he might be useful to his brethren.

Demetrius in his work *On Men of the Same Name* asserts that on the same day on which Alexander died in Babylon Diogenes died in Corinth.

https://books.google.fi/books?id=vq1wWM4MseoC&lpg=PP1&hl=fi&pg=PA226#v=onepage&q&f=false

Displaying horrendous manners, Diogenes was said to sneeze from the left.25 He was often accused of advocating incest and cannibalism.26

> 26. Incest: Dio Chrys. *Or.* 10.29-30; cf. 7.188. Cannibalism: D.L. 6.73; Dio Chrys. *Or.* 8.14; Theophilus of Antioch, *Ad Autolycum* 3.5; and possibly *Ep. Diog.* 28. **In a tirade against Cynic indecency, Philodemus's treatise *On the Stoics* accuses Cynics of masturbating in public, transvestitism, pederasty, being penetrated in homosexual acts, group marriage, rape, incest, prostitution, and adultery.**

https://archive.org/details/historyofcynicis032872mbp/page/n57/mode/2up?view=theater

If Philodemus is throughout drawing on the writings of Diogenes, we gather that intercourse was to be permitted without restriction of place, person, or sex.2 **It goes without saying that all distinctions of rank and birth were to be abolished.** Such appears to have been the 'ideal state' of Diogenes. That it might be realized he carried on a violent opposition, not merely to the customs and conventions, but to the ordinary business of existing communities.

> **He would praise those who were about to marry and refrained, those who intended to go on a voyage and never set sail, those who thinking to engage in politics do no such thing, those also who purporting to raise a family do not do so, and those who make ready to associate with tyrants and yet never approach them after all.**3

It is the extreme of individualism. To call it a political system at all is doubtless a contradiction, unless we are prepared to admit with Blake the possibility of a benevolent anarchy.

---

https://archive.org/details/historyofcynicis032872mbp/page/n231/mode/2up?view=theater

In modern times the movement most akin to Cynicism is Anarchism. **In the eighteenth century it appears, though not under that name, in the speculations of Rousseau and Diderot on the Golden Age, or later in Blake's vision of the Age of Innocence;** all marked by nostalgia for an imaginary age when man as an individual had the widest scope for achieving happiness, untrammelled by the constraints of the social system.

As they stood in the public rooms of the wealthy amateurs of art and philosophy – and of the unconventional in philosophy – in the great houses and villas of Rome and Italy, the Cynics that accosted the members of these households and their visitors were so small that the engagement of the Cynic was much diminished and the man of taste immune from the violence of their attack. **And we are reminded that the wealthy sometimes invited the Cynics to dinner as, in another age, Baron d’Holbach invited Jean-Jacques Rousseau to his hotel, dressed as Rousseau was in the eighteenth-century equivalent of a *tribōn*.**39 But more often the Cynics were invited into the houses of the great in Rome and Italy when they were long dead.

> 39. **“A nobleman was expected to dress like a nobleman, a bourgeois like a bourgeois, but a philosopher – at any rate a recognized philosopher – could dress as he pleased”:** Maurice Cranston, *Jean-Jacques; The Early life and Work of Jean-Jacques Rousseau, 1712-1754* (Chicago 1991) 257.

https://archive.org/details/in.ernet.dli.2015.218820/page/n287/mode/2up?view=theater

The phenomenon of Rousseau signifies in literature the irruption of exaggerated and brutal plebeianism. Hitherto the efforts of the middle classes had been to climb into the higher strata of society, to attain and, if possible, to surpass the refinement, restraint, and elegance of their manner of life. **But Rousseau scorns “society,” or rather adopts the virtuous rôle of one who scorns it. He stays down, and therein lies his originality and his strength.**

https://archive.org/details/worshippingstate0000wike/page/166/mode/2up?view=theater

To create a kind of anti-Genesis, Rousseau erases or denies everything one finds in the Biblical account of human origins. **Human beings are not made in the image of God; that is, they are not rational by nature. Indeed, “the state of reflection is a state contrary to nature and … the man who meditates is a depraved animal.”**4 **Man’s natural, non-depraved condition is to savor “the sentiment” of his own “present existence without any idea of the future.”**5 Man is naturally a feeling animal, not a rational animal, a being absorbed in the here and now, and hence oblivious to eternity. In Rousseau’s account there is no primitive religion, no care or concern for – or even mention of – God. **For Rousseau, belief in God is not natural, and religion is somehow part of the depravity that comes in later, with meditation.**6
…

> His desires do not exceed his physical needs, the only goods he knows in the universe are nourishment, a female, and repose; the only evils he fears are pain and hunger. **I say pain and not death because an animal will never know what it is to die; and knowledge of death and its terrors is one of the first acquisitions that man has made in moving away from the animal condition.**9

https://archive.org/details/theistsatheistst0000moln/page/198/mode/2up?view=theater

> 31. **Sade’s state of nature means, ultimately, a universal freedom for unlimited sex.** For many of his *philosophe* contemporaries too the sexual tabus were the first to be abolished. **In Morelly’s *Basiliade* (1753) the ‘infamous terms incest, adultery and prostitution were unknown. These nations had no idea of such crimes. A sister received her brother’s tender embrace. … Not fear of punishment prevented a widow from accepting the caresses of her son.’** On Sade’s sexual politics see my article, ‘Kakotopia, the politics of Sade,’ in *The Political Science Reviewer*, Vol. III (fall 1973).

https://www.garynorth.com/freebooks/docs/pdf/westminsters_confession.pdf

If you want my thesis of natural law theory in one graphic sentence, I will provide it: ***the most consistent defender of natural law theory was the Marquis de Sade.*** De Sade's incomparable perversity was self-consciously based on his observation of the workings of nature. In this sense, he was a faithful late-eighteenth-century Enlightenment thinker.

De Sade came about as close as anyone ever has in literature to become the fully consistent covenant-breaking man. The American literary critic Edmund Wilson once wrote that the only writer that he could not bear to read while eating breakfast was de Sade. When you think "natural law theory," always think sadism. Natural law theory apart from God's grace, both special and common, leads to sadism.35 So does its logical corollary, political pluralism. **If you doubt me, how do you explain *Roe v. Wade*?** Think of 25 million unborn American infants silently screaming, 1973-1990. This is the Marquis de Sade's moral legacy to America, and Roger Williams' political legacy. "We, the politically sovereign People" have spoken.36

De Sade was a true Enlightenment republican. He wrote these stirring words: "**We need a faith, a faith suited to the republican character and far removed from ever possibly resuming that of Rome.** In an age when we are so convinced that religion must rest on morality, and not morality upon religion, we need a religion in tune with our way of life, as it were the development, the inevitable extension of it, a religion which can elevate the soul and keep it perpetually at the level of that precious liberty which it venerates today as its only idol."37 He was a man opposed to harsh civil sanctions, such as the death penalty.38 He also opposed civil laws against prostitution, adultery, incest, rape, and sodomy. **After all, these are all natural urges and practices; they are found in nature. Marriage and monogamy are not normal in nature.** "Can we possibly imagine Nature giving us the possibility of committing a crime which would offend her?"39

https://supervert.com/elibrary/marquis-de-sade/120-days-of-sodom

"That I deny," said the Bishop with emphasis, "and even for such pleasures as you allude to the boy is worth more than the girl. **Consider the problem from the point of view of evil, evil almost always being pleasure's true and major charm;** considered thus, the crime must appear greater when perpetrated upon a being of your identical sort than when inflicted upon one which is not, and this once established, the delight automatically doubles."

"Yes," said Curval, "but that despotism, that empire, that delirium born of the abuse of one's power over the weak..."

"But the same is no less true in the other case," the Bishop insisted. "**If the victim is yours, thoroughly in your power, that supremacy which when using women you think better established than when using men, is based upon pure prejudice, upon nothing, and results merely from the custom whereby females are more ordinarily submitted to your caprices than are males. But give up that popular superstition for a moment, view the thing equitably** and, provided the man is bound absolutely by your chains and by the same authority you exert over women, you will obtain the idea of a greater crime; your lubricity ought hence to increase at least twofold."

"I am of the Bishop's mind," Durcet joined in, "and once it is certain that sovereignty is fully established, I believe the abuse of power more delicious when exercised at the expense of one's peer than at a woman's."

https://archive.org/details/theworldaswill02schouoft/page/352/mode/2up?view=theater

Therefore Apuleius says (*Florid.*, iv.): *"Crates, ut lar familiaris apud homines suae aetatis cultus est. Nulla domus ei unquam clausa erat: nee erat patrisfamilias tam absconditum secretum, quin eo tempestive Crates interveniret, litium omnium et jurgiorum inter propinquos disceptator et arbiter."* Thus in this, as in so many other respects, they show a great likeness to the mendicant friars of modern times, that is, to the better and more genuine among them, whose ideal may be seen in the Capucine Christoforo in Manzoni's famous romance. **Yet this resemblance lies only in the effects, not in the cause.** They agree in the result, but the fundamental thought of the two is quite different. With the friars, as with the Sannyâsis, who are akin to them, it is an aim which transcends life; but with the Cynics it is only the conviction that it is easier to reduce their wishes and their wants to the *minimum*, than to attain to the *maximum* in their satisfaction, which indeed is impossible, for with their satisfaction the wishes and wants grow *ad infinitum*; therefore, in order to reach the goal of all ancient ethics, the greatest happiness possible in this life, they took the path of renunciation as the shortest and easiest: "*ὅθεν καὶ τὸν κυνισμὸν εἰρήκασι σύντομον ἐπ' ἀρετὴν ὁδόν*." (*Unde Cynismum dixere compendiosam ad virtutem viam.*) *Diog. Laert.*, vi. 9. **The fundamental difference between the spirit of cynicism and that of asceticism comes out very clearly in the humility which is essential to the ascetic, but is so foreign to the Cynic that, on the contrary, he is distinguished beyond everything else for pride and scorn:**

> "*Sapiens uno minor est Jove, dives,*
> *Liber, honoratus, pulcher, rex denique regum.*" *Hor.*

On the other hand, the view of life held by the Cynics agrees in spirit with that of J.J. Rousseau as he expounds it in the "*Discours sur l'Origine de l'Inégalité*." For he also would wish to lead us back to the crude state of nature, and regards the reduction of our wants to the minimum as the surest path to happiness.

https://oll.libertyfund.org/title/acton-the-history-of-freedom-and-other-essays#lf0030_label_020

Communism in its grossest form was recommended by Diogenes of Sinope.

https://archive.org/details/historyofcynicis032872mbp/page/n233/mode/2up?view=theater

It is especially interesting to find Kropotkin recognizing the 'best exposition from the Ancient World of the principles of Anarchism' in the *Republic* of Zeno, which was of course composed when Zeno was under the influence of Cynicism.

---

https://en.wikisource.org/wiki/Lives_of_the_Eminent_Philosophers/Book_VI#Crates

According to Antisthenes in his *Successions*, the first impulse to the Cynic philosophy was given to him when he saw Telephus in a certain tragedy carrying a little basket and altogether in a wretched plight. So he turned his property into money, – for he belonged to a distinguished family, – and having thus collected about 200 talents, distributed that sum among his fellow-citizens. And (it is added) so sturdy a philosopher did he become that he is mentioned by the comic poet Philemon. At all events the latter says:

> In summer-time a thick cloak he would wear
> To be like Crates, and in winter rags.

Diocles relates how Diogenes persuaded Crates to give up his fields to sheep pasture, and throw into the sea any money he had.
...

Eratosthenes tells us that by Hipparchia, of whom we shall presently speak, he had a son born to him named Pasicles, and after he had ceased to be a cadet on service, Crates took him to a brothel and told him that was how his father had married.

89. **The marriage of intrigue and adultery, he said, belonged to tragedy, having exile or assassination as its rewards; while the weddings of those who take up with courtesans are material for comedy,** for as a result of extravagance and drunkenness they bring about madness.
...

90. **He carried on a regular campaign of invective against the courtesans, habituating himself to meet their abuse.**

When Demetrius of Phalerum sent him loaves of bread and some wine, he reproached him, saying, "Oh that the springs yielded bread as well as water!" It is clear, then, that he was a water-drinker.
...

He was ugly to look at, and when performing his gymnastic exercises used to be laughed at. He was accustomed to say, raising his hands, "Take heart, Crates, for it is for the good of your eyes and of the rest of your body. 92. You will see these men, who are laughing at you, tortured before long by disease, counting you happy, and reproaching themselves for their sluggishness." **He used to say that we should study philosophy to the point of seeing in generals nothing but donkey-drivers.**
...

93. **When Alexander inquired whether he would like his native city to be rebuilt, his answer was, "Why should it be? Perhaps another Alexander will destroy it again." Ignominy and Poverty he declared to be his country, which Fortune could never take captive. He was, he said, a fellow-citizen of Diogenes, who defied all the plots of envy.** Menander alludes to him in the Twin Sisters in the following lines:

> Wearing a cloak you'll go about with me,
> As once with Cynic Crates went his wife:
> His daughter too, as he himself declared,
> He gave in marriage for a month on trial.

...

94. Metrocles of Maroneia was the brother of Hipparchia. **He had been formerly a pupil of Theophrastus the Peripatetic, and had been so far corrupted by weakness that, when he made a breach of good manners in the course of rehearsing a speech, it drove him to despair, and he shut himself up at home, intending to starve himself to death.** On learning this Crates came to visit him as he had been asked to do, and after advisedly making a meal of lupins, he tried to persuade him by argument as well that he had committed no crime, for a prodigy would have happened if he had not taken the natural means of relieving himself. At last by reproducing the action he succeeded in lifting him from his dejection, using for his consolation the likeness of the occurrences. From that time forward Metrocles was his pupil, and became proficient in philosophy. 95. Hecato in the first book of his *Anecdotes* tells us he burned his compositions with the words:[55]

> Phantoms are these of dreams o' the world below.

Others say that when he set fire to his notes of Theophrastus's lectures, he added the line:

> Come hither, Hephaestus, Thetis now needeth thee.

...

96. Hipparchia too, sister of Metrocles, was captured by their doctrines. Both of them were born at Maroneia. She fell in love with the discourses and the life of Crates, and would not pay attention to any of her suitors, their wealth, their high birth or their beauty. But to her Crates was everything. She used even to threaten her parents she would make away with herself, unless she were given in marriage to him. Crates therefore was implored by her parents to dissuade the girl, and did all he could, and at last, failing to persuade her, got up, took off his clothes before her face and said, "This is the bridegroom, here are his possessions; make your choice accordingly; for you will be no helpmeet of mine, unless you share my pursuits."

97. The girl chose and, adopting the same dress, **went about with her husband and lived with him in public and went out to dinners with him. Accordingly she appeared at the banquet given by Lysimachus, and there put down Theodorus, known as the atheist, by means of the following sophism.** Any action which would not be called wrong if done by Theodorus, would not be called wrong if done by Hipparchia. Now Theodorus does no wrong when he strikes himself: therefore neither does Hipparchia do wrong when she strikes Theodorus. He had no reply wherewith to meet the argument, but tried to strip her of her cloak. **But Hipparchia showed no sign of alarm or of the perturbation natural in a woman.** 98. **And when he said to her:**

"Is this she
Who quitting woof and warp and comb and loom?"[56]

56. Eur. *Bacch*. 1236.

she replied, "It is I, Theodorus, – but do you suppose that I have been ill advised about myself, if instead of wasting further time upon the loom I spent it in education?" These tales and countless others are told of the female philosopher.

There is current a work of Crates entitled *Epistles*, containing excellent philosophy in a style which sometimes resembles that of Plato. He has also written tragedies, stamped with a very lofty kind of philosophy; as, for example, the following passage:[57]

Not one tower hath my country nor one roof,
But wide as the whole earth its citadel
And home prepared for us to dwell therein.

http://penelope.uchicago.edu/aelian/varhist3.xhtml#chap6

***Crates* the *Theban* is known to have been a magnanimous person, as well by other things, as by his despising what the Vulgar admire, as also his Wealth and Country.** That he gave the *Thebans* his estate is generally known. But this other action perhaps is less notorious. He quitted *Thebes* newly restored, saying, "I have no need of a City which *Alexander* or some other may subvert."

https://en.wikisource.org/wiki/Lives_of_the_Eminent_Philosophers/Book_VI#Menedemus

103. Such are the lives of the several Cynics. But we will go on to append the doctrines which they held in common – if, that is, we decide that Cynicism is really a philosophy, and not, as some maintain, just a way of life. **They are content then, like Ariston of Chios, to do away with the subjects of Logic and Physics and to devote their whole attention to Ethics.**
…

At least Antisthenes used to say that those who had attained discretion had better not study literature, lest they should be perverted by alien influences. 104. So they get rid of geometry and music and all such studies.
…

They hold further that "Life according to Virtue" is the End to be sought, as Antisthenes says in his *Heracles*: exactly like the Stoics. For indeed there is a certain close relationship between the two schools. Hence it has been said that Cynicism is a short cut to virtue; and after the same pattern did Zeno of Citium live his life.

105. They also hold that we should live frugally, eating food for nourishment only and wearing a single garment. **Wealth and fame and high birth they despise.** Some at all events are vegetarians and drink cold water only and are content with any kind of shelter or tubs, like Diogenes, who used to say that it was the privilege of the gods to need nothing and of god-like men to want but little.

They hold, further, that virtue can be taught, as Antisthenes maintains in his *Heracles*, and when once acquired cannot be lost; and that the wise man is worthy to be loved, impeccable, and a friend to his like; and that we should entrust nothing to fortune. **Whatever is intermediate between Virtue and Vice they, in agreement with Ariston of Chios, account indifferent.**

https://archive.org/details/in.ernet.dli.2015.55010/page/n553/mode/2up?view=theater

This is the essence of the Cynic philosophy: to reduce the things of the flesh to bare necessities in order that the soul may be as free as possible. **Antisthenes took the doctrine literally, and became a Greek Franciscan without theology.**
…

When a priest explained to Antisthenes how many good things the virtuous will enjoy after death, he asked, "Why, then, do you not die?"[49] Diogenes smiled at the Mysteries, and remarked of the offerings set up in Samothrace by those who had survived shipwreck, "The offerings would have been much more numerous if those who were lost had offered them instead of those who were saved."[50] **Everything in religion but the practice of virtue seemed to the Cynics superstition.** Virtue must be accepted as its own reward and should not depend upon the existence or justice of the gods.
…

Men are not civilized by nature, and bear the restraints of ordered life only because they fear punishment or solitude. **Diogenes stood to Socrates in somewhat the same relation as Rousseau to Voltaire: he**

thought that civilization was a mistake, and that Prometheus had deserved his crucifixion for bringing it to mankind.[56] The Cynics, like the Stoics and Rousseau, idealized "nature peoples";[57] Diogenes tried to eat meat raw because cooking was unnatural.[58] The best society, he thought, would be one without artifices or laws.

The Greeks smiled upon the Cynics, and tolerated them as medieval society tolerated its saints. After Diogenes the Cynics became a religious order without religion; they made a rule of poverty, lived on alms, tempered their celibacy with promiscuity, and opened schools of philosophy.

https://archive.org/details/in.ernet.dli.2015.231118/page/n541/mode/2up?view=theater

They lived like mendicant friars, had a hierarchical organization with novices and superiors,[20] avoided marriage and work, scorned the conventions and artificialities of civilization, denounced all governments as thieves and superfluities, laughed at all oracles, "mysteries," and gods. Everyone satirized them, Lucian most savagely; yet even Lucian admired Demonax, a cultured Cynic who had abandoned his wealth to live in philosophical poverty. He gave his century of life (A.D. 50-150) to helping others, reconciling hostile individuals and cities; **and Athens, which ridiculed everything, respected him. Indicted before an Athenian court for refusing to offer sacrifice to the gods, he won acquittal by saying simply that the gods had no need of offerings, and that religion consisted in kindness to all.**

https://en.wikipedia.org/wiki/Cynic_epistles

The two main groups of letters are a set of 51 letters attributed to Diogenes of Sinope, and a set of 36 letters attributed to Crates of Thebes. None of the letters are genuine. Most of the letters of Diogenes were probably written in the 1st century BCE, whereas the letters of Crates, some of which seem to be based on the Diogenes letters, probably date from the 1st century CE.[1] It is not known who wrote the letters, but they seem to have been written by multiple authors.[2] Written in Koine Greek, **the Epistles are among the few Cynic writings which have survived from the time of the Roman empire.**[3]

In addition to these letters, **there are 10 epistles attributed to Anacharsis and 9 epistles attributed to Heraclitus. The letters of Anacharsis may have been written in the 3rd century BCE, whereas the Heraclitean letters probably date from the 1st century CE.**[1] **Anacharsis and Heraclitus predate the Cynics, but they were both regarded by the Cynics to have anticipated Cynic ideals.** There are also 35 *Socratic epistles* supposedly written by Socrates and his followers (Antisthenes, Aristippus, Aeschines, Xenophon, etc.), many of these letters were also written by someone with a strong affinity towards Cynic ideals, albeit with a sympathy towards Aristippus rather than Antisthenes.[1] Other fictitious letters, such as some of those attributed to Hippocrates, could also be included among the Cynic epistles.[1]

https://learning.hccs.edu/faculty/gregory.buchanan/huma1301/reading-on-the-types-of-cynics

The issues between the two types are sharpened in six of the Socratic letters in which Simon the shoemaker (and Antisthenes) and Aristippus speak for them (Epistles 913). The topic discussed is whether the Cynic could associate with a tyrant. **Antisthenes asserts that the Cynic should strive for selfsufficiency (autarkeia), and that he cannot associate with tyrants or the masses, for they are ignorant of it** (Epistle 8). **With biting irony the hedonist Aristippus replies that he was a steward of the teaching of Socrates in Dionysius' court** (Epistle 9), **and that his position there had resulted in his saving certain Locrian youths** (Epistles 10; 11). Simon denies that a life of luxury is Socratic; his cobbling is done to make possible his admonition of foolish men and his austerity is of value in the pursuit of sophrosyne. He takes umbrage at Aristippus's jesting about his way of life (Epistle 12). Aristippus responds in conciliatory fashion. He is not ridiculing the humble life, for there is wisdom in it. **But Simon would also have opportunity to practise his craft, and on a larger scale, in Syracuse.** Aristippus assures Simon that he is his friend, in contrast to the harsh, bestial Cynics (Epistle 13)
...

The rigoristic Cynics had an extremely pessimistic view of mankind, which earned them the charge of misanthropy. **This view is especially, but not exclusively, represented by most of the letters attributed to Crates, Diogenes, Heraclitus, and Hippocrates.** Most people, they held, are totally deluded, puffed up in their evil, and completely bereft of reason and selfcontrol. Having sunk to the level of beasts in their ignorance and conduct, nature itself hates them, and takes vengeance on them by punishing them. In contrast, the true Cynic, the epitome of virtue, knows nature and imitates it. Whereas nature punishes them in deed, the Cynic does so in his speech (pseudoDiogenes Epistle 28.5). It is by virtue alone that their souls can be purified of its diseases, and it is the Cynic who is the physician able to bring about their cure. Their putrid condition requires no gentle treatment, but rather the cautery and surgery of scathing Cynic parresia. **It is not that the Cynic wishes to be morbid; their wickedness made him sullen and excised his gentleness (pseudoHeraclitus Epistles 5.3; 7.23).**

The worse the human condition, the greater is the virtue of the Cynic perceived to be. Not everyone is capable of Cynic virtue, and most people, complaining about Cynic indifference, flee the Cynic regimen when they see how hard it is. The Cynic alone has brought moral practice to perfection, and, when people prove to be beyond cure, he withdraws from them. **He separates from the bestial crowd who know neither nature, reason or truth, and associates only with those who understand the word of a Cynic** (pseudoDiogenes Diogenes Epistle 28.8). **He may explain, in selfdefence, that it is men's vice, and not themselves, that**

he hates (pseudoHeraclitus Epistle 7.2), but his hatred for them and for association with them is nevertheless at times stated.
...

To begin with, all men are evil, and hate the Cynic (pseudoHeraclitus Epistles 2; 7.10). Although their folly causes him hardships, and they maltreat him, and he cannot avoid them, still his virtue remains untouched (pseudoCrates Crates Epistle 35). He is superior to them because he has chosen the difficult, Diogenean, way to happiness. It is hard to find a real Cynic (pseudoDiogenes Epistle 29.4). One must be born to that life, otherwise one fears it and despairs of it (pseudoCrates Epistle 21; pseudoDiogenes Epistles 12; 41). But the Cynic is superior in his moral exercise, is more simple in his life, and more patient in hardship (pseudoDiogenes Epistle 27). It is, in the first instance, what he is, as exemplified in his deeds rather than his words, that is important. **Thus, the Cynic dress, which he invests with great importance, sets him off from other people by freeing him from popular opinion** (pseudoDiogenes Epistles 7; 34) and effectively separating him from undesirable people (pseudoCrates Epistle 23).

The Cynic's superiority is also demonstrated in his begging. He begs to sustain himself, but he does so for the right reasons and in the right manner, which set him further apart. Begging is not disgraceful, for it is to satisfy a need arising from voluntary poverty (pseudoCrates Epistle 17). **By surrendering his private property and thus being freed from evil** (pseudoCrates Epistle 7), **he shows himself superior to the values of popular opinion** (pseudoDiogenes Epistle 9). **Furthermore, he is not really begging, but only demanding what belongs to him, for, since all things belong to God, friends have all things in common, and he is a friend of God, all things belong to him** (pseudoCrates Crates Epistles 26, 27; pseudoDiogenes Epistle 10.2). Nor is he indiscriminate in his begging, for vice must support virtue. Thus, he begs only from people who are worthy of him and his teaching (pseudoCrates Epistles 2; 19; 22; 36; pseudo-Diogenes Epistle 38.34).
...

As the major representative of the milder Cynicism advocated in the letters, Aristippus illustrates their irenic tendency. As already noted, he commends Simon. He is further on good terms with Xenophon and other Socratics (Epistle 18), and the enmity between him and Plato is played down as jesting and a reconciliation is hinted at (Epistle 23.3). By selective use of the anecdotal tradition, rivalries are further played down and a harmonious picture is sketched. For example, **although the tradition often records the austere Diogenes's criticisms of Plato, Diogenes does not appear in these letters, and even the less frequently attested opposition between Antisthenes and Plato is omitted, with Antisthenes left to rebuke only Aristippus.**

https://en.wikipedia.org/wiki/Maximus_of_Tyre

Maximus of Tyre (Greek: Μάξιμος Τύριος; fl. late 2nd century AD), also known as Cassius Maximus Tyrius, was a Greek rhetorician and philosopher who lived in the time of the Antonines and Commodus, and who belongs to the trend of the Second Sophistic. His writings contain many allusions to the history of Greece, while there is little reference to Rome; hence it is inferred that he lived longer in Greece, perhaps as a professor at Athens.[1] **Although nominally a Platonist, he is really an Eclectic and one of the precursors of Neoplatonism.**[1]

https://archive.org/details/bub_gb_YcYfAAAAMAAJ/page/n219/mode/2up?view=theater

I AM desirous, conformably to the wisdom of the Lydian [Aesop], to compose for you a fable.
...

But they, after their birth, lived without difficulty; for the earth supplied them with aliment, rich meadows, long-haired mountains, and abundance of fruits, such as she is accustomed to bear when undisturbed by husbandmen. The nymphs also supplied them with pure fountains, pellucid rivers, and easily-pervious and copious sources of other streams. To these things also was added a bland heat from the sun, which afforded a solace to bodies by its circumfluent symmetry; and cooling breezes from rivers refreshed them in the summer. To the inhabitants of the earth, thus living in an abundant supply of spontaneous good, hostility was unknown. **Poets appear to me, to be very near to this our fable, who obscurely signify that there was a life of this kind under Saturn, the king of the gods;** a life without war, without iron, without a guard, peaceful, healthful, unindigent: and Hesiod, as it seems, (strenuously alluding to such a life as this) calls it the golden age.

Here, however, let the fable end, and let our discourse, arising out of it, compare in its progress life with life, the latter with the former, whether some one may think proper to denominate it iron, or to give it some other appellation. **When men, therefore, being allotted the earth, had distributed different portions of it among themselves, they enclosed themselves with fortifications and walls, rolled soft bandages round their bodies, and defended their feet with skins.**
...

Let us, however, leave these images together with fables, and direct our attention to a man, **who did not live under the reign of Saturn, but in the midst of this iron race, and who was made free by Jupiter and Apollo. But this man was neither Attic nor Doric; he was neither a pupil of Solon, nor formed from the discipline of Lycurgus, (for neither places nor laws elect the virtues) but he was from Sinope, in Pontus;** and, having consulted with Apollo, he divested himself of all calamitous circumstances, liberated himself from his fetters, and travelled round the earth without restraint, like a bird endued with intellect, fearing no tyrant, compelled by no law, employed by no polity, neither oppressed by the education of children, nor suffering restraint through wedlock, nor detained by agriculture, nor disturbed by military affairs, nor driven from place to place by merchandize; but he derided all who are thus employed and their pursuits, just as we do little children, when we see them seriously employed about their play-things, and striking and plundering each other.

[93.] **And, in short, according to Clearchus of Soli, you do not adopt a manly system of life, but you do really aim at a system which might become a dog; and although this animal has four excellent qualities, you select none but the worst of his qualities for your imitation.** For a dog is a wonderful animal as to his power of smelling and of distinguishing what belongs to his own family and what does not; and the way in which he associates with man, and the manner in which he watches over and protects the houses of all those who are kind to him, is extraordinary. **But you who imitate the dogs, do neither of these things. For you do not associate with men, nor do you distinguish between those with whom you are acquainted;** and being very deficient in sensibility, you live in an indolent and indifferent manner. But while the dog is also a snarling and greedy animal, and also hard in his way of living, and naked; **these habits of his you practise, being abusive and gluttonous, and, besides all this, living without a home or a hearth.**

https://books.google.fi/books?id=gy0rDwAAQBAJ&lpg=PP1&hl=fi&pg=PA319#v=onepage&q&f=false

You won't give a second thought to marriage, children, fatherland – all this will be just so much nonsense to you. You'll leave your home and family to live in a tomb, an abandoned tower, or a tub.
…

In a word, behave exactly like a wild beast. Forget about shame, propriety, moderation. Wipe the blushes from you face forever. Make for the places where crowds gather but, in their very midst, remember to be solitary and and aloof, to stay away from friend and stranger alike; otherwise you'll be undermining our empire. **Don't hesitate to do in the sight of all what the ordinary man wouldn't do even in private; pick the more amusing perversions for your sexual pleasures;** and, finally, if you care to, kill yourself off by eating a raw octopus or squid.6 This is my kind of happiness. And I'll guarantee it for you.
…

But, listen. It's so easy. Anyone can do it. No course of study required, no debates, no nonsense; my road is a short cut to fame.

https://books.google.fi/books?id=LT5WAAAAYAAJ&hl=fi&pg=PA57#v=onepage&q&f=false

What an ingenious b modern Writer has said of Diogenes, may be generally apply'd to the Philosophers of that Sect. **"That they of the Number of those extraordinary Persons, who run every Thing into Extremes, without excepting even Reason itself; and who verify the Maxim, * *That there is no great Wit without a Spice Madness*."** They had learn'd from *Socrates*, that Morality was the most useful of all the Sciences; and what deserv'd our greatest Care and Application. From this most true Principle, they absurdly concluded; that Logick, Natural Philosophy, Geometry, Musick, the liberal Arts and Sciences; in a word, every Thing that did not immediately relate to the Science of Morality, was to be despis'd, and intirely thrown aside.
…

I am surpris'd to find this celebrated Author, whose Words I borrow'd, making the *Cynicks* to triumph; as if Reason alone was not sufficient to demonstrate, that their Impudence is vicious, and contrary to the Maxims of the Law of Nature. "It may be objected, says he, to *Diogenes*, that the Sense of Shame, in Cases of this Nature, is a natural Sentiment; so that to be without Shame on these Occasions, is to do Violence to Nature itself. But, to this he will answer; **that was this Sense of Shame a real Dictate of Nature, the other Animals too, who so faithfully follow the Impulse of Nature, would seek for dark Holes and secret Recesses, to perform this Work of Generation in: The contrary of which is most apparent.** At least, this would be universally true as to Men, that they in such Cases always seek out the darkest and most obscure Retreat; which is also w

false.---It will here be reply'd to *Diogenes*, that it is sufficient, that all civiliz'd Nations are subject to this Sense of Shame.---To which he again will make this Return; **that the Nations we are pleased to call barbarous, have much less deviated from the Rules of Nature;** than those, who have, with their refining, and Subtilty of Thought, so vastly multiply'd the Modes and Forms of Decency and Civility; and in short, **since the Law of Nature is not subject to Prescription, it is both right and lawful, at all Times, and in all Places to return back to the Observation of it; without having any Regard to the arbitrary Yoke of Customs and Opinions, however, or wheresoever establish'd.**" **These are the Reasons which Mr. *Bayle* puts into the Mouth of *Diogenes*.**

https://www.marxists.org/reference/archive/hegel/works/hp/hpsocratics.htm#antisthenes

Antisthenes and Diogenes, as already mentioned, were men of great culture. The succeeding Cynics are not any the less conspicuous by their exceeding shamelessness, but they were, generally speaking, nothing more than swinish beggars, who found their satisfaction in the insolence which they showed to others. They are worthy of no further consideration in Philosophy, and they deserve in its full the name of dogs, which was early given to them; for the dog is a shameless animal.

https://books.google.fi/books?id=qKiDDAAAQBAJ&lpg=PR2&hl=fi&pg=PA89#v=onepage&q&f=false

> **"With a more decided contempt for all knowledge, and a still greater scorn of all the customs of society, the later Cynicism became a repulsive and shameful caricature of the Socratic spirit."** – German philosopher Albert Schwegler in A History of Philosophy in Epitome, p. 81

...

If the Sophists provide us with a preview of much of what constitutes sociological thought today, the Cynics help us round out that picture and allow us to see more clearly not just the ideas but also the attitudes which animate the SocProgs. **The Cynics like the Sophists both shared a disdain for custom, tradition, and any and all notions of settled or permanent values, of truth. But here the two groups may be said to part ways. Whereas a few of the Sophists actually grew concerned and backtracked a little over all their negations and destructions, the Cynics held no such reserve.** The Cynics loudly and brazenly challenged and ultimately rejected any and all conventions, customs, and traditions they could get their hands on. They even went as far as to imagine a new world, a better world, a world in which there was no property, no custom, no tradition, no morality, and no religion; a world in which everyone was free to have sex with whomever one wished whenever one wanted.

https://bobthune.com/2020/01/seeing-through-cynicism/

The title of the book pays homage to **C.S. Lewis's famous observation in *The Abolition of Man*: "You cannot go on 'seeing through' things forever… To 'see through' all things is the same as not to see."** Keyes adopts this rubric as his baseline definition of cynicism: "Cynicism… has to do with *seeing through* and unmasking positive appearances to reveal the more basic underlying motivations of greed, power, lust, and selfishness."
...

By claiming to "see through" the motives of others, the cynic assumes a posture of omniscience. "Cynics see through the illusory truths of others to get down to the 'real truth' beneath… Far from losing confidence in truth, cynicism has put enormous trust in a different set of truths – its own tools of cynical inquiry." **Though often cloaked in the language of skepticism, cynicism is in fact a claim to absolute truth and objectivity.**

https://books.google.fi/books?id=DA4vAAAAYAAJ&hl=fi&pg=PA180#v=onepage&q&f=false

Had either Diogenes or Crates been the beasts which some have represented them, it is wholly incredible that Zeno and the Stoics would have treated their memory with so much respect.
...

In MENEDEMUS, of Lampsacus, the spirit of the Cynic sect degenerated into downright madness. Dressed in a black cloak, with an Arcadian cap upon his head, on which were drawn the figures of the twelve signs of the zodiac, with tragic buskins on his legs, with a long beard, and with an ashen staff in his hand, **he went about like a maniac, saying that he was a spirit, returned from the infernal regions to admonish world.**

https://en.wikisource.org/wiki/Lives_of_the_Eminent_Philosophers/Book_VI#Menedemus

102. Menedemus was a pupil of Colotes of Lampsacus. According to Hippobotus **he had attained such a degree of audacity in wonder-working that he went about in the guise of a Fury, saying that he had come from Hades to take cognisance of sins committed, and was going to return and report them to the powers down below.** This was his attire: a grey tunic reaching to the feet, about it a crimson girdle; an Arcadian hat on his head with the twelve signs of the zodiac inwrought in it; buskins of tragedy; and he wore a very long beard and carried an ashen staff in his hand.

https://en.wikipedia.org/wiki/Aghori#Beliefs_and_doctrines

The purpose of embracing pollution and degradation through various customs is the realization of non-duality (advaita) through transcending social taboos, attaining what is essentially an altered state of consciousness and perceiving the illusory nature of all conventional categories.
...

Aghoris base their beliefs on two principles common to broader Shaiva beliefs: **that Shiva is perfect (having omniscience, omnipresence and omnipotence) and that Shiva is responsible for everything that occurs:** all conditions, causes and effects. Consequently, everything that exists must be perfect and to deny the perfection of anything would be to deny the sacredness of all life in its full manifestation, as well as to deny the Supreme Being.

Aghoris believe that every person's soul is Shiva, but is covered by *aṣṭamahāpāśa* "eight great nooses or bonds", including sensual pleasure, anger, greed, obsession, fear and hatred. The practices of the Aghoris are centered around the removal of these bonds. **Sādhanā in cremation grounds is used in an attempt to destroy fear; sexual practices with certain riders and controls attempt to release one from sexual desire; being naked is used in an attempt to destroy shame.** On release from all the eight bonds, the soul becomes *sadāśiva* and obtains *moksha*.[8]
...

Barrett (2008: p. 161) discusses the "charnel ground sādhanā" of the Aghora in both its left and right-handed proclivities **and identifies it as principally cutting through attachments and aversion and foregrounding primordiality;** a view uncultured, undomesticated:[11]

> **The gurus and disciples of Aghor believe their state to be primordial and universal. They believe that all human beings are natural-born Aghori. Hari Baba has said on several occasions that human babies of all societies are without discrimination, that they will play as much in their own filth as with the toys around them. Children become progressively discriminating as they grow older and learn the culturally specific attachments and aversions of their parents.** Children become increasingly aware of their mortality as they bump their heads and fall to the ground. They come to fear their mortality and then palliate this fear by finding ways to deny it altogether.

https://en.wikipedia.org/wiki/Ayin_and_Yesh

Hasidic master Dov Ber of Mezeritch says:

> **one should think of one's self as *Ayin*, and that "absolute all" and "absolute nothingness" are the same, and that the person who learns to think about himself as *Ayin* will ascend to a spiritual world, where everything is the same and everything is equal: "life and death, ocean and dry land."**[1][7]

...

In his autobiographical trilogy *Love and Exile*, Isaac Bashevis Singer, an American-Jewish writer and a Nobel Prize laureate, remembers how he studied Kabbalah **and tried to comprehend how could have it been that he,**

> **Rothschild, the mouse in its hole, the bedbug on the wall, and the corpse in the grave were identical in every sense, as were dream and reality...**[14]

http://www.garynorth.com/freebooks/docs/pdf/unholy_spirits.pdf

Don Juan, an "uneducated" Indian of the Southwest, has the same view of the world and man's role in it that Immanuel Kant struggled to attain by means of rigorous logic. Man makes up the rules and serves as the game's only umpire. "The *tonal* makes the world only in a manner of speaking. It cannot create or change anything, and yet it makes the world because its function is to judge and assess, and witness. I say that the *tonal* makes the world because it witnesses and assesses it according to *tonal* rules. In a very strange manner the *tonal* is a creator that doesn't create a thing. In other words, the *tonal* makes up the rules by which it apprehends the world. So, in a manner of speaking, it creates the world."94

Kant never said it any better; in fact, he never said it as well. There is no world-in-itself but only a description of the world that men learn to visualize and take for granted.95

…

The sorcerer must discipline his rational side not to collapse in the face of control by the irrational. Don Juan offers this crucial bit of instruction: "The goal of a warrior's training then is not to teach him to hex or to charm, but to prepare his *tonal* not to crap out. A most difficult accomplishment."102
…

The sociological premise of sorcery is *radical atomism*. The sorcerer is cut off from all social institutions, all sense of history, all sense that one thing is any more important than another – except for the quest for power. With respect to the world and the flesh, it is possible to say: "Everything is equal and therefore unimportant."110 **But one had better not say this about the devil; the philosophy of pure relativism, or "controlled folly," does not apply to the agents of his satanic majesty:** "My ally and Mescalito are not on a par with us human beings. My controlled folly applies only to myself and to the acts I perform while in the company of my fellow men."111

https://archive.org/details/dawnofday029675mbp/page/n31/mode/2up?view=theater

14. The Signification of Madness in the History of Morality.—If, despite that formidable pressure of the "morality of custom," under which all human communities lived—thousands of years before our own era, and during our own era up to the present day (we ourselves are dwelling in the small world of exceptions, and, as it were, in an evil zone):—**if, I say, in spite of all this, new and divergent ideas, valuations, and impulses have made their appearance time after time, this state of things has been brought about only with the assistance of a dreadful associate: it was insanity almost everywhere that paved the way for the new thought and cast off the spell of an old custom and superstition.**
…

Let us take a step further: all those superior men, who felt themselves irresistibly urged on to throw off the yoke of some morality or other, had no other resource—*if they were not really mad*—than to feign madness, or actually to become insane. And this holds good for innovators in every department of life, and not only in religion and politics. Even the reformer of the poetic metre was forced to justify himself by means of madness.

https://www.claremont.org/crb/article/are-the-kids-altright/

And a great deal of BAP's silly outrageousness seems to be there to provide air cover for the outrageous things he means in deadly earnest. If so, he might be following Niccolò Machiavelli, who once wrote "that it is a very wise thing to simulate craziness at the right time." The internet pidgin likely serves a similar purpose. It simultaneously attracts the young—who by nature enjoy slang for its exclusionary effect on the duffers (which is why, to remain effective, slang must be constantly reinvented)—while putting off said duffers, who will assume that such drivel cannot be serious and thus is not worth their attention, much less their worry.

---

https://books.google.fi/books?id=khpY2fQaIg0C&lpg=PP1&hl=fi&pg=PA70#v=onepage&q&f=false

The asceticism of Antisthenes and the asceticism of those Christian anchorites are vastly different for a simple reason: **whereas the Christian anchorites knew (or thought they knew) that *this* temporal life is only a moment of trial that would be followed by an eternal life of blissfulness for the good and suffering for the wicked, Antisthenes and, with him, other Cynics were convinced that *this* physical life is the only life given to us.** Thus, whereas the former renounced pleasure and punished the body in order to assure for themselves eternal happiness and pleasure **(proving themselves to be ultimately hedonistic, for eternal pleasure was their real goal),** the latter renounced *some* pleasures, and disciplined the body in order to strengthen their character and and allow for their rational faculty to become liberated from desires and needs, and act as the only ruler of their lives. **Antisthenes' asceticism, therefore, is not otherworldly, and is not based on the expectation of another life. Unlike the Christian anchorites, accordingly, Antisthenes loved and had his pleasures, including the satisfaction of his sexual needs.**

https://www.perseus.tufts.edu/hopper/text?doc=Perseus%3Atext%3A1999.01.0236%3Atext%3Ddisc%3Abook%3D3%3Achapter%3D22

It is necessary also for such a man (the Cynic) to have a certain habit of body: **for if he appears to be consumptive, thin and pale, his testimony has not then the same weight.** For he

> must not only by showing the qualities of the soul prove to the vulgar that it is in his power independent of the things which they admire to be a good man, **but he must also show by his body that his simple and frugal way of living in the open air does not injure even the body. See, he says, I am a proof of this, and my own body also is.** So Diogenes used to do, for he used to go about fresh looking, and he attracted the notice of the many by his personal appearance. But if a Cynic is an object of compassion, he seems to be a beggar: all persons turn away from him, all are offended with him; for neither ought he to appear dirty so that he shall not also in this respect drive away men; **but his very roughness ought to be clean and attractive.**

…

This idea of strength is best understood in terms of the word 'virtue', expressed in Greek as *ἀρετή* (*virtus* in Latin). In it, we come upon the most critical of all the ideas of Antisthenes. **If we insist on using the word 'virtue' to designate what Antisthenes had in mind, however, we must disassociate from it the connotations that have adhered to it through the influence of Judeo-Christian traditions.** 'Virtue' in the Cynic context, and, in fact, in the context of Greek philosophy in general, is only marginally related to ideas such as purity or chastity, piety or religiosity, and is only a distant relative of the canonical virtues of Thomistic theology.

https://books.google.fi/books?id=vq1wWM4MseoC&lpg=PP1&hl=fi&pg=PA47#v=onepage&q&f=false

The idea of taking a fresh look at the religion of the early Cynics first came to me when I realize how widely divergent were the interpretations of their religious attitudes proposed by scholars hitherto, and how completely lacking those interpretations have been in any rigorously systematic approach to the problem. Zeller spoke of *Aufklärung* (enlightenment).1 Bernays wrote of adherents of "the purest deist sect" of antiquity.2 **Gomperz complained that the monotheism of the Cynics introduced a divinity that was "an utterly colorless abstraction, comparable with the First Cause of the English deists."**3 Guthrie referred to the pantheism of Antisthenes.4 Rahn went so far as to entitle one of his articles "Die Frömmigheit der Kyniker." (The Piety of the Cynics).5 And that list takes no account of the reputation for atheism with which certain classical authors saw fit to grace Diogenes of Sinope or Bion of Borysthenes. Such diversity of views cried out for closer examination.

…

When we survey the list of titles of the works of the early Cynics, we notice immediately that there are very few dealing with religious subjects, almost as though religion was something that did not really interest these philosophers. Antisthenes, however, occupies a place apart. **It is impossible, at least as far as religion is concerned, to group him with the other Cynics, for he almost certainly wrote several works dealing with religion,** including *On Injustice and Impiety* (and a *Phusikos*, which can perhaps be identified with the *Peri Phuseōs* and the *Erōtēma peri Phusēos* found in the catalogue preserved by Diogenes Laertius).65 Among the Presocratic philosophers, this kind of work dealt with the question of the gods.66

…

The inventory is, therefore, rather disappointing, particulary since even looking at the work of later Cynics, **we find only one work – albeit an important one – that took up a position on religion; the *Kata tōn Khrēstēriōn* (*Against the Oracles*) of Oenomaus of Gadara.**70 **Comparison with the Stoics highlights even more clearly the lack of interest in religion and theology shown by the Cynics, always with the exception of Antisthenes.** Persaeus,71 Cleanthes,72 Chrysippus,73 and Posidonius74 each wrote a work entitled *On the Gods*.

…

We read in Diogenes Laertius:77 **"Diogenes also said that when he saw the lives of steersmen, doctors, and philosophers, he thought the man was the most intelligent living being. On the other hand, when he saw interpreters of dreams, soothsayers and those who listened to them, or those puffed up with pride and riches, he thought there was nothing more foolish than a man."** Diogenes was also beside himself when he saw men sacrificing to the gods in order to have good heath and, even while the ceremony was going on, eat in a way that was detrimental to their health.78 He likewise mocked those naive enough to believe that the initiates of the Mysteries had a right to the best places in Hades:79 "Let me laugh! Agesilas and Epaminondas will be crouching in the mire while any nincompoop – provided that he was an initiate – will be staying in the Isles of the Blessed!"80

The third motive is also truly Cynic. **Diogenes seeks to show how popular religion and its practices stem from *nomos* and not from *phusis*.** These practices, inscribed in the framework of custom and convention under all its forms, domestic, social, or political, were always a favorite target of the Cynics, and to such practices they opposed *phusis*, that is to say, nature. **I refer to the famous passage of Antisthenes' *Phusikos* in which he say that according to tradition there are many gods, but according to nature only one.**81 For all the Cynics, popular religion plays a part in social conventions, which is why they criticize it. This is what led to the disrespectful comments of Diogenes, comments which must have shocked his contemporaries. He said, for instance, that there was nothing out of place in robbing a temple.82 For Diogenes, from the moment temples are a human institution, respect for the goods within them becomes a purely social convention.

…

The polemic that opposes Polystratus and his adversaries concerns the psychology of animals. His adversaries, whom Polystratus considers to be full of insolence,95 observe that moral concepts that are generally accepted vary from one culture to another and from one man to another.96 **They conclude that such moral ideas, denuded of *phusis*, have no universal value save that lent them by convention – unlike gold and stone, where the difference is said to be one of nature rather than of convention. In the eyes of Polystratus's adversaries, who are probably Cynics, ethical concepts such as the noble (*to kalon*) or the base (*to aiskhron*) correspond to false beliefs in man and do not deserve to be taken seriously,**97 **since they do not exist objectively (*kat' alētheian*).**98 This position obviously shocked Polystratus, implying as it does a fundamental spiritual identification between the human soul and the souls of animals, an idea that Polystratus hotly contested and attempts to ridicule. This passage is similar in tone to the paradoxical hierarchy mentioned above. It supposes that animals have the same souls as men have, **while the Cynics go even further when they say, as we have seen in the case of Philodemus, that animals are happier than man because they have no knowledge of the divine.**

Such a hierarchy is so fundamental that for a long time it served to symbolize Cynic attitudes. A trace can be found as late as the second century of our era in Tatian's *Discourse to the Greeks* 25.1. While obviously completely unaware of the paradoxical hierarchy of the Cynics, **Tatian addresses one of them with the following reproach: "You who imitate the Dog, you know not God and have descended to the imitation of creatures deprived of reason** [*kai epi tēn alogōn mimēsin metabebēkas*]." This imitation, which Tatian calls a descent, a degeneration, is for the Cynic, on the contrary, an important step in the direction of the stated goal of self-sufficiency.

> http://earlychristianwritings.com/text/tatian-address.html
>
> O man competing with the dog, you know not God, and so have turned to the imitation of an irrational animal. **You cry out in public with an assumption of authority, and take upon you to avenge your own self;** and if you receive nothing, you indulge in abuse, and philosophy is with you the art of getting money.

Cynic criticism thus goes much further than a simple criticism of popular religion and its practices. Certainly the divine may serve as a moral paradigm of self-sufficiency, on a more elevated level than the beasts of the field. **The Cynics nonetheless envy animals, who have no notion of gods or of ethical and religious concepts and can therefore know true detachment. We are here far from Socrates, for whom one of the superiorities of man over animals was the very fact of knowing that the gods exist.**99

> 99. In Xenophon, *Mem*. 1.4.13, Socrates expresses himself thus: "First of all, what other living creature [i.e., what creature other than man] has a soul capable of realizing that the gods who ordered the universe, the greatest and most beautiful of things, exist? And what other race than man worships the gods?"

To Diogenes and his disciples religion seemed to be an obstacle to human happiness, which is why the Cynics considered the state of an irrational creature far preferable to that of men, who suffer from the misfortune of having a concept of the gods.
...

One can certainly say that the Cynics took their criticism of religion to extremes. **But the greatest difference is that they made absolutely no concession to traditional religion.** This is an original attitude if compared with that of the Stoics or Epicureans. We know that Epicurus wrote a book *On the Gods*, one *On Holiness*, and another *On Piety*,114 sacrificed piously to the gods, and encouraged participation in public ceremonies.115 Even if the gods of the Epicureans care nothing for men and do not listen to their prayers, even if they do not engage in any activity, **Epicurus supported the idea that they exist and called madmen those who deny them like Prodicus, Critias, or Diagoras.**116 As far as the Stoic sage is concerned, although like his Cynic counterpart he does not restrain himself from criticizing popular religion, he nonetheless avoids cutting himself off from the beliefs of the majority of people. **Thus it is that he explains and excuses anthropomorphism and manages to safeguard polytheism,**117 **while at the same time showing a clear drift toward monotheism.**

> 117. The stars, years, months, and changes of year were all gods to him (Zeno, *SVF* 1.165 = Cicero, *De Natura Deorum*, 1.36), **even if at the same time he upheld the dogma of divine unity in conceiving a god who is at once Fire, Ether, Breeze, Intelligence, Reason, Destiny, and Providence.**

He displays a pious attitude, offers sacrifices to the gods, and performs purificatory rites.118 In other words, **the theoretical revolution of the Stoic sage is accompanied by extraordinarily conservative attitudes, which were completely alien to the Cynics.** Yet there is more to it than that. Other philosophers, as we have remarked already, had managed to set up new systems that effectively safeguarded popular religion. This was the case with the Platonic Ideas, the Aristotelian Prime Mover, and the Stoic Logos. Even the Epicureans, with their materialist philosophy, managed to keep a place for the gods, whom they situated in the *intermundia*, as though man had, come what may, a need to preserve his concept of the divine.

In the case of the Cynics, however, we see nothing of the sort. They had neither a rational image of the world nor a providentialist conception of nature. They did not think that the universe was created for the benefit of man or that there was a mystery of the world waiting to be uncovered.
...

They accepted the human condition, while at the same time remaining fully aware that it was not a particularly enviable one. **So we find in them an acute desire for lucidity and a desire to preach that lucidity.** This is why they went out into the streets and marketplaces, insisting that man must return to nature and that it is not difficult to do so. **But they refused absolutely to allow that man – whose limits they knew only too well – should abandon his true place and his true nature, and put himself in the hands of the transcendent.**
…

There is, therefore, nothing to prove that Diogenes was a confirmed atheist, and equally little to prove that he was pious. How, then, can his attitude be defined? He was an outright agnostic, who had rid himself, once and for all, of the basic problem of religion and succeeded in extricating himself from embarrassing questions with a display of intellectual agility. Harpalus the thief is happy? It is a testimony against the gods. Lysias the apothecary acts like an enemy of the gods? Then the gods exist. But the most interesting passage is to be found in Tertullian:147 “When Diogenes was asked what went on in heaven, he said: ‘I’ve never been up there.’” Diogenes displays – and I believe that this is his fundamental attitude – not so much atheism as agnosticism about a realm whose secrets no effort of human understanding, nor any human experience, can penetrate. Tertullian continues: “When he was asked if the gods exist, he replied: ‘Do the gods exist? I don’t know, but I know that it is expedient that they should.’”148

Thus the philosopher steadfastly refuses to pronounce on the existence of gods. But he does show that he is well aware of the social role religion can play; the simple fact of believing in the gods instills in man a fear that society is well able to take advantage of.

At the end of the day, we discover that the gods are insignificant in Cynicism and that in Diogenes’ philosophy there is no place for religious preoccupations. In the eyes of Diogenes, religion serves no purpose, and is even an obstacle to the Cynic aim of detachment. Man alone has the ability to create his own happiness. He should count only on his will to follow nature, the only power that he admits is stronger than himself. But do we therefore have to suppose that the Cynics saw a god in this same nature? A passage in Diogenes Laertius could allow of such an interpretation:149 “Diogenes constantly proclaimed that the life the gods had given man was an easy life, but that he spoiled the ease of it by looking for honey cakes, perfumes, and other luxuries of that kind.” **It is obvious that the gods in question here have become one with nature. But we must not lose a sense of perspective. The Cynic sage does not revere nature as one would a divinity. He simply acknowledges it and puts up with it, because he cannot do otherwise, because in the end it is easy to live according to nature.** He who refuses all that could compromise his ideal of detachment, who would be master of his own life, recognizes nature and its constraints as the only limits on his freedom. But once these constraints are admitted, he constructs, with the sole aid of his *iskhus* or will power, a happiness that nothing can threaten.150

> 150. We must not look upon the Cynics as sour-minded. They were, on the contrary, passionate about happiness. Diogenes maintained that “there is only one happiness, which consists in truly rejoicing and never getting upset, whatever the place or circumstances you find yourself in” (Stobaeus 4.39.20 = V B 301 G.). **He asserted that “true happiness is to be found when mind and soul find themselves in continual tranquillity and gaiety”** (Stobaeus 4.2.39.21 = V B 300 G.). **This is just like Crates, in fact, who saw in life a festival for laughing and joking** (Plutarch *De Tranquillitate Animi* 466e = V H 46 G.). **Diogenes reckoned that for man every day is a holiday** (ibid. 477c = V B 464 G.).

A confirmation of this interpretation is to be found in the ideas Diogenes expressed on the subject of his burial. There are various versions in circulation of the alleged final wishes of the philosopher.151 Their limited historical value is of little importance here; what counts is the sentiment behind them. Diogenes variously asked to be left in the open without a tomb so that wild animals could share his body among them, to be shoved into a hole and covered with a handful of dust, or alternatively to be thrown into a river, that he might prove useful to his brothers (which might mean the fish or more indirectly, through them, his fellow men). Diogenes shows thereby that he cares very little about death, that he does not believe in any kind of afterlife, and that he accepts death quite simply as a natural phenomenon and as a normal end to life. In such a system of beliefs the gods can indeed have little part to play.
…

Of the interpretations mentioned at the beginning of my study, I would retain the idea of *Aufklärung* (enlightenment) as formulated by Zeller, qualifying it with the idea of agnosticism. **I would challenge Rahn, who fleshed out the piety of the Cynics by using a Diogenes who was not the Diogenes of history, but rather a creation of Epictetus or of Julian.** I would reject Gomperz’s epiphet “colorless,” which he used, thinking principally of Antisthenes, to describe divinity as conceived of by the Cynics. If this monotheism seems colorless to us, it is because all we have today are the two fragments of the *Phusikos*. As for the Antisthenean pantheism of Guthrie, on the one hand there is a lack of evidence to support the idea, and on the other hand Brancacci has rightly drawn attention to the fact that neither Antisthenes nor his age made this notion a regular theme of inquiry. And one could say the same of the deism proposed by Bernays.

Working from the preceding remarks we can draw the following conclusions. **Antisthenes was not a Cynic in his religious views, but by opposing nature to custom he undoubtedly influenced Diogenes and his successors, particularly in the criticism of tradition. In the end, Antisthenes is the only one of the philosophers we have considered to whom we can ascribe piety, at least of a philosophic kind.**

As far as Diogenes is concerned, **it would certainly be a mistake to lay at his door an atheism that was very probably the invention of his enemies.** Whether or not the gods exist is not his problem, and, indeed, the question does not interest him. He shows a frank agnosticism on the subject. On the other hand he is passionately interested in beign happy, whereas the very idea of religion and gods, as perceived by his contemporaries, contradicts his ideal of human happiness as founded on freedom, detachment, and self-sufficiency – which is why he banished such an idea from his thoughts. Diogenes wants to be master of his own destiny. **The only limits to his freedom that he recognizes – because he cannot do otherwise – are the constraints imposed by nature. But in no way does he revere nature as one would a god. He simply has the wisdom not to struggle against it in vain.**

As far as the later Cynics such as Crates, Menippus, or Bion are concerned, they seem to have remained faithful to the spirit of Diogenes. **In the Cynicism of the imperial age, Oenomaus of Gadara, with his virulent criticism of oracles, does no more, with all his talent and conviction, than follow in the footsteps of Diogenes.**172

I have deliberately not touched upon the various forms of idealization of Diogenes here, as they interfere with the true thought of the philosopher. In Epictetus, our philosopher has actually become a servant of Zeus, sent to earth as an example to man,173 while Julian represents him as *theosebēs*, a man pious in both words and deeds, always acting in the service of the gods.174 **These authors turn Diogenes into a pious man, with a mission from the gods, and attribute to him a discourse on the divine that certainly did not originate with Diogenes.**

> 174. In *Or.* 7 Julian explains how Diogenes was convinced that the gods looked after him and that they had not sent him to Corinth by chance. The city had, in fact, greater need than Athens of a censor. This is why, even after his enfranchisement by Xeniades – when, in other words, he was in no way obliged to do so – he nonetheless chose to stay in Corinth (*Or.* 7.212d). Julian also goes out of his way to justify the fact that Diogenes never had himself initiated. He explains that a candidate for initiation had to be inscribed on the list of Athenian citizens. Diogenes, however, considered himself to be a citizen of the world; consequently, out of respect for the gods, Diogenes had no wish to transgress the law (*Or.* 7.238). Similarly, Julian allows that Diogenes might be reproached for not going anywhere near sanctuaries, statues, or altars. To this he replies that Diogenes served the gods with his soul, giving the most precious thing he had (*Or.* 9.199b). In the same ways he idealizes Crates, who worshipped the gods solely through the holiness of his morals (*Or.* 7.213).

https://en.wikisource.org/wiki/Lives_of_the_Eminent_Philosophers/Book_IV#Bion

46. **Bion was by birth a citizen of Borysthenes [Olbia];** who his parents were, and what his circumstances before he took to philosophy, he himself told Antigonus in plain terms. For, when Antigonus inquired:

> Who among men, and whence, are you? What is your city and your parents?[49]

he, knowing that he had already been maligned to the king, replied, **"My father was a freedman, who wiped his nose on his sleeve" – meaning that he was a dealer in salt fish – "a native of Borysthenes, with no face to show, but only the writing on his face, a token of his master's severity. My mother was such as a man like my father would marry, from a brothel.** Afterwards my father, who had cheated the revenue in some way, was sold with all his family. And I, then a not ungraceful youngster, was bought by a certain rhetorician, who on his death left me all he had. 47. And I burnt his books, scraped everything together, came to Athens and turned philosopher.

> This is the stock and this the blood from which I boast to have sprung.[50]

Such is my story. It is high time, then, that Persaeus and Philonides left off recounting it. Judge me by myself."
…

He even abused Socrates, declaring that, if he felt desire for Alcibiades and abstained, he was a fool; if he did not, his conduct was in no way remarkable. The road to Hades, he used to say, was easy to travel; at any rate men passed away with their eyes shut. He said in censure of Alcibiades that in his boyhood he drew away the husbands from their wives, and as a young man the wives from their husbands. When the Athenians were absorbed in the practice of rhetoric, he taught philosophy at Rhodes. To some one who found fault with him for this he replied, "How can I sell barley when what I brought to market is wheat?"
…

Bion at the outset used to deprecate the Academic doctrines,[53] even at the time when he was a pupil of Crates. **Then he adopted the Cynic discipline, donning cloak and wallet.** 52. **For little else was needed to convert him to the doctrine of entire insensibility.**

Next he went over to Theodorean views, after he had heard the lectures of Theodorus the Atheist, who used every kind of sophistical argument. And after Theodorus he attended the lectures of Theophrastus

the Peripatetic. He was fond of display and great at cutting up anything with a jest, using vulgar names for things. **Because he employed every style of speech in combination, Eratosthenes, we hear, said of him that he was the first to deck philosophy with bright-flowered robes. He was clever also at parody.**
…

53. **And in general he made sport of music and geometry.** He lived extravagantly, and for this reason he would move from one city to another, sometimes contriving to make a great show. Thus at Rhodes he persuaded the sailors to put on students' garb and follow in his train. And when, attended by them, he made his way into the gymnasium, all eyes were fixed on him. It was his custom also to adopt certain young men for the gratification of his appetite and in order that he might be protected by their goodwill.[55] **He was extremely selfish and insisted strongly on the maxim that "friends share in common."** And hence it came about that he is not credited with a single disciple, out of all the crowds who attended his lectures. And yet there were some who followed his lead in shamelessness. 54. **For instance, Betion, one of his intimates, is said once to have addressed Menedemus in these words: "For my part, Menedemus, I pass the night with Bion, and I don't think I am any the worse for it." In his familiar talk he would often vehemently assail belief in the gods, a taste which he had derived from Theodorus.** Afterwards, when he fell ill (so it was said by the people of Chalcis where he died), he was persuaded to wear an amulet and to repent of his offences against religion. **And even for want of nurses he was in a sad plight, until Antigonus sent him two servants.** And it is stated by Favorinus in his *Miscellaneous History* that the king himself followed in a litter.

https://en.wikisource.org/wiki/On_Benefits/Book_VII#7

7. **Bion is able to prove by argument at one time that everyone is sacrilegious, at another that no one is. When he is in a mood for casting all men down the Tarpeian rock, he says,** "Whosoever touches that which belongs to the gods, and consumes it or converts it to his own uses, is sacrilegious; but all things belong to the gods, so that whatever thing any one touches belongs to them to whom all belongs; whoever, therefore, touches anything is sacrilegious." **Again, when he bids men break open temples and pillage the Capitol without fear of the wrath of heaven, he declares that no one can be sacrilegious; because, whatever a man takes away, he takes from one place which belongs to the gods into another place which belongs to the gods.** The answer to this is that all places do indeed belong to the gods, but all are not consecrated to them, and that sacrilege can only be done in places solemnly dedicated to heaven. Thus, also, the whole world is a temple of the immortal gods, and, indeed, the only one worthy of their greatness and splendour, and yet there is a distinction between things sacred and profane; all things which it is lawful to do under the sky and the stars are not lawful to do within consecrated walls. **The sacrilegious man cannot do God any harm, for He is placed beyond his reach by His divine nature; yet he is punished because he seems to have done Him harm: his punishment is demanded by our feeling on the matter, and even by his own. [opinio illum nostra ac sua obligat poenae]**

https://www.livius.org/sources/content/philostratus-life-of-apollonius/philostratus-life-of-apollonius-4.6-10/#4.10

And there he saw what seemed an old mendicant artfully blinking his eyes as if blind, as he carried a wallet and a crust of bread in it; and he was clad in rags and was very squalid of countenance. Apollonius therefore ranged the Ephesians around him and said: **"Pick up as many stones as you can and hurl them at this enemy of the gods."**
…

When therefore they had exposed the object which they thought they had thrown their missiles at, they found that he had disappeared and instead of him there was a hound who resembled in form and look a Molossian dog, but was in size the equal of the largest lion; there he lay before their eyes, pounded to a pulp by their stones and vomiting foam as mad dogs do.

> **[The point of this anecdote may be that a Pythagorean philosopher overcomes a Cynic: an element that may have been present in Philostratus' source "Damis" and explains why the demon is portrayed as a beggar, a dog, and an enemy of the gods.]**

https://en.wikipedia.org/wiki/Oenomaus_of_Gadara

Oenomaus was a native of Gadara,[2] which was then a partially Hellenized community in northern Jordan. He is listed in the *Chronicle* of Jerome as flourishing in the 224th Olympiad (117 to 121 AD): "Plutarch of Chaeronea, Sextus, Agathobulus and Oenomaus are considered notable philosophers."[3]

https://archive.org/details/historyofcynicis032872mbp/page/n191/mode/2up?view=theater

It does not follow from Oenomaus' arguments that the gods do not exist, for it is open to him to agree with the Epicureans that they do exist, but take no 'interest in human affairs.' **But it is easy to see why Julian calls him 'a scorner of everything human and divine,' whose object was 'to do away with all reverence for the gods and to dishonour human wisdom' (he means, of course, the wisdom of the Stoics).** For according to Julian, the gods manifest their providence (*πρόνοια*) for the human race through the medium of oracles; but the arguments of Oenomaus about the impossibility of knowledge of the future sweep away providence and oracles alike. **If his views of the freedom of choice possessed by the human will were accepted, there would be an end of the reign of the gods,** whose statues he calls 'the wooden and stone masters of man.' But those who do not share the scruples of the pious Emperor must admit that the book is perhaps the most interesting piece of Cynic literature we possess.1

1. Bernays (op. cit., p. 35) calls it 'einer Schrift, die zu den lebendigst geschrieben Prosawerken des zweiten Jahrhunderts gehört.'

Despite its rhetorical tone, lack of original thought, and deficiencies in logic, it is good popular polemic, on much the same intellectual level as popular contributions to the Darwinian controversy in the last century. And it is yet another example of that vein of mocking scepticism which, remembering Menippus and Lucian, we may call the peculiar contribution of Syria to Greek literature.

https://en.wikisource.org/wiki/To_the_Cynic_Heracleios#cite_ref-19

But now in the Muses' name answer me this question about the Cynic philosophy. **Are we to think it a sort of madness, a method of life not suitable for a human being, but rather a brutal attitude of mind which recks naught of the beautiful, the honourable, or the good?** For Oenomaus[20] would make many people hold this view of it. If you had taken any trouble to study the subject, you would have learned this from that Cynic's "Direct Inspiration of Oracles" and his work "Against the Oracles," in short from everything that he wrote. **This then is his aim, to do away with all reverence for the gods, to bring dishonour on all human wisdom, to trample on all law that can be identified with honour and justice, and more than this, to trample on those laws which have been as it were engraved on our souls by the gods, and have impelled us all to believe without teaching that the divine exists, and to direct our eyes to it and to yearn towards it:** for our souls are disposed towards it as eyes towards the light. Furthermore, suppose that one should discard also that second law which is sanctified both by nature and by God, I mean the law that bids us keep our hands altogether and utterly from the property of others, and permits us neither by word or deed or in the inmost and secret activities of our souls to confound such distinctions, since the law is our guide to the most perfect justice – **is not this conduct worthy of the pit?**[21]

21. The pit or chasm at Athens into which the bodies of criminals were thrown; cf. Xenophon, *Hellenica* 1. 7. 20.

And ought not those who applauded such views to have been driven forth, not by blows with wands, like scapegoats,[22] for that penalty is too light for such crimes, but put to death by stoning? **For tell me, in Heaven's name, how are such men less criminal than bandits who infest lonely places and haunt the coasts in order to despoil navigators? Because, as people say, they despise death; as though bandits were not inspired by the same frenzied courage!** So says at any rate he[23] who with you counts as a poet and mythologist, though, as a Pythian god proclaimed to certain bandits who sought his oracle, he was a hero and divinity – I mean where, speaking of pirates of the sea, he says: "Like pirates who wander over the sea, staking their lives."[24] What better witness can you require for the desperate courage of bandits? **Except indeed that one might say that bandits are more courageous than Cynics of this sort, while the Cynics are more reckless than they. For pirates, well aware as they are how worthless is the life they lead, take cover in desert places as much from shame as from the fear of death: whereas the Cynics go up and down in our midst subverting the institutions of society,** and that not by introducing a better and purer state of things but a worse and more corrupt state.

Now as for the tragedies ascribed to Diogenes, which are, and are admitted to be, the composition of some Cynic – the only point in dispute being whether they are by the master himself, Diogenes, or by his disciple Philiscus, – **what reader of these would not abhor them, and find in them an excess of infamy not to be surpassed even by courtesans? However, let him go on to read the tragedies of Oenomaus – for he too wrote tragedies to match his discourses – and he will find that they are more inconceivably infamous, that they transgress the very limits of evil; in fact I have no words to describe them adequately,** and in vain should I cite in comparison the horrors of Magnesia,[25] the wickedness of Termerus[26] or the whole of tragedy put together, along with satiric drama, comedy and the mime: with such art has their author displayed in those works every conceivable vileness and folly in their most extreme form.
...

It follows then, does it not? that the Pythian god speaks the truth, and moreover that Diogenes was clearly convinced of this since he obeyed the god and so became, instead of an exile, I will not say greater than the King of Persia, but according to the tradition handed down actually an object of envy to the man[27] who had broken the power of Persia and was rivalling the exploits of Heracles and ambitious to surpass Achilles. **Then let us judge of the attitude of Diogenes towards gods and men, not from the discourses of**

Oenomaus or the tragedies of Philiscus – who by ascribing their authorship to Diogenes grossly slandered that sacred personage – but let us, I say, judge him by his deeds.

>
> **Why treat the subalterns with unsparing severity, while he spares the principals?** Why rush with a ruthless vehemence upon the Jesuitism of the seventeeth century, while, over the same Jesuitism of the sixteenth, he throws the veil of a reverential silence?

https://books.google.fi/books?id=vq1wWM4MseoC&lpg=PP1&hl=fi&pg=PA205#v=onepage&q&f=false

In the history of ancient Cynicism the portrayal of Diogenes and his successors is far from being uniform. **Whereas the *chreiai*, the oldest stratum of the Cynic tradition, represent [Diogenes] as the Dog in all his aspects of shamelessness (*anaideia*) and in his unrestrained freedom of speech (*parrhēsia*),**1 **the emperor Julian, toward the end of the movement, ascribes to Cynicism a sublime character and surrounds it with an almost religious aura.** In his eyes Diogenes is a model for a universal and divine philosophy, which, founded on the Delphic maxim *gnōthi sauton* (Know Thyself), results in action (*erga*) rather than in a system of doctrines (*logoi*).2
…

In fact, Julian's idea of austerity seems to coincide perfectly with his conception of the true Cynic, whom he describes in *Oration* 7 (*Against the Cynic Heraclius*): **"He avoids any excess of food and renounces the pleasures of sexual intercourse. … That is the true shortcut to philosophy. A man must completely come out of himself and recognize that he is divine and keep his mind untiringly and steadfastly fixed on divine thoughts, which are stainless and pure. He must also utterly despise his body and regard it, in the words of Heraclitus, as 'more deserving to be thrown out than dung.'"**72 Julian's comparison of the human body with dung reflects the Neoplatonic coloring of the speech, just as does a passage in *Oration* 9 (*Against the Uneducated Cynics*), in which the true followers of Diogenes seem to subscribe to the Platonic doctrine of the soul's superiority to the body.73
…

In Julian's eyes Cynicism is a universal philosophy based on the principle of "Know Thyself."94 **Accordingly, it is neither Antisthenes nor Diogenes who was its founder but Apollo, the god of truth.** Therefore it demands no special study whatsoever but simply requires the practice of virtue and the avoidance of evil.95 **In this syncretistic view of philosophy the old antagonism between Plato and Diogenes is reduced to a matter of mere difference of intent: whereas Plato chose to achieve his aim through words (*logoi*), for Diogenes actions (*erga*) were enough.**96 The ideal Cynic will not let himself be influenced by other people's opinions, but everything he does will first be put to the test of experience. When Diogenes ate the octopus, he did it not out of vanity (*kenodoxia*) but because he wanted to verify whether eating raw meat was in fact unfit for man, while cooked meat is considered a natural diet.97 **This explanation is a tour de force and serves primarily to put Diogenes out of the reach of criticism.**

https://books.google.fi/books?id=vq1wWM4MseoC&lpg=PP1&hl=fi&pg=PA260#v=onepage&q&f=false

Even more vehement, and indeed abusive, was the criticism voiced by the Jesuit François Garasse in *La doctrine curieuse des beaux esprits de ce temps ou prétendus tels* (1623),96 **a criticism that Bayle quoted in the notes to his *Dictionnaire* article "Diogenes the Cynic," although he saw it as "a tirade in impertinences."** The gist of Garasse's text is that Diogenes was nothing but a hypochondriac, a madman, a dolt and an idiot, a buffoon, an ill-mannered and self-conceited fool, and an atheist to boot. **Garasse refuses to admire antiquity unreservedly and "canonize every word and deed" of the ancients as though "God had granted them infallibility."** He criticizes Diogenes Laertius and Plutarch for describing the lives Diogenes the Cynic and Democritus in great detail, saying that this is like "describing the acts and words of Brusquet or Maître Guillaume, who were at least as wise as they were." **For "one of them, Democritus, was a joker, and the other, Diogenes, a beggar," and it "was principally those two who introduced atheism into gentile society."**
…

Religiously, he was "an out and out atheist, who laughed at the gods the people generally worshipped, lived like a dog, a brute beast, and preached that we should have no shame about anything natural. We should do whatever our senses tell us, though it be in the middle of the street, like dogs, who relieve themselves and do everything else in public." **This is how the Cynics lived, "using impious language and doing disgusting things that even Tapinambours and cannibals would be ashamed of."**97

https://books.google.fi/books?id=khpY2fQaIg0C&lpg=PP1&hl=fi&pg=PA185#v=onepage&q&f=false

Neither the principles nor the style of life of the older Cynics remained standing, and we can affirm that as the era of classical times drew to a close, the Army of the Dog was finally disbanded, notwithstanding the presence of undisciplined irregulars and and vaguely identifiable militiamen who kept some of the external features of Cynicism. **The harsh barking of the ancient Cynics was at last drowned, first under the shouting and cursing of the hordes of Barbarians who invaded the Roman empire, and then under the ritualistic and lulling Gregorian chants of Christian Europe. Here and there, in medieval times and even in later ages, vestiges of Cynicism survived in monastic orders, whose mendicant monks maintained alive *certain* Cynic-like ideals and types of life, but philosophically and theologically, these had hardly anything in common with the Cynics.**

https://books.google.fi/books?id=qKiDDAAAQBAJ&lpg=PR2&hl=fi&pg=PA97#v=onepage&q&f=false

But the funny thing is, **at the same time as the Cynics were flinging contempt and contumely on the *polis* they never strayed very far from it,** which is odd. They ridiculed and rejected the state and its laws and its customs but the very thing at which they directed their scorn was the very thing that they could not do without. **The *polis* protected them from harm with its laws.**38 **Too, the *polis* kept the Cynics fed because they were beggars and it's hard to beg in the countryside.**39 But also and perhaps most importantly for our purposes here, a Cynic could simply not be a Cynic without someone there to watch them being Cynical and here again we bump up against that theme of artificiality, of self-consciousness and self-awareness, states of being which do not conduce to either sincerity or honesty. **Cynicism, absent spectators, would simply evaporate. As Robin Hard observed, one must give credit to the Christian ascetics. When they retreated from society, they retreated fully out of public view, grew their own food, and at least tried to support themselves.** And one is reasonably sure that they masturbated in private.

https://books.google.fi/books?id=oyArttEO-_AC&lpg=PP1&hl=fi&pg=PR10#v=onepage&q&f=false

Cynicism was an urban phenomenon. Its practitioners would not withdraw from human society, like some later Christian ascetics, to support themselves in the countryside or wilderness by their own labour. They had to rely instead on alms from people who valued them for providing a moral example or performing a beneficial service as moral preachers.

https://en.wikiquote.org/wiki/José_Ortega_y_Gasset#The_Revolt_of_the_Masses_(1929)

Diogenes, in his mud-covered sandals, tramps over the carpets of Aristippus. The cynic pullulated at every corner, and in the highest places. **This cynic did nothing but saboter the civilisation of the time. He was the nihilist of Hellenism.** He created nothing, he made nothing. His role was to undo—or rather to attempt to undo, for he did not succeed in his purpose. The cynic, a parasite of civilisation, lives by denying it, for the very reason that he is convinced that it will not fail. What would become of the cynic among a savage people where everyone, naturally and quite seriously, fulfils what the cynic farcically considers to be his personal role?

https://archive.org/details/historyofcynicis032872mbp/page/n229/mode/2up?view=theater

Long ago Onesicratus had praised the virtues of the 'noble savage', by the sixth century A.D. the savage had come again and conquered the world. The State and its institutions, which Diogenes had found an intolerable burden on the individual, were shattered, and the ordinary individual worse off than ever before. Having little to hope for in this world, he turned to a religion that would promise him redress in the next. **Cynicism had nothing further to offer mankind.**

---

https://books.google.fi/books?id=OirJPP6mOkEC&lpg=PP1&hl=fi&pg=PA107#v=onepage&q&f=false

The most significant point for our purpose is that the Cynics emphasised the cleavage between wisdom and folly to the exclusion of other divisions: among the unnatural conventions to be ignored by the *sophos* were those distinctions of sex, race and class which still retained so strong a hold on the Greek mind, and which Aristotle was so concerned to justify.
...

The same authority twice tells the story of the sale of Diogenes, which is to the point even though it may be a later fiction by Menippus: captured by pirates, put up for sale as a slave, and asked what he could do, Diogenes

replied, ‘Rule men,’ and ‘Sell me to this man here – he needs a master.’62 **The mischance of slavery cannot affect the true distinction of between the worthy and the unworthy, the wise men and the fools.**

The wise man’s superiority to convention, his freedom and independence and separation from ordinary men, were summed up in the one term ‘self-sufficiency’ (*autarkeia*). Aristotle described the philosophic practiser of contemplation as ‘the most self-sufficient of men.’ The *autarkeia* of the Cynic sage is complete. He is primarily an isolated individual, the very opposite of the citizen of Plato’s ideal state.
…

In a sense, of course, the *sophos* has fellow-citizens – not the other inhabitants of the particular locality where he happens to have been born, but the other wise men, fellow-bearers of the knapsack, who share with him citizenship of Pera and of the cosmos. It was in this sense that Crates of Thebes could describe himself as a fellow-citizen of Diogenes of Sinope (93). There is friendship and kinship between the wise (12, 105), so that Plutarch rightly includes Diogenes along with Plato and Zeno as one whose political thought was guided by the principle of concord.68 **Scattered over the world though they may be, they form together a well-knit unity, for ‘when brothers are of one mind, their life together is stronger than any wall’** (6). But this united *politeia* of men of wisdom is nothing like an all-embracing society of all mankind. If it can be described as a state at all, it is a super-state, a state outside all states, the members of which are cut off from the mass of humanity. Although the Cynic wise man, far in advance of most fourth-century thought, ignores the traditional barriers that make female inferior to male, slave to master, foreigner to Greek, the Cynics themselves enlarged and strengthened the other barrier which loomed so large in contemporary thinking about mankind. **The Cynic conception does not unite the human race, but draws a single great dividing line across it, separating the few wise men from the many fools, whom Diogenes described as ‘one finger removed from lunacy.’**69 We may guess that if Diogenes did write a *Politeia*, its subject was life within this fellowship of the wise, not an ideal state in the ordinary sense.

What of the majority on the wrong side of the line of division? The doxographical reference to the value of law, which I have already mentioned, suggests that they should continue their ordinary city-state existence, guided by the traditions and conventions above which the wise man is able to rise. **But whereas other thinkers, such as Protagoras and Aristotle, held that such civilised beings had a primary right to be called ‘men,’ Diogenes declared that the non-wise are *not* men. Hence the story of his walking through the streets of Athens with a lantern in broad daylight, saying ‘I am looking for a man’** (41); **or his description of the gathering assembled at Olympia: ‘a great crowd, but few men’** (60). Only the wise man is truly man, and truly possesses the nature of man. The unwise are sub-human, unhuman, not human at all. **‘Reason – or the noose’ was said to be one of Diogenes’ favourite prescriptions:** those who do not follow reason might as well be dead.
…

They stand out as truly radical critics of the accepted pattern of society in sharp contrast with Aristotle and others who sought to justify it, **and their precept and example must have done much to loosen the rigidity of accepted prejudices and prepare the way for wider views.** They exercised great influence through the Stoics and other thinkers who incorporated some Cynic doctrines into their own in a modified form, and we shall often come upon them again in this indirect way in the further development of our theme. But the appeal of Cynicism itself was always to isolated individuals: through the fourth and the centuries B.C., and again under the Roman Empire, it produced some striking individual figures, powerful critics of society and its follies, but it never passed beyond its negative contempt for conventional barriers to become a major positive factor in the movement of ideas towards the concept of a united mankind.

The Cynics on JSTOR

Aristotle does not denounce the Cynics. **In his usual tolerant and inclusive fashion he goes all the way with them in insisting that the moral life must be a thing complete and all-sufficing in itself. He adopts the very watchword of Cynicism, "self-sufficingness" *αὐταρχεία*.** But then the Aristotelian self-sufficingness is not of the sort that minimizes wants, and leaves the individual isolated from his kind and stripped of life's resources.
…

But there is nothing which so effectually turns the edge of invective as the perception that it is undiscriminating. We feel this about the diatribes of Antisthenes and the rest. **They denounced war, but to what purpose, when we feel that they would have equally denounced a filibuster's raid and the civic devotion of Marathon or Salamis?** They rose above the narrow exclusiveness of the *πόλις* and were the first cosmopolitans; but what of that, when we feel sure that they would have risen above the kingdom of heaven could it have descended four-square upon earth? After an it is a spurious and an easy cosmopolitanism which comes of indifference to the fatherland. The true cosmopolitanism comes by antecedence, not by negation of patriotism. They protested, too, and vehemently enough, against Greek forms of ritual, **but one feels that they would have swamped in one common condemnation the most devout achievements of religious art, and the mere antics of superstition.** It is so all along the line.

From these things therefore it is clear that the city-state is a natural growth, and that man is by nature a political animal, and a man that is by nature and not merely by fortune citiless is either low in the scale of humanity or above it (like the “clanless, lawless, hearthless” man reviled by Homer,[1] for one by nature unsocial is also ‘a lover of war’) inasmuch as he is solitary, like an isolated piece at draughts.

> The standard set by the Greeks for the true man varied to some extent according to the point of view of the thinker, but always, with one notable exception, it involved the idea that a man really worthy of the name is one fitted to be a member of human society and play his part in the life of the community. Homer’s Cyclops, Protagoras’ ‘misanthrope,’ and Aristotle’s ‘cityless’ man all stand outside the true human pattern because they are incapable of social and political association with normal men. **The exception which proves the rule is the paradoxical view of the Cynics, who regarded the mass of ‘civilised’ mankind as sub-human and claimed true humanity for those whom others nicknamed ‘dogs.’**

Epicurus used to call this Nausiphanes jelly-fish,[13] an illiterate, a fraud, and a trollop; Plato's school he called "the toadies of Dionysius," their master himself the "golden" Plato,[14] and Aristotle a profligate, who after devouring his patrimony took to soldiering and selling drugs; **Protagoras a pack-carrier and the scribe of Democritus** and village schoolmaster; Heraclitus a muddler;[15] Democritus Lerocritus (the nonsense-monger); and Antidorus Sannidorus (fawning gift-bearer); **the Cynics foes of Greece; [ἐχθροὺς [ekhthrós] τῆς Ἑλλάδος]** the Dialecticians despoilers; **and Pyrrho an ignorant boor.**

https://books.google.fi/books?id=anxK6pMCWMUC&lpg=PP1&hl=fi&pg=PA50#v=onepage&q&f=false

The sophist Aelius Aristides (*c.* 117-*c.* 180) expatiates on the stereotype by comparing Cynic philosophers whom he is denouncing to “those impious men of Palestine” who “do not believe in the higher powers,” and Aristides suggests that the Cynics resemble the Christians because they too **“have defected from the Greek race, or rather from all that is higher.”**61

https://archive.org/details/historyofcynicis032872mbp/page/n195/mode/2up?view=theater

The sympathy of outlook is commented upon by Aelius Aristides, who says that the Cynics

> **resemble the impious sect in Palestine in their customs. For with the latter a mark of their impiety is that they do not reverence the gods; and so do these philosophers in like manner cut themselves off from the Greeks, and, indeed, from all divine authority.**1

Aristides, it is to be noticed, speaks of a resemblance and not of a connexion, but the career of Peregrinus is not the only evidence of the relations between the two movements. **The ascetic sect of the 'Encratites' were undoubtedly influenced by the Cynics, as their name suggests; and Hippolytus calls them 'more Cynic than Christian.'** Their leader Tatian was a contemporary of Peregrinus and quotes his writings, and the Cynic philosopher Crescens, though responsible for the martyrdom of Tatian's disciple Justin, was evidently in close touch with the Christians, for Justin says of him that he found it necessary to 'avoid the suspicion of being himself a Christian.'2

> https://en.wikisource.org/wiki/Ante-Nicene_Fathers/Volume_V/Hippolytus/The_Refutation_of_All_Heresies/Book_VIII/Part_14

Others, however, styling themselves Encratites, acknowledge some things concerning God and Christ in like manner with the Church. In respect, however, of their mode of life, they pass their days inflated with pride. They suppose, that by meats they magnify themselves, while abstaining from animal food, (and) being water-drinkers, and forbidding to marry, and devoting themselves during the remainder of life to habits of asceticism. **But persons of this description are estimated Cynics rather than Christians, inasmuch as they do not attend unto the words spoken against them through the Apostle Paul.** Now he, predicting the novelties that were to be hereafter introduced ineffectually by certain (heretics), made a statement thus: "The Spirit speaketh expressly, In the latter times certain will depart from sound doctrine, giving heed to seducing spirits and doctrines of devils, uttering falsehoods in hypocrisy, having their own conscience seared with a hot iron, forbidding to marry, to abstain from meats, which God has created to be partaken of with thanksgiving by the faithful, and those who know the truth; because every creature of God is good, and nothing to be rejected which is received with thanksgiving; for it is sanctified by the word of God and prayer."[2] **This voice, then, of the blessed Paul, is sufficient for the refutation of those who live in this manner, and plume themselves on being just;[3] (and) for the purpose of proving that also, this (tenet of the Encratites) constitutes a heresy.**

https://books.google.fi/books?id=as_OTst8jvoC&lpg=PP1&hl=fi&pg=PA183#v=onepage&q&f=false

Prior to the Cynics, the goal of philosophy was progress toward wisdom and virtue through successively higher stages of philosophical knowledge. Philosophy, in other words, was an endeavor that involved the gradual improvement over time of the individual and, indeed, the slow enlightenment of mankind in general. **In the Hellenistic period, however, certain intellectuals developed the idea that primitive man somehow possessed knowledge of the truth and that the philosopher "need only unearth and decipher it."**20 **The early Stoics, in particular, seem to have believed that primitive men, while not philosophers, nevertheless lived in such harmonious proximity to nature that they acted philosophically.**21 Later Stoics such as Posidonius taught that vice entered into the human community along with the invention of the arts and sciences (*τέχναι*) that had been, ironically, discovered by the first philosophers themselves.

21. See Boys-Stones' reading of **Seneca's *Epistle* 90, which he takes to be a reflection of early Stoic thought,** esp. 90.36: *faciebant facienda sapientibus* (*Post-Hellenistic Philosophy* 18-27).

https://en.wikisource.org/wiki/Moral_letters_to_Lucilius/Letter_90

35. I am not speaking of that philosophy **which has placed the citizen outside his country and the gods outside the universe, and which has bestowed virtue upon pleasure,[24]** but rather of that philosophy which counts nothing good except what is honourable, – one which cannot be cajoled by the gifts either of man or of fortune, one whose value is that it cannot be bought for any value. That this philosophy existed in such a rude age, when the arts and crafts were still unknown and when useful things could only be learned by use, – this I refuse to believe.

36. **Next there came the fortune-favoured period when the bounties of nature lay open to all, for men's indiscriminate use, before avarice and luxury had broken the bonds which held mortals together, and they, abandoning their communal existence, had separated and turned to plunder.** The men of the second age were not wise men, even though they did what wise men should do.[25] 37. Indeed, there is no other condition of the human race that anyone would regard more highly; **and if God should commission a man to fashion earthly creatures and to bestow institutions upon peoples, this man would approve of no other system than that which obtained among the men of that age, when**

> **No ploughman tilled the soil, nor was it right**
> **To portion off or bound one's property.**
> Men shared their gains, and earth more freely gave
> Her riches to her sons who sought them not.[26]

26. Verg. *Georg.* i. 125 ff.

38. What race of men was ever more blest than that race? They enjoyed all nature in partnership. Nature sufficed for them, now the guardian, as before she was the parent, of all; and this her gift consisted of the assured possession by each man of the common resources. Why should I not even call that race the richest among mortals, since you could not find a poor person among them? But avarice broke in upon a condition so happily ordained, and, by its eagerness to lay something away and to turn it to its own private use, made all things the property of others, and reduced itself from boundless wealth to straitened need. **It was avarice that introduced poverty and, by craving much, lost all.**

https://en.wikipedia.org/wiki/Noble_savage#Origin_of_term

The *locus classicus* of the 18th-century portrayal of the American Indian are the famous lines from Alexander Pope's "Essay on Man" (1734):

> Lo, the poor Indian! whose untutor'd mind
> Sees God in clouds, or hears him in the wind;
> His soul proud Science never taught to stray
> Far as the solar walk or milky way;
> Yet simple Nature to his hope has giv'n,
> Behind the cloud-topp'd hill, a humbler heav'n;
> Some safer world in depth of woods embrac'd,
> Some happier island in the wat'ry waste,
> Where slaves once more their native land behold,
> No fiends torment, no Christians thirst for gold!
> To be, contents his natural desire;
> He asks no angel's wing, no seraph's fire:
> But thinks, admitted to that equal sky,
> His faithful dog shall bear him company.

To Pope, writing in 1734, the Indian was a purely abstract figure – "poor" either meant ironically, or applied because he was uneducated and a heathen, but also happy because he was living close to Nature. **Pope's phrase, "Lo the Poor Indian", became almost as famous as Dryden's "noble savage"** and, in the 19th century, when more people began to have first hand knowledge of and conflict with the Indians, would be used derisively for similar sarcastic effect.[b]

https://archive.org/details/spartantradition0000raws/page/80/mode/2up?view=theater

THE GREAT figures of the fourth century continued to a remarkable extent to dominate Greek intellectual history, whether in rhetoric, historiography, or political theory. One proof of this is the astonishing persistence of interest in Sparta; for the place itself, deprived of territory by Philip, and defeated again under Alexander, was henceforth of no importance beyond the Peloponnese.

It is true, no doubt, that the time for practical laconism was past; among the characters described by Aristotle's pupil and successor, Theophrastus, the laconomaniac has no place, and the 'oligarchic man' does not resemble him. But, though the once very influential political literature of the Academy and Peripatos is lost, the pupils both of Plato and Aristotle seem if anything to have had fewer reserves than their masters in admiration for Sparta. Perhaps more practical and less idealistic, they lay less stress on her intellectual and moral shortcomings. **No longer a menacing rival of Athens (to which most of them did not belong by birth), Sparta, for them, takes off almost wholly into the realm of fantasy.**
…

It may be that the most important for us among Aristotle's pupils ought to be the tantalizing figure of Dicearchus of Messene, so admired by Cicero. **Dicearchus is known to have disagreed with his master and the contemporary Peripatetics in seeing the essence of man in practical not intellectual ability and in setting the active above the contemplative life; the intellectualistic ethics of Plato, and even Aristotle, had regarded them as interdependent. From such a kernel may have sprung a thoroughgoing admiration of Sparta.** At any rate, a treatise of his on the *Lacedaemonian Politeia* is said to have been so highly regarded at Sparta itself that it was by law read out once a year to the young.4

> 4. Wehrli, op. cit., vol. i, fr. 1. Perhaps, it has been suggested, in the archaizing Roman period?

It seems likely, too, that in stressing the importance of the discoveries of practical men and politicians, Dicearchus insisted that the philosophers had learnt from Lycurgus; that he retailed the story that Pythagoras visited Crete and Sparta to study their laws,1 **and declared that Plato was a combination of Socrates with Pythagoras and Lycurgus**2 **– perhaps because, as the source telling us this goes on to say, Lycurgus like Plato preferred 'geometric' proportion to the 'arithmetical' equality of democracy.** One is also entitled to wonder if Dicearchus' primitivism is relevant; in his famous *Greek Life* he represented the Golden Age as a time when men enjoyed health, concord, and leisure owing to their lack of arts and possessions and the moderation of their wants. Did he see Sparta as attempting to prolong this state?3 **For as we shall see, the Noble Savage and the Spartan were being compared at this time.**
…

Cynicism, however, combined the sophistic rejection of law with the Socratic ethical tradition, and thus with one kind of laconism. Though Antisthenes was sometimes regarded as the founder, **and Xenophon was much read by both Cynics and Stoics,** Cynicism proper, which was a way of life

rather than a formal philosophy, takes its origin and its name from Diogenes 'the Dog' in the later fourth century. The true Cynic was identifiable by his life as a wandering beggar, his assault on all superstitions, conventions, and laws, and his appeal to beasts and primitive men for evidence about the natural life. Possibly Diogenes himself knew Sparta; at any rate the saying of his with the best claim to be genuine is to the effect that the taverns are the mess-tables of Attica – a plain criticism of Athenian in the light of Spartan life.2 A less probably authentic remark (also given to Antisthenes) is that to go from Sparta to Athens is to go from the men's to the women's rooms in a house. Later sources, including the letters in his name, put many other references to Sparta in Diogenes' mouth;3 and Lucian, in one of the *Dialogues of the Dead*, makes him try to send up a message from Hades ticking the Spartans off for relaxing their severity.4 Diogenes' *Politeia*, if a genuine work, seems to have advocated a valueless currency and the community of women, who were to dress like men and exercise naked 'as at Sparta'; **Plutarch praised Lycurgus for carrying out what Plato and Diogenes after him only wrote about.**

A pupil of Diogenes, Onesicritus, went to India with Alexander and wrote a highly embroidered account of his adventures. **Not only do his fakirs – 'gymnosophists' or naked sages – emerge as perfect Cynics, but in dilating on the simplicity and *eunomia* of the 'country of Musicanus' in India he apparently explicitly compared its common meals, of simple food largely the product of the hunt, with Sparta's *syssitia*;** and the absence of slaves, though young men acted as servants, with the use of helots in Sparta and Crete. And he may have expected other features of his Utopia, such as the refusal to use gold or silver or study the sciences, to recall Sparta too.1

> 1. *FGH* ii b, no. 134, frs. 24, 25 (cf. 17). **Compare Arrian, *Indica* 10.8: all Indians, like all Lacedaemonians, are free – though the latter have helots.** (From Megasthenes, rather than a comment of Arrian's own, and thus suggesting that Onesicritus' ideas were not unique in his day?)

Here is the first certain forerunner of all those post-Renaissance authors who compare Indians, though American Indians now, to Spartans in simplicity and virtue.

Nevertheless, the natural life was not to be achieved without training. Perhaps this is why Diogenes is represented as praising Spartan boys; and when the story of his enslavement and consequent employment as a tutor at Corinth was elaborated, he was said to have introduced a curriculum with somewhat Spartan features.2 Though the Cynics rejected intellectual disciplines as useless, they were deeply interested in the teaching of practical virtue, and to this end relied greatly on the anecdotes and examples of which some of them are known to have made collections. 'Laconic apophthegms' were already recognized as a useful type of maxim in Aristotle's *Rhetoric* (which also recognized the orator's tendency to turn for illustrations to famous events in Spartan history);3 possibly special collections had even been made by then. **But the apophthegms were more popular than ever in the Hellenistic period, and many were certainly used by, if they did not originate with, the Cynics, while enough are put indifferently into the mouths of Spartan heroes or Cynic sages to show how alike the Spartan and Cynic outlook must have been considered.**

Quantities of these stories survive in the literature of later antiquity, and above all in the several collections of laconic and other apopthegms and *exempla* made for the use of writers and orators that have come down to us under the name of Plutarch.4 There are a few hostile illustrations of Spartan deceit (especially Lysander's) or naïveté; but far commoner are examples of Spartan wit at the expense of useless learning or luxury, **and also of superstition.** Their lack of walls and of written laws are admiringly held up to us.
…

The fifth century had thought of Spartan women as immoral hoydens; but in the fourth we enter the age of the Spartan heroine, obedient to Lycurgus' command to eschew elegance, a great housewife, but as devoted to the state as her menfolk, and as liable to apophthegm. Ephorus probably adorned his history with some Spartan mothers;1 a Cynic source produced several, one a typically coarse variant;2 and whether slaughtering one son or burying eight without a tear she is a favourite with the epigrammatic poets.

> 2. Stobaeus iv. 51, going back to Teles (third century B.C.), '*On Apathy*' or impassivity (that Cynic and Stoic virtue) **and ultimately to Bion of Borysthenes, one of the earliest and most famous authors of Cynic diatribes.** Pulling up her skirts she asked her fugitive son 'Are you trying to get back into my womb?'

…

There can be no doubt that the often satiric literature of the Cynics was very widely diffused. Cynicism has been called the philosophy of the proletariat. At any rate it was doubtless instrumental in extending laconism beyond the limited if influential circles in which it had hitherto been at home; while the old democratic ideals that might have worked against such an extension seem to have been passing away even in Athens. **Nor was Sparta associated any longer with exclusiveness of class or race, for the Cynics like the Stoics even managed to see in her a reflection of their cosmopolitan ideal. All men are equal by nature; nature and training together make the good man.** We are informed

by a Cynic source that the foreigner or helot's son accepted for the *agoge* is regarded as the equal of the best in the land, while an unworthy scion of the royal house may be degraded to helot status.2 **Or, as a later Stoicizing writer**3 **puts it, among the things for which Sparta is to be praised is the understanding that citizenship is a matter of virtue and training, not of birth, and the habit of allowing 'Scythians, Triballians, Paphlagonians or barbarians without a name' to become Lacedaemonians.**4

2. Stobaeus xl. 8, going back to Teles (and Bion) again.

3. Bernays, ***Die Heraklitische Briefe*****,** no. ix, p. 90. The author(s) of these rhetorical letters ascribed to the archaic philosopher Heraclitus date from the first century A.D.

4. Foreigners were, as we saw, occasionally, and helots, or more probably the sons of Spartiates by helot women, could probably (at some periods at least) be put through the *agoge*; but that complete equality followed is more than dubious.

Popular as Epicureanism long was, the dominant philosophy of later antiquity was one that, uniting Cynic and Platonic elements, ensured the survival of sympathy for Sparta.
...

The Stoics of the earlier period at least did not share the anti-intellectualism of the Cynics, **and in their physics and theology operated a final reconciliation between those frequent enemies, law and nature. Law was for them dependent on the divine reason or providence that rules the cosmos, a conception that lies at the root of many more modern theories of natural law.** Law, therefore, is divine and absolute, identical for all and co-extensive with virtue, as on different grounds it had been for Plato. Man is primarily a citizen of the universe, a cosmopolitan. But though, for this reason, one could even deny that Lycurgus and other lawgivers were able to make laws at all,2 yet the way was open for Sparta to regain her place as the city most obedient to law.

https://archive.org/details/spartantradition0000raws/page/110/mode/2up?view=theater

Elsewhere Dio links the endurance of Indians and Spartans, the educational qualities of Tyrtaeus and Homer (who perhaps inspired Lycurgus with the idea of *syssitia*), praises Agesilaus for refusing to allow any portrait to be made of him, and calls Lycurgus and other radical lawgivers the true philosophers. Sparta's self-control and regard for law were the cause of her prosperity. **But Dio is also ready to mention the less glorious episodes in her history, and he sets the Stoic cosmopolis, in which all intelligent beings have a share, above the Spartan polis, which excluded the helots altogether.** Indeed, he could argue that no method of enslaving others is just. The Thebans were right to free the Messenians from Sparta.2

https://anastrophe.uchicago.edu/cgi-bin/perseus/citequery3.pl?dbname=GreekNov21&getid=1&query=Hdt.%204.76

But as regards foreign customs, the Scythians (like others) very much shun practising those of any other country, and particularly of Hellas, as was proved in the case of Anacharsis and also of Scyles. For when Anacharsis was coming back to the Scythian country after having seen much of the world in his travels and given many examples of his wisdom, he sailed through the Hellespont and put in at Cyzicus; where, finding the Cyzicenes celebrating the feast of the Mother of the Gods with great ceremony, he vowed to this same Mother that if he returned to his own country safe and sound he would sacrifice to her as he saw the Cyzicenes doing, and establish a nightly rite of worship. So when he came to Scythia, he hid himself in the country called Woodland (which is beside the Race of Achilles, and is all overgrown with every kind of timber); hidden there, Anacharsis celebrated the goddess' ritual with exactness, carrying a small drum and hanging images about himself. Then some Scythian saw him doing this and told the king, Saulius; **who, coming to the place himself and seeing Anacharsis performing these rites, shot an arrow at him and killed him. And now the Scythians, if they are asked about Anacharsis, say they have no knowledge of him; this is because he left his country for Hellas and followed the customs of strangers.**

https://penelope.uchicago.edu/Thayer/E/Roman/Texts/Plutarch/Lives/Solon*.html#ref8

5 1 In particular we are told of private intercourse between Solon and Anacharsis, and between Solon and Thales, of which the following accounts are given.[8] Anacharsis came to Athens, knocked at Solon's door, and said that he was a stranger who had come to make ties of friendship and hospitality with him. **On Solon's replying that it was better to make one's friendships at home, "Well then," said Anacharsis, "do thou, who art at home, make me thy friend and guest."** 2 So Solon, admiring the man's ready wit, received him graciously and kept him with him some time. This was when he was already engaged in public affairs and compiling his laws. **Anacharsis, accordingly, on learning what Solon was about, laughed at him for thinking that he could check the injustice and rapacity of the citizens by written laws, which were just like spiders' webs; they would hold the weak and delicate who might be caught in their**

meshes, but would be torn in pieces by the rich and powerful. 3 To this Solon is said to have answered that men keep their agreements with each other when neither party profits by the breaking of them, and he was adapting his laws to the citizens in such a manner as to make it clear to all that the practice of justice was more advantageous than the transgression of the laws. **But the results justified the conjecture of Anacharsis rather than the hopes of Solon.** It was Anacharsis, too, who said, after attending a session of the assembly, that he was amazed to find that among the Greeks,[a] the wise men pleaded causes, but the fools decided them.

https://en.wikisource.org/wiki/Lives_of_the_Eminent_Philosophers/Book_I#Anacharsis

101. Anacharsis the Scythian was the son of Gnurus and brother of Caduidas, king of Scythia. **His mother was a Greek, and for that reason he spoke both languages. He wrote on the institutions of the Greeks and the Scythians, dealing with simplicity of life and military matters, a poem of 800 lines. So outspoken was he that he furnished occasion for a proverb, "To talk like a Scythian."**

Sosicrates makes him come to Athens about the 47th Olympiad[76] in the archonship of Eucrates. Hermippus relates that on his arrival at the house of Solon he told one of the servants to announce that Anacharsis had come and was desirous of seeing him and, if possible, of becoming his guest. 102. The servant delivered his message and was ordered by Solon to tell him that men as a rule choose their guests from among their own countrymen. Then Anacharsis took him up and said that he was now in his own country and had a right to be entertained as a guest. And Solon, struck with his ready wit, admitted him into his house and made him his greatest friend.

103. After a while Anacharsis returned to Scythia, where, owing to his enthusiasm for everything Greek, he was supposed to be subverting the national institutions, and was killed by his brother while they were out hunting together. When struck by the arrow he exclaimed, "My reputation carried me safe through Greece, but the envy it excited at home has been my ruin." In some accounts it is said that he was slain while performing Greek rites.

Here is my own epitaph upon him:[77]

> **Back from his travels Anacharsis came,**
> **To hellenize the Scythians all aglow;**
> Ere half his sermon could their minds inflame,
> A winged arrow laid the preacher low.

...

When some Athenian reproached him with being a Scythian, he replied, "Well, granted that my country is a disgrace to me, you are a disgrace to your country."

https://books.google.fi/books?id=vq1wWM4MseoC&lpg=PP1&hl=fi&pg=PA154#v=onepage&q&f=false

In this context, Anacharsis's odd language (from the point of view of Athenians) forces one to look at what he does, not what he says. And this reinforces the Cynic message – to follow the shortcut to virtue, without philosophizing in endless talk of dialectic and *elegkhos* (refutation). **Anacharsis is the remedy to the threat – apparently quite real in early Cynicism and understandable if Antisthenes is the actual originator of this philosophy – that Platonic-style discourse will drown out the Cynic message.**61

...

This Anacharsis may well have been traditional before the fifth century. We have no way of knowing, but the possibility does offer one final, intriguing thought. Whether or not he began Cynicism, **we can still wonder where Diogenes of Sinope got his notions about street theater – the *paignia* we see him play in the service of effective philosophy, which Dudley maintained belong rather to an anthology of Greek humor than a discussion of philosophy.**62

https://www.sacred-texts.com/cla/luc/wl2/wl209.htm

Anacharsis was not the first Scythian who was induced by the love of Greek culture to leave his native country and visit Athens: he had been preceded by Toxaris, a man of high ability and noble sentiments, and an eager student of manners and customs; but of low origin, not like Anacharsis a member of the royal family or of the aristocracy of his country, but what they call *'an eight-hoof man,'* a term which implies the possession of a waggon and two oxen. Toxaris never returned to Scythia, but died at Athens, where he presently came to be ranked among the Heroes; and sacrifice is still paid to 'the Foreign Physician,' as he was styled after his deification. Some account of the significance of this name, the origin of his worship, and his connexion with the sons of Asclepius, will not, I think, be out of place: for it will be seen from this that the Scythians, in conferring immortality on mortals, and sending them to keep company with Zamolxis, do not stand alone; since the Athenians permit themselves to make Gods of Scythians upon Greek soil.

...

In this frame of mind he had already reached the Ceramicus, when his good genius appeared to him in the guise of Toxaris. The attention of the latter was immediately arrested by the dress of his native country, nor was it likely that he would have any difficulty in recognizing Anacharsis, who was of noble birth and of the highest rank in Scythia. Anacharsis, on the other hand, could not be expected to see a compatriot in Toxaris, **who was dressed in the Greek fashion, without sword or belt, wore no beard, and from his fluent speech might have been an Athenian born; so completely had time transformed him.**
...

'What! come to the very door, and then turn back? This is not the language of enthusiasm. However, there is no fear of that--you will not go back, **Athens will not let you off so easily. She is not so much at a loss for charms wherewith to detain the stranger: she will take such a hold on you, that you will forget your own wife and children--if you have any.**
...

'You know not what you say. Nothing gives him greater pleasure than to have an opportunity of showing his hospitality to strangers. **Only follow me, and you shall see how courteous and benevolent he is, and how devout a worshipper of the God of Hospitality.** But stay: how fortunate! here he comes towards us. See, he is wrapped in thought, and mutters to himself.--Solon!' he cried; 'I bring you the best of gifts--a stranger who craves your friendship. He is a Scythian of noble family; but has left all and come here to enjoy the society of Greeks, and to view the wonders of their country. I have hit upon a simple expedient which will enable him to do both, to see all that is to be seen, and to form the most desirable acquaintances: in other words, I have brought him to Solon, who, if I know anything of his character, **will not refuse to take him under his protection,** and to make him a Greek among Greeks.--It is as I told you, Anacharsis: having seen Solon, you have seen all; behold Athens; behold Greece. You are a stranger no longer: all men know you, all men are your friends; this it is to possess the friendship of the venerable Solon. **Conversing with him, you will forget Scythia and all that is in it.** Your toils are rewarded, your desire is fulfilled. **In him you have the mainspring of Greek civilization, in him the ideals of Athenian philosophers are realized.** Happy man--if you know your happiness--to be the friend and intimate of Solon!'

It would take too long to describe the pleasure of Solon at Toxaris's 'gift,' his words on the occasion, and his subsequent intercourse with Anacharsis--how he gave him the most valuable instruction, **procured him the friendship of all Athens,** showed him the sights of Greece, and took every trouble to make his stay in the country a pleasant one; and how Anacharsis for his part regarded the sage with such reverence, that he was never willingly absent from his side.
...

The fact is, my situation is pretty much that of Anacharsis. I crave your indulgence, in venturing to compare myself with royalty. Anacharsis, after all, was a barbarian; **and I should hope that we Syrians are as good as Scythians.**

https://www.salon.com/2008/05/08/anacharsis_cloots/

The Revolution was, for Cloots, an event of messianic significance, the heralding of the Last Days of the tyrants; and a titanic battle between peoples and despots in which the victory of the former would be crowned by the establishment of political paradise on earth -- the Universal Republic. **There the abominations of bureaucracy would be redundant; the postal service would run from Bordeaux to Peking; "there, there will be neither barrier nor walls; neither official nor guard; there will be no more desert and the entire earth will become a garden."**

https://archive.org/details/in.ernet.dli.2015.16695/page/n453/mode/2up?view=theater

Briefly, all nations of the earth were to be welded into one as members of "the only nation" (*la nation unique*), which, by a play on the word *german*, that is to say, "closely allied," he suggested, with an ingenuity worthy of his race, should be known as "the immutable empire of Great Germany, the Universal Republic."1 By way of illustration he had presented himself at the Legislative Assembly, under the title of "the orator of the human race," at the head of a strange procession composed of specimens from all available races—Germans, Swedes, Russians, Poles, Turks, and negroes—whom he had hired for the occasion, in dresses suited to the part, but, since he omitted to pay them as arranged, he found his own door next day beset by a furious crowd,2 **which seemed somewhat to disprove his theory that "the Republic of the human race will never have any dispute with any one since there can be no communication between the planets."**3

In all this Clootz shows himself simply an amiable madman; **it is only on the subject of religion that he grows violent. The second title he had bestowed upon himself was that of "the personal enemy of Jesus Christ."** Christianity filled him with an almost epileptic fury. "Religion," he wrote, "is a social disease which cannot be too quickly cured. A religious man is a depraved animal; he resembles those beasts that are only kept to be shorn and roasted for the benefit of merchants and butchers."4 "The People," he declared, "is the Sovereign and the God of the world; **France is the centre of the People-God;** only fools can believe in any other God, in a Supreme Being."5

https://quod.lib.umich.edu/cgi/t/text/text-idx?c=evans;cc=evans;rgn=main;view=text;idno=n25379.0001.001

"The Supreme Being" says Anacharsis Cloots (the Reporter of the Committee of Public Instruction to the French National Convention) in an official Report of that Committee, "the Eternal Being, is no other than Nature uncreated and uncreatable; and the only Providence is the Association of mankind in freedom and equality. Man, when free, wants no other Divinity than himself. Reason dethrones both the Kings of the earth, and the Kings of heaven. No Monarchy above, if we wish to preserve our republic below. Volumes have been written to determine whether a republic of Atheists could exist. I maintain, that every other republic is a chimera. If you once admit the existence of a heavenly Sovereign, you introduce the wooden horse within your walls! What you adore by day will be your destruction at night. A people of Theists will necessarily become Revelationists."

https://archive.org/details/BarruelMemoirsIllustratingTheHistoryOfJacobinism/page/n557/mode/2up?view=theater

Are we to be duped by the name of *Minerval Academies*, with which the Sect decorates its schools? Can we observe there any other study than that of applying the sciences to the subversion of science, as well as to the total annihilation of all religion or society, when we remark the anxiety with which the Sect puts the following questions to the adept on his coming out of these academies, wishing to know what progress he has made in its principles before he is admitted to the illuminized priesthood:

"Do the *general* and *common* sciences to which men apply infuse real light? Do they lead to true happiness? Are they not rather the offspring of variegated wants, or of the anti-natural state in which men exist? Are they not the invention of crazy brains laboriously subtle?"24 …

Do you know in what light the illuminizing legislator views these northern clans sallying from their forests and desolating the most flourishing countries of Europe, firing its towns, beating down its empires, and strewing the earth with ruins? **He complacently beholds the precious remains of the patriarchal race, the true offspring of Nature;** it is with their hatchets that he means to regenerate mankind, and shape them out to the views of the Sect. I did not note the lessons of the Hierophant on this subject, when lecturing the future Epopt.—Hear the account which Weishaupt gives of these clans, when he pretends to historify human nature, at that epoch marked in the annals of Europe as a scourge, and called the inundation of the barbarians. Here is his description:

At that period when all Europe had fallen prey to corruption, **"Nature, which had preserved the true race of men in its original vigour and purity, came to the assistance of mankind. From distant, but poor and sterile countries, she calls those *savage nations* and sends them into the regions of luxury and voluptuousness to infuse new life into the enervated species of the south; and with new laws and morals to restore that vigour to human nature which flourished until an ill-extinguished germ of corruption infected even that portion of mankind which originally arrived in so pure a state,"** or those barbarians the pretended regenerators of Europe sent by Nature. …

Here, in the eyes of the adept, is the grand crime of these barbarians; the Hierophant, deploring their fall, exclaims, "Oh had there remained any sages among them, happy enough to have preserved themselves from the contagion, how would they sigh after, and ardently wish to return to the former abodes of their ancestors, there again to enjoy their former pleasures on the banks of a rivulet, under the shade of a tree laden with fruit, by the side of the object of their affections! It was then that they conceived the high value of Liberty, and the greatness of the fault they had committed in placing too much power in the hands of one man—**It was then that the want of Liberty made them sensible of their fall, and seek means of softening the rigour of Slavery;—but even then their efforts were only aimed against the tyrant, and not against tyranny.**"

https://publicdomainreview.org/essay/get-thee-to-a-phalanstery-or-how-fourier-can-still-teach-us-to-make-lemonade/

Fourier's most essential claim would have seen him burnt at the stake a century or so earlier: specifically, that all of humanity's various instincts and passions, including lust, are part of God's grand design and should not be repressed or stigmatized as sinful. **The problem, according to Fourier, is not with our primal urges, but with the way these desires are stifled, stunted, and warped by civilization (a time period in the Western Hemisphere that dates from the ancient Greeks, by his reckoning). Make no mistake, when Fourier uses the term "civilized", he is not marking a higher state or achievement, but rather hurling an insult with a curled lip.** Civilization names a dark age of hypocrisy, disorientation, and universal unhappiness, where even the very rich are imprisoned in simply a more comfortable class of misery than the rest of us. While humanity has made great technical strides, according to our guide, which have led to astonishing leaps in our capacity to exploit nature for profit, we have not paid any attention to our own inclinations, our own souls, our own hunger for freedom, play, sensual exploration, artistic expression, confraternity, and collective erotic interaction.

(Where “Eros” is figured not in its reduced form, as merely the sexual, but as the pulse of life and joy which Lucretius believed lies at the origin of life’s spark.) **In other words, Fourier provided a fully fledged theory of alienation, several decades before Marx, just as he had a fully fledged theory of repression nearly a century before Freud.**

https://archive.org/details/selectionsfromw00fourgoog/page/n172/mode/2up?view=theater

> 1. **Upon beholding this associative fairyland, these harmonies, these prodigies, this sea of delights, created simply by attraction or divine impulse, we shall see aroused a frenzy of enthusiasm for God, author of so beautiful an order; and perfectible, infamous civilisation, will be loaded with universal malediction.** Its political and moral libraries will be spat upon, torn up in the first moment of anger, and delivered over to the meanest uses, until they are reprinted with a critical commentary, facing the text, to make it the enduring laughing-stock of the human race.—(N. M., 287.)

---

https://books.google.fi/books?id=SWbABgAAQBAJ&lpg=PP1&hl=fi&pg=PA154#v=onepage&q&f=false

Diogenes Laertius reports it as a matter of contention whether Cynicism can be called a philosophical school (*hairesis*) at all, as opposed to simply a way of life (6.103); and though he is willing to call it a school, he immediately adds that the Cynics had nothing to do with logic or physics, confining themselves entirely to ethics – a claim that is quite consistent with the other evidence.
…

Indeed, in this respect they are probably even more anti-theoretical than Pyrrho. For although Pyrrho did not trouble himself with philosophical debates, and took no interest in most of the things with which philosophers generally concern themselves, he is reported, in a much discussed passage of Aristocles (in Eusebius, *Praep. evang.* 14.18.1-5), to have held that a happy life depended on having successfully answered the question “what are things like by nature?”
…

The anecdotes about the Cynics perhaps tend to emphasize a deliberate flouting of convention more than the pure indifference to it that we find in Pyrrho; **but for both Pyrrho and the Cynics, not caring what people think is a prominent feature of their image** and one that I would assume to have some historical basis, regardless of the veracity of any individual story.
…

That there is some influence – and from the Cynics on Pyrrho rather than the other way round, since Diogenes of Sinope was at least a generation older than Pyrrho – is made much more likely by the fact that **the group of philosophers that Alexander took with him on his expedition to India included both Pyrrho and a Cynic, Onesicritus.**

> https://en.wikisource.org/wiki/Lives_of_the_Eminent_Philosophers/Book_VI#Onesicritus
>
> 84. Onesicritus some report to have been an Aeginetan, but Demetrius of Magnesia says that he was a native of Astypalaea. He too was one of the distinguished pupils of Diogenes. **His career seems to have resembled that of Xenophon; for Xenophon joined the expedition of Cyrus, Onesicritus that of Alexander;** and the former wrote the *Cyropaedia*, or *Education of Cyrus*, while the latter has described how Alexander was educated: the one a laudation of Cyrus, the other of Alexander. And in their diction they are not unlike: except that Onesicritus, as is to be expected in an imitator, falls short of his model.
>
> https://penelope.uchicago.edu/Thayer/E/Roman/Texts/Strabo/15A3*.html#ref:rubbing
>
> But although Megasthenes says that no Indian uses slaves, **Onesicritus declares that slavery is peculiar to the Indians in the country of Musicanus, and tells what a success it is there, just as he mentions many other successes of this country, speaking of it as a country excellently governed.**

…

***Tuphos*, “vanity” or “humbug,” is a common term of Cynic invective,**21 **and Timon appropriates it;** besides using it on Zeno of Citium (DL 7.15), he turns it around and, as we saw, gives Pyrrho the supreme compliment of *atuphos*, “without vanity,” as well as situating Xenophanes, a leading figure in the *Silloi*, on a higher plane than most by calling him *hupatuphos*, “partly free from vanity” (Sextus, *PH* 1.224). Long has also argued convincingly that the satirical poems of the Cynic Crates were an important inspiration behind Timon’s *Silloi*.22

https://books.google.fi/books?id=niaQDwAAQBAJ&lpg=PP1&hl=fi&pg=PA82#v=onepage&q&f=false

The common ground between Timon and the Cynics is much too extensive to be explained merely due to an ethical consensus among philosophers who have nothing else what unites them. Any doubts on that score must be resolved when we review the form of Timon's *Silloi*. These poems, notwithstanding their eponymous allegiance to the work of Xenophanes, have a much more immediate model in the work of Timon's older contemporary, the Cynic philosopher Crates of Thebes.
…

With his uninhibited and hyperbolical language and the form and content of his *Silloi*, Timon must have intended his readers to recognize a close affinity between his critique of high culture and that of the Cynics. But we should not draw the conclusion that Timon wished to represent Pyrrho as a card-carrying Cynic philosopher, bearing in mind the Cynics' at least partial allegiance to Socrates. **Although none of the *Silloi* attacks Diogenes or any contemporary Cynic by name – which is indeed quite telling – Socrates himself and his non-Academic followers, including the proto-Cynic Antisthenes, are satirized.**69
…

While Timon's ethical judgements accord so well with familiar Cynic preaching, there are also many distinctive Cynic attitudes that he does not endorse in the extant material. These include the mendicant lifestyle, the appeal to non-human animals in the critique of human culture, the cult of shamelessness (*anaideia*), the focus on hardiness, and above all the appeal to reject convention (*nomos*) in favour of nature (*physis*), **which seems completely in variance with Pyrrho's anti-objectivism and insistence on the governance of convention** (DL 9.61 = LS 1A)

https://users.wfu.edu/zulick/300/gorgias/negative.html

Sextus, *Against the Schoolmasters* vii 65

> Gorgias of Leontini began from the same position as those who have abolished the criterion, but did not follow the same line of attack as the school of Protagoras. In what is entitled *On the Nonexistent* or *On Nature* **he proposes three successive headings: first and foremost, that nothing exists; second, that even if it exists it is inapprehensible to man; third, that even if it is apprehensible; still it is without a doubt incapable of being expressed or explained to the next man.**

https://iep.utm.edu/gorgias/

Gorgias may have believed in a relative notion of truth that was contingent upon a particular *kairos* (an opportune moment or "opening"), that is to say, truth can only be found within a given moment.
…

Bruce McComiskey points out that Plato believed in an "oligarchic government" for Athens, **while many of the sophists "favored the Athenian Democracy the way it was"** (20).
…

Despite efforts by G.W.F Hegel and George Grote toward rehabilitating the reputations of Gorgias and the other sophists in the 19th century, the sophists still had a foul reputation well into the 20th century (as evidenced by the pejorative term "sophistry"). In 1930, French philosopher Jacques Maritain remarked "[s]ophistry is not a system of ideas, but a vicious attitude of the mind;" the sophists "came to consider as the most desirable form of knowledge the art of refuting and disproving by skillful arguments" (32-33). In recent years, however, **modernists and post-structuralists have found great value in the philosophy of Gorgias, especially his theories on truth and language.**

https://en.wikisource.org/wiki/Moral_letters_to_Lucilius/Letter_88

43. Let me tell you what evils are due to over-nice exactness, and what an enemy it is of truth! **Protagoras declares that one can take either side on any question and debate it with equal success** – even on this very question, whether every subject can be debated from either point of view. **Nausiphanes holds that in things which seem to exist, there is no difference between existence and non-existence.** 44. Parmenides maintains that nothing exists of all this which seems to exist, except the universe alone.[36] Zeno of Elea removed all the difficulties by removing one; for he declares that nothing exists. **The Pyrrhonean, Megarian, Eretrian, and Academic schools are all engaged in practically the same task; they have introduced a new knowledge, non-knowledge.** 45. You may sweep all these theories in with the superfluous troops of "liberal" studies; the one class of men give me a knowledge that will be of no use to me, the other class do away with any hope of attaining knowledge. It is better, of course, to know useless things than to know nothing. One set of philosophers offers no light by which I may direct my gaze toward the truth; the other digs out my very eyes and

leaves me blind. **If I cleave to Protagoras, there is nothing in the scheme of nature that is not doubtful; if I hold with Nausiphanes, I am sure only of this – that everything is unsure; if with Parmenides, there is nothing except the One;**[37] **if with Zeno, there is not even the One.**

46. What are we, then? **What becomes of all these things that surround us, support us, sustain us? The whole universe is then a vain or deceptive shadow.** I cannot readily say whether I am more vexed at those who would have it that we know nothing, or with those who would not leave us even this privilege. Farewell.

https://archive.org/details/alexandriaandher00kinguoft/page/58/mode/2up?view=theater

> Such word-splitters were Stilpo and Diodorus, the slayer and the slain. They were of the Megaran school, and were named Dialectics; and also, with more truth, Eristics, or quarrelers. **Their clique had professed to follow Zeno and Socrates in declaring the instability of sensible presumptions and conclusions, in preaching an absolute and eternal Being.** But there was this deep gulf between them and Socrates; that while Socrates professed to be seeking for the Absolute and Eternal, for that which is, they were content with affirming that it exists. With him, as with the older sages, philosophy was a search for truth. With them it was a scheme of doctrines to be defended. And the dialectic on which they prided themselves so much, differed from his accordingly. He used it inductively, to seek out, under the notions and conceptions of the mind, certain absolute truths and laws of which they were only the embodiment. **Words and thoughts were to him a field for careful and reverent induction, as the phenomena of nature are to us the disciples of Bacon.** But with these hapless Megarans, who thought that they had found that for which Socrates professed only to seek dimly and afar off, and had got it safe in a dogma, preserved as it were in spirits and put by in a museum, the great use of dialectic was to confute opponents. Delight in their own subtlety grew on them, the worship not of objective truth, but of the forms of the intellect whereby it may be demonstrated; **till they became the veriest word-splitters, rivals of the old sophists whom their master had attacked, and justified too often Aristophanes' calumny, which confounded Socrates with his opponents, as a man whose aim was to make the worse appear the better reason.**
>
> We have here, in both parties, all the marks of an age of exhaustion, of scepticism; of despair about finding any real truth. **No wonder that they were superseded by the Pyrrhonists, who doubted all things, and by the Academy, which prided itself on setting up each thing to knock it down again;** and so by prudent and well-bred and tolerant qualifying of every assertion, neither affirming too much, nor denying too much, **keep their minds in a wholesome or unwholesome state of equilibrium, as stagnant pools are kept, that everything may have free toleration to rot undisturbed.**

https://oll.libertyfund.org/title/emerson-the-morals-vol-1#lf0062-01_head_151

"**Had I not designed to intermix barbarians and Greeks and to civilize the earth as I marched forward, and had I not proposed to search the limits of sea and land, and so, extending Macedon to the land-bounding ocean, to have sown Greece in every region all along and to have diffused justice and peace over all nations,** I would not have sat yawning upon the throne of slothful and voluptuous power, but would have labored to imitate the frugality of Diogenes. But now pardon us, Diogenes. We follow the example of Hercules, we emulate Perseus, and tread in the footsteps of Bacchus, our divine ancestor and founder of our race; once more we purpose to settle the victorious Greeks in India, and once more to put those savage mountaineers beyond Caucasus in mind of their ancient Bacchanalian revels. **There, by report, live certain people professing a rigid and austere philosophy, and more frugal than Diogenes, as going altogether naked; pious men, governed by their own constitutions and devoted wholly to God.** They have no occasion for scrip or wallet, for they never lay up provision, having always fresh and new gathered from the earth. The rivers afford them drink, and at night they rest upon the grass and the leaves that fall from the trees. **By our means shall they know Diogenes, and Diogenes them. But it behooves us also, as it were, to make a new coin, and to stamp a new face of Grecian civility upon the barbarian metal.**"

https://books.google.fi/books?id=53GYDwAAQBAJ&lpg=PR1&hl=fi&pg=PA28#v=onepage&q&f=false

Pyrrho's tripartite statement is completely unprecedented and unparalleled in Greek thought. Yet it is not merely similar to Buddhism, it corresponds closely to a famous statement of the Buddha preserved in canonical texts.28 The statement is known as the *Trilakṣaṇa*, the 'Three Characteristics' of all *dharmas* 'ethical distinctions, factors, constituents, etc.' Greek *pragmata* '(ethical) things' corresponds closely to Indic *dharma~dhamma* '(ethical) things' and seems to be Pyrrho's equivalent of it.29

The Buddha says, “All *dharmas* are *anitya* ‘impermanent’. ... All *dharmas* are *duḥkha* ‘unsatisfactory, imperfect, unstable’. ... All *dharmas* are *anātman* ‘without an innate self-identity’.”30

https://en.wikipedia.org/wiki/Similarities_between_Pyrrhonism_and_Buddhism

A summary of Pyrrho's philosophy was preserved by Eusebius in *Praeparatio evangelica*, quoting Aristocles, quoting the Pyrrhonist philosopher Timon, quoting his teacher, Pyrrho, in what is known as the "Aristocles passage."[3]

> "Whoever wants to live well (eudaimonia) must consider these three questions: First, how are *pragmata* (ethical matters, affairs, topics) by nature? Secondly, what attitude should we adopt towards them? Thirdly, what will be the outcome for those who have this attitude?" Pyrrho's answer is that "**As for *pragmata* they are all adiaphora (undifferentiated by a logical differentia), *astathmēta* (unstable, unbalanced, not measurable), and *anepikrita* (unjudged, unfixed, undecidable).** Therefore, neither our sense-perceptions nor our *doxai* (views, theories, beliefs) tell us the truth or lie; so we certainly should not rely on them. Rather, we should be *adoxastoi* (without views), *aklineis* (uninclined toward this side or that), and *akradantoi* (unwavering in our refusal to choose), saying about every single one that it no more is than it is not or it both is and is not or it neither is nor is not.[4]

...

Ajñana, which upheld radical skepticism, may have been a more powerful influence on Pyrrho than Buddhism. The Buddhists referred to Ajñana's adherents as ***Amarāvikkhepikas* or "eel-wrigglers",** due to their refusal to commit to a single doctrine.[10]

...

According to legend, Nagarjuna said he was influenced by books inaccessible to other people. He was approached by Nagas (semi-divine serpents) in human form. They invited him to their kingdom to see some texts they thought would be of great interest to him. Nagarjuna studied those texts and brought them back to India.[19][20][21] Matthew Neale illustrated such viewpoint inspired by Joseph G. Walser, "Nāgārjuna was a skillful diplomat concealing novel doctrines in acceptably Buddhist discourse... to conceal their doctrines’ derivation from foreign wisdom traditions."[22]

...

In the *Silloi* Timon of Phlius said “desire is absolutely the first of all bad things”[50]

> https://penelope.uchicago.edu/Thayer/E/Roman/Texts/Athenaeus/8A*.html#ref46
>
> "Alexis wrote a play called *The Teacher of Profligacy*, says Sotion of Alexandria in his book *On Timon's Satires*. I myself have not come across the play. Although I have read more than eight hundred plays of the so-called Middle Comedy and have made excerpts from them, I have not found *The Teacher of Profligacy*, and I do not even know of anyone who thought it worth cataloguing. Certainly neither Callimachus nor Aristophanes[47] has catalogued it, nor have even those who compiled the catalogues in Pergamum. Well, Sotion says that in this play a slave named Xanthias is represented as inciting his fellow-slaves to high living, and saying:[48] **‘What's this nonsense you are talking, for ever babbling, this way and that, of the Lyceum, the Academy, and the Odeum gates—mere sophists' rubbish? There's no good in them. Let's drink, and drink our fill, my Sicon, Sicon! Let's have a good time while we may still keep the life in our bodies. Whoop it up, Manes! There's nothing nicer than the belly. That is your father, and again, your only mother. Ethics, embassies, army tactics—fine pretences that sound hollow, like dreams. You will have only what you eat and drink. All the rest is dust—Pericles, Codrus, Cimon.’** It would have been better, says Chrysippus, if the inscription over Sardanapalus had been changed thus: ‘Though knowing full well that thou art but mortal, indulge thy desire, find joy in discourse. Eating, though shalt have no delight. Yes, I am but a ragged remnant, although I have eaten and had pleasure to the utmost. I have only what I have learned, what I have pondered, what noble things I have experienced with their aid, and what is left is a legacy altogether sweet.’ **Timon, also, has said very rightly:[49] ‘Foremost among all evils is desire.’**

...

While discussing Christopher Beckwith's claims in *Greek Buddha: Pyrrho's Encounter with Early Buddhism in Central Asia*, Jerker Blomqvist states that:

> On the other hand, certain elements that are generally regarded as essential features of Buddhism are entirely absent from ancient Pyrrhonism/scepticism. **The concepts of good and bad karma must have been an impossibility in the Pyrrhonist universe, if “things” were ἀδιάφορα, ‘without a logical self-identity’, and, consequently, could not be differentiated from each other by labels such as ‘good’ and ‘bad’ or ‘just’ and ‘unjust’. A doctrine of rebirth, reminiscent of the Buddhist one, though favored by Plato and Pythagoras, was totally alien to the Pyrrhonists.** The ἀταραξία, ‘undisturbedness’, that the Pyrrhonists promised their followers, may have a superficial resemblance to the Buddhist nirvana, but ἀταραξία, unlike nirvana, did not involve a liberation from a

> cycle of reincarnation; rather, it was a mode of life in this world, blessed with μετριοπάθεια, 'moderation of feeling' or 'moderate suffering', not with the absence of any variety of pain. Kuzminski, whom Beckwith (p. 20) hails as a precursor of his, had largely ignored the problem with this disparity between Buddhism and Pyrrhonism.[52]

https://classicalwisdom.com/philosophy/the-greek-buddha/

On top of this Buddhist philosophical foundation, Pyrrho built an innovative technique. **For reasons we can only speculate about, he did not bring back to Greece the Buddhist technique of meditation.** Instead, he took techniques that already existed in Greek thought – principally from Democritus, Protagoras, Gorgias, and the Megarians – synthesizing them and repurposing them to achieve ends that meditation achieves.

Nearly all of Western philosophy serves the end of building up the ego. Look at how clever we humans are for figuring all this stuff out! We are as gods! **Pyrrhonism, like Buddhism, is an assault on the ego.** To be successful in that assault, Pyrrhonism was built to breach the philosophical conceits of the Western ego.

Pyrrhonism turns rationality against itself. It employs the same tools we use to build up our sense of who we are and what our world is to dismantle those constructions, leaving each of us with what is known in the metaphorical language of Zen as our original face: the face we had before our parents were born.

As a consequence, Pyrrhonism has induced viscerally negative reactions from other philosophers, from antiquity to modernity. The Stoic philosopher Epictetus – famous for urging people to "bear and forbear" – was so riled by Pyrrhonism that he thought Pyrrhonists should be tortured (*Discourses* Book 2 Chapter 20).
…

Pyrrho put his translation of *anatta* first in his list, perhaps because it so well countered Aristotle's arguments against Democritus. Buddhist teachings commonly emphasize the personal implications of *anatta* – that we have no real selves, no soul, nothing that is essentially us. Humans, however, are no special case. No physical thing has those attributes.

Democritus had already pointed to this in his famous saying "by convention sweet and by convention bitter, by convention hot, by convention cold, by convention color; but in reality atoms and void." In other words, we have no firm basis for knowing that the attributes we agree that objects have are *really* there. All we really know is that the objects are conditioned things, just as the Buddha pointed out.

Aristotle disagreed with Democritus. He claimed that things do have essences, known now as Aristotelian "substances." **And because things have essences, things can be logically distinguished through what is now known as Aristotelian "differentia" – Latin for the Greek term Aristotle used – *diaphora* – differences in the essences.** Pyrrho translated *anatta* as *adiaphora* to negate Aristotle's claim. There are no *diaphora*. Things have no metaphysical substance or essence that allows the kind of neat, logical categorizing that Aristotle claims.

Buddhists call this "dependent origination." The ancient writer, Aulus Gellius, described the same idea in Pyrrhonism, saying "…there is nothing at all that is self-dependent or which has its own power and nature, but that absolutely all things have reference to something else…" (*Attic Nights* XI, 5, 6-7)

In the Classical era, the Pyrrhonists were always a minority. In the Medieval era, Aristotle's views would so come to dominate that he would become known simply as "the philosopher." **Indeed, we wouldn't even have known that Pyrrho based his teachings on the Three Marks of Existence were it not for Eusebius, a Christian apologist who copied Aristotelian arguments against Pyrrhonism from a book by the Peripatetic philosopher, Aristocles of Messene.**

http://robertlstephens.com/essays/shafarevich/001SocialistPhenomenon.html#pagestart_287

Nāgārjuna proceeds on the assumption that that which is not understandable is not real. He then proves that the following are neither understandable nor explicable: motion and rest, time, causality, the notion of the part and the whole, the soul, the "I," Buddha, God and the universe. "There is no God apart from the universe, and there is no universe apart from God, and they both are equally appearances." (159: p. 655) "There is no death, no birth, no distinction, no persistence, no oneness, no manyness, no coming in, no going forth." (159: p. 655) "All things have the character of emptiness, they have no beginning, no end, they are faultless and not faultless, they are not imperfect and not perfect, therefore, O Sariputta, here in this emptiness there is no form, no perception, no name, no concept, no knowledge." (159: p. 656)

I will argue that the state of *ataraxia* ("unperturbedness") as interpreted by the Skeptics is essentially identical to the Zen state of "non-dwelling" as articulated by the Sixth Patriarch Huineng. In doing so, I will attempt to show how the philosophical methodologies of both Sextus and Huineng succeed in **bringing the individual to a state of tranquility through the skillful use of**

opposition pairs, be they in the form of opposed arguments (for the Skeptics) or traditional dichotomies (for the Zennists). I will argue also that simple non-dogmatic reliance on non-rational guides to life (e.g. culture, custom, etc.) as advocated by the Skeptics is equivalent to the Zen idea of returning to life in the ordinary world absent attachment to either ordinary or the transcendent.
…

> The Skeptic way is a disposition to oppose phenomena and noumena to one another in any way whatever, with the result that, **owing to the equipollence among the things and statements thus opposed,** we are brought first to *epoché* and then to *ataraxia*. (*Outlines of Pyrrhonism*, BK I, 8)
>
> If someone asks you about the Dharma, **answer in dichotomous fashion making constant use of opposition pairs to demonstrate their mutual dependency. Do this and eliminate dualistic dharmas once and for all,** leaving them with no place at all to go. (*Platform Sūtra of the Sixth Patriarch*, Ch. 45)

…

And although the Buddha made counter-arguments against the dominant view at the time of the existence of *atman*, or eternal Self, he was also careful not to fully endorse the view of no-Self (*anatman*) either. **He referred to his teaching like a "raft," that was to be used for "crossing over and not for taking hold of."**87
…

Two Mahāyāna sūtras in particular, the *Mahāparinirvāṇa Sūtra* (*Niepanjing*) or *Nirvana Sūtra* for short, and the *Laṅkāvatāra Sūtra* (*Lengqiejing*) teach, respectively, the existence of a "Buddha-nature" (*fo xing*) and "self-nature" (*zi xing*) inherent in all humans. Thus, according to one recent Zen anthology of Zen literature,

> **In substance Zen Buddhism advocates that the nature of the self is the nature of the Buddha, and that the heart of the self is the heart of the Buddha, that Buddha nature is there in everyone, and everyone can attain Buddhahood.**88

Thus, it turns out that the eternal *atman*, the very concept which much of early Buddhism so vehemently rejected, made a comeback in Mahāyāna Buddhism in the form of an unchanging Buddha-nature.
…

One other important development of note within Mahāyāna Buddhism was its non-separation of religious practice and everyday life. This line of thought is developed most fully in the *Vimalakīrti Sūtra* (*Weimojiejing*), a text which Huineng also mines heavily throughout the *Platform Sūtra*.92 **In the *Vimalakīrti Sūtra* the lines between monastic and lay life are blurred and it is affirmed that even lay practitioners may achieve awakening.**93 **This represents perhaps one of the most important transitions from early Buddhism.**

> 92. **Whereas many hold Chinese Zen is a Sinofication of Indian Buddhism, I see it more as an application of the practical spiritual life as already envisioned by the *Vimalakīrti Sūtra*.** One telling point I find is Huineng's rejection of traditional Confucian mourning rituals (*PS* 53).
>
> https://en.wikipedia.org/wiki/Vimalakirti_Sutra#Synopsis
>
> Chapter 6
>
> **Vimalakīrti expounds a series of analogies designed to explain the point that the bodhisattva regards sentient beings as, in various senses, illusory or even logically impossible.** A goddess then appears, who has been living in Vimalakīrti's room for twelve years. She creates a shower of heavenly petals. These petals stick to the bodies of the non-Mahāyāna adepts (*mahāśrāvaka*s), but slide off the bodies of the bodhisattvas and drop to the ground. Śāriputra, perturbed (among other things, by a probable infringement of the monastic code, which prohibits personal adornment), even attempts to use his supernatural powers to shed this unwelcome decoration, but in vain. A battle of wits and wisdom ensues, in which Śāriputra is sorely bested and humiliated by the goddess. She explains that he cannot shake off the flowers because he is "attached" (for instance, to a formalistic and superficial understanding of the Dharma and the Vinaya). **Śāriputra asks the goddess, perhaps somewhat peevishly, why she still has the (inferior) body of a woman, if she has attained to such high levels of insight. In response, she uses her own supernatural powers to switch bodies with Śāriputra, who is even more perturbed to find himself in the guise of a woman, but finds that nothing he does allows him to return to his own "true" form.** Eventually, the goddess takes mercy and releases her hold, but the overall effect of the exchange is to show the vast superiority of Mahāyāna doctrine and practice over the other, more traditional forms of Buddhism of which Śāriputra is a paragon. The drama presented in this chapter has been an important reference point for traditional and especially modern attempts to find Mahāyāna perspectives on the nature of gender, and Buddhist feminist attempts to find canonical sources for a stance that ascribes equal spiritual status or potential to women.

Chapter 7

A dialogue ensues between Mañjuśrī and Vimalakīrti. Echoing the dramatic besting of Śāriputra – a famed expert in doctrine – by a mere non-Buddhist deity and female, this dialogue ultimately sees Mañjuśrī, the paragon of Mahāyāna wisdom, upstaged by someone who is apparently a "mere" householder, and (as we saw in Chapter 2), apparently no model of virtue at that – a companion of gamblers and prostitutes.

…

There is no separation from daily activities; in fact it may be said that it can only be fully realized within activity. Huineng quotes from the *Vimalakīrti Sūtra* to make just this point: “Externally he is skilled at distinguishing all the various forms of existence, while internally he remains unmoved in the First Principle.”105 This verse from the *Vimalakīrti Sūtra* is also an indicator as to why the distinction between lay and ordained life ceases to be of fundamental importance. The monk in earlier traditions had access to the proper environmental conditions necessary to cultivate both mental and physical stillness. But if such conditions were truly the prerequisite of enlightenment, the person in the work-a-day world would of course stand little chance of becoming enlightened. **However, once *internal* stillness becomes the only requirement, *anyone* now who was willing to put in the practice could in fact become a Buddha.**

…

Finally, we should also observe that Huineng also never sees “enlightenment” as a one-time affair, something that is attained for once and for all. It is from the beginning a moment-to-moment process and will depend on one’s state of the mind at any given time: **“If you are deluded during a thought, you are an ordinary person; if you gain understanding with the following thought, you are a Buddha.”**107

…

The whole of Huineng’s teaching may therefore be summed up in four Chinese characters: (*jian xing cheng fo*):115 **“See the self-nature and become a Buddha.”** To quote mysticism scholar Robert Forman: “In wu-nien one directly realizes that one is, in one’s core, not this or that perception, but transcendental to it.”116 **There is neither “Northerner nor Southerner” in the Buddha-nature as Huineng famously said.**117 **And this not seeing one’s self as this or that perception is to see one’s real nature.** On the other hand, by “self-nature” Huineng also has in mind is the notion of an all-encompassing center of being that excludes nothing! There is no conflict here, since philosophically speaking, there is little if any difference between a nature that contains everything and a nature that contains nothing. Or as the late Robert Solomon put in his *The Rise and Fall of the Self* (in the context of 18th century Continental philosophy), **“Between the Self as absolute spirit and the self as nothing at all there is, it turns out, very little difference…”**118 Thus, the self-nature might be interpreted not only as a true self apart from all perceptions, but also that which equally *includes all perceptions* as part of one’s very own nature.119

…

Thus, it seems *only if* X remains undefined can the Skeptic remain in tranquility. And consequently, if it could be proven that, say, being X *was* good by nature, then it *would* seem rational for us to be vexed by the thought of not possessing property X and overjoyed by the thought of possessing it.211 Thus, it appears that the Skeptic’s tranquility only holds in the case of *ignorance!* **That is, the Skeptic is fine *now*, but this is only because she doesn’t know. And in that case, it would also seem evident that the Skeptic has a vested interest in *not finding truth*.**

…

Thus, we can see why Huineng repeatedly admonishes his disciples constantly to not see the faults of others, since fault-seeking usually tends to lead to the unfounded view that there exists some rough-and-ready distinction between one’s “good” Self and the “bad” Other.215

215. See *PS* 14, 36, 44. Huineng is not literally suggesting that we ought to let people get away with murder. Instead his teaching is an expedient means to correcting the habit of being judgmental. **In fact, Huineng tells Shenhui in *PS* 44 that even the practice of not seeing the faults but one’s own faults is itself dualistic: “Seeing (one’s faults) and not seeing [the faults of others] is dualistic (lit. “two-sided,” *liang bian*).”**

…

The Skeptic it seems would hardly stand a chance of becoming a staunch abolitionist. **While this seems true, neither would the Skeptic it seems be anywhere inclined to believe that she or anyone else had a *natural right* to enslave others.** After all, historically, appeal to the moral order has been used to justify slavery just as much as it has been used to fight against it. Thus, the Skeptic seems no worse or better off than the ordinary person in this regard.

American Buddhist monk Bhikkhu Bodhi wrote:

> "The real meaning of upekkha is equanimity, not indifference in the sense of unconcern for others. As a spiritual virtue, **upekkha means stability in the face of the fluctuations of worldly fortune. It is evenness of mind, unshakeable freedom of mind, a state of inner equipoise that cannot be upset by gain and loss, honor and dishonor, praise and blame, pleasure and pain.** ***Upekkha*** **is freedom from all points of self-reference;** it is indifference only to the demands of the ego-self with its craving for pleasure and position, not to the well-being of one's fellow human beings. **True equanimity is the pinnacle of the four social attitudes that the Buddhist texts call the 'divine abodes': boundless loving-kindness, compassion, altruistic joy, and equanimity.** The last does not override and negate the preceding three, but perfects and consummates them."[6]

https://en.wikisource.org/wiki/Lives_of_the_Eminent_Philosophers/Book_IX#Pyrrho

61. Pyrrho of Elis was the son of Pleistarchus, as Diocles relates. According to Apollodorus in his *Chronology*, he was first a painter; then he studied under Stilpo's son Bryson:[89] thus Alexander in his *Successions of Philosophers*. **Afterwards he joined Anaxarchus, whom he accompanied on his travels everywhere so that he even forgathered with the Indian Gymnosophists and with the Magi. This led him to adopt a most noble philosophy, to quote Ascanius of Abdera, taking the form of agnosticism and suspension of judgement. He denied that anything was honourable or dishonourable, just or unjust.[90] And so, universally, he held that there is nothing really existent, but custom and convention govern human action; for no single thing is in itself any more this than that.**

62. He led a life consistent with this doctrine, going out of his way for nothing, taking no precaution, but facing all risks as they came, whether carts, precipices, dogs or what not, and, generally, leaving nothing to the arbitrament of the senses; but he was kept out of harm's way by his friends who, as Antigonus of Carystus tells us, used to follow close after him. But Aenesidemus says that it was only his philosophy that was based upon suspension of judgement, and that he did not lack foresight in his everyday acts. He lived to be nearly ninety.
…

63. **He would withdraw from the world and live in solitude, rarely showing himself to his relatives;** this he did because he had heard an Indian reproach Anaxarchus, telling him that he would never be able to teach others what is good while he himself danced attendance on kings in their courts. He would maintain the same composure at all times, so that, even if you left him when he was in the middle of a speech, he would finish what he had to say with no audience but himself, although in his youth he had been hasty.[91] Often, our informant adds, he would leave his home and, telling no one, would go roaming about with whomsoever he chanced to meet. **And once, when Anaxarchus fell into a slough, he passed by without giving him any help, and, while others blamed him, Anaxarchus himself praised his indifference and *sang-froid*.**
…

In debate he was looked down upon by no one, for he could both discourse at length and also sustain a cross-examination, so that even Nausiphanes when a young man was captivated by him: at all events he used to say that we should follow Pyrrho in disposition but himself in doctrine; **and he would often remark that Epicurus, greatly admiring Pyrrho's way of life, regularly asked him for information about Pyrrho; and that he was so respected by his native city that they made him high priest, and on his account they voted that all philosophers should be exempt from taxation.**
…

66. **He lived in fraternal piety with his sister, a midwife, so says Eratosthenes in his essay *On Wealth and Poverty*,** now and then even taking things for sale to market, poultry perchance or pigs,

and he would dust the things in the house, quite indifferent as to what he did. They say he showed his indifference by washing a porker.
…

Philo of Athens, a friend of his, used to say that he was most fond of Democritus, and then of Homer, admiring him and continually repeating the line

> As leaves on trees, such is the life of man.[96]

He also admired Homer because he likened men to wasps, flies, and birds, and would quote these verses as well:

> Ay, friend, die thou; why thus thy fate deplore?
> Patroclus too, thy better, is no more,[97]

and all the passages which dwell on the unstable purpose, vain pursuits, and childish folly of man.[98]
…

71. **Some call Homer the founder of this school, for to the same questions he more than anyone else is always giving different answers at different times, and is never definite or dogmatic about the answer.** The maxims of the Seven Wise Men, too, they call sceptical; for instance, "Observe the Golden Mean," and "A pledge is a curse at one's elbow," meaning that **whoever plights his troth steadfastly and trustfully brings a curse on his own head.** Sceptically minded, again, were Archilochus and Euripides, for Archilochus says:[100]

> Man's soul, O Glaucus, son of Leptines,
> Is but as one short day that Zeus sends down.

And Euripides:[101]

> Great God! how can they say poor mortal men
> Have minds and think? Hang we not on thy will?
> Do we not what it pleaseth thee to wish?

72. Furthermore, they find Xenophanes, Zeno of Elea, and Democritus to be sceptics: Xenophanes because he says,[102]

> Clear truth hath no man seen nor e'er shall know

and Zeno because he would destroy motion, saying, "A moving body moves neither where it is nor where it is not"; Democritus because he rejects qualities, saying, "Opinion says hot or cold, but the reality is atoms and empty space," and again, "Of a truth we know nothing, for truth is in a well."[103]

> 103. This proverbial expression is inadequate; a more literal rendering of ἐν βύθῳ would be "in an abyss."

Plato, too, leaves the truth to gods and sons of gods, and seeks after the probable explanation.[104] Euripides says:[105]

> 73. Who knoweth if to die be but to live,
> And that called life by mortals be but death?

…

And even Heraclitus: "Let us not conjecture on deepest questions what is likely."[108]

> https://en.wikisource.org/wiki/Lives_of_the_Eminent_Philosophers/Book_VII#cite_ref-57
>
> 129. **Neither do [the Stoics] think that the divergence of opinion between philosophers is any reason for abandoning the study of philosophy, since at that rate we should have to give up life altogether:** so Posidonius in his *Exhortations*.

…

79. **They showed, then, on the basis of that which is contrary to what induces belief, that the probabilities on both sides are equal.** Perplexities arise from the agreements[114] between appearances or judgements, and these perplexities they distinguished under ten different modes in which the subjects in question appeared to vary. The following are the ten modes laid down.[115]

The *first* mode relates to the differences between living creatures in respect of those things which give them pleasure or pain, or are useful or harmful to them. By this it is inferred that they do not receive the same impressions from the same things, with the result that such a conflict necessarily leads to suspension of judgement. **For some creatures multiply without intercourse, for example, creatures that live in fire, the Arabian phoenix and worms; others by union, such as man and the rest.**
…

83. The *fifth* mode is derived from customs, laws, belief in myths, compacts between nations and dogmatic assumptions. This class includes considerations with regard to things beautiful and ugly, true and false, good and bad, with regard to the gods, and with regard to the coming into being and the passing away of the world of phenomena. **Obviously the same thing is regarded by some as just and by others as unjust, or as good by some and bad by others.** Persians think it not unnatural for a man to marry his daughter; to Greeks it is unlawful. The Massagetae, according to Eudoxus in the first book of his *Voyage round the World*, have their wives in common; the Greeks have not. The Cilicians used to delight in piracy; not so the Greeks.
…

101. **There is nothing good or bad by nature, for if there is anything good or bad by nature, it must be good or bad for all persons alike, just as snow is cold to all.** But there is no good or bad which is such to all persons in common; therefore there is no such thing as good or bad by nature. For either all that is thought good by anyone whatever must be called good, or not all. Certainly all cannot be so called; since one and the same thing is thought good by one person and bad by another; for instance, **Epicurus thought pleasure good and Antisthenes thought it bad;** thus on our supposition it will follow that the same thing is both good and bad. **But if we say that not all that anyone thinks good is good, we shall have to judge the different opinions; and this is impossible because of the equal validity of opposing arguments. Therefore the good by nature is unknowable.**

https://en.wikisource.org/wiki/Lives_of_the_Eminent_Philosophers/Book_IX#cite_ref-137

According to Menodotus [Timon] left no successor, but his school lapsed until Ptolemy of Cyrene re-established it. Hippobotus and Sotion, however, say that he had as pupils Dioscurides of Cyprus, Nicolochus of Rhodes, Euphranor of Seleucia, and Pralus of the Troad.[137] The latter, as we learn from the history of Phylarchus, was a man of such unflinching courage that, **although unjustly accused, he patiently suffered a traitor's death, without so much as deigning to speak one word to his fellow-citizens.** 116. Euphranor had as pupil Eubulus of Alexandria; Eubulus taught Ptolemy, and he again Sarpedon and Heraclides; Heraclides again taught Aenesidemus of Cnossus, the compiler of eight books of Pyrrhonean discourses; the latter was the instructor of Zeuxippus his fellow-citizen, he of Zeuxis of the angular foot,[138] he again of Antiochus of Laodicea on the Lycus, who had as pupils Menodotus of Nicomedia, an empiric physician, and Theiodas of Laodicea; Menodotus was the instructor of Herodotus of Tarsus, son of Arieus, and Herodotus taught Sextus Empiricus, who wrote ten books on Scepticism, and other fine works. Sextus taught Saturninus called Cythenas,[139] another empiricist.

> 139. **Possibly κυδαθηναιεύς, i.e. a member of the well-known Attic deme, into which even Italians with such names as Saturninus might penetrate under the cosmopolitan empire of the Severi.**

https://archive.org/details/in.ernet.dli.2015.69382/page/n285/mode/2up?view=theater

Timon’s doctrine was simple. The source of trouble is contradictory knowledge, but nothing can be known, therefore suspend your judgment and never dogmatise; remember too that nothing matters, not even whether you live or die; thus you will attain the goal, imperturbability. **He attained to a good deal of money by preaching this throughout the world, but did not attain to imperturbability, for much of his life was spent in attacking Arcesilaus for poaching on his preserve; and he left no successor, for with Arcesilaus (*c.* 264-242) Scepticism passed over to the Academy.**

https://en.wikipedia.org/wiki/Aenesidemus

There is no definite evidence about the life of Aenesidemus, but his most important work, the *Pyrrhonian Discourses* was known to be dedicated to Lucius Aelius Tubero, a friend of Cicero and member of Plato's Academy whom Photius described as a colleague. Based on this information, scholars have assumed that Aenesidemus himself was also a member of the Academy. **Furthermore, it has been assumed that he took part under the leadership of Philo of Larissa and probably adopted Pyrrhonism either in reaction to Antiochus of Ascalon introduction of Stoic and Peripatetic dogma into the Academy or Philo's acceptance of provisional beliefs.**
…

We have this summary of its contents from Photius (in his *Myriobiblion*).

> **I read Aenesidemus' eight *Pyrrhonist Discourses.*** The overall aim of the book is to establish that there is no firm basis for cognition, either through sense-perception, or indeed through thought. Consequently, he says, neither the Pyrrhonists nor the others know the truth in things; but the philosophers of other persuasions, as well as being ignorant in general, and wearing themselves out uselessly and expending themselves in ceaseless torments, are also ignorant of the very fact that they have cognition of none of the things of which they think that they have gained cognition. **But he who philosophizes after the fashion of Pyrrho is happy not only in general but also, and especially, in the wisdom of knowing that he has firm cognition of nothing.** And even with regard to what he knows, he has the propriety to assent no more to its affirmation than to its denial. The whole scheme of the book is directed towards the purpose I have mentioned. In writing the discourses Aenesidemus addresses them to Lucius Tubero, one of his colleagues from the Academy, a Roman by birth, with an illustrious ancestry and a distinguished political career. In the first discourse he differentiates between the Pyrrhonists and the Academics in almost precisely the following words. **He says that the Academics are doctrinaire: they posit some things with confidence and unambiguously deny others. The Pyrrhonists, on the other hand, are aporetic and free of all doctrine.**
> ...
>
> **But the Academics, he says, especially those from the present-day Academy, are sometimes in agreement with Stoic beliefs, and to tell the truth turn out to be Stoics fighting with Stoics.** Moreover, they are doctrinaire about many things. For they introduce virtue and folly, and posit good and bad, truth and falsity, convincing and unconvincing, existent and non-existent. They give firm determinations for many other things too. It is only about the cognitive impression that they express dissent.
> ...
>
> The seventh discourse he marshalls against the virtues, saying that those who philosophize about them have uselessly invented their doctrines, and that they have misled themselves into thinking that they have attained the theory and practice of them. **The eighth and last launches an attack on the end, allowing the existence of neither happiness nor pleasure nor prudence, nor any other end which any philosophical persuasion might believe in, but asserting that the end which they all celebrate simply does not exist.**

https://archive.org/details/in.ernet.dli.2015.55010/page/n693/mode/2up?view=theater

Perhaps Polybius, who was then a hostage with Scipio, heard these addresses or of them, for he speaks with the anger of a practical man against those philosophers

> who in the discussions of the Academy have trained themselves in extreme readiness of speech. For some of them, in their efforts to puzzle the minds of their hearers, resort to such paradoxes, and are so fertile in inventing plausibilities, that they wonder whether or not it is possible for those in Athens to smell eggs roasted in Ephesus, and are in doubt whether all the time they are discussing the matter in the Academy they are not lying in their beds at home and composing this discourse in a dream. ... **From this excessive love of paradox they have brought all philosophy into disrepute. ... They have implanted such a passion in the minds of our young men that they never give even a thought to the ethical and political questions that really benefit students of philosophy, but spend their lives in the vain attempt to invent useless absurdities.**[14]

https://archive.org/details/lifeofchrist00papi/page/326/mode/2up?view=theater

Pilate, as shown by his questions put to Jesus, was one of those skeptics of the Roman decadence corrupted with Pyrrhonism, a devotee of Epicurus, an encyclopedist of Hellenism without any belief in the gods of his country, nor any belief that any real God existed at all.

https://archive.org/details/lifeofchrist00papi/page/342/mode/2up?view=theater

A real Roman, a Roman of antiquity, of the true Roman stock, would either at once have satisfied the demands of that turbulent crowd and would not have wasted a moment in defending an obscure visionary; or would at once have decreed, from the beginning, that this man was innocent and was under the august protection of the Empire.

By his stratagems, half-measures, indolent questionings, hesitations and partially executed maneuvers Pilate found himself slowly pushed towards a decision he did not wish to make. **The fact that he had not at once decided the question with a yes or no had increased the insolence of the High Priests and the excitement of the people.**

https://penelope.uchicago.edu/Thayer/E/Roman/Texts/Quintilian/Institutio_Oratoria/12B*.html#ref20

But this leads me to another question as to which school of philosophy is like to prove of most service to oratory, although there are only a few that can be said to contend for this honour. 24 For in the first place Epicurus banishes us from his presence without more ado, since he bids all his followers to fly from learning in the swiftest ship that they can find.[21] Nor would Aristippus, who regards the highest good as consisting in physical pleasure, be likely to exhort us to the toils entailed by our study. **And what part can Pyrrho have in the work that is before us? For he will have doubts as to whether there exist judges to address, accused to defend, or a senate where he can be called upon to speak his opinion.** 25 Some authorities hold that the Academy will be the most useful school, on the ground that its habit of disputing on both sides of a question approaches most nearly to the actual practice of the courts.

http://www.perseus.tufts.edu/hopper/text?doc=Perseus%3Atext%3A1999.01.0236%3Atext%3Ddisc%3Abook%3D2%3Achapter%3D20

Man what are you doing?[10] are you refuting yourself every day; and will you not give up these frigid attempts? When you eat, where do you carry your hand to? to your mouth or to your eye? when you wash yourself, what do you go into? do you ever call a pot a dish, or a ladle a spit? **If I were a slave of any of these men, even if I must be flayed by him daily, I would rack him. If he said, 'Boy, throw some olive oil into the bath,' I would take pickle sauce and pour it down on his head.** What is this? he would say—An appearance was presented to me, I swear by your genius, which could not be distinguished from oil and was exactly like it—Here give me the barley-drink (tisane), he says—I would fill and carry him a dish of sharp sauce—Did I not ask for the barley drink? Yes, mister: this is the barley drink? Take it and smell; take it and taste. How do you know then if our senses deceive us?—**If I had three or four fellow-slaves of the same opinion, I should force him to hang himself through passion or to change his mind.** But now they mock us by using all the things which nature gives, and in words destroying them.

Grateful indeed are men and modest, who, if they do nothing else, are daily eating bread and yet are shameless enough to say, we do not know if there is a Demeter or her daughter Persephone or a Pluto;[11]
not to mention that they are enjoying the night and the day, the seasons of the year, and the stars, and the sea and the land and the co-operation of mankind, and yet they are not moved in any degree by these things to turn their attention to them; but they only seek to belch out their little problem (matter for discussion), and when they have exercised their stomach to go off to the bath. But what they shall say, and about what things or to what persons, and what their hearers shall learn from this talk, they care not even in the least degree, **nor do they care if any generous youth after hearing such talk should suffer any harm from it, nor after he has suffered harm should lose all the seeds of his generous nature;** nor if we[12] should give an adulterer help towards being shameless in his acts; nor if a public peculator should lay hold of some cunning excuse from these doctrines; nor if another who neglects his parents should be confirmed in his audacity by this teaching.—What then in your opinion is good or bad? This or that?—Why then should a man say any more in reply to such persons as these, or give them any reason or listen to any reason from them, or try to convince them? **By Zeus one might much sooner expect to make catamites change their mind than those who are become so deaf and blind to their own evils.[13]**

> 13. This resembles what our Saviour said to the Jewish rulers: Verily I say unto you, that the publicans and the harlots go into the kingdom of God before you.' Matthew, xxi. 31. Mrs. Carter.

https://archive.org/details/in.ernet.dli.2015.231118/page/n545/mode/2up?view=theater

Nevertheless, in this final stage of Hellenistic culture, **there were skeptics who recalled all the doubts of Protagoras, and a Lucian who laughed at belief with the insolence of Aristippus and almost Plato's charm.** The school of Pyrrho was not dead; Aenesidemus of Cnossus rephrased its denials in the Alexandria of our first century, by propounding the famous "Ten Modes" *(tropoi),* or contradictions, that made knowledge impossible.[II] Towards the end of the second century **Sextus Empiricus, of unknown date or place, gave the skeptical philosophy its final formulation in several destructive volumes of which three survive. Sextus takes all the world for his enemy; he divides philosophers into diverse species and slays each breed in turn.** He writes with the vigor necessary to an executioner, the good order and clarity characteristic of ancient philosophy, occasional sarcastic humor, and much dreary chopping of logic.

To every argument, says Sextus, an equal argument can be opposed, so that in the end there is nothing so superfluous as reasoning. **Deduction is untrustworthy unless based upon complete induction; but complete induction is impossible, for we can never tell when a "negative instance" will turn up.[51] "Cause" is merely a regular antecedent (as Hume would repeat), and all knowledge is relative.[52]** Similarly there is no objective good or evil; morality changes across every frontier,[53] and virtue has a different definition in every age. All the arguments of the nineteenth century against the possibility of knowing whether God exists or not are stated here, and all the contradictions between benevolent omnipotence and worldly suffering.[54] **But Sextus is a more complete agnostic than the agnostics, for he affirms that we cannot know that we cannot know; agnosticism is a dogma.[55]** But, he consoles us, we do not need certainty. Probability is enough for all practical purposes, and the suspension of

judgment *(epoché,* holding back; *aphasia,* saying nothing) in philosophical questions, instead of disturbing the mind, brings it a careless peace *(ataraxia).*[56] **Meanwhile, since nothing is certain, let us accept the conventions and beliefs of our time and place, and modestly worship our ancient gods.**[57]

https://en.wikisource.org/wiki/Ante-Nicene_Fathers/Volume_IV/Minucius_Felix/The_Octavius_of_Minucius_Felix/Chapter_13

"However, if you have a desire to philosophize, let any one of you who is sufficiently great, imitate, if he can, Socrates the prince of wisdom. **The answer of that man, whenever he was asked about celestial matters, is well known: '<u>*What is above us is nothing to us.*</u>'** Well, therefore, did he deserve from the oracle the testimony of singular wisdom, which oracle he himself had a presentiment of, that he had been preferred to all men for the reason, not that he had discovered all things, but because he had learnt that he knew nothing. And thus the confession of ignorance is the height of wisdom. **From this source flowed the safe doubting of Arcesilas, and long after of Carneades, and of very many of the Academics,**[1] in questions of the highest moment, in which species of philosophy the unlearned can do much with caution, and the learned can do gloriously. **What! is not the hesitation of Simonides the lyric poet to be admired and followed by all?** Which Simonides, when he was asked by Hiero the tyrant what, and what like he thought the gods to be, asked first of all for a day to deliberate; then postponed his reply for two days; and then, when pressed, he added only another; and finally, when the tyrant inquired into the causes of such a long delay, he replied that, the longer his research continued, the obscurer the truth became to him.[2] **<u>In my opinion also, things which are uncertain ought to be left as they are.</u> Nor, while so many and so great men are deliberating, should we rashly and boldly give an opinion in another direction, lest either a childish superstition should be introduced, or all religion should be overthrown.**"

1. This is otherwise read, "Academic Pyrrhonists." 2. Cicero, *de Natura Deorum,* i. 22.

https://books.google.fi/books?id=LT5WAAAAYAAJ&hl=fi&pg=PA67#v=onepage&q&f=false

But one Thing there is, which to me appears *incontestable*; *viz*. that this Spirit of universal Scepticism, utterly destroys, and overturns the very Foundations of all Religion, and Morality. Nor do I know any Books more dangerous, for Men to read, who have not accustom'd themselves to an accurate Way of Thinking, and discerning between Truth and Falshood; than those, whose Authors make it their whole Business, to accumulate Difficulties against the most evident Truths; without ever resolving them, or preventing the fatal Impressions thereof, by a clear and rational Account, of what may and ought to be held as certain, notwithstanding such Difficulties; which, however considerable, yet can no way lessen, or hinder the Cogency of such direct Proofs, as are really convincing. 'Tis true, the antient *Scepticks* i *did not indeed deny, but that a Man ought to conform to the Customs of his Country; to practise the Duties of Morality; and in all such Cases to be determin'd upon* m *probable Grounds; without insisting upon, or expecting, absolute Certainty*. **But then, as Mr. *Bayle* himself owns, *they* n *did, under Pretence of only opposing the Reasons which the Dogmatists urg'd for the Existence of a Deity; in Effect, undermine the Doctrine itself.*** *Their Way was, first to premise,* o *that as for themselves, they pretended not to be singular in any Thing; but that following the common Course of Life, they, without being addicted to any particular Sect, held that there were Gods, worshipp'd 'em, and ascrib'd to 'em a Providence; but for the rash Reasonings of the Dogmatists about these Matters, 'twas what they could not submit to: Whereupon they produc'd their Objections; which were usually such, as did, by disproving a divine Providence, at the same Time destroy the Existence of a Deity*. As to Morality, there is no doubt to be made, but *Pyrrho* p taught, "that the Honesty and q Turpitude, Justice and Injustice of humane Actions, were intirely dependent upon humane Laws, and Custom." *Carneades*, r after having one Day made an admirable Harangue in Praise of Justice; did the very next shew, that it was only a mere empty Name; opposing it at the same Time more strenuously, than he had before defended it. Thus however excellent, those s Maxims of Morality, which the *Academick* and *Pyrrhonist* give out for Precepts, may be in themselves; yet in their Mouths, they can amount to no more, than empty Sounds, unprofitable Rules, Propositions advanc'd without any Foundation, and in flat Contradiction to their own proper Principles; this too, notwithstanding their Conduct and Demeanour be otherwise never so regular, and umblameable. **<u>According to *Carneades*, the chief End, or supreme Good, of Man, consisted in *the Enjoyment of*, what he call'd, t the *natural Principles*; that is to say, in satisfying Desires of Nature; without giving one's self any Trouble of Concern about Honour and Virtue.</u>**

https://archive.org/details/theistsatheiststst0000moln/page/70/mode/2up?view=theater

But once it is proved that God either does not exist or is so remote that his disinterest in men amounts to inexistence, the skeptic's weapon turns against reason itself: the disciples of Pyrrho hold that the world itself in unknowable in its assumed metaphysical reality **and that any judgment about the world can be balanced by a contrary and equivalent judgment. <u>The Sage is in an equipose between the *pro* and the *contra*</u>, hence the morality he adopts can only be an apparent or provisional morality, a submission to what sees useful in the practical order.** The skeptic's epistemology and ethics are thus in harmony, but they are the exact opposite of religious realism: against the latter's affirmation that the human intellect grasps the outside world, God, and the *quidditas* of moral relationships, it argues that since this is not the case, we should adjust our behavior to the prevailing

standards and mores. **This is an undoubtedly softer morality than that of the Stoics (following from the ontology of each), but it too seeks an undisturbed state of mind (*epoché*) related to the Stoics' *apatheia* and derived from the suspension of judgment. No wonder that it is easy to switch from skepsis to Stoicism and vice-versa,** and that Pyrrho's doctrine became so popular: as Pierre Bayle wrote at the end of the seventeenth century, reason is better able to demolish than to build, it knows better what things are not, than what they are. With such an agnosticism in cognitive matters, skepticism justified agnosticism in religious and moral matters too, **allowing a kind of carefully cultivated sloth to spread over mind and soul.**

---

https://archive.org/details/theistsatheiststst0000moln/page/76/mode/2up?view=theater

When the Paduan School, **mainly Pietro Pomponazzi and his disciples,** proceeded drastically to separate philosophy from religious doctrine and recruit it for science, most defenders of religion seized upon these, for them dangerous arguments to show that indeed reason is not the right instrument of disquisition about God and matters divine, that faith alone is such an instrument. **This fideistic thesis was best summed up by Pierre Charron, seventeenth-century cleric and disciple of Montaigne,** who declared that God had indeed created man to know the truth, but that he cannot know it by himself or by any human means. The senses are deceptive, the real nature of things escapes one's reach, and our intellectual ideas lack objective validity. God was unknowable because we are weak and he is immense. **The only possible way of knowing him, argued Charron making use of the subtle skepticism of medieval radical mystics, is to know him negatively.**
…

It all looks as if Charron, Gassendi, Descartes, and others, and before them Ockham and the Paduan naturalists had elaborated the fideist argumentation less with a view of defending God's existence than of disqualifying those who, in proving his existence, insisted on following the main avenue, that of reason.

https://books.google.fi/books?id=cQ8xzDLYWfsC&lpg=PP1&hl=fi&pg=PA7#v=onepage&q&f=false

While many Catholic theologians tried to offer historical evidence to justify the authority of the Church (without being able to show that historical evidence was the criterion), **a suggestion of the sceptical defense of the faith, the defense that was to dominate the French Counter-Reformation, was offered by Erasmus of Rotterdam.**
…

Erasmus' general anti-intellectualism and dislike of rational theological discussions led him to suggest a kind of sceptical basis for remaining within the Catholic Church. His reaction to the philosophers at the University of Paris in his student days and his condemnation, in *The Praise of Folly*, of their intellectual quest per se, culminated in the statement that **"human affairs are so obscure and various that nothing can be clearly known. This was the sound conclusion of the Academics [the Academic Sceptics], who were the least surly of the philosophers."**12
…

This attempt, early in the Reformation, at sceptical "justification" of the Catholic rule of faith brought forth a furious answer from Luther, the *De Servo Arbitrio* of 1525. Erasmus' book, Luther declared, was shameful and shocking, the more so since it was written so well and with so much eloquence. **"It is as if one carried sweepings or droppings in a gold or silver vase."**15 The central error of the book, according to Luther, was that Erasmus did not realize that a Christian cannot be a sceptic.
…

The sole defender of Servetus among the Reformers, the scholar Sebastian Castellio of Basel, saw that the way to argue against the condemnation was to attack the Calvinists' claims to certainty. In his *De Haereticis,*27 written shortly after the burning of Servetus, Castellio tried to destroy the grounds for Calvin's complete assurance of the truth of his religious beliefs, without at the same time destroying the possibility of religious knowledge.

Castellio's method was to point out that in religion there are great many things that are too obscure, too many passages in Scripture too opaque for anyone to be absolutely certain of the truth. These unclear matters has been the source of controversy for ages, and obviously no view was sufficiently manifest so that everyone would accept it. (Otherwise why should the controversy continue, "for who is so demented that he would die for the denial of the obvious?")28 **On the basis of the continual disagreements and the obscurity of Scripture, Castellio indicated that no one was really so sure of the truth in religious affairs that he was justified in killing another as a heretic.**

This mild, sceptical attitude and defense of divergent views elicited a nasty and spirited response. **Theodore Beza saw immediately what was at issue and attacked Castellio as a reviver of the New Academy (**the Platonic academy two generations after Plato, starting mid-fourth century B.C.E.) **and the scepticism of Carneades, trying to substitute probabilities in religious affairs for the certainties required by a true Christian.**29 **Beza insisted that the existence of controversies proves only that some people are wrong.** True Christians are persuaded by the Revelation, by God's Word, which is clear to those who know it. **The introduction of the *akatelepsis* of the Academic sceptics is entirely contrary to Christian belief.** There are truths set up by God and revealed to us, and anyone who does not know, recognize, and accept them is lost.30

Castellio wrote, but did not publish, a reply, in which he tried in a general way to show how little we can know, and the "reasonable" way for judging this knowledge, and then applied his modest standards to the controversies of his time. **The *De arte dubitandi*** 31 **is in many ways a remarkable book, far in advance of its time in proposing a liberal, scientific, and cautious approach to intellectual problems,** in contrast to the total dogmatism of the Calvinist opponents.32
…

These several indications of interest in ancient scepticism in the first part of the sixteenth century are what Villey called "small fires of scepticism which cast a very pale and brief glimmer of light and then quickly disappear."123 None of the figures considered were particularly competent as thinkers; none of them seems to have discovered the true force of ancient scepticism, possibly because, with the exception of the younger Pico, they knew only the less philosophical presentations in Cicero and Diogenes Laertius, or possibly because they were befuddled by the wealth of disagreements that have always existed among men about all intellectual topics.

At any rate, prior to the publication of Sextus Empiricus, there does not seem to be very much serious philosophical consideration of scepticism. **Busson has tried to make the few works dealing with Academic scepticism signs of a vast intellectual movement growing out of the impact of Paduan thought in France.**124 **However, although there was, no doubt, some joint development, the Aristotelianism of the Italian thinkers was far removed from sceptical thought, *except for* its final fideistic conclusion.** The Paduans were confirmed rationalists, whose views of philosophy were the result of accepting a certain philosophical framework and the rational constructions within it. The sceptics, on the other hand, denied or doubted the entire procedure and basis of the Aristotelians. **The sole point of agreement of the two was that the articles of faith could not be supported by rational evidence and must be believed, not proved.** The few discussions of scepticism before 1562 may have occurred historically in the context of Paduan influences, but the ideas stem from ancient discussions about scepticism. Rather than being the culmination of Italian Aristotelianism, as Busson suggests, they appear to be due to isolated rediscoveries about Hellenistic philosophy. Those who write on scepticism do not seem to have studied each other, nor do they seem to be too concerned with serious philosophical analysis of sceptical problems. **It is only after the works of Sextus were published that scepticism became an important philosophical movement, especially as a result of Montaigne and his disciples.**

https://books.google.fi/books?id=qH6lgQsY3gMC&lpg=PA58&hl=fi&pg=PA60#v=onepage&q&f=false

Two remarkable events took place in the 1560's to secure the Catholic intellectual position. One was the publication in Latin of the writings of the Greek skeptic, Sextus Empiricus, and the other the installation in Paris of one of the greatest Jesuit controversialists, Juan Maldonat.
…

Veron answered that the so-called rules of reasoning were set down by a pagan, Aristotle, and why should he be taken as the judge of religious truth? And neither Jesus nor any of the church fathers maintained that their views were true because of the logic involved, but that they were true because they were the Word of God.17 When some reformers answered that Zeno of Elea, and not Aristotle, was the author of the rules of inference, Veron retorted, "A great objection: that it be Zeno or another; are they better judges of our controversies?"18 **The Calvinist leader, Pierre du Moulin, countered, in his *Elements de la Logique Françoise*, that logic is not based on the opinions of some ancient Greeks, "For there is a natural logic, which men make use of naturally without applying any art. Even the peasants make syllogisms without thinking about it."**19 About this Veron exclaimed, "poor supposed faith, based on the rules of Zeno's logic, or on the force of a peasant's reason."20
…

This type of fideism reaches its apex with François de la Mothe Le Vayer, "le voluptueux incrédule," who inherited the mantle of Montaigne from Mlle. de Gournay. La Mothe Le Vayer rose to eminence under the patronage of Richelieu and became the teacher of the king's brother and a member of the *Academie française*. **Although hardly an original mind, his skepticism is probably the most far-going of**

any of the Montaignians up to his time. And in spite of the constant attacks on his religion, or lack of it, from his contemporaries like Guez de Balzac and Antoine Arnauld, down to the most recent studies of Pintard, Julien-Eymard d'Angers, and Grenier, almost all his writings include a constant appeal to, and defense of, an extremely fideistic kind of Christianity.66

La Mothe Le Vayer's first love was Sextus Empiricus, whom he called "our master," "the divine Sextus," "the author of our new Decalogue," etc. The endless theme of La Mothe Le Vayer's writings, from his early dialogues down to his final soliloquies, is that Pyrrhonism is the philosophy closest to Christianity, and that the message of St. Paul is really the same as that of Sextus.
…

The beleaguered Calvinists who sounded warnings about the consequences of using François Veron's machine of war were also ignored. **The aggressive, premature anti-skeptics, like Garasse and Descartes, found themselves denounced and persecuted by the most orthodox leaders of the society, while the "Christian skeptics" were thriving as the favorites of Louis XIV and were dominating the intellectual scene. Garasse was condemned by the Sorbonne and silenced by the Jesuit order.** Descartes, offering a positive theory to demonstrate the existence of God and the immortality of the soul, to replace the skepticism and fideism them current, found himself attacked by a leading Jesuit, Father Bourdin, **and assailed by the Jesuit order until they achieved the condemnation of his works late in the century.** Among the leaders in the struggle against Cartesianism were Father Gabriel Daniel, a Jesuit who preferred the skepticism of Gassendi to the dogmatic metaphysics of Descartes, and Pierre-Daniel Huet, the Bishop of Avranches, and La Mothe Le Vayer's successor as the teacher of the Dauphin, who advocated a complete Christian Pyrrhonism in preference to what he considered the heretical dogmatism of Descartes, heretical for trying to provide a rational basis for religion.85
…

It is hard to date its termination, and the about-face in evaluation of the merits and aims of the Christian skeptics. **But the fate of Father Richard Simon's *Histoire critique du Vieux Testament* of 1678, the crowning achievement of the "new machine of war," is probably indicative of what was happening.** This scholarly work purported to demolish the Calvinist appeal to Scripture by showing that (a) no original manuscript of the Bible exists, and (b) nobody knows the original meaning of ancient Hebrew. Therefore Father Simon claimed no one could safely base one's faith on Scripture.

The destructive potentialities of Simon's work were immediately realized, the implications that it had for any and all historical documents, be they scriptural, apostolic, papal, or anything else. The work, dedicated to Louis XIV, was suppressed before publication. **(A copy of this edition survives in the library of the last important leader of the alliance, the last direct-line disciple of Montaigne, Bishop Pierre Daniel Huet.)**

The alliance lasted approximately from the end of the Council of Trent until the period of the Revocation of the Edict of Nantes, until France was again "toute Catholique."

https://oll.libertyfund.org/title/roper-the-crisis-of-the-seventeenth-century#lf6114_label_327

Even Montaigne, whose Pyrrhonism could be and was used as a means to defend traditional Catholicism, did not survive unscathed: **his essays were finally condemned in Rome in 1676.** And if the greatest religious thinker of seventeenth-century France, Cardinal Bérulle, the founder of the Oratory, contrived to **combine the ideas of Erasmus and Montaigne** with the Catholicism of the Counter-Reformation,36 his disciples, the French Oratorians, soon found themselves in difficulty.

> 36. For Bérulle, whom Mr. Popkin describes (*History of Scepticism,* p. 178) as **"perhaps the most important religious thinker of the Counter-Reformation in France,"** see especially Jean Dagens, *Bérulle et les origines de la restauration catholique* (Bruges, 1950).

Huet's scepticism is most fully presented in his *Traité philosophique de la foiblesse de l'esprit humain*, written in 1691 and 1692 but only published after his death in 1723. **At first, the Jesuits claimed it was a forgery put forth to embarrass the church.** However, manuscripts of the work existed in Huet's handwriting, and his correspondence made his authorship clear. In the *Traité*, he sets forth the Pyrrhonian position as presented in Sextus Empiricus. He carefully examines criticisms that had been

offered and refutes them. Huet contends that scepticism is the perennial philosophy, the ancient wisdom, that appears in biblical figures, in ancient Greek thinkers, in leading medieval philosophers and theologians such as Averroës, Maimonides, and Thomas Aquinas, and in more contemporary major thinkers such as Montaigne, Charron, Gassendi, and others.
…

In the *Traité*, in his correspondence, and in his marginal notes in his books (especially his copy of Pascal), **Huet presents an extreme fideism in which he denies that there can be any rational defense of religion, or even any evidence for it.** Pascal, he thought, did this when he put forth his wager arguments. Only faith can lead to any religious views. **It is not clear how much faith Huet himself had, or what he actually believed. As a bishop and a theologian, he set forth extremely latitudinarian views and was friendly with scholars all over Europe regardless of their religious views or affiliations.** He took no part in the French Catholic campaign against the Protestants and even helped some of those who were persecuted.

>
> **His literary works show him to have inherited and developed the spirit of the sixteenth century, rather than to have identified himself with the mind of the seventeenth century.**
> …
>
> But it was his posthumous work on the limitations of the human mind that drew forth serious protest. **In it Huet is a pure fideist.** For him, as for Pascal, reason and sense are incapable of bringing us to truth with certainty; that can be done only by faith. **The Jesuits refused at first, in the "Mémoires de Trévoux", to believe in the authenticity of the work.** In this they were mistaken; it certainly was Huet's; but they were right when they declared that, by decrying human reason as it did, **such a work was more likely to weaken than to strengthen the foundations of faith, as its author had intended.**

Unlike anti-intellectuals like Erasmus, Montaigne developed his doubts through reasoning. Unlike his sceptical predecessors, who presented mainly a series of reports on the variety of human opinions, Montaigne worked out his complete Pyrrhonism through a sequence of levels of doubt, culminating in some crucial philosophical difficulties. **The rambling musings of the "Apologie" have a method in their madness, a method of increasing the fever of doubt until it destroys every possible stronghold of rational activity.**56

The occurrence of Montaigne's revitalization of the Pyrrhonism of Sextus Empiricus, coming at a time when the intellectual world of the sixteenth century was collapsing, made the *nouveau pyrrhonisme* of Montaigne not the blind alley that historians like Copleston and Weber have portrayed it as being,57 **but one of the crucial forces in the formation of modern thought.** By extending the implicit sceptical tendencies of the Reformation crisis, the humanistic crisis, and the scientific crisis, into a total *crise pyrrhonienne,* Montaigne's genial "Apologie" became the coup de grâce to an entire intellectual world. It was also to be the womb of modern thought, in that it led to the attempt either to refute the new Pyrrhonism or to find a way of living with it. Thus, throughout the seventeenth and eighteenth centuries, Montaigne was seen not as a transitional figure, or a man off the main roads of thought, but as the founder of an important intellectual movement that continued to plague philosophers of their quest for certainty.58

When the initial volume [of the *Encyclopédie*] appeared in 1751, it included as its introduction an extraordinary document that achieved an instant and lasting success: d'Alembert's "Preliminary Discourse to the Encyclopedia of Diderot."

In the central and most important section of that essay, d'Alembert singles out four men for special praise – Francis Bacon, René Descartes, Isaac Newton, and John Locke. Before mentioning their names, the French philosophe describes what these four men had actually achieved: **"While adversaries, poorly instructed or malign in intention, openly made war on philosophy, it sought refuge, so to speak, in the works of a few great men – who, without having the dangerous ambition of tearing the blindfolds from the eyes of their contemporaries, prepared from afar, in the shadows and silence, the light (*la lumière*) from which, they supposed, the world would little by little, by insensible degrees secure illumination."**
…

Montaigne may not be a figure whom we would instinctively associate with d'Alembert's conspiracy, but that is merely a sign of our ignorance. **In his own day and in the seventeenth and eighteenth centuries, he was generally recognized as one of the founding fathers of modern philosophy.**78 And this was true for politics as well.79 Among the French philosopher's contemporaries, the Dutchman Justus Lipsius was the preeminent student of public affairs. **He championed Stoic political psychology and married it to the skepticism of Carneades; he edited Tacitus and wrote the first political commentary on his works; and he contributed decisively to the revival of Roman military discipline and thereby to the emergence of the modern, professional army.**80 Machiavelli he called "the Tuscan master." Montaigne he dubbed "the Gallic Thaïes." The latter's magnum opus he considered "honest, wise, and very much to my taste."81 In Europe, he had found no one whose thinking accorded more fully with his own. So he told Montaigne in a letter that he eventually chose to publish.82 **Two centuries thereafter, Dugald Stewart, the last great figure of the Scottish Enlightenment, would echo Lipsius's evaluation of the Frenchman's importance. In his estimation, Montaigne had "done more, perhaps, than any other author … to introduce *into men's houses* … what is now called the *new philosophy*, – a philosophy certainly very different from that of Socrates."**83 If anything, Stewart understated the achievement of the man. Montaigne was a popularizer, to be sure. But he was much more as well: as the epiphet conferred on him by Justus Lipsius suggests, his true stature rests on a philosophical accomplishment of untold importance.

In the late sixteenth century, before anyone else seems to have noticed, Montaigne picked up on the argument which lay behind Machiavelli's passing hints and elaborated that argument in a fashion which led him to repudiate his Florentine mentor's exaltation of glory. **In the process, he severed the last, tenuous link connecting modern political philosophy with ancient Greece and Rome, and he launched an assault on heroic virtue that prepared the way for the liberal critique of the Christian saint as well as that of the classical citizen-warrior.** As one perceptive observer put it well over a century ago, "that immoral philosophy" which one finds "displayed in the dark precepts of Machiavel" can also be discovered "lurking in the desultory sallies of Montaigne." There, too, it threatens "to destroy the sense of intrinsic distinctions in the quality of actions, and to convert the maxims of statecraft and dissembling polity into the rule of manners."84

Aristotle strongly emphasized the "intrinsic distinctions in the quality of actions." For this reason, he possessed ample warrant for omitting *philanthropía* from his list of virtues: as the etymologies of the terms *fellow feeling*, *sympathy*, and *compassion* imply, pity is always rooted in the potential for selfpity: as such, it is a passion foreign to the peripatetic's justly proud paragon of moral virtue – "the man of great soul (*megalópsuchos*)."85 **Machiavelli had been able to include pity and humanity on his revised list only because he denied virtue any splendor independent of its function as an instrument for the acquisition of "security and well-being."** In developing the implications of this revolutionary assertion, Montaigne echoed the Italian writer's attack on those who designed imaginary commonwealths; and in the process, he made two insinuations: that heroism and virtuous restraint, in both their Christian and classical forms, are diseases of the soul grounded in an absurd and unjustified pride; and that these putative virtues are largely responsible for man's inhumanity to himself and to others.86 To communicate his reasoning on this and related matters, **Montaigne invented a new genre of prose, which he called essays.** If the French thinker is not properly appreciated today, it is perhaps chiefly because he conveyed his opinions in those essays for the most part by indirection and a studied carelessness. Scholars born and bred in societies peculiar for their tolerance of dissent rarely pay sufficient attention to the rhetorical strategies customarily employed by freethinkers writing in epochs of religious persecution.

The essay entitled "Of Virtue" is a good illustration of Montaigne's modus operandi. There, **the French philosopher begins his discussion by stating the unorthodox opinion that – at least for ordinary men – "resolute steadfastness" is nothing more than "a species of passion," akin to rage, "that drives and agitates" the soul and "to some extent tears it out of itself."** Then, he devotes the bulk of what follows not a discussion of virtue per se, but to a series of anecdotes concerning the practice of suttee in India, the activities of the sect of Assassins in Syria, and the like. **In each case, courage and self-sacrifice turn out to be irrational and highly disagreeable passions rooted in what the men of the time would have recognized as religious fanaticism. In this connection, he makes no mention of Christianity.** But lest his readers miss the point, Montaigne appends a particularly revealing comment to one of the first stories he tells. The tale recounts the woes of a "young gentleman, amorous and spirited (*gaillard*)" who expended considerable effort in softening "the heart of a beautiful mistress" but then found that at the critical moment "he was himself soft and failing." As soon as he reached home, the young man reportedly "deprived himself" of the offending member and dispatched it to the young woman, "a victim, cruel and bleeding, for the purgation of his offense." Montaigne tacitly acknowledges that the anecdote is ridiculous, gruesome, and even offensive. That fact only sharpens its bite and makes his punch line all the more effective: **"If this had been done for reason and religion, as in the case of the priests of Cybele," he wonders, "what would we not say of an enterprise so exalted?"**87

In other essays, the French thinker pursues the same rhetorical strategy. Thus, **he dedicates the first third of the chapter entitled "Of Cruelty" not to an account of cruelty itself, but to a rambling discussion never quite stating but clearly indicating, nonetheless, that heroism and self-sacrifice require one to take a perverse and twisted pleasure in doing violence to oneself.** As he explains at the outset, there is a difference between "virtue" and that "natural mildness (*douceur*) and ease of disposition (*facilité*)" which we call "goodness" and which we would be right in attributing to God. **Virtue can hardly itself be divine: it "demands a road rough and thorny";** and for that reason, it depends on external or internal opposition and often "cannot do without the assistance of vice." Sometimes, in fact, virtue climbs "to so high a point that it not only has contempt for pain but positively enjoys it."

…

Despite appearances, Montaigne is not making an *ad hominem* assault on Cato's integrity. In another context, he speaks of the man as "furnishing every example of virtue." That is, in fact, the point. While ostensibly giving courage and self-sacrifice all due praise, he effectively uses the example of Cato to debunk them both; and at the same time, he discreetly intimates that the one quality really worthy of esteem is that "natural *douceur* and *facilité*" which makes a man like Montaigne himself unable to see an innocent animal pursued and killed without feeling "displeasure."89 **"In the end," he elsewhere observes, "no eminent and spirited (*gaillard*) virtue is without some unruly agitation."**90 **For at the heart of the longing "always to be the best (*ansteúein*) and to be superior to others" lies an uncontrolled anger or rage that somehow remains invisible to men.**91 One might even say that virtue is the disease of which it is said be the cure.

To dispel the charm attached to heroism, Montaigne draws attention to a singular and, in his estimation, highly questionable aspect of modern Europe's Hellenic inheritance. With the term *kalos* or perhaps *kalokagathía* in mind, he notes that "in Greek one and the same word embraces the beautiful (*bel*) and the good." As the essayist was aware, that fact was a reflection of the ethos of of honor which reigned within the ancient city and which had subsequently been adopted by the martial aristocracy that shared dominion within Christendom with the Church. In Montaigne's view, that ethos and the ethical teaching of the ancient philosophers and their modern admirers which sustained is rested on a grand illusion. **He hints at its character by falsely attributing to Aristotle the view that "the right to rule (*commander*) belongs to the beautiful (*beaux*)" and the opinion that, "when there is anyone present whose beauty approaches that of the images of the gods, veneration is similarly to his due."** The French writer makes this assertion in a chapter entitled "Of Physiognomy," and it is clear that he has physical beauty in mind. He deliberately substitutes a discussion of bodies for Aristotle's discussion of the soul in order to draw attention to the difficulty of discerning beauty of soul and to the inevitable tendency to substitute for invisible distinctions of this sort **visible distinctions grounded less often in nature than in artifice and convention.** In a closely related section of the same chapter, Montaigne noted just how easy "it is to speak like Aristotle and live like Caesar."92

One can avoid such confusion and self-delusion – but only by abandoning the Platonic supposition that the soul's longing for the beautiful and noble is an erotic divination of the good. **Montaigne insists on identifying the good with the useful. And of course that requires weighing virtue in the scale of security and well-being.**
…

The essayist holds himself up as a proper model for others precisely because of his own self-absorption: **he lacks that *gaillardise* or spiritedness which the Greeks called *thumos*; and therefore, in contrast to the pagan and Christian paragons of virtue, Montaigne is on principle extremely mild and easygoing in his treatment of himself.** He rejects magnanimity (*megalopsuchía*), and therefore he cannot be considered a man of great soul. Above all, he is free from pride. **He thinks of man as an animal fearful of pain and desirous of pleasure – and not as a being somehow akin to the divine and therefore called on to transcend mere humanity through a pursuit of all that is ennobling and fine. For this reason, the French philosopher is prepared to "strike down" man's "presumption" and "voluntarily abdicate that imaginary kingship over the other creatures which is accorded to us."**94

As a consequence of lowering his sights and and of emphasizing man's kinship with the beasts of the field, Montaigne can write, "I, who maneuver always close to the earth, hate that inhumane wisdom which would make us disdainful of and hostile to the cultivation of the body. **I deem it equal to injustice to set our heart against natural pleasures and to take them too much to heart.** Xerxes was a fool, who, surrounded by all human pleasures, went and offered a prize to anyone who would find him others. But hardly less of a fool is that man who cuts short those that nature has found for him. We should neither pursue them nor flee them, we should accept them."95 **Intimately connected with Montaigne's genial self-indulgence is his relaxed and sympathetic attitude toward the pleasures enjoyed and the pains suffered by other sentient beings.** This broad empathy arises from his "nature" and is confirmed by his "judgment." Both dictate that he "cruelly hate cruelty as the extreme of all vices." And so he cannot see "a chicken's neck wrung without displeasure," and he finds it "painful to hear the scream of a rabbit in the teeth" of his dogs.96 **He considers popular government to be "the most natural and equitable," but he is put off by the spectacle of the Athenians executing for reasons of religion the generals victorious at Arginusae. Indeed, "the inhuman injustice" of this democratic piety makes him "almost ready to vow a hatred irreconcilable against all popular rule."**97 In similar fashion, the essayist is equally appalled by the general ancient practice of torturing slaves suspected of crimes and by the Roman custom of putting on gladiatorial shows. The taste of his contemporaries for bearbaiting and similar entertainments causes him to wonder whether "nature herself" has attacked "to man some instinct for inhumanity."98 **Most important of all, Montaigne presents himself as believing in "a general duty of humanity, that attaches us not to the animals alone, who have life and feeling, but even to trees and plants.** We owe justice to men, and good will and kindness to the other creatures which are capable of accepting it."99

Montaigne's apologia is deliberately exaggerated for comic effect, but it was no less influential for that. **He often denies the importance of his book, but the care he took in composing and publishing it in its various editions belies his claim.** He hints that he intends to be a teacher of statesmen, and he clearly achieved his aim.100

Epictetus, Horace, Cicero, Seneca, Plutarch, speak in Montaigne's *Essais* many dozens of times, in voices that are their own. Montaigne's Vergil is not the necromancer dear to the Middle Ages, but Homer's greatest descendant; his Ovid is not the compiler of allegories for nuns, but the imaginative poet of fascinating, often lascivious adventures.

This was attractive enough to the Enlightenment; what made it still more attractive was that Montaigne's view of life had undergone marked changes and that these changes, which reflect the teachings of ancient schools, deposited their traces in the *Essais*. It would be unjust to Montaigne to divide his development into rigid stages; even as a young man he was not a doctrinaire. But in his youth, when he dwelled with Roman resignation on the idea that to philosophize is to learn how to die, he echoed the Stoic philosophy of Seneca and Marcus Aurelius. **Later – as a vigorous skeptic who coined the motto *Que scais-je?* – he sounded much like the Pyrrhonists and like Cicero in his most skeptical phase.** At last he grew to depend on himself and his experience alone, taking for his only master Socrates, who had taught the supreme virtue of self-knowledge. Montaigne's philosophical pilgrimage thus offered his readers a clear-eyed anthology of pagan thought and an impressive drama of self-liberation.
…

Montaigne never abjured Catholicism; he lived and died a Christian – by his lights. But many of his eighteenth-century readers found it easy to put his tepid religiosity into the service of their secular world view. They appropriated Montaigne's preoccupation with himself, his unashamed pleasure in sensuality, his refusal to repent of his worldliness, his contempt for fanaticism, his humane views on education, **and above all, his Pyrrhonist pronouncements derived so unmistakably from pagan authorities.**

Human understanding is marvellously enlightened by daily conversation with men, for we are, otherwise, compressed and heaped up in ourselves, and have our sight limited to the length of our own noses. **One asking Socrates of what country he was, he did not make answer, of Athens, but of the world;—[Cicero, Tusc. Quaes., v. 37; Plutarch, On Exile, c. 4.]—he whose imagination was fuller and wider, embraced the whole world for his country, and extended his society and friendship to all mankind; not as we do, who look no further than our feet.** When the vines of my village are nipped with the frost, my parish priest presently concludes, that the indignation of God has gone out against all the human race, and that the cannibals have already got the pip. Who is it that, seeing the havoc of these civil wars of ours, does not cry out, that the machine of the world is near dissolution, and that the day of judgment is at hand; without considering, that many worse things have been seen, and that in the meantime, people are very merry in a thousand other parts of the earth for all this? For my part, considering the licence and impunity that always attend such commotions, I wonder they are so moderate, and that there is no more mischief done. To him who feels the hailstones patter about his ears, the whole hemisphere appears to be in storm and tempest; like the ridiculous Savoyard, who said very gravely, that if that simple king of France could have managed his fortune as he should have done, he might in time have come to have been steward of the household to the duke his master: the fellow could not, in his shallow imagination, conceive that there could be anything greater than a Duke of Savoy.

Beasts sufficiently show us how much the agitation of our minds brings infirmities and diseases upon us. **That which is told us of those of Brazil, that they never die but of old age, is attributed to the serenity and tranquillity of the air they live in; but I rather attribute it to the serenity and tranquillity of their souls, free from all passion, thought, or employment, extended or unpleasing, a people that pass over their lives in a wonderful simplicity and ignorance, without letters, without law, without king, or any manner of religion.**

I long had a man in my house that lived ten or twelve years in the New World, discovered in these latter days, and in that part of it where Villegaignon landed,—[At Brazil, in 1557.]—which he called Antarctic France. This discovery of so vast a country seems to be of very great consideration.
…

Now, to return to my subject, **I find that there is nothing barbarous and savage in this nation, by anything that I can gather, excepting, that every one gives the title of barbarism to everything that is not in use in his own country.** As, indeed, we have no other level of truth and reason than the example and idea of the opinions and customs of the place wherein we live: there is always the perfect religion, there the perfect government, there the most exact and accomplished usage of all things. **They are savages at the same rate that we say fruits are wild, which nature produces of herself and by her own ordinary progress;** whereas, in truth, we ought rather to call those wild whose natures we have changed by our artifice and diverted from the common order. In those, the genuine, most useful, and natural virtues and properties are vigorous and sprightly, which we have helped to degenerate in these, by accommodating them to the pleasure of our own corrupted palate. And yet for all this, our taste confesses a flavour and delicacy excellent even to emulation of the best of ours, in several fruits wherein those countries abound without art or culture. Neither is it reasonable that art should gain the pre-eminence of our great and powerful mother nature.
…

Our utmost endeavours cannot arrive at so much as to imitate the nest of the least of birds, its contexture, beauty, and convenience: not so much as the web of a poor spider.

All things, says Plato,—[Laws, 10.]—are produced either by nature, by fortune, or by art; the greatest and most beautiful by the one or the other of the former, the least and the most imperfect by the last.

These nations then seem to me to be so far barbarous, as having received but very little form and fashion from art and human invention, and consequently to be not much remote from their original simplicity. The laws of nature, however, govern them still, not as yet much vitiated with any mixture of ours: but ‘tis in such purity, that I am sometimes troubled we were not sooner acquainted with these people, and that they were not discovered in those better times, when there were men much more able to judge of them than we are. **I am sorry that Lycurgus and Plato had no knowledge of them; for to my apprehension, what we now see in those nations, does not only surpass all the pictures with which the poets have adorned the golden age, and all their inventions in feigning a happy state of man, but, moreover, the fancy and even the wish** and desire of philosophy itself; so native and so pure a simplicity, as we by experience see to be in them, could never enter into their imagination, nor could they ever believe that human society could have been maintained with so little artifice and human patchwork. I should tell Plato that it is a nation wherein there is no manner of traffic, no knowledge of letters, no science of numbers, no name of magistrate or political superiority; no use of service, riches or poverty, no contracts, **no successions, no dividends, no properties, no employments, but those of leisure, no respect of kindred, but common,** no clothing, no agriculture, no metal, no use of corn or wine; the very words that signify lying, treachery, dissimulation, avarice, envy, detraction, pardon, never heard of.
…

As to the rest, they live in a country very pleasant and temperate, so that, as my witnesses inform me, ‘tis rare to hear of a sick person, and they moreover assure me, that they never saw any of the natives, either paralytic, bleareyed, toothless, or crooked with age. The situation of their country is along the sea-shore, enclosed on the other side towards the land, with great and high mountains, having about a hundred leagues in breadth between. They have great store of fish and flesh, that have no resemblance to those of ours: which they eat without any other cookery, than plain boiling, roasting, and broiling. The first that rode a horse thither, though in several other voyages he had contracted an acquaintance and familiarity with them, put them into so terrible a fright, with his centaur appearance, that they killed him with their arrows before they could come to discover who he was. **Their buildings are very long, and of capacity to hold two or three hundred people,** made of the barks of tall trees, reared with one end upon the ground, and leaning to and supporting one another at the top, like some of our barns, of which the covering hangs down to the very ground, and serves for the side walls. They have wood so hard, that they cut with it, and make their swords of it, and their grills of it to broil their meat. Their beds are of cotton, hung swinging from the roof, like our seamen’s hammocks, every man his own, for the wives lie apart from their husbands. They rise with the sun, and so soon as they are up, eat for all day, for they have no more meals but that; they do not then drink, as Suidas reports of some other people of the East that never drank at their meals; but drink very often all day after, and sometimes to a rousing pitch. Their drink is made of a certain root, and is of the colour of our claret, and they never drink it but lukewarm. It will not keep above two or three days; it has a somewhat sharp, brisk taste, is nothing heady, but very comfortable to the stomach; laxative to strangers, but a very pleasant beverage to such as are accustomed to it. They make use, instead of bread, of a certain white compound, like coriander seeds; I have tasted of it; the taste is sweet and a little flat. The whole day is spent in dancing.

Their young men go a-hunting after wild beasts with bows and arrows; one part of their women are employed in preparing their drink the while, which is their chief employment. One of their old men, in the morning before they fall to eating, preaches to the whole family, walking from the one end of the house to the other, and several times repeating the same sentence, till he has finished the round, for their houses are at least a hundred yards long. Valour towards their enemies and love towards their wives, are the two heads of his discourse, never failing in the close, to put them in mind, that ‘tis their wives who provide them their drink warm and well seasoned. The fashion of their beds, ropes, swords, and of the wooden bracelets they tie about their wrists, when they go to fight, and of the great canes, bored hollow at one end, by the sound of which they keep the cadence of their dances, are to be seen in several places, and amongst others, at my house. They shave all over, and much more neatly than we, without other razor than one of wood or stone. **They believe in the immortality of the soul, and that those who have merited well of the gods are lodged in that part of heaven where the sun rises, and the accursed in the west.**

They have I know not what kind of priests and prophets, who very rarely present themselves to the people, having their abode in the mountains. At their arrival, there is a great feast, and solemn assembly of many villages: each house, as I have described, makes a village, and they are about a French league distant from one another. This prophet declaims to them in public, exhorting them to virtue and their duty: but all their ethics are comprised in these two articles, resolution in war, and affection to their wives. He also prophesies to them events to come, and the issues they are to expect from their enterprises, and prompts them to or diverts them from war: but let him look to’t; for if he fail in his divination, and anything happen otherwise than he has foretold, he is cut into a thousand pieces, if he be caught, and condemned for a false prophet: for that reason, if any of them has been mistaken, he is no more heard of.

Divination is a gift of God, and therefore to abuse it, ought to be a punishable imposture. Amongst the Scythians, where their diviners failed in the promised effect, they were laid, bound hand and foot, upon carts loaded with firs and bavins, and drawn by oxen, on which they were burned to death.—[Herodotus, iv. 69.]—Such as only meddle with things subject to the conduct of human capacity, are excusable in doing the best they can: **but those other fellows that come to delude us with assurances of an extraordinary faculty, beyond our understanding, ought they not to be punished, when they do not make good the effect of their promise, and for the temerity of their imposture?**
…

After having a long time treated their prisoners very well, and given them all the regales they can think of, he to whom the prisoner belongs, invites a great assembly of his friends. They being come, he ties a rope to one of the arms of the prisoner, of which, at a distance, out of his reach, he holds the one end himself, and gives to the friend he loves best the other arm to hold after the same manner; which being done, they two, in the presence of all the assembly, despatch him with their swords. After that, they roast him, eat him amongst them, and send some chops to their absent friends.
…

I conceive there is more barbarity in eating a man alive, than when he is dead; in tearing a body limb from limb by racks and torments, that is yet in perfect sense; in roasting it by degrees; in causing it to be bitten and worried by dogs and swine (as we have not only read, but lately seen, not amongst inveterate and mortal enemies, but among neighbours and fellow-citizens, and, which is worse, under colour of piety and religion), **than to roast and eat him after he is dead.**

Chrysippus and Zeno, the two heads of the Stoic sect, were of opinion that there was no hurt in making use of our dead carcasses, in what way soever for our necessity, and in feeding upon them too;—[Diogenes Laertius, vii. 188.]—as our own ancestors, who being besieged by Caesar in the city Alesia, resolved to sustain the famine of the siege with the bodies of their old men, women, and other persons who were incapable of bearing arms.

> [“‘Tis said the Gascons with such meats appeased their hunger.”—Juvenal, Sat., xv. 93.]

And the physicians make no bones of employing it to all sorts of use, either to apply it outwardly; or to give it inwardly for the health of the patient. But there never was any opinion so irregular, as to excuse treachery, disloyalty, tyranny, and cruelty, which are our familiar vices. **We may then call these people barbarous, in respect to the rules of reason: but not in respect to ourselves, who in all sorts of barbarity exceed them. Their wars are throughout noble and generous, and carry as much excuse and fair pretence, as that human malady is capable of; having with them no other foundation than the sole jealousy of valour. Their disputes are not for the conquest of new lands, for these they already possess are so fruitful by nature, as to supply them without labour or concern, with all things necessary, in such abundance that they have no need to**

enlarge their borders. And they are, moreover, happy in this, that they only covet so much as their natural necessities require: all beyond that is superfluous to them: men of the same age call one another generally brothers, those who are younger, children; and the old men are fathers to all. These leave to their heirs in common the full possession of goods, without any manner of division, or other title than what nature bestows upon her creatures, in bringing them into the world. If their neighbours pass over the mountains to assault them, and obtain a victory, all the victors gain by it is glory only, and the advantage of having proved themselves the better in valour and virtue: for they never meddle with the goods of the conquered, but presently return into their own country, where they have no want of anything necessary, nor of this greatest of all goods, to know happily how to enjoy their condition and to be content. And those in turn do the same; they demand of their prisoners no other ransom, than acknowledgment that they are overcome: but there is not one found in an age, who will not rather choose to die than make such a confession, or either by word or look recede from the entire grandeur of an invincible courage. **There is not a man amongst them who had not rather be killed and eaten, than so much as to open his mouth to entreat he may not.** They use them with all liberality and freedom, to the end their lives may be so much the dearer to them; but frequently entertain them with menaces of their approaching death, of the torments they are to suffer, of the preparations making in order to it, of the mangling their limbs, and of the feast that is to be made, where their carcass is to be the only dish. All which they do, to no other end, but only to extort some gentle or submissive word from them, or to frighten them so as to make them run away, to obtain this advantage that they were terrified, and that their constancy was shaken; and indeed, if rightly taken, it is in this point only that a true victory consists:

> “Victoria nulla est,
> Quam quae confessor animo quoque subjugat hostes.”
>
> [**“No victory is complete, which the conquered do not admit to be so.”**—Claudius, De Sexto Consulatu Honorii, v. 248.]

…

But to return to my story: these prisoners are so far from discovering the least weakness, for all the terrors that can be represented to them, that, on the contrary, during the two or three months they are kept, they always appear with a cheerful countenance; importune their masters to make haste to bring them to the test, defy, rail at them, and reproach them with cowardice, and the number of battles they have lost against those of their country. **I have a song made by one of these prisoners, wherein he bids them “come all, and dine upon him, and welcome, for they shall withal eat their own fathers and grandfathers, whose flesh has served to feed and nourish him. These muscles,” says he, “this flesh and these veins, are your own: poor silly souls as you are, you little think that the substance of your ancestors’ limbs is here yet; notice what you eat, and you will find in it the taste of your own flesh:”** in which song there is to be observed an invention that nothing relishes of the barbarian. Those that paint these people dying after this manner, represent the prisoner spitting in the faces of his executioners and making wry mouths at them. And ‘tis most certain, that to the very last gasp, they never cease to brave and defy them both in word and gesture. **In plain truth, these men are very savage in comparison of us; of necessity, they must either be absolutely so or else we are savages;** for there is a vast difference betwixt their manners and ours.

The men there have several wives, and so much the greater number, by how much they have the greater reputation for valour. And it is one very remarkable feature in their marriages, that the same jealousy our wives have to hinder and divert us from the friendship and familiarity of other women, those employ to promote their husbands’ desires, and to procure them many spouses; for being above all things solicitous of their husbands’ honour, ‘tis their chiefest care to seek out, and to bring in the most companions they can, forasmuch as it is a testimony of the husband’s virtue. **Most of our ladies will cry out, that ‘tis monstrous; whereas in truth it is not so, but a truly matrimonial virtue, and of the highest form.** In the Bible, Sarah, with Leah and Rachel, the two wives of Jacob, gave the most beautiful of their handmaids to their husbands; Livia preferred the passions of Augustus to her own interest; —[Suetonius, Life of Augustus, c. 71.]—and the wife of King Deiotarus, Stratonice, did not only give up a fair young maid that served her to her husband’s embraces, but moreover carefully brought up the children he had by her, and assisted them in the succession to their father’s crown.
…

Three of these people, **not foreseeing how dear their knowledge of the corruptions of this part of the world will one day cost their happiness and repose, and that the effect of this commerce will be their ruin, as I presuppose it is in a very fair way (miserable men to suffer themselves to be deluded with desire of novelty and to have left the serenity of their own heaven to come so far to gaze at ours!),** were at Rouen at the time that the late King Charles IX. was there. The king himself talked to them a good while, and they were made to see our fashions, our pomp, and the form of a great city. After which, some one asked their opinion, and would know of them, what of all the things they had seen, they found most to be admired? **To which they made answer, three things, of which I have forgotten the third, and am troubled at it, but two I yet remember. They said, that in the**

first place they thought it very strange that so many tall men, wearing beards, strong, and well armed, who were about the king (‘tis like they meant the Swiss of the guard), should submit to obey a child, and that they did not rather choose out one amongst themselves to command. Secondly (they have a way of speaking in their language to call men the half of one another), that they had observed that there were amongst us men full and crammed with all manner of commodities, whilst, in the meantime, their halves were begging at their doors, lean and half-starved with hunger and poverty; and they thought it strange that these necessitous halves were able to suffer so great an inequality and injustice, and that they did not take the others by the throats, or set fire to their houses. I talked to one of them a great while together, but I had so ill an interpreter, and one who was so perplexed by his own ignorance to apprehend my meaning, that I could get nothing out of him of any moment: **Asking him what advantage he reaped from the superiority he had amongst his own people (for he was a captain, and our mariners called him king), he told me, to march at the head of them to war.**

https://en.wikipedia.org/wiki/Noble_savage#Origin_of_term

> In France the stock figure that in English is called the "noble savage" **has always been simply "le bon sauvage", "the good wild man", a term without any of the anti-paradoxical frisson of the English one. Montaigne is generally credited for being at the origin of this myth in his *Essays* (1580), especially "Of Coaches" and "Of Cannibals".**

https://www.gutenberg.org/cache/epub/46333/pg46333-images.html#Footnote_3_52

> [3] I dare not speak of those happy nations, who did not even know the name of many vices, which we find it difficult to suppress; **the savages of America, whose simple and natural mode of government Montaigne preferred, without hesitation, not only to the laws of Plato, but to the most perfect visions of government philosophy can ever suggest.** He cites many examples, striking for those who are capable of appreciating them. But, what of all that, says he, they can’t run to a pair of breeches!

https://books.google.fi/books?id=cQ8xzDLYWfsC&lpg=PP1&hl=fi&pg=PA57#v=onepage&q&f=false

The impact of the Montaigne’s Pyrrhonism occurred both directly, through the influence of the *Essais*, which were very widely read and reprinted in the years immediately after their initial publication,63 **and also through the more didactic presentations of Montaigne’s disciples Father Pierre Charron and Jean-Pierre Camus, bishop of Bellay.**

Pierre Charron is a neglected figure in the development of modern philosophy, neglected because neither his thought nor his style rose to the heights of that of his mentor, Montaigne, and because of his reputation for libertinism. **But in his day, and in the half century after his death, Charron had an influence at least as great as his master’s in furthering the break with tradition and in forming the ideology of both the *libertinage érudit* and the French Counter-Reformation.** Because he was a professional theologian, Charron was able to connect the skepticism of Montaigne more systematically with the main antirational currents in Christian thought, **thereby providing a more thoroughgoing Christian Pyrrhonism by uniting the doubts of Pyrrho with the negative theology of the mystics.** Also, since Charron was a learned doctor, he could present the case for the new Pyrrhonism in a way in which it could be studied by those trained in the Schools, rather than in the more rambling and, for its day, more esoteric method of the French Socrates.
…

In 1589, for better or worse, after his failure to gain admittance to a cloister, the most important event of Charron’s life occurred, his meeting with Michel de Montaigne.64 During the remaining three years of Montaigne’s life, Charron studied and conversed with him, adopting the sceptical insights of the French Socrates as his own. Montaigne found in the preacher an ideal intellectual heir and left him a large worldly and spiritual legacy, as well as adopting him as his son. **(While Montaigne was alive, the sole gift that we know he gave to Charron was a heretical work, the catechism of the extremely liberal Reformer, Ochino.)**
…

The underlying theory of this Catholicism that is based only on complete scepticism is made much more explicit in Charron’s philosophical writing, *La Sagesse*, and his defense of it, *le Petit Traicté de la Sagesse*. The major theme here is that man is unable to discover any truth except by revelation, and in view of this, our moral life, except when guided by Divine Light, should be based on following nature. **This treatise of Charron’s is little more than Montaigne’s “Apologie” in organized form. In so ordering it, Charron presented what was one of the first philosophical writings in a modern language.**
…

Maryanne C. Horowitz has challenged my interpretation of Charron's view of the source of wisdom.88 **She has insisted that a careful textual analysis shows that Charron was a Neo-Stoic. I think we would agree that Charron was very eclectic.** He borrowed in large measure from Montaigne, but also from Du Vair and other classical and contemporary Stoics. Many of the writers of this period, as the late Julien Eymard D'Angers89 pointed out, used Stoic ideas and materials. Nonetheless, what was taken as the message and meaning of Charron was the Christian Pyrrhonism. (The evidence of why he changed certain passages does not indicate that he was trying to alter his views but that he was trying to get his book approved.)90

https://www.newadvent.org/cathen/03633b.htm

He studied law at Bourges, but after several years' practice he embraced the ecclesiastical state. For thirty years he preached with so much success that the bishops vied with one another to engage his services. Queen Margaret of Navarre entertained him as her preacher in ordinary, and King Henry delighted to hear him even before his conversion to the Catholic Faith.
...

The sceptic spirit which pervades the whole book allows it to be summed up in a very few words: **by his own natural light and strength man is incapable of finding principles of religion and morality sufficiently certain; and, being sure of nothing, it is consequently wise to live as conveniently and pleasurably as the common usage of the people among whom one lives allows. No attempt is made anywhere in the body of the book to conceal the baldness of this doctrine.**

Had Charron, **instead of engraving his easy-going "Je ne sçay" as the essence of all his worldly wisdom on the title-page of his "Sagesse" and over the entrance of his house,** taken, like Descartes, the time and the trouble of finding a solid basis of moral and religious certainty, he would have shown himself a deeper and more independent philosopher and a worthier moralist. As it is, we need not wonder that the second edition of the "Sagesse" encountered great opposition and was allowed to appear only after some passages had been softened down, and others explained or corrected. **Nor is the fierce onslaught of Garasse, who called Charron "*athée et le patriarche des esprits forts*", surprising, especially when, even in our days, nearly the same charge is made and ably supported by Ad. Franck in the "Dictionnaire des sciences philosophiques".**

https://en.wikisource.org/wiki/1911_Encyclop%C3%A6dia_Britannica/Charron,_Pierre

CHARRON, PIERRE (1541-1603), French philosopher, born in Paris, **was one of the twenty-five children of a bookseller. After studying law he practised at Paris as an advocate, but, having met with no great success, entered the church, and soon gained the highest popularity as a preacher,** rising to the dignity of canon, and being appointed preacher in ordinary to Marguerite, wife of Henry IV. of Navarre.
...

With regard to the nature of the soul he merely quotes opinions. **The belief in its immortality, he says, is the most universal of beliefs, but the most feebly supported by reason.** As to man's power of attaining truth his scepticism is decided; and he plainly declares that none of our faculties enable us to distinguish truth from error. **In comparing man with the lower animals, Charron insists that there are no breaks in nature.** The latter have reason; nay, they have virtue; and, though inferior in some respects, in others they are superior. **The estimate formed of man is not, indeed, flattering.** His most essential qualities are vanity, weakness, inconstancy, presumption. Upon this view of human nature and the human lot Charron founds his moral system. Equally sceptical with Montaigne, and decidedly more cynical, he is distinguished by a deeper and sterner tone. Man comes into the world to endure; let him endure then, and that in silence. **Our compassion should be like that of God, who succours the suffering without sharing in their pain. Avoid vulgar errors; cherish universal sympathy.** Let no passion or attachment become too powerful for restraint. Follow the customs and laws which surround you. Morality has no connexion with religion. Reason is the ultimate criterion.

Special interest attaches to Charron's treatment of religion. He insists on the diversities in religions; he dwells also on what would indicate a common origin. All grow from small beginnings and increase by a sort of popular contagion; all teach that God is to be appeased by prayers, presents, vows, but especially, and most irrationally, by human suffering. Each is said by its devotees to have been given by inspiration. In fact, however, a man is a Christian, Jew, or Mahommedan, before he knows he is a man. **One religion is built upon another. But while he openly declares religion to be "strange to common sense," the practical result at which Charron arrives is that one is not to sit in judgment on his faith, but to be "simple and obedient," and to allow himself to be led by public authority.** This is one rule of wisdom with regard to religion; and another equally important is to avoid superstition, which he boldly defines as the belief that God is like a hard judge who, eager to find fault, narrowly examines our slightest act, that He is revengeful and hard to appease, and that therefore He must be flattered and importuned, and won over by pain and sacrifice. True piety, which is the first of duties, is, on the other hand, the knowledge of God and of one's self, the latter knowledge being

necessary to the former. It is the abasing of man, the exalting of God,—the belief that what He sends is all good, and that all the bad is from ourselves. It leads to spiritual worship; for external ceremony is merely for our advantage, not for His glory. **Charron is thus the founder of modern secularism. His political views are neither original nor independent. He pours much hackneyed scorn on the common herd, declares the sovereign to be the source of law, and asserts that popular freedom is dangerous.**

https://archive.org/details/theistsatheiststst0000moln/page/82/mode/2up?view=theater

> It follows that all religions will benefit by getting rid of their non-functional [theoretical] accretions.23

This is a degenerate form of the earlier fideism, **only unlike Charron and Gassendi who were more rigorous thinkers than Schiller even if not necessarily more religious,** Schiller does not appeal to the irrational but authoritative faith of a church, but to growing religious indifference.24

https://www.academia.edu/3758118/Against_Throne_and_Altar

In his book, Charron is ostentatiously conservative in the Averroist fashion, insisting that a wise man will conform outwardly, in both word and deed, to the expectations of the society in which he lives,106 **but it is striking that he nowhere endorses, as Averroës does,**107 **Aristotle's claim that man is a political animal and his contention that politics is needed as a supplement to ethics for the promotion of moral virtue.**
…

Moreover, in the clearest possible language, as near as possible to the center of his chief work's central book, Charron openly challenges the Averroist contention that religion – and, in particular, belief in an afterlife where virtue is rewarded and vice punished – is in any way supportive of moral virtue. There, after pointing to the use of religious fear for the purpose of political manipulation, he laments that "execrable crimes" that "the zeal for religion has produced," **and there, without mentioning his source, he quotes two notorious lines illustrating Lucretius' denunciation of religion as an inspiration for monstrous deeds. "Beware," he writes, "of one who is an honest man out of scruple and because of a religious bridle, and esteem him hardly at all."** Beware of "the man who has religion without honesty (*preud'homie*)." Charron is not willing to say that the latter is "more wicked … than one who has neither" religion nor honesty. **But he does regard him as "much more dangerous."** Such a man, he explains, "having no taste, no image, or conception of *preud'homie* except with regard to religion and in its service, and thinking that being a good man is nothing other than taking care to advance and promote his own religion, believes that everything – whether it be treason, perfidy, sedition, rebellion, or any other offense, whatever it might be – is not only lawful and permitted, excused (*colorée*) by zeal and a care for religion." He also believes that such conduct is "praiseworthy, meritorious, and grounds for canonization, if it serves the progress and advancement of religion and the overthrow of its adversaries."109

If Charron broke with the Averroist consensus, if he followed Machiavelli in abandoning the cause of moral virtue and in applying to Christianity Lucretius' savage critique of all religion, he evidently had his reasons. In contrast with Pomponazzi, but like Montaigne, he had witnessed the wars of religion, those in his native France.110 He was no doubt well-informed concerning those that had preceded them in Germany, and he had the sense to recognize that there might well be more such wars to come. **In his book, he said no more than that which Montaigne had intimated,**111 **and fairly often he said what he said using Montaigne's own words.**112 **He was merely voicing what every *politique* took for granted.** But actually saying such things out loud – "in a terse fashion, distinctly, clearly, with an air of certitude" – nonetheless mattered, for the publication of Charron's book appears to have marked a sea change in European thought.

That its influence was profound there can hardly be doubt. In the period stretching from 1601 to 1634, the book was reprinted in one form or another some twenty-four times.113 It first appeared in English in 1608, and it was reprinted in 1612, 1615, 1620, 1630, and 1640. There is reason to believe that *Of Wisdom* was no less important than *De rerum natura* in helping Sarpi to make the transition from an Averroism deeply indebted to Pomponazzi to an outright hostility to religion itself,114 and we know that Elie Deodati and is friends in the *Tétrade* were devotees of Charron.115 **The odds are good, given the work's publication history, that today we see no more than the tip of of what was then a very large iceberg. Though now forgotten, *De la sagesse* was read by virtually all educated men throughout much of Europe.**

https://en.wikipedia.org/wiki/Paolo_Sarpi#Views

Sarpi read and was influenced by the skepticism of Michel de Montaigne and his disciple Pierre Charron.[45] As a historian and thinker in the realist tradition of Tacitus, Machiavelli, and Guicciardini, he stressed that patriotism as national pride or honour could play a central role in social control.[46] **At various times during his lifetime he was suspected of a lack of orthodoxy in religion: he appeared before the Inquisition around 1575, in 1594, and in 1607.**[47]

Sarpi hoped for toleration of Protestant worship in Venice and the establishment of a Venetian free church by which the decrees of the Council of Trent would have been rejected. Sarpi discusses his intimate beliefs and motives in his correspondence with Christoph von Dohna, envoy to Venice for Christian I, Prince of Anhalt-Bernburg.[48] **Sarpi told Dohna that he greatly disliked saying Mass and celebrated it as seldom as possible, but that he was compelled to do so, as he would otherwise seem to admit the validity of the papal prohibition.** Sarpi's maxim was that "God does not regard externals so long as the mind and heart are right before Him."[49] Another maxim Sarpi formulated to Dohna was *Le falsità non dico mai mai, ma la verità non a ognuno* ("I never, never tell falsehoods, but the truth I do not tell to everyone.").[*citation needed*]

Sarpi at the end of his life wrote to Daniel Heinsius that he favoured the side of the Calvinist Contra-Remonstrants at the Synod of Dort.[50][51] Yet although Sarpi corresponded with James I of England and admired the English *Book of Common Prayer*, Catholic theologian Le Courayer in the 18th century wrote that Sarpi was no Protestant, terming him *"Catholique en gros et quelque fois Protestant en détail"* ("Catholic in general and sometimes Protestant in detail"). In the twentieth century, William James Bouwsma found Sarpi to have been a philo-Protestant whose religious ideas were nevertheless "consistent with Catholic orthodoxy,"[52] and Eric Cochrane described him as deeply religious in the typical spirit of the Counter-Reformation.[53] **Corrado Vivanti saw Sarpi as a religious reformer who aspired toward an ecumenical church,**[54] **and historian Diarmaid MacCulloch describes Sarpi as having moved away from dogmatic Christianity.**[55] **On the other hand, in 1983 David Wootton made a case for Sarpi as a scientific materialist and thus as likely a "veiled" atheist who was "hostile to Christianity itself" and whose politics looked forward to a secular society unrealizable in his own time,**[56] a thesis that has won some acceptance.[57] Jaska Kainulainen, on the other hand, asserts that the thesis that Sarpi was an atheist contradicts the historical record, **observing that neither Sarpi's pronounced skepticism nor his pessimistic view of capabilities are incompatible with religious faith:**

> Sarpi's writings do not support the claim that he was an atheist. In fact, from an atheistic point of view, systematic skepticism can be seen as providing support of religious belief, because atheists' position postulates certain knowledge of God's inexistence. ... In his case the fundamental question was not the existence of God, but whether knowledge of God was obtainable by reason or by faith. **His response was unequivocal: he was convinced that knowledge of divine matters was attained sola fide and he explicitly claimed that in religious matters one could not make judgments based on reason, but instead, they had to be based on affection or feeling.**[58]

https://www.academia.edu/3758118/Against_Throne_and_Altar

> Sarpi's book has an interesting history. **It was smuggled out of Venice in 1618 by the English ambassador in a series of discrete parcels. In London, with support from James I, Sir Francis Bacon, and the archbishop of Canterbury,** it was edited by Marc' Antonio de Dominis, the renegade Catholic archbishop of Split, published in the original Italian, and then translated into virtually every European language for circulation throughout Western Christendom. **The Anglicans who sponsored its publication and the Protestants on the continent who embraced it seem not to have recognized at the time that its acid analysis of what came to be called priestcraft could and would soon be turned against them.**

https://books.google.fi/books?id=cQ8xzDLYWfsC&lpg=PP1&hl=fi&pg=PA62#v=onepage&q&f=false

Another early disciple of Montaigne was Jean-Pierre Camus (1584-1654), **who became a doctor of law at eighteen,** a priest a few years later, and the bishop of Bellay at twenty-five. He became the secretary of St. François de Sales and spent much of his life writing pastoral novels and attacking the monastic orders. **His most philosophical work, *Essay Sceptique*, was written prior to his religious life when he was only nineteen.** Although he was later embarrassed by its light tone, it contained his basic fideistic point of view. Even though he later came to condemn Montaigne's style and literary form, he never gave up Montaigne's ideas, and even defended his mentor against the charge of atheism.96

The *Essay* was written when "I was then fresh from the shop of Sextus Empiricus."97 It is an attempt of a rather novel sort of bring about Pyrrhonian suspense of judgment in order to prepare one for the true faith. As Pierre Villey has pointed out, "The fear of Protestant rationalism is at the base of the scepticism of Camus."98 Hence, by undermining human rational pretensions, he advanced a fideistic defense of Catholicism.

The presentation of the case for scepticism by Camus is unique, though, as he was the first to admit, the content "had been only a pure abridgement of Sextus Empiricus," and the style is an imitation of Montaigne's.99 Rather than rambling through the various themes of Pyrrhonian philosophy, as Montaigne did, or welding them into a battery of arguments, primarily against Aristotelianism, as Charron did, **Camus created a vast structure of Hegelian thesis, antithesis, and synthesis. The thesis is Academic scepticism – nothing can be known; the antithesis is dogmatism – something can be known; and the synthesis – "sceptical indifference," the Pyrrhonian suspense of judgment.**

…

For it was Montaigne, Charron, and Sextus who undermined the assurances of the philosophers, who served as the inspiration and source for the skeptics, and about whom the battles against the sceptical menace took place. **Even Bayle, always on the lookout for sceptical heroes, remembered Camus for his sallies against the monks rather than for his presentation of Pyrrhonism in the form of the Dialectic.**106

https://books.google.fi/books?id=cQ8xzDLYWfsC&lpg=PP1&hl=fi&pg=PA75#v=onepage&q&f=false

The Cardinal du Perron, perhaps the greatest of the French Counter-Reformers,61 **and himself a convert to Catholicism, spent practically no time in his controversial writings presenting evidence for his cause but devoted himself primarily to pointing out the inadequacy of the Calvinist theory of religious knowledge.** The cardinal, however, was a friend of Montaigne's adopted daughter, Marie de Gournay, and a great admirer of the fideistic writings of Montaigne's adopted son, Pierre Charron.62 A story about du Perron indicates his evaluation of the merits of human reason in theological matters. He was once invited to dinner by Henri III and, at the table, presented a discourse against atheism, offering proofs of the existence of God. When the king expressed his pleasure at this and praised du Perron, he answered, **"Sire, today I have proved by strong and evident reasons that there is a God. Tomorrow, if it pleases Your Majesty to grant me another audience, I will show you and prove by as strong and evident reasons that there is no God at all." The King, apparently not a fideistic Christian, became angry and threw his guest out.**63
…

Apparently, even to Montaigne's surprise, the Vatican expressed only the mildest disapproval of the views in the *Essais* and invited him to devote himself to writing in defense of the Church.66 Most of the disciples of Montaigne in the early seventeenth century received protection and encouragement from Cardinals Richelieu and Mazarin.67 The bishop of Boulogne, Claude Dormy, was a great admirer of Charron and helped him to obtain an approbation for *La Sagesse*. The bishop was so fideistically inclined that he disapproved of Charron's few efforts at moderating his Christian Pyrrhonism in the face of opposition from Sorbonne.68 The king's Confessor, the Jesuit Nicolas Caussin, printed a précis of the core of Charron's fideistic scepticism in his *La Cour Sainte*.69 **Cardinal Bérulle in his critique of rational knowledge offered a view strikingly like that of Charron.**70 In the 1620s, when Charron had been accused of being a "secret atheist,"71 he was defended first by Father Ogier72 and then by the great Jansenist theologian Saint-Cyran (Jean Duvergier du Hauranne). **The latter, who said that Cardinal du Perron had recommended Charron's theology to him, insisted that it was, by and large, just good Augustinianism and that Charron's Christian Pyrrhonism was in accord with the best in religious thought as well as Scripture.**73

https://books.google.fi/books?id=tSE6DwAAQBAJ&lpg=PT200&hl=fi&pg=PT61#v=onepage&q&f=false

Earlier [in 1685], Charles Cotton published an English translation of Montaigne and dedicated it to George Savile, the marquis of Halifax. In a letter accepting the dedication, which would later serve as a preface to the 1693 edition of Cotton's translation, **this great practitioner of Machiavellian prudence, who had already once helped save England from civil war at the time of the Exclusion Crisis and who would do so again in 1688,** commended Montaigne in language remarkably similar to that employed by Locke.
…

His essays were, the English statesman remarked, "the *Book* in the World I am the best entertain'd with."102

Halifax's own publications deserve at least a passing glance, **for one can easily trace the influence and the political implications of Montaigne's depreciation of human pretensions in the spirited attack on absolute, divine-right monarchy which the Frenchman's most outspoken English admirer launched in his celebrated pamphlet *The Character of a Trimmer*.** When George Savile contemplated "the glittering outside of unbounded Authority," he found "nothing but poor and miserable deformitie within."
…

His point was simple. **Where Aristotle intimated, and the ancient Greeks generally believed, that man is only fully human when aiming to be a god, he contended, instead, that "by aiming to be more than a man, he becomes a Beast."** Mindful of Montaigne's dictum that it is easy to speak like Aristotle and yet live like Caesar, Halifax depicted the individual who sets himself up as God's viceroy in the most scathing of terms: "A mistaken Creature swelled with Panegyriques, and flattered out of his sences: and not only an incumbrance but a common nusance to mankind; A hardned and unrelenting Soule." "And like some creatures that grow fatt with pyosons," the English statesman continued, "**he grows great by other men's miseries; An ambitious Ape of the Divine greatnesse; An unruly Gyant, that would storm even Heaven it selfe, but that his scaling Ladders are not long enough:** In short a wild beast in rich trappings, and with all his pride, no more than a Whip in God Allmighty's hand, to be thrown into the fire when the world has been sufficiently scourged with it."103

The adoption of Montaigne's principles would have profound political consequences. **It would lead men like Halifax to express disdain for "the affected humility of the divines, and the mistaken Ideas of some heroick coxcombs." It would cause them to repudiate the "unnaturall vertue" exhibited by Brutus**

and other patriotic "Romans who killed their own sonnes, when they had offended." And ultimately it would induce them to reject "unlimited Government" on humanitarian grounds, confessing that "if it should be so, that it is not possible for a State to bee great and glorious, except the Subjects are wretchedly miserable, **I am not ashamed to own my low spirited frailtry in preferring such a modell of Government as may agree with the reasonable enjoyments of a free people,** before such a one by which Empire is to bee extended at such an unnaturall price."104

But before we trace in detail the import of Montaigne's thinking for the constitution of government, we must pause and retrace our steps, for John Locke and the marquis of Halifax were by no means the first men of great political stature to discern the Frenchman's importance and to find his writing irresistible, and they may not have been the most influential. **A short time after the appearance of Montaigne's magnum opus, no less a figure than Sir Francis Bacon paid their author the supreme compliment of imitation by publishing a collection of essays himself.**105
...

The English statesman initiates the first discussion [on friendship] by contesting Aristotle's suggestion that someone who "*delighted in solitude*" might be a god rather than a wild beast, and throughout the piece, he emphasizes the degree to which "those that want friends to open themselves unto are cannibals of their own hearts." **He ends the second with a blunt admission: "There is little friendship in the world, and least of all between equals, which was wont to be magnified. That that is, is between superior and inferior, whose fortunes may comprehend the one the other."** The two discussions, though radically different in tone, are in fact intimately linked: **in denying to man the possibility of achieving a godlike capacity for serene and solitary contemplation, Bacon denies to man the capacity for *logos* that he must possess at least in some measure if he is to be capable of a friendship transcending utility** and the desperate craving men feel for a "discharge of the fullness and swellings of the heart."
...

We should not be surprised to find Sir Francis Bacon among the partisans of humanity. **In the universe described by Niccolò Machiavelli, where men who recognize their plight become "cannibals of their own hearts," pity stands in as a substitute for the friendship men need and can never possess.**115
...

As for goodness itself, in Bacon, it has little or nothing in common with the patriotism of the ancients, the contemplative virtues of the classical philosophers, and the otherworldly piety of their Christian successors. Goodness is a secular, cosmopolitan virtue; it properly belongs only to the man who is "a citizen of the world." Though it is the greatest of virtues, it demands only that its practitioner "be gracious and courteous to strangers," that "he be compassionate towards the afflictions of others," that "he easily pardons and remits offences," and that "he be thankful for small benefits." It does not require self-sacrifice, magnanimity, or greatness of soul, **and it does not demand that a man devote himself to the cultivation of human excellence; to the interest, honor, power, and glory of his country; or even to the saving of souls.**

> https://en.wikisource.org/wiki/The_Works_of_Francis_Bacon,_Volume_1/Essays/Of_Goodness_and_Goodness_of_Nature
>
> Errors indeed, in this virtue, of goodness or charity, may be committed. The Italians have an ungracious proverb, "Tanto buon che val niente;" "So good, that he is good for nothing:" and one of the doctors of Italy, Nicholas Machiavel, had the confidence to put in writing almost in plain terms, "That the Christian faith had given up good men in prey to those that are tyrannical and unjust;" which he spake, because, indeed, there was never law or sect or opinion did so much magnify goodness as the Christian religion doth; therefore to avoid the scandal and the danger both, it is good to take knowledge of the errors of an habit so excellent.
> ...
>
> The parts and signs of goodness are many. **If a man be gracious and courteous to strangers, it shows he is a citizen of the world, and that his heart is no island cut off from other lands, but a continent that joins to them:** if he be compassionate towards the afflictions of others, it shows that his heart is like the noble tree that is wounded itself when it gives the balm: if he easily pardons and remits offences, it shows that his mind is planted above injuries, so that he cannot be shot: if he be thankful for small benefits, it shows that he weighs men's minds, and not their trash: but, above all, if he have St. Paul's perfection, that he would wish to be an anathema from Christ for the salvation of his brethren, it shows much of a divine nature, and a kind of conformity with Christ himself.

To bring home the radically novel character of the moral code he recommends, Bacon contrives to end his account of humanity on an apparently pious but, in fact, exceedingly blasphemous note. "But above all," he writes, if the man blessed with goodness "have St. Paul's perfection, that he would wish to be an *anathema* from Christ for the salvation of his brethren, it shews much of a divine nature, and a kind of conformity with Christ himself."118 **Though disguised, Bacon's point – once suspected – is clear. If men are to escape the tyranny and injustice to which traditional Christianity subjects them, they will have to abandon the central tenets of the Christian faith and seek their salvation on earth and not hereafter.**119 **Like the Machiavelli who admitted to loving his "native city" more than his "soul" and who managed to compose *The Prince* and the *Discourses* without ever even mentioning the latter word,**120 **Sir Francis Bacon was the very figure of what his compatriots had just recently learned to call "the politic atheist."**121

...

To see what he has in mind by vulgar belief, one need only turn to the essay immediately following – a piece which could be published in England but which was too shocking to be included in the Italian edition.

In it, Bacon recants and acknowledges that godlessness has a certain charm. In particular, it is far preferable to superstition. **Precisely because it deprives men of the means for exalting themselves above human frailty, disbelief renders them fearful of death and peaceable in general.**

> https://en.wikisource.org/wiki/The_Works_of_Francis_Bacon,_Volume_1/Essays/Of_Atheism
>
> They that deny a God destroy man's nobility; for certainly man is of kin to the beast by his body; and, if he be not of kin to God by his spirit, he is a base and ignoble creature. It destroys likewise magnanimity, and the raising of human nature; for take an example of a dog, and mark what a generosity and courage he will put on when he finds himself maintained by a man, who to him is instead of a God, or "melior natura;" which courage is manifestly such that creature, without that confidence of a better nature than his own, could never attain. **So man, when he resteth and assureth himself upon divine protection and favour, gathereth a force and faith, which human nature in itself could not obtain;** therefore, as atheism is in all respects hateful, so in this, that it depriveth human nature of the means to exalt itself above human frailty.
>
> https://en.wikisource.org/wiki/The_Works_of_Francis_Bacon,_Volume_1/Essays/Of_Superstition
>
> **Atheism leaves a man to sense, to philosophy, to natural piety, to laws, to reputation:** all which may be guides to an outward moral virtue, though religion were not; but superstition dismounts all these, and erecteth an absolute monarchy in the minds of men: **therefore atheism did never perturb states; for it makes men wary of themselves, as looking no further, and we see the times inclined to atheism (as the time of Augustus Cæsar) were civil times: but superstition hath been the confusion of many states, and bringeth in a new "primum mobile," that ravisheth all the spheres of government.**

...

Indeed, in the modern dispensation, the Englishman tells us, “natural philosophy proposes to itself, as its noblest work of all, nothing less than the restitution and renovation (*instauratio*) of things corruptible, and (what is indeed the same thing in a lower degree) the conservation of bodies in the state in which they are, and the retardation of dissolution and putrefaction.”126 **This exaltation of medical science is precisely what the principles of humanity require if they are properly defined as “the affecting of the weal of men.” <u>It would be hard to imagine a populist rhetoric better suited to weaning the multitude from superstition</u> and to enlisting it among the supporters of philosophy’s emancipation from clerical tutelage.**127

...

To “*the vulgar sort*” who are, like Machiavelli’s “many,” anxious lest they “lose what they have acquired” already, he promises “the conservation of bodies.” **To “*generous spirits*” made “worthy to be princes” by the lust “to dominate” and “have more,” he proffers an enticement exceeding even the Florentine’s wildest dreams.** He offers not just the conquest of political fortune through manly *virtù* but the subjection of nature as a whole.

> https://books.google.fi/books?id=Zymp_kM33ZcC&lpg=PP1&hl=fi&pg=PA215#v=onepage&q&f=false
>
> When the Reformation and the Counter-Reformation it inspired rendered the situation of freethinkers within the Christian West increasingly precarious, **Europeans of philosophical temper began to reconsider the alliance of convenience forged with Julian’s Galilaeans so many years before, and a considerable number answered Machiavelli’s clarion call for the establishment of “new modes and orders” and flocked to the banner of revolt that he had unfurled.** Of these, the ablest then began pondering just how someone – perhaps graced “with more *virtù*, more eloquence and judgment” than the Florentine – might “be able to satisfy” the great man’s “intention”, **and in time they devised a strategy for resolving the “ancient quarrel between philosophy and poetry” once and for all by recasting the former <u>and equipping it with a new species of populist rhetoric so powerful as to virtually eliminate the multitude’s need for poetry in the traditional sense.</u>**48

A milder sort of these atheistical spirits there are that profess religion, but *timide et hæsitanter*, tempted thereunto out of that horrible consideration of diversity of religions, which are and have been in the world (which argument Campanella, *Atheismi Triumphati, cap. 9.* both urgeth and answers), besides the covetousness, imposture, and knavery of priests, *quæ faciunt* (as Postellus observes) *ut rebus sacris minus faciant fidem*; and those religions some of them so fantastical, exorbitant, so violently maintained with equal constancy and assurance; whence they infer, that if there be so many religious sects, and denied by the rest, why may they not be all false? or why should this or that be preferred before the rest? **The sceptics urge this, and amongst others it is the conclusion of Sextus Empericus, *lib. 3. advers. Mathematicos*: after**

many philosophical arguments and reasons pro and con that there are gods, and again that there are no gods, he so concludes, *cum tot inter se pugnent, &c. Una tantum potest esse vera*, as Tully likewise disputes: Christians say, they alone worship the true God, pity all other sects, lament their case; and yet those old Greeks and Romans that worshipped the devil, as the Chinese now do, *aut deos topicos*, their own gods; as Julian the apostate, Cecilius in Minutius, Celsus and Porphyrius the philosopher object: and as Machiavel contends, were much more noble, generous, victorious, had a more flourishing commonwealth, better cities, better soldiers, better scholars, better wits.

https://archive.org/details/LeoStraussThoughtsOnMachiavelli_201411/page/n31/mode/2up?view=theater

> Since under the Roman emperors free writers could not blame Caesar, they blamed Catiline, Caesar's luckless prefiguration, and they celebrated Brutus, Caesar's enemy. **After having indicated the principle, Machiavelli immediately turns to applying it by praising the pagan Roman religion,** the enemy of the Biblical religion: his praising the religion of the pagans while he was subject to the Christian Church is almost the exact counterpart of a Roman republican's praising the murderer of Caesar while being subject to the Roman emperors.36

https://archive.org/details/LeoStraussThoughtsOnMachiavelli_201411/page/n141/mode/2up?view=theater

> Christianity was compelled to permit and even to encourage the study of pagan literature. **That study and the admiration for the pagan way of life which it aroused in a few minds could thus become the entering wedge for Machiavelli's criticism of Biblical religion.** His praise of ancient Rome is an essential element of his wholly new teaching, but it is also, and even chiefly, a mere engine of subversion or of what one might call his immanent criticism of the Biblical tradition. **Admiration for ancient Rome was the only publicly defensible base from which he could attack the Biblical religion.**

http://hosted.desales.edu/files/salesian/PDF/PocettoRabelais.pdf

And yet even in the 17th century, an admirer of Francis de Sales apparently saw a close relationship. He had portraits of Rabelais along with Erasmus and the saint in his study and referred to these men as his "*dieux tutelaires*."1 It might even surprise the saint himself to have his name mentioned in the same breath as Rabelais, especially in view of the opinion he had of him. In a letter to Celse-Bénigne, son of St. Jane de Chantal, as he was going off to court, **de Sales advises the young man not to read that "infamous Rabelais and certain other writers of our era who make a career out of doubting everything, of despising everything and making fun of the maxims of antiquity."**2

> 1. Guy Patin, *Lettres de Gui Patin*, éd. Reveillé-Parise, (Paris: J.H. Baillière, 1846), 3 vols. 2: 284. "**Je les [les trente-six de se collègues] traitai dans ma chambre, où pardessus la tapisserie se voyaient curieusement les tableaux d'Erasme ... Montaigne, Charron ... Il y avoit encore trois autres portraits d'excellents hommes, de feu M. de Sales, évêque de Genève, ... et enfin de François Rabelais. ... Que dites-vous de cette assemblage? Mes invités n'étaient ils en bonne compagnie?"**

https://books.google.fi/books?id=cQ8xzDLYWfsC&lpg=PP1&hl=fi&pg=PA83#v=onepage&q&f=false

St. Paul's 1 Corinthians, Tertullian's *credo quia absurdum*, and the views of the negative theologians are sung in unison with the "golden books" of Sextus Empiricus.18 The net effect is that of an insipid Montaigne. Unfortunately, **La Mothe Le Vayer was neither the personality that Montaigne had been nor the theoretician that Charron was.**
…

For La Mothe Le Vayer, unlike his contemporaries Descartes and Bacon, the value of the method of doubt lies in clearing away the sciences as well as scientific interest. What remains is the suspension of judgment on all matters, and the divine Revelation. **"O precious Epoche! O sure and agreeable mental retreat! O inestimable antidote against the presumption of knowledge of the Pedants!"**25
…

Beginning with Balzac and Arnauld in the seventeenth century, down to such contemporary critics as Pintard, Grenier, and Julien-Eymard d'Angers, there has been a rather uniform judgment that this so-called Christian sceptic was really a "concealed sceptic" who lacked the religious fervor of Pascal or the possible orthodox intent of Montaigne.35
…

Julien Eymard d'Angers, in his excellent essay **"Stoïcisme et 'Libertinage' dans l'oeuvre de François La Mothe Le Vayer"** has found *evidences* of his nonreligious intent in his style and his use of examples.37 Jean Grenier has gound *evidences* in the flavor of his writings.38 René Pintard has found *evidences* in his career, his associations, and so on.39
…

The religious authorities in the mid-seventeenth century, who were so worried about heretical views, never seemed to have challenged La Mothe Le Vayer or his friends, except for Isaac La Peyrère.

https://books.google.fi/books?id=wrx9BgAAQBAJ&lpg=PP1&hl=fi&pg=PA180#v=onepage&q&f=false

The same tendencies noted in Charron appear also in La Mothe le Vayer,2 who moved in the free-thinking circles of his time. **He was a friend of Charron, familiar with Naudé,** a frequenter of both Gassendi and the irrepressible Guy Patin. Guez de Balzac seemed somewhat suspicious of his ideas, although in their correspondence he treats him with marked courtesy. He became the "protégé" of Mlle de Gournay, who remained his patroness until her death in 1645 and who bequeathed to him her library. **He was celebrated among his contemporaries for his erudition, so renowned, in fact, that he was considered for the position of tutor to Louis XIV and actually did become the preceptor of the Duke of Orléans.** Naudé and Bayle called him "Le Plutarque français," while Sorbière referred to him as "le Plutarque et le Sénèque de la cour, … un parfait modèle de vertu et d'érudition." Bayle remarked upon his erudition and his propensity for quoting others, and regretted that he did not push his own ideas with a greater independence. **Strangely enough, with this reputation for being another Plutarch, he seems to have utilized the works of his patronymic very infrequently, contrary to both Montaigne and Charron.**

Miss Wickelgren has explored the extent of his erudition in her thesis. Starting with his plan for assembling a small model library, she has examined his rather voluminous work with a view to collecting his references to these works. Among those which he seems to utilize the most are the Old Testament and Aristotle, **though he also quotes abundantly from Sextus Empiricus, Seneca, and Cicero. Those whom he recommends are Campanella, Giordano Bruno, Telesio, that is to say the Paduans, and Francis Bacon whose works, particularly the 1619 translation of the *Oeuvres morales* and the 1624 translation of the *Advancement of Learning*, were peculiarly attractive to him. This ability of La Mothe le Vayer to unite the Paduans, Montaigne and his sources, particularly Sextus and Seneca, and Francis Bacon is very interesting, indeed.** When coupled with Sorbière's translation of Hobbes, the extent of the English impact (at least *in potentia*) becomes apparent at a very early date. And when added to La Mothe's quotations from Pliny, from Averroes, Pomponazzi, and Cardano, not to mention the immense interest he took in voyage literature, the full range of this early seventeenth-century erudition and its importance in the evolution of ideas become very impressive.

Perhaps one example will bring out the significance of this remark. La Mothe wrote (Wickelgren, p. 51): "**L'athéisme (dit le Chancellier Bacon dans ses *Essais moraux*) laisse à l'homme le sens, la philosophie, la piété naturelle, les loix, la réputation, et tout ce qui peut servir de guide à la vertu; mais la superstition détruit toutes ces choses et s'érige une tyrannie absolue dans l'entendement des hommes."** In other words, atheism is less a menace than superstition, a point which Voltaire discussed and which became one of the most debated problems of the eighteenth century.

La Mothe's reputation was not restricted to the first half of the seventeenth century. His works were widespread throughout most of the century, so much so that one can subscribe without difficulty to Miss Wickelgren's estimate as to his estimate (p. 2): **"La pensée de La Mothe le Vayer forme en effet un lien entre les idées de la Renaissance et celles du XVIII siècle."**
…

This analysis of the situation certainly does not hold for La Mothe, since it was in 1630 that he published the first volumes of is *Dialogues*. In these articles he defined the nature of his skepticism, based upon Montaigne's concept of diversity of races, of tastes, of conditions, of morality, and of religions. **It is essentially an aristocratic attitude directed against the masses and especially against all forms of dogmatism and intolerance. La Mothe, like Montaigne in the *Apologie*, drew his controlling ideas from the *Hypotyposes* of Sextus Empiricus,** and insisted that the true skeptic is still seeking the truth. For him, as for his predecessor Montaigne, skepticism is a method of examination which compares and opposes objects of the senses to those of the intellect. **Its ultimate goal is to encourage indifference, or at least impassibility. Indeed, for La Mothe as well as for Montaigne, it was conceived as a means of merging stoicism with epicureanism.**

https://www.tandfonline.com/doi/abs/10.1080/0268117X.2000.10555468

[…] Le Vayer's interest in Scepticism has been considered only in its epistemological, rather than ethical, aspects.6 **Le Vayer is thus defined too narrowly as a Sceptic, and his Stoicism remains either unacknowledged or misunderstood – which is especially odd given that one contemporary characterized him as a Stoic,**7 **and his conduct invited contemporary comparisons with that of the ancient Sages.**8 Considered from any of these viewpoints, *De la vertu*

des payens baffles or invites dismissal, not least because Le Vayer uncharacteristically equipped it with an elaborate theological apparatus.

https://books.google.fi/books?id=eZSPCwAAQBAJ&lpg=PP1&hl=fi&pg=PA211#v=onepage&q&f=false

A particularly curious example of this is provided by François La Mothe Le Vayer's treatise *On the Virtues of the Pagans*, first published in 1641-42. **Le Vayer is best known as an exponent of philosophical skepticism: in this treatise, however, he stands forth as a theological polemicist, professing to defend the consensus of Catholic theologians against the view that pagans are incapable of genuine virtue. Pretty obviously, his target is Jansenius.** But Le Vayer then shifts the discussion to the more thorny question of whether pagans can be saved, and whether, indeed, any we know of may have been saved. Though careful to maintain that no one can be saved without faith in Christ, he suggests that in general good pagans, who believe in one God, and live well according to the natural light of reason, might be credited by God with an "implicit" faith and saved through divine grace. But he then reviews a number of famous individuals to assess their chances of salvation. **Those he discusses are all philosophers (if we count Julian the Apostate as a philosopher-emperor), and all from Greek or Roman antiquity, apart from Confucius.**

Le Vayer's position is often extremely hard to pin down, because of his habit of arguing *in utramque partem*, and of qualifying the conclusions to which his argument seemed to be leading. His assessment of the Stoics is as balanced, or as equivocal, as that of most the schools or figures he discusses. His account of Zeno of Citium, and of the Stoics in general begins by stressing the proximity of Stoic and Christian ethics, and then proceeds to insist on their differences, as to the nature of God, for instance, or the immortality of the soul. **Commendation for the Stoic enthusiasm for virtue is undermined by criticism of their paradoxes (for instance, the equality of all virtues and vices, of all good actions and all wrong actions).** The portrait of the Stoic sage is likewise condemned, especially Seneca's claims of his equality or superiority to God (Jupiter) (Seneca, *Ep*. 73). So is the view of suicide as legitimate. Yet Le Vayer distinguishes between Stoic teaching, as contrary to Christian faith, and Stoic behavior, often morally admirable (136-7). In the chapter on Seneca, **he holds up to admiration the passage of *De ira* (3.36), where the philosopher describes his daily examination of conscience: what, he asks, could the best Christian do that is more agreeable to God** (La Mothe Le Vayer 1647: 256-7)? (He is, none the less, pessimistic about Seneca's chances of salvation.)

A refutation was immediately produced by Antoine Arnauld, Jansenius's most dogged disciple. *De la nécessité de la foi en Jésus-Christ pour être sauvé* (On the necessity for salvation of faith in Jesus Christ) was not, however, published until 1701, held back, no doubt, by caution. **Le Vayer had powerful protectors; most likely he was writing at the behest of Richelieu, who loathed Jansenius and his followers.** Arnauld is not primarily concerned to discuss individual philosophers: far more important, he clearly sees, is **the general claim that salvation might not require an explicit faith in Christ – for that way deism lies** (Arnauld 1775-81: 321-2).
…

The moral maxims of the pagans are only "lessons in pride," teaching them to depend only on themselves for their virtue and happiness (114). **Arnauld observes with alarm that many contemporary Christians seem to think that the morality of the Scriptures is valid only for the cloister, and that the morality of Seneca and his like is more suitable to a gentleman ("honnête homme")** (129). **It will be seen that here as elsewhere the attack on pagan virtue in general is essentially targeted at its Stoic version; Aristotle is not directly attacked, if only because, Christianized by Aquinas, his ethic had been so heavily incorporated into orthodoxy.**

https://www.academia.edu/35745755/The_Varieties_of_neostoic_Virtue_Erasmus_to_Diderot

The erudite members of the learned French humanist circle known as *la Tétrade* introduced into their vindication of Graeco-Roman ethics, and particularly into the Seneca trial, a supple interplay of partial objections and critical consensus. **Confessional customs, court hypocrisy and self-censure imposed *libertins érudits* – unbelievers, freethinkers and atheists – a devious literary technique of lip service and substantial irreverence.** François de La Mothe Le Vayer, academician and preceptor of the Dauphin, published in 1642 *La vertu des Payens*, a treatise devoted to a systematic survey and vindication of the moral thought of pagan sages. Le Vayer adapted to his purpose the old genealogy of the *prisca sapientia*, asking whether the initiates of the chain who lived before the Christian era deserved eternal salvation. **They had high probabilities of salvation – he suggested – considering their «implicit faith» in God and in the coming revelation.**

This sly suggestion was in fact an understatement of the salvific mission of Christ. But what about Seneca, the former preceptor, minister and later victim of Nero, who committed suicide just two years before the execution of Peter and Paul? The shrewd freethinker affirms that the theory of implicit faith is valid for the older philosophers, but does not hold true in the case of a contemporary of the Christians who was certainly aware of Nero's persecutions against them. The malevolent gossip of Seneca's contemporary accusers and the theological charges of «pride» are quietly rejected thanks to a critical re-reading of Tacitus and Suetonius. **Le**

Vayer prefers to quote and discuss the benevolent tradition of *laudationes* beginning in the patristic age, which was kept alive by the Renaissance humanists. He stresses certain similarities between the Gospels and the *Epistolae ad Lucilium*, even if he discards the apocryphal correspondence between Paul and Seneca, remarking that any real contact between the two men would have left more evident tokens somewhere in the *Corpus Senecanum*. However, the Roman philosopher's views on the *summum bonum* and the immortality of the soul, and his biting satire of the idolatrous cults, quoted by Augustine, show that he can be considered quite close to «Roman orthodoxy». In spite of these reasons, however, Seneca could not aspire to eternal salvation because of the decay of «implicit faith» in his times. **Here Le Vayer's lip service shows the real content of his sceptical method, which set the pros and cons of the various arguments against each other in order to cast doubt on all dogmatic assertions, and finally to show the paradoxical deadlocks of human reason.**

https://books.google.fi/books?id=wrx9BgAAQBAJ&lpg=PP1&hl=fi&pg=PA207#v=onepage&q&f=false

Gassendi displays many of the intellectual traits of Erasmus as well as of Pierre Bayle, his successor. Like these two, his erudition was extensive and broadly humanistic. His love of classical poetry was an avocation. He knew well both the historians and philosophers of antiquity – Plato, Seneca, Pliny, Cicero, Plutarch, and Aristotle – and was also familiar with the writers of the Renaissance – Luis Vives, Pico, Ramus, and, of course, Montaigne and Charron.
…

With characteristic vigor Gassendi pointed out contradictions in the Aristotelian text and opposed to this ancient philosopher and his abstract rationalism the more experimental rationalism of other ancient writers. It was a tactic which he was destined to continue, especially in his arguments with Descartes**. He forged for himself a universal pyrrhonism as protection against the persecution of his contemporaries. Of course, this stance was characteristic of the free-thinking of his time: Charron, Naudé, and La Mothe showed the same tendency derived, as we have seen, from Montaigne.**

https://books.google.fi/books?id=cQ8xzDLYWfsC&lpg=PP1&hl=fi&pg=PA89#v=onepage&q&f=false

Montaigne, Charron, Camus, Naudé, Patin, and La Mothe Le Vayer criticized science but usually understood by this either the Renaissance conception of the Scholastic scientist, the Aristotelian, or the motley group of Renaissance alchemists, astrologers, numerologists, pantheists, and so on. Some of the humanistic sceptics knew and admired personally such heroes of the scientific revolution as Galileo. **But their usual notice of what was to become the "new science" was to comment briefly on Copernicus or Paracelsus not as discoverers of new truths but as peculiar figures who denied accepted theories, thus suggesting that if even the most accepted scientific theories could be challenged, nothing in the sciences should be accepted as true.**

On the other hand, thinkers like Leonard Marandé, Pierre Gassendi, and Gassendi's disciple Samuel Sorbière had scientific interests, and were participants in the formation of "the new science."
…

Bayle, in his article on Pyrrho, credited Gassendi with having introduced Sextus Empiricus into modern thought, and thereby having **opened our eyes to the fact that "the qualities of bodies that strike our senses are only appearances."**58 This attack on the attempts to build up necessary and certain sciences of Nature from our sense experience is the starting point of Gassendi's thought.
…

The high point of Gassendi's Pyrrhonian attack occurs in the last chapter, entitled "That there is no science, and especially no Aristotelian science." Here, **the tropes of the ancient Pyrrhonists, of Sextus, Agrippa, Aenesidemus, and others were employed in order to show that our knowledge is always restricted to the appearances of things and can never deal with their real, hidden inner natures. We can tell how things seem to us but not how they are in themselves.** Thus, for example, we know from our experience that honey seems sweet. But we cannot discover if it is *really sweet*.67 The distinction Gassendi made between apparent qualities, how things seem or appear to us, and real qualities, what properties the object actually has, is one of the earliest clear formulations of the primary-secondary quality distinction in modern philosophy.68
…

Later he made perhaps his greatest contribution to modern science by developing the atomic theory of Epicurus as a hypothesis, or mechanical model, for relating appearances and predicting future phenomena.75 The positive side of Gassendi's thought led him to an attempt to mitigate his initial Pyrrhonism into a type of "constructive scepticism" and to develop a theory that would lie between complete scepticism and dogmatism.76 **This later view, fully developed in his *Syntagma*, as well as the theory of knowledge of his friend Mersenne, contitutes, perhaps, the formulation, for the first time, of what may be called the "scientific outlook."**

https://books.google.fi/books?id=cQ8xzDLYWfsC&lpg=PP1&hl=fi&pg=PA121#v=onepage&q&f=false

His magnum opus, the *Syntagma*, deals not at all with metaphysics but does treat at great length what his hero, Epicurus, called "canonics" – philosophy of logic and theory of knowledge. Here Gassendi examined the views he had originally espoused, those of the Pyrrhonists, and showed why he was abandoning their total doubt about the possibility of knowledge.
…

Thus, scientific explanation, which for Gassendi is in terms of an atomic theory, accounts for our experience of sense qualities but does not tell us anything about the nature of things-in-themselves, except how they appear in relation to us. This is the type of scientific object that Gassendi wished to protect from the doubts of the sceptics.
…

Having less comprehension of the nature of mathematics than did Mersenne, Gassendi was sceptical of the role that it could play in our understanding of nature and feared that the mathematical physicists were a new brand of metaphysicians, trying to portray the real nature of things in mathematical terms, like the Pythagoreans and Platonists of antiquity.57

But, whatever his limitations might have been, **Gassendi, perhaps even more than Mersenne, had accomplished one of the most important revolutions of modern times, the separation of science from metaphysics.** Building his new outlook on a complete Pyrrhonism with regard to any knowledge of reality, or the nature of things, he was able to develop a method and a system of the sciences that, of all those of the seventeenth century, comes closest to the modern antimetaphysical outlook of the positivists and the pragmatists. Rochot, in his many studies of Gassendi's atomism and his place in the history of scientific and philosophical thought, **shows him to be a most important link between Galileo and Newton, in moving from a conception of the "new science" as the true picture of nature to one wherein it is seen as a hypothetical system based solely on experience, and verified through experience, a conception in which science is never thought of as a way to truth about reality but only about appearance.**58

HOW GRATEFUL WOULD YOU BE IF YOU CAME TO ME COMPLAINING of a headache and I chopped off your head? Certainly, I fixed the problem – and permanently so! – but at a rather higher cost than you'd hoped for.

René Descartes' *Discourse on Method* [1637] has had a similar effect on the Western mind. Descartes' little book has done damage to us precisely by seeming to do good, like a bull who kindly offers to straighten up the china shop. Descartes attacked skepticism, but only be denying reality. He confirmed the idea of the immaterial soul against the pronouncements of the crass materialists of the day, but only by recreating us as insubstantial ghosts trapped in clattering machines. **He proved God's existence, but only by making it dependent on our thinking Him into existence. By his good intentions – if indeed they really were good – he fathered every flavor of self-congratulatory solipsism,** led us to believe we are no different from robots, and made religion a creation of our own ego. Thanks a lot, René.
…

He offered a method as medicine, pretending with false modesty that he wasn't really saying that everyone should follows his method, but merely describing what method had worked for him.

This false modesty hid a gargantuan pride. Descartes desired nothing less than that everyone should follow his method, and his wish has been all too handsomely fulfilled. He is known – and rightfully and woefully so – as the father of modern philosophy. If you think that doesn't pertain to you, the great Frenchman Alexis de Tocqueville said after his visit to America in the first half of the nineteenth century that **"America is … one of the countries where the precepts of Descartes are least studied and are best applied."**2
…

"I thought it necessary," he tells us in Part IV of the *Discourse*, "that I reject as absolutely false everything in which I could imagine the least doubt, so as to see whether, after this process, anything in my set of beliefs remains that is entirely indubitable."
…

Even if such a method doesn't lead to insanity, it certainly leads to narcissism, the morbid condition of believing that I sit in god-like judgment of everything else but nothing stands in judgment of me. We suspect that Descartes' method clothes itself in the most abject humility as a way to exert the most naked pride. **It assumes the posture of a quivering ant to presume the imposture of a towering god.**
…

Indeed, there seems to be no underlying common human nature at all, for **“the very same man with his very own mind, having been brought up from infancy among the French or the Germans become different from what he would had he always lived among the Chinese or among cannibals”** (Part II).
…

Recall Descartes’ strange conclusion: **as he could imagine that he had no body and that there was no material world, therefore he “was a substance the whole essence or nature of which was merely to think, and which, in order to exist, needed no place and depended on no material thing.”**

A ghastly conclusion, or rather a ghostly one, for by it Descartes imagined that we were pure spirits trapped in alien bodies (or more accurately, as we soon find out, alien machines). **As Descartes reveals in Part V of the *Discourse on Method*, he is a raving mechanist who believed that all nature was nothing more than machinery.** Animals and plants are no more alive (or dead) than hydraulic pumps, toasters, or alarm clocks.
…

If Descartes is the father of modern dualism, what does dualism itself beget? **A walking philosophical bipolar disorder, a creature who is not at home in creation, a creature who dwells in dual extremes, either as wholly a ghost or entirely a robot.** One day he feels that he is a god, a purely spiritual being, capable of completely mastering and manipulating all nature (including his own body) as he would any machine, and the next day believes that he is a purely material being, a helpless machine entirely mastered by the mechanics of nature.

This brings us to Descartes’ final error, his absolutely awful proof of the existence of God (in Part IV). We recall that Descartes puts as the first principle of his philosophy “I think, therefore I am.” He then asserts that God must exist because he (Descartes, not God) can think of a being more perfect than himself. Therefore, he concludes, **“this idea was placed in me by a nature truly more perfect than I was … and … this nature was God.” To make matters worse, Descartes then claims that it must be the case that his ideas, “insofar as they are clear and distinct, cannot fail to be true” because they too come from God.** Therefore, God exists, because Descartes can imagine Him, and all Descartes’ clear and distinct ideas are absolutely true, because God put them there!
…

His beastly reasoning had led us to reject God on the grounds that our thinking about Him is fuzzy, and to accept the most ridiculous utopian fantasies about humanity because we can imagine them quite clearly and distinctly.

https://archive.org/details/heine-on-the-history-of-religion-and-philosophy-in-germany/page/43/mode/2up?view=theater

Not Bacon, as one often hears, but rather René Descartes is the father of modern philosophy, and we will show clearly to what extent German philosophy derives from him.63

> 63. Francis Bacon (1561-1626), British philosopher, is considered the founder of modern scientific method. René Descartes (1596-1650), French philosopher, is known for his starting point of methodical doubt and his foundation of knowledge in self-consciousness (see below). **Heine follows Hegel in granting priority to Descartes.**

René Descartes is a Frenchman, and here, too, great France deserves fame for its initiative. But this great France, this noisy, turbulent, chattering land of the French never provided suitable soil for philosophy; perhaps philosophy will never flourish there. René Descartes felt this and went to Holland, a quiet, silent land of *trekschuiten*64 and the Dutch. There he wrote his philosophical works. **Only there was he able to free his spirit from the traditional formalism and to build up an entire philosophy out of pure thoughts, taken neither from faith nor empirical fact, as has been demanded of every true philosophy since that time.**

https://books.google.fi/books?id=cQ8xzDLYWfsC&lpg=PP1&hl=fi&pg=PA144#v=onepage&q&f=false

When and how Descartes came into contact with sceptical views is hard to tell. But he seems to have been well aware not only of the Pyrrhonian classics but also of the sceptical current of his time, and its ever-increasing danger to the cause of both science and religion. **He wrote in his answer to Father Bourdin: “Neither must we think that the sect of the sceptics is long extinct. It flourishes to-day as much as ever, and nearly all who think that they have some ability beyond that of the rest of mankind, finding nothing that satisfies them in the common Philosophy, and seeing no other truth, take refuge in Scepticism.”**7
…

As Pascal and Hume saw, the highest point in sceptical doubt had been reached.34 Once it had been suggested that the reliability of our most rational faculties was questionable, man had been transformed from a repository of truth into a sink of uncertainty and error.35 In his comments on the *malin genié*, in *The Conversations with Burman*, Descartes is reported to have noted that here he made

of man a great doubter and threw him into every possible objection, every possible reason for doubting.36 **Only when scepticism had been carried to this extreme, to engender a *crise pyrrhonienne* greater than that ever dreamed of by the *nouveaux pyrrhoniens*, could one overcome the force of scepticism.** Unless one were willing to pursue the possibility of raising doubts to the end, one could never hope to discover any truth untainted by doubt or uncertainty.
…

Descartes eliminates the possibility that the deity possesses demonic features by stressing the character of *our* idea of God. If the idea of God cannot include demonic elements, then what is clear and distinct about the idea must be true about the object, God himself. **"I recognize it to be impossible that He should ever deceive me; for in all fraud and deception some imperfection is to be found, and although it may appear that the power of deception is a mark of subtilty or power, yet the desire to deceive without doubt testifies to malice or feebleness, and accordingly cannot be found in God."**56 Descartes did not consider the possibility that it may be the demon, rather than God, who has supplied him with his idea of God, and who has compelled him to come to antidemonic conclusions about the moral nature of the deity. But, with this conception of God, based on the clear and distinct idea of him, **Descartes was now ready to march on triumphantly to his promised land, the new world of dogmatism where knowledge of truth and reality could be completely assured, since "I now have before me a road which will lead us from the contemplation of the true God … to the knowledge of the other objects of the universe."**57
…

The demon having been exorcised from heaven and earth, there then remained no question about the truths of mathematics. Once the criterion of clear and distinct ideas had been founded on God's guaranteed honesty, the initial doubts, the initial Pyrrhonism, vanished, for one could now tell what was true, what constituted evidence, and so forth. From here on, all is relatively safe and easy. Mathematical truths are clear and distinct. We are compelled to believe them, and in this compulsion we are secure since God is no deceiver. The relationship of these truths of Nature can also be discovered by our trust in God. We can be sure that there is a physical world to which the truths about pure extension apply, since God would not make us think so unless there was in fact such a world beyond the reach of our ideas.58

The atheist is not able to have this security about the objective truth of his clear and distinct ideas, because he does not have a God to guarantee what he thinks he knows.

https://books.google.fi/books?id=tSE6DwAAQBAJ&lpg=PT200&hl=fi&pg=PT73#v=onepage&q&f=false

Descartes links his critique of heroism and religious zeal intimately with his new science. **His tacit repudiation of the commonsense distinction between the noble love of God, the honorable longing for glory, and the base lust for money, wine, and sexual relief demands particular attention,** for the grounds for his break with the ancients and for his reorientation of philosophy in general come quickly to light when one considers the foundations he laid for the new morality. As the French philosopher puts it in the very first sentence of his treatise *The Passions of the Soul*, **"There is nothing in which it better appears just how defective are the sciences that we have from the ancients than in what which they have written concerning the passions."**150

Plato, Aristotle, and their successors never tried to explain away everyday, commonsense moral perceptions; in this sphere, as in all others, they took it as their task "to save the appearances (*tà phainómena*)" of popular opinion by showing that ordinary moral perceptions point beyond themselves to a more comprehensive and intelligible account of human experience.151 Accordingly, they attempted to make sense of the common opinion concerning the noble and the base desires: they pointed to the universal experience of internal conflict and explicated that experience on the supposition that each part of the soul must somehow have its own peculiar form of *érôs*.152

Like Bacon, Descartes rejected the Platonic and Aristotelian notion that "true philosophy" can somehow "be coaxed from the preconceptions of the intellect." **The apostle of universal doubt had little or no respect for everyday opinions,**153 **and he dismissed the notion of the divided soul entirely.**154

> https://en.wikisource.org/wiki/1911_Encyclop%C3%A6dia_Britannica/Stoics
>
> **If, however, in the science of nature the Stoics can lay claim to no striking originality, the case is different when we come to the science of man.** In the rational creatures—man and the gods—Pneuma is manifested in a high degree of purity and intensity as an emanation from the world-soul, itself an emanation from the primary substance of purest ether—a spark of the celestial fire, or, more accurately, fiery breath, which is a mean between fire and air, characterized by vital warmth more than by dryness. The physical basis of Stoic psychology deserves the closest attention.
> …

> What God is for the world that the soul is for man. **The Cosmos must be conceived as a single whole, its variety being referred to varying stages of condensation in Pneuma. So, too, the human soul must possess absolute simplicity, its varying functions being conditioned by the degrees or species of its tension. It follows that of "parts" of the soul, as previous thinkers imagined, there can be no question; all that can consistently be maintained is that from the centre of the body—the heart—seven distinct air-currents are discharged to various organs, which are so many modes of the one soul's activity.**[1]
> …
>
> With this psychology is intimately connected the Stoic theory of knowledge. **From the unity of soul it follows that all psychical processes—sensation, assent, impulse—proceed from reason, the ruling part;** that is to say, there is no strife or division: the one rational soul alone has sensations, assents to judgments, is impelled towards objects of desire just as much as it thinks or reasons. **Not that all these powers at once reach full maturity. The soul at first is void of content; in the embryo it has not developed beyond the nutritive principle of a plant (φύσις): at birth the "ruling part" is a blank tablet, although ready prepared to receive writing. This excludes all possibility of innate ideas or any faculty akin to intuitive reason. The source of all our knowledge is experience and discursive thought, which manipulates the materials of sense. Our ideas are copied from stored up sensations. No other theory was possible upon the foundation of the Stoic physics.**
>
> Note the parallel between the macrocosm and the microcosm. **The soul of the world fills and penetrates it: in like manner the human soul pervades and breathes through all the body, informing and guiding it, stamping the man with his essential character of rational.** There is in both alike a ruling part, though this is situate in the human heart at the centre—not in the brain, as the analogy of the celestial ether would suggest.

…

Not surprisingly, then, Cartesian psychology subordinates the soul to the body so completely **that one may be justified in suspecting the French philosopher of doubting whether the soul has any desires properly its own.**158 **He makes it clear that, if any such desires do exist, they are weak and of little or no importance:** for at the end of his treatise, he specifies that the pleasures shared by the soul and the body "depend entirely on the passions: so that those men whom the passions can move the most are capable of tasting the greatest sweetness in this life." In fact, **"wisdom is chiefly useful" in teaching men to be "masters of their passions and to regulate (*menager*) them with such address that the evils they cause are quite bearable and one can even draw pleasure from them all."**159

> https://archive.org/details/academicquestio00cice/page/156/mode/2up?view=theater
>
> You will, I say, be ashamed of that picture which Cleanthes was in the habit of drawing with such accuracy in his description. He used to desire those who came to him as his pupils, to think of Pleasure painted in a picture, clad in beautiful robes, with royal ornaments, and sitting on a throne. **He represented all the Virtues around her, as her handmaidens, doing nothing else, and thinking nothing else their duty, but to minister to Pleasure,** and only just to whisper in her ear (if, indeed, that could be made intelligible in a picture) a warning to be on her guard to do nothing imprudent, nothing to offend the minds of men, nothing from which any pain could ensue. **We, indeed, they would say, we Virtues are only born to act as your slaves; we have no other business.**

Effectively stripped of every form of *érôs* peculiar to itself, the soul reappears as the servant of the body: the *res cogitans* is capable of calculating how best to provide for the body's needs; it can sometimes revolve the conflicts arising from contradictory passions by concentrating attention on one discrete object of desire to the virtual exclusion of all others; and over the long run, it can achieve a species of command over the passions through a process of habituation – but it is not capable of initiating motion on its own.

…

When the soul is reduced to a *res cogitans*, virtue can no longer be understood as a mean,161 **and Descartes therefore replaces magnanimity (*megalopsuchía*) with the quality he calls *générosité*. The latter cannot be "the crowning ornament and ordering principle (*kosmos*) of the virtues" because a soul undivided can possess no principle of order.** *Générosité* is, as its etymology is intended to suggest, an inborn quality, an ingenerate strength of soul, a congenial species of courage rooted in the dispositions of the body. It is an uncontrollable, overpowering lust for mastery; and because it cannot itself be checked, it is the master passion that serves as "the key to all the other virtues" and as "a general remedy against all the disorders of the passions."162 **In fact, *générosité* sums up all the virtues; or, rather, to be more precise, it supplants virtue altogether.**

https://archive.org/details/in.ernet.dli.2015.218820/page/n93/mode/2up?view=theater

This mind, which is always thinking, has no brothers. Cartesianism presents, in a remarkable degree, that rigid isolation into which any consistent rationalism shuts the human being. It is out of the heroic void and

autonomous solitude of pure thought that Descartes formulates his terrible *cogito ergo sum*. Man, as he conceives him, stands alone in the wide world with his *cogito*, his noble power of thinking, ordering, and clarifying, which builds up the whole Cosmos for him: God, man, and nature; world-risings and world-settings; sociologies, astronomies, physics; atoms, vortices, planets; states, passions, virtues. **Yet at bottom (although it will not admit it and is perhaps unaware of it) this *Monas Cartesius*, which thinks and thinks and thinks, is alone real. Sense-perceptions are not true, but only the thought of these perceptions. Similarly in geometry what is real (or at any rate what is essential) is not the actual curve, but the general formula of it that reason discovers.** Sensual conceptions have less reality because they are "unclear." And what guarantee have we that the whole world of the senses is not a dream? "When I consider the matter carefully, I find not a single characteristic which would serve definitely to distinguish the waking conditions from a dream. So similar are the two that I am completely at a loss to know whether I myself am dreaming at this moment." Here Descartes unmasks himself suddenly as a true Baroque philosopher, by degrading the world of the senses to a reality of the second order, conceiving of it—even though only in hypothesis—as a dream, and in any case showing the profoundest distrust of the whole. He show's himself a child of the Baroque, too, **in combining with his fundamental scepticism and extreme revolutionary rationalism an unconditional recognition of actuality so far as its property of power is concerned.** In his human capacity he was, as has been pointed out, strictly conservative, almost reactionary, and in his heart an anti-reformer. For the Reformation was individualistic, democratic, "progressive," libertarian in *practice*—and to this Descartes was ever opposed. **Bossuet said of him that his prudence before the Church went to extremes, and he himself recommends his readers to observe under all circumstances the laws and customs of the country in which they live, hold fast to the religion in which they were bred,** obey the most moderate and widely accepted rules in society, and avoid altogether the discussion of ethical matters, since it is the business of those invested with power, and those only, to set up moral standards for others. He was an aristocrat and a Catholic, and never in any connexion a "protestant," but in spite of this (or more probably because of this) **he created a philosophy more unprejudiced than anything that any bourgeois or reformer of his country ever achieved.** In its there breathes the air of a mind so free that it despises freedom itself.

> https://archive.org/details/leviathaninstate0000schm/page/90/mode/2up?view=theater
>
> With a *humanitas* that is still philosophical in the classical sense, Descartes recognized all existing orders based in religion and tradition, in church and state.
> …
>
> **But the tolerant conservatism of Descartes should not deceive us; precisely because this philosopher understood the human body to be a mechanism, all things human, in their very core, had already been changed in a revolutionary manner.** This change signaled the coming technical-industrial revolution.

https://archive.org/details/threecriticsofen0000berl_z2z0/page/92/mode/2up?view=theater

What Descartes cautiously implied, the radicals of the eighteenth century proclaimed boldly and clearly: that every form of belief and practice that was not founded on a rational basis, such as religious or non-rational or subjective thought or feeling, is so much gratuitous deviation from the one, eternal, timeless truth.

https://archive.org/details/radicalenlighten0000isra/page/380/mode/2up?view=theater

What [Bekker] denied was the near universal conviction that Satan, demons, or any spirits can, through spells, possession, bewitchment, or any magical device, alter the normal workings of nature's laws and influence men's lives. **Sticking rigidly to Descartes' dichotomy of 'thought' and 'extension,' he claims their being distinct substances precludes all interaction between the two, so that evil spirits, the essence of which is 'thought,' can no more influence bodies than bodies can spirits.**34 Contact between disembodied spirits and humans is completely impossible. Nor, he asserts, can there be any contradiction between the truths of philosophy and theology, so that if reason proves bodies and souls distinct, Scripture likewise confirms souls have a separate existence from bodies.35 **'Rather than question the accuracy or authority of Descartes,'** remarked the church historian Johann Laurenz Mosheim (1694-1755), **Bekker 'thought fit to squeeze the narrations and doctrines of Scripture into a conformity with the principles and definitions of this philosopher.'**36

Almighty God, holds Bekker, is the only supernatural power capable of changing nature's course and affecting men. God has this power, being neither 'thought' nor 'extension,' nor a single substance combining thought and extension 'as Spinoza raves.'37 Rather God supersedes any substance. Besides God, only good angels act on men since they are tools of the divine will. Even so, nothing about angels is ascertained through reason, while Scripture reveals so little it is otiose to speculate about their number and capabilities. Much of Book II is dedicated to demonstrating that commonly supposed examples in Scripture of Satan influencing men are really nothing of the kind. **Here Bekker stretches Cocceius' exegetical methodology to the limit,** or, as the *Acta Eruditorum* preferred, 'perverts the plain meaning of Scripture in innumerable places with great audacity,' **claiming that apparent interventions of the Devil in the Bible are just poetic, allegorical references to evil inclinations in men.**38
…

Applying his Cartesian dualism of bodies and spirits as separate substances which cannot interact, he rules out all possibility of bewitchment or pacts with the Devil – and therefore witchcraft, spells, exorcism, and magic of any type.42
…

Strive as they might, held Koelman, Cartesians and those who embrace mechanistic philosophy could disown neither Bekker nor Spinoza. Spinoza, he argued, drew his fundamental principles from Descartes, 'especially the doubting of everything in order to find truth,' the notion of the certainty and infallibility of mathematical reason, the technique of interpreting Scripture as a reflection of the imaginings and prejudices of men, **the 'dogma' of the movement of the earth round the sun,** and finally the 'demonstrating of everything with philosophical reasoning.'104 From Cartesian ingredients Spinoza had concocted his 'philosophical religion' which was now poised, with Bekker's support, to challenge all established religion, tradition, and authority.

https://archive.org/details/radicalenlighten0000isra/page/692/mode/2up?view=theater

However, this group, while plainly rooted in Fontenelle, Bayle, Boulainvilliers, and a highly critical reading of Malebranche, **contains no direct borrowing from Spinoza, does not invoke Spinoza, and makes no explicit use of the doctrine of one substance.** Hence the texts are not strictly Spinozistic in the same sense as the first main category. Yet it must be admitted this closely allied group**, the second main category of early Enlightenment radical *clandestina*,** encapsulates almost the same corpus of doctrine as the first, this very high degree of intellectual convergence deriving above all from the ubiquitous influence of Fontenelle, Boulainvilliers, Du Marsais, Fréret, and Lévesque de Burigny. **Lévesque's *De l'Examen* has been described as 'hyper-cartésien'** and one might indeed wish to categorize the whole of this latter group as 'radical Cartesian' rather than specifically Spinozist, though such terminology, while differentiating the second from the first main category, and stressing its primarily French provenance, tends to mislead by overstating by implication at least the influence of the scorned Malebranche, **as well as a Descartes himself lambasted by Du Marsais, for example, for proposing to believe only what he could see himself while wilfully but unwarrantably shutting his eyes in metaphysics, theology, and religion.**44
…

A similar procedure is followed in *l'Ame matérielle*, likewise a product of the 1720s, a collage in which Descartes' dichotomy of substances, separating mind and body, is ridiculed **and Locke invoked for the sole purpose of helping to undermine the age-old orthodoxy, or 'superstition' as it is termed here, 'que la matière ne peut sentir.'**47

https://archive.org/details/radicalenlighten0000isra/page/476/mode/2up?view=theater

Yet of the three rival versions of moderate, mainstream, Early Enlightenment – Neo-Cartesianism, Newtonianism (reinforced with Locke), and Leibnizian-Wolffianism, that which in 1700 appeared most formidable, and enjoyed the widest support amongst Europe's ruling élites, Cartesianism, rapidly proved the most precarious intellectually and was the first to collapse under the strain of escalating philosophical and scientific strife. **Many of Europe's acutest minds discarded Cartesianism during the opening years of the new century.** Vico came out publicly against Cartesianism, disparaging Descartes' use of
the *cogito*, in a public oration before the viceroy of Naples in 1708,2 and later expanded his critique in a published version, **granting Cartesian philosophy had dramatically changed our picture of the world but stressing even more the dangers of teaching men to think in exclusively mechanistic terms, disregarding the whole edifice of received thought and education.**3

---

https://archive.org/details/enlightenmentint0000unse_i6k5/page/290/mode/2up?view=theater

His *Essais*, Diderot wrote, contain literally hundreds of quotable passages as beautiful as they are irreligious; and his memorable device – *Que scais-je?* – had given the Pyrrhonists their battle cry.5 Significantly, Diderot, who knew and loved his Montaigne better than most of the other philosophes – who indeed knew and loved him well enough – enlisted Montaigne himself among the followers of Pyrrho and placed him directly before Bayle: "But," he wrote, "skepticism had no doughtier athlete, either among the ancients or the moderns, than Bayle."6
…

But for the philosophes, the line from Montaigne's to Bayle's skepticism was straight and unobstructed; they read his opacity and evasiveness, not as signs of inner combat, not as possible clues to a kind of wry fideism, but as tactical devices designed to spread a maximum

of subversive information with a minimum of risk. He was, they said, beyond question or quibble, a trustworthy bridge to a much neglected branch of antique speculation; he was the wittiest, the most reliable, teacher of Pyrrhonist skepticism, **so sensible that he did not practice what he preached: he knew too much, Diderot said, echoing Bayle himself, either to believe or to doubt everything. If there was one work in the large canon of his writings that all the Enlightenment appropriated, it was the article on Pyrrho in his *Dictionnaire historique et critique*:** Pyrrho, Bayle there told his readers, had taught that all things are at bottom mysterious.
…

When Holbach called Bayle that celebrated man "who teaches so well how to doubt,"7 he was uttering a firmly established platitude that testifies to the pervasiveness of Bayle's influence and to the single-minded uses to which his complex work was put.

> https://archive.org/details/in.ernet.dli.2015.218820/page/n119/mode/2up?view=theater
>
> Voltaire said of Bayle, very aptly, **that not a line of his contained an attack on Christianity, but that there was not one that did not lead to doubt;** so that, although not himself an unbeliever, he made unbelievers of others.

https://archive.org/details/enlightenmentcon0000isra/page/72/mode/2up?view=theater

For Bayle, unlike Descartes, Locke, Malebranche, Newton, and Leibniz, but like Spinoza, philosophical reason *more geometrico* is the only criterion of what is true.26 In him, as in Spinoza, natural reason produces 'adequate ideas,' that is, ideas which correspond to reality, solely by means of mathematical rationality under which text criticism was subsumed, Bayle too grounding his concept of rational argument on mathematical proportion and exactitude. Holding it undeniable that the whole must be bigger than its parts and that if from equal entities 'on ôte choses égales, les résidus en seront égaux,'27 Bayle sought to exploit to the full reason's scope as an instrument for assessing evidence and determining truth.28
…

Consequently, held Bayle, orthodox theologians (whatever they say), Socinians, and true philosophers ***au fond* all concede that philosophy, not theology, is the true 'queen' – only, no one except Spinoza was willing or able to say so publicly.**
…

Since there is no way to prove revelations and miracles authentic or inauthentic**, nothing prevents one man's 'vérités révélées' being rejected by the next as the most ridiculous 'superstition.'**33 **Characteristically, Bayle leaves this irresolvable dilemma wholly intact, indeed shows no interest in resolving what he takes every care to highlight.**
…

During the long years of their increasingly bitter struggle, **Le Clerc always took particular exception to the article in Bayle's *Dictionnaire* on 'Manichaeism' and the, in his eyes, unmistakable implication it carries that God, if he exists, is manifestly not a God of goodness and justice.**43
…

Who could doubt that Bayle was as averse to 'superstition' as were the *rationaux*? But, this granted, did it not prove, if proof were needed, that Bayle was not a genuine 'fideist'? **Indeed, in his philosophy the distinction between what is certain and what doubtful, far from being meaningless, or open to Pyrrhonist objections, is actually fundamental at every step and not just in history, mathematics, philosophy, and science but no less in morality, society, and politics. In fact it was exclusively matters of faith which Bayle subjected to his withering bogus Pyrrhonism.**
…

The Dutch and Swiss Arminians, English and Irish Latidudinarians, German Leibnizians, and the vying Huguenot intellectual factions were all acutely aware, through the Dutch French-language journals, that Bayle's stance called in question the entire edifice of 'rational religion,' **the parallel systems so painstakingly assembled in their different ways in England by Newton, Locke, and Clarke, in France by Descartes, Arnauld, and Malebranche, and in Germany by Thomasius and Leibniz, as also by the Huguenot *rationaux*.** For all these thinkers held theirs to be an increasingly 'enlightened' age, in which 'reason' set the agenda *and* ensured that religion, authority, and Christian morality were strengthened and confirmed, by the advances of philosophy and science. **In effect, Bayle's philosophy categorically blocked all prospect of a Christian Enlightenment.**
…

Little wonder that Barbeyrac, leading Natural Law theorist and in his mature years a passionate advocate of Locke and especially Locke's insistence on the compatibility of reason, Christianity, and the

basic principles of morality, judged that Bayle's real aim was to undermine respect for Scripture and religion, **and concluded that 'les derniers ouvrages de Mr. Bayle,' as he wrote to Le Clerc in April 1706, referring particularly to the *Continuation des Pensées diverses* and the *Réponse aux questions d'un provincial*, were even more dangerous than 'les livres de Hobbes, et de Spinosa.'**69

> https://oll.libertyfund.org/title/tooke-the-whole-duty-of-man-according-to-the-law-of-nature-1673-2003#lf0217_head_055
>
> It is that we equally avoid the two vicious extremes to which men have been drawn on this question: one is the false thinking of the philosophers and theologians, who have maintained that justice depends on an entirely free divine will whereby God could, were He so to wish, render the unjust just; the other is the opinion of those who, **conceiving justice to be independent of the will of God, and founding it purely in the nature of things, have also depicted virtue as independent of religion, and atheism as a doctrine that retains morality and natural law in all their force. Monsieur Bayle, as we know, in pleading for atheists, has made great efforts to show that "they can believe themselves obliged to conform to the ideas of reason as a rule of the moral good, as distinct from the useful"** (*Continuation des Pensées sur la Comète*, art. clii).

…

Despite the smokescreen of 'fideism' which, indeed, served no real function in Bayle's philosophy other than categorically to separate philosophy from theology and deflect criticism and outrage by concealing the true implications of his stance, being as Barbeyrac later described it just an 'expedient, dont la mauvaise foi est évidente,'77 **Bayle actually bases his thought, as Le Clerc clearly saw, on a radical Cartesian mathematico-historical rationalist foundation, a kind of *Malebranchisme* purged of all theological elements** – or, in other words, a type of crypto-Spinozism. Its aim and effect was to bar every route to a rational theology. Bayle, contended Le Clerc, had entered on a forlorn and lonely path from which there was no escape.

This catastrophe, held Le Clerc, arose from Bayle's outmoded adherence to the mechanistic axioms of Descartes, Fontenelle, and Malebranche and disastrous rejection of the epistemology of the English empiricists.78 Where Bayle, in Le Clerc's opinion, was secretly abetting Spinoza and leading many to perdition, Boyle, Locke, and Newton with their wise empiricism, deployed to defend a 'rational' Christianity and Christ's miracles, has shown the 'republic of letters' the true path to 'enlightenment.'

…

No one else, not even Locke, was a staple of so many libraries or had so wide a general influence, his writings being everywhere acknowledged to be a prime cause of the tide of scepticism, atheism, and materialism sweeping the west of the continent. The Huguenot Laurent Angliviel de la Beaumelle (1726-73), who spent many years in Denmark, reports that, by the late 1740s, Copenhagen and the Danish court had become a veritable Deistic haven. This, he says, was due to philosophy and there could be no doubt which philosopher had most effectively given expression to the insights, doubts, and questions driving this great cultural change: **the Danish 'déistes,' who are very numerous 'parmi les gens d'un certain rang,' he informed his brother in France in April 1748, were all steeped in Bayle, and forever seeking out his books and reading him,** one particular nobleman, the count of Rantzau to whom he was close, speaking incessantly about that philosopher every time he saw him.97

…

By the 1730s and the 1740s, meanwhile, the efforts to check Bayle's influence were helped by the fact that his astounding paradoxes and contorted method of argument were beginning to lose something of their appeal and their force. For as the peculiarly fraught ideological milieu of the 1680s, 1690s, and opening years of the new century which had shaped his philosophical style receded into the past, readers became less attuned and receptive both to his paradoxes and to the constant twists and circumlocutions of which he was the supreme master.

By the late 1740s, the process which eventually led to the eclipse of Bayle's once vast reputation, in the later eighteenth and nineteenth centuries, was already apparent. Much more effectively than Maupertuis, Voltaire powerfully intervened, using various lines of attack to deflate Bayle's standing, styling his *Dictionnaire* a mine of miscellaneous and curious information while pointedly always ignoring his philosophy as such.103

…

His strategy for combating Bayle, however, was quite different from that of the *rationaux*: **for he consistently denied Bayle was insidious or dangerous, preferring rather to recast him as a sceptic (like much of the late twentieth-century historiography).** While agreeing that his

'scepticism' sometimes unwittingly functioned as an engine for manufacturing *esprits forts*, producing so many objections to Christian dogmas that many were disturbed by him,105 **he completely rejected Jurieu's view of Bayle as an advocate 'd'idées plus dangereuses que celles de Spinosa.'**106
…

Voltaire was willing to agree that Bayle's life, like Spinoza's, was singularly virtuous;114 but he did not consider the sedentary life of philosophers who, like Bayle or Spinoza, spend their entire careers contemplating reality from their studies to have much broad significance for society, admiring much more the worldly cut and thrust of an active life like his own. **Ridiculing the fact that Des Maizeaux had gone to the trouble of writing a whole book about Bayle's life, he went so far as to suggest that even six pages would have been excessive!**
…

The paradox he suggested was that both these Dutch-based philosophers had enjoyed huge reputations but yet had had no meaningful impact on society. Why was this? **Because men are ruled, says Voltaire, principally by habit and custom 'et non par la métaphysique.' A personality who is eloquent, active, and received in high society can exert a much wider impact among men, he suggests, than a hundred philosophers of the stamp of Spinoza and Bayle 's'ils no sont que philosophes.'**117

Bayle, then, for Voltaire, was not in the least a hero or in any way comparable with Locke, Newton, or Clarke in importance. Rather, Voltaire continued Le Clerc's battle with Bayle, only now with new weapons and a new strategy, continually belittling his status as a thinker and portraying his 'scepticism' as pervasive, certainly, but also overrated and thoroughly tedious. **One of his favourite quips at Bayle's expense was that when it came to Cartesianism and especially Cartesian 'reason,' 'le sceptique Bayle,' he put it around 1752, and later repeated several times, 'n'est pas encore assez sceptique.'**118
…

But he saw that Bayle could be most effectively countered by continually disparaging his alleged long-windedness, inconsistency, and tiresome 'scepticism,' rather than trying to answer his arguments.
…

Introduced to Bayle's *oeuvre* around 1736, whilst still crown prince, by his Huguenot secretary and adviser on books Charles Étienne Jordan (1700-45), Frederick had, early on, been impressed by his writing. **Jordan had adopted Bayle as his own 'maître spirituel,' imbibing a healthy respect for his powerfully subversive tendency, and passed something of this on to Frederick. Reading Bayle had for Frederick, as for so many others, been a decisive step in his own personal intellectual development and especially his growing disenchantment with the philosophy of Wolff.**128

>
> **The German *Aufklärer*, far less exposed to irreverent writings than the literary men of other countries, experienced his relentless scholarship and ruthless criticisms as a devastating solvent: it was through Bayle that the young Lessing freed himself from the strict Protestantism of his childhood,** while the adolescent Wieland, as I have said before, broke loose from his Pietist upbringing after he managed to get hold of Bayle's *Dictionnaire*. As early as 1729, the *Bibliothèque germanique* had warned that "the works of M. Bayle have unsettled a large number of readers and have cast doubt on some of the most widely accepted principles of morality and religion."8

Consequently, he long continued to regard him as one of the main authors of the Enlightenment: **in 1776, writing to Voltaire of his admiration for those who had inspired the profound 'revolution' brought about by the Enlightenment, the king noted that it was to 'Bayle, votre précurseur,' no less than to Voltaire himself, that the glory is due 'de cette revolution qui se fait dans les esprits.'**129 Voltaire could hardly contradict this royal judgement, but he could encourage the idea that Bayle was his precursor in engineering this great 'revolution' of the age, while gradually whittling down the king's admiration for Bayle, **work in which he was seconded by d'Alembert who disliked the Huguenot's historical, anti-mathematical bias.**130

Thus, Le Clerc's conception of Bayle as a philosopher who seeks, as he put it in 1727, **to 'renverser la religion chrétienne, en feignant de la défendre' [to overturn the Christian religion while feigning to defend it], general in the first third of the eighteenth century,** eventually came to be overshadowed by Voltaire's rigorously pruned and sanitized Bayle.131 Bayle the crypto-*Spinosiste* came to be replaced by Bayle the fideist and sceptic. **By the late eighteenth century, only a few clergy and academics, as well as *philosophes* and *anti-philosophes*, still recalled Le Clerc's,**

Jaquelot's, Bernard's, and Barbeyrac's older (yet assuredly more accurate) designation of Bayle as the thinker who wrote to justify the *athées*, a deeply subversive thinker who refused to accept that 'atheists' should be deemed rebels against the moral order, who wished to tolerate everyone whatever they believe, who propagated the idea of the 'virtuous atheist,' everywhere insinuating crypto-Spinozism, insisting that 'on peut être Déiste ou Athée de bonne foi,' **indeed may act more morally without any faith than anyone else, since true morality has nothing to do with faith and both morality and toleration, among Man's most precious assets, are the discoveries not of peoples, legislators, prophets, or theologians but rather, being a task for pure reason alone, of the philosophers.**132

https://www.marxists.org/archive/marx/works/1845/holy-family/ch06_3_d.htm

Just as *Feuerbach* by combating speculative theology was driven further to combat *speculative philosophy*, precisely because he recognised in speculation the last drop of theology, **because he had to force theology to retreat from pseudo-science to *crude*, repulsive *faith*, so Bayle too was driven by religious doubt to doubt about the metaphysics which was the prop of that faith. He therefore critically investigated metaphysics in its entire historical development. He became its historian in order to write the history of its death.** He refuted chiefly *Spinoza* and *Leibniz*.

Pierre Bayle not only prepared the reception of materialism and of the philosophy of common sense in France by shattering metaphysics with his scepticism. **He heralded the *atheistic society* which was soon to come into existence by proving that a society consisting only of atheists is *possible,* that an atheist can be a man worthy of respect, and that it is not by atheism but by superstition and idolatry that man debases himself.**

https://archive.org/details/radicalenlighten0000isra/page/340/mode/2up?view=theater

In his *Free Thoughts On Religion*, Mandeville restates Bayle's paradox of the 'virtuous atheist,' evidently, many inferred, for the same seditious purpose.53 One of Mandeville's chief critics, William Law, tutor to Edward Gibbon's father, and an adviser of Whiston though no Newtonian, put a particular stress on the link between Mandeville and Bayle, **insisting that the latter had greatly 'increased the numbers of infidels and libertines' and was the 'principal author amongst those, whose parts have been employ'd to arraign and expose virtue and religion as being only the blind effects of complexion, natural temper and custom.'**54

> https://archive.org/details/in.ernet.dli.2015.82406/page/n59/mode/2up?view=theater
>
> Mr. *Bayle* engaged in a Cause, where he found it necessary to assert, that a *Society of Atheists* might be as virtuous Men, as a Society of other People professing Religion; and to maintain this Opinion, **he was further obliged to declare, that religious *Opinions* and *Beliefs*, had no Influence *at all* upon Men's Actions.**
> …
>
> I would not by this insinuate, that he was not a Man of fine Parts; *Bellarmin's* Absurdities, though ever so many, still leave room to acknowledge his great Abilities. This seems to have been Mr. *Bayle's* Case; **he was no *Jesuit* or *Papist*, but he was as great a *Zealot* in his way. *Bellarmin* contradicted himself for the sake of *Mother Church*; and Mr. *Bayle* contradicted himself as heartily, for the sake of an *imaginary* Society, a *Society of Atheists*.**

https://archive.org/details/enlightenmentcon0000isra/page/146/mode/2up?view=theater

For this reason, it is fundamentally incorrect to discern, as some scholars have, a 'surprising convergence' between Bayle's and Locke's theories of toleration; for the two theories are actually totally different and incompatible, the first Protestant, theological, and limited, the latter entirely non-theological and universal.55
…

In the *Supplément* to his main treatise on toleration, published in the year of the Glorious Revolution, 1688, Bayle held that if, as some think, it is correct that the Christian faith justifies the use of coercive force to bring non-Christians within the fold, then the Graeco-Roman pagan authorities before Constantine were surely no less justified in persecuting the Christians, since **Christian doctrine was then not just disrupting the public cults upheld by the state, and publicly defying the laws of the time, but by authorizing coercion in matters of faith disrupting also 'la religion naturelle, les lois de l'humanité, de la raison, et de l'équite.'**58
…

Before his dismissal from his professorship in Rotterdam in 1693, the Dutch Reformed consistory drew up a detailed list of objections to his philosophy based on his anonymously published *Pensées diverses* of 1683, which, by that date, Bayle openly acknowledged as his. Fifteen 'extravagant propositions' were highlighted, and formally condemned by the assembly at its gathering of 28 January 1693, all of which are redolent of Bayle's refusal to assign any innate moral superiority to Christian positions and his basing social justice purely on philosophical reason.

Especially condemned by the Rotterdam Dutch Reformed consistory, in its report to the city government in March 1693, was Bayle's thesis that nothing was ever less of an inconvenience to society than 'atheism' which is why God enacted no miracles to curb it.59 Judged hardly less outrageous were his maxims that atheism is not a greater evil than idolatry;60 **that everything in nature being uncertain 'it is best to keep to the faith of one's parents and profess the religion we learn from them';**61 and that, as the original French puts it, 'l'athéisme ne conduit pas nécessairement à la corruption des moeurs.'62 Totally unacceptable was Bayle's no less notorious proposition that, as the Rotterdam assembly expressed his view, 'een societyt van atheisten ook wel gereguleert kan zyn' [a society of atheists could be well regulated]; **and that the Sadducees, though denying immortality of the soul, were morally worthier than the Pharisees,**63 ideas which again all imply Christian doctrines need not be the basis of a well-ordered society.
…

Bayle's toleration theory, hence, rests squarely on the pseudo-fideist argument that there is no way rationally to ascertain which is the true faith – or whether there is a true faith. In a typically brutal Baylean paradox, he simultaneously proclaims the unqualified primacy and total irrationality of faith.
…

Were one to take his 'fideism' seriously (which would reduce his system to complete and fundamental inconsistency), it would mean, as Doria remarks, that what is most important in human life is totally indistinguishable from 'superstition' which Bayle considers absolutely the worst and most pernicious of things, a position which is manifestly absurd.
…

Indeed, in Bayle, it is never theological doctrine, love, or forbearance which debar and condemn persecution but solely and exclusively the intrinsic injustice, rationally demonstrated, of oppressing the innocent.
…

It was, affirms Bayle, a dreadful and outrageous thing that those who wished to reform the church after its utter perversion by the papacy did not understand 'les immunités sacrées et inviolables de la conscience' but rather adhered to 'le dogme de la constrainte'; **and that in the year 1535, at Geneva, the birthplace of the Reformed Church, the Calvinists suppressed Catholicism, expelling everyone who refused to convert.**75 **Only the Socinians and Arminians, contends Bayle, were free of intolerance; but these were both tiny, fringe churches:** thus the doctrine of tolerance is only recognized as true in a few small corners of Christendom 'qui ne font aucune figure, pendant que celui de l'intolérance va partout la tête levee.'76 **While continually attacking the Socinians for being theologically more muddled and inconsistent than anyone else, it was typical of Bayle that he simultaneously holds that they were exceptionally just and upright.**

https://archive.org/details/enlightenmentcon0000isra/page/558/mode/2up?view=theater

On the fundamental rationality of human morality, in fact, Bayle refuses to compromise and is never sceptical, though some modern scholars have indeed fallen into the trap of assuming – as was alleged (without evidence) by his enemy Barbeyrac – that he is a sceptic on moral issues. The unchallengeable primacy of natural reason in revealing to us what Bayle calls the 'les premiers principes généraux des moeurs' is alike natural, necessary, and universally valid; for it is the only way Man can ever construct the moral system he perennially requires. **Thus, in ancient Greece great progress was made in promoting morality but not at all owing to the pagan cults, which Bayle deemed inherently irrational and corrupt, but solely, he thought, to the efforts of the philosophers who, relying on reason alone, established the principles of ethics, of which equity and reciprocity are the chief.**55 **This, of course, is the very reverse of scepticism.**

No matter how erring and muddled the Socinians may be, argues Bayle, in his *Commentaire philosophique*, in applying reason to speculative matters, there can never be any limit, even when discussing the Bible, when applying reason to moral issues.56 **For him, autonomous reason is the only criterion when establishing and evaluating morality. God himself, he says, must conform to our basic notions of justice, equity, and goodness, for the logic of the moral law is a necessary and unalterable, one not something subject to the divine will and something by definition independent of any divine ruling:** hence, without exception 'il faut soumettre toutes les lois morales à cette idée naturelle d'équité, qui, aussi bien que la lumière métaphysique, illumine tout

homme venant au monde.'57 So important is the principle of basic equality in Bayle's conception of a secular morality divorced from all teleology, divine ordinance, or prior transcendental order **that it prompts him to affirm, as he does repeatedly in his last works, that primitive societies based on equality – such as he took Lahontan's Spinozistic Canadian Indians and the ancient Scythians to be – must *ipso facto* be inherently of a higher ethical level than more hierarchical societies.**58

Hence, while the man of faith, says Bayle, rightly insists the fundamentals of Christianity cannot be explained by reason, and this should never be attempted, the central mysteries of the Christian religion having no connection with reason, **matters are exactly the opposite when it comes to discussing any question of morality.**

> https://archive.org/details/enlightenmentcon0000isra/page/668/mode/2up?view=theater
>
> Unquestioning submission of faith is justifiable, philosophically, says Bayle, only by means of Pyrrhonism, leading many later interpreters wrongly to assume that his 'fideism' must therefore by 'Pyrrhonist' and his supposed Pyrrhonism applicable also to moral concepts.23 **Yet, nothing could be less Pyrrhonist than Bayle's system of moral, social, and political thought. Indeed, he vehemently rejects Pyrrhonism in these spheres, especially because (incomprehensibly for those who maintain Bayle's Calvinist piety) Pyrrhonism permits no proper conception of goodness and justice.** Sound moral ideas, holds Bayle, can only be derived by natural reason and, hence, stand diametrically against both faith and every kind of scepticism including fideism.

…

The function of 'fideism' in his system being tactical only, and exclusively limited to rendering questions of faith uncertain, Bayle is in no way being inconsistent when affirming, in his *Commentaire*, that a strict rationalism, reason that is defined as the 'principes généraux de nos connoissances,' is for us always the absolute and only guide when weighing and judging those moral issues posed in, and by, the Bible, since reason is 'la règle matrice et originale' of all Bible exegesis and, moreover, 'en matière de moeurs principalement.'60

https://archive.org/details/radicalenlighten0000isra/page/338/mode/2up?view=theater

According to the Abbé Pluquet, writing in 1757, all those who had hitherto attempted to refute Spinoza had failed, but Bayle, the sharpest of philosophical critics, had, he says, failed more resoundingly than any adversary of Spinoza, having neither interpreted Spinoza correctly nor fought him effectively: **'le célèbre Bayle lui-même, ce destructeur indefatigable de toute doctrine systématique paroît avoir échoue à l'égard de celui-ci [i.e. Spinoza], et porté ses coups en l'air.'**44

Whichever answer one gave, no one could deny, in any case, that Bayle places Spinoza not only at the heart of contemporary philosophical debate but at the heart of all ancient, medieval, and modern intellectual debate. **After telling us, for example, that Xenophanes asserts 'l'unité de toutes choses,' much like Parmenides and Melissus, and that his view of God is an abominable form of 'Spinozisme,' he commences his long article on Zeno of Elea by affirming that this disciple of Parmenides, one of the major philosophers of antiquity, held views almost the same as those of Xenophanes and Parmenides concerning the unity, the incomprehensibility, and the immutability of all things,** the clear implication being that the philosophy of the Eleatics too is akin to Spinozism.45 Bayle takes the opportunity presented by what was known of Zeno's opinions to rehearse a mass of objections to the belief that motion exists outside matter and shows that all the proofs that motion is external to matter fail to stand up to reason. He then asserts, giving an excellent illustration of his general method, that he nevertheless shares the universal view that motion resides outside matter.46 The usefulness of the exercise, he assures readers, lies in its showing the limitations of reason.47 But if reason is truly our guide, then the reader can only infer that there is no way of maintaining that motion is external to matter rationally and that reason inexorably proves motion is inherent in matter. **This is just one of innumerable examples of how Bayle employs Pyrrhonism as a tactical device to push readers towards a conclusion opposed to the fideist position he pretends to adopt.**48

>
> **The first Aryan known as a monotheist was Xenophanes (born c. 570 B.C., died c. 470).** He certainly repudiated the anthropomorphic gods of polytheism and posited one god, spherical because that is the perfect form, eternal, and unchanging; but we are also told that the god was an infinite sphere and identical with the universe. Now, was the universe conscious, and could men, whom Xenophanes thought the products of a kind of chemical reaction between earth and water, pray to the vast being of which they were an infinitesimal part? There is no evidence that Xenophanes thought they could, and I do not see how one could imagine that a man could attract

> the attention of the universe. Even assuming that Xenophanes thought of the universe as a living being (which, of course, is not unchanging), can we imagine one cell in our bodies as praying to us? **My guess is that what has been called "the only true monotheism that has ever existed in the world" was, strictly speaking, atheism.*** **If there are no gods whom men can ask to intervene in human affairs, it is simply an abuse of language to call an impersonal, inexorable force 'god.'**

…

Years later, Des Maizeaux heard from David Durand, the Reformed minister closest to Bayle in his last years, and an exceptionally tolerant pastor, indeed a friend who supplied him with many a Latin quotation, that he had written to him 'quelques jours avant sa mort la lettre du monde la plus tendre pour l'obliger à lever tout expèce de scandale, par une confession édifiante des verities chrétiennes, ou du moins des veritez de la religion naturelle.'56 **Unfortunately, all he received from Bayle by way of reply was a note replete with witticisms drawn from Horace and Martial without a single word about Christian truth.**

https://archive.org/details/enlightenmentcon0000isra/page/388/mode/2up?view=theater

Another newcomer to the campaign against Bayle was his former friend David Durand (*c.* 1680-1763), a great foe of superstition and bigotry and an exceptionally irenic preacher in Rotterdam and The Hague, as well as later in London.78 Durand was so liberal that he approved of van Dale and judged Fontenelle's *Historie des oracles* a treasure.79 **Yet, like Jaquelot, he too, once convinced Bayle had abandoned religion and represented a dire intellectual threat, saw it not just as a pressing duty to help unmask Bayle's insidious paradoxes and deception but as a way of unifying Huguenot opinion. Just as Spinoza had feigned being a Cartesian, and Spinozists today employ the same veil 'pour anéantir la liberté et introduire la fatalité stoïque,' Bayle, he alleged, had counterfeited his 'fideism' the more effectively to propagate illicit ideas.**80

https://books.google.fi/books?id=YwI1AAAAMAAJ&hl=fi&pg=PA408#v=onepage&q&f=false

As neither his editor nor our translator have mentioned what first gave rise to this poem, it may not be improper to mention it here: "A seeming chance," as we are told, "first put Polignac upon this undertaking. **The author, in his return from Poland, made some stay in Holland, where, becoming acquainted with M. Bayle, he asked him, which of the sects in vogue he professed? Bayle eluded the question, by repeating some lines out of Lucretius;** and being closer pressed, he made no other answer than that he was a true Protestant. The Abbé still urging him, he answered with some emotion, **'Yes, Sir, I am a true Protestant, and to the utmost extent of the word, for I protest against all that is said or done;' which was followed by another more energetic repetition from Lucretius. The Abbé finding that learned person far gone in the system of Epicurism, or at least of Skepticism, and that these notions were seducingly advanced in his celebrated Dictionary,** immediately conceived a design of refuting those errors, and his two relegations (to the States) proved fortunate for the accomplishment."

https://archive.org/details/enlightenmentcon0000isra/page/266/mode/2up?view=theater

Bayle devoted his life to his roundabout, devious idealization of rational philosophy as Man's finest and only effective tool, a quest which, together with his mocking, subversive pseudo-fideism, or more precisely anti-scepticism disguised as fideism, characterized his *oeuvre*, **until in the last few years of his life when, feeling the approach of death, he scarcely troubled any longer,** especially in his *Continuation* and the *Réponse*, to veil the crypto-Spinozist reality behind the 'fideist' mask.21

No philosopher uses sceptical arguments more than Bayle. But he never employs scepticism, like Montaigne or Hume, to counter the force of reason but rather to undercut grounds for belief, undermine systems based on theological premises, and ridicule thinkers like Le Clerc, Jaquelot, and Locke whose efforts to blend theology with philosophy he scorned.

> https://www.gutenberg.org/files/2167/2167-h/2167-h.htm#link2H_4_0015
>
> It is really amusing to observe how he proceeds with his narration when he has no better authority than poor Diodorus. **He is compelled to relate something; yet he believes nothing.** He accompanies every fact with a long statement of objections. His account of the administration of Dionysius is in no sense a history. It ought to be entitled—"Historic doubts as to certain events, alleged to have taken place in Sicily."
>
> **This scepticism, however, like that of some great legal characters almost as sceptical as himself, vanishes whenever his political partialities interfere. He is a vehement admirer of tyranny and oligarchy, and considers no evidence as feeble which can be brought forward in favour of those forms of government.**

https://archive.org/details/enlightenmentcon0000isra/page/618/mode/2up?view=theater

Muslims, from the time of Muhammad in the seventh century onwards, held Bayle, in his article 'Mahomed' in the *Dictionnaire* (1697), a claim later echoed by Voltaire in his *Traité sur la tolérance* (1762), were invariably more tolerant than the Christians.22 **Had Christians ruled the Ottoman Near East instead of the Turks, avers Bayle, there would remain today no 'trace of the Greek Church' and Islam would have been obliterated whereas, by contrast, 'ces infidèles' fully tolerated Christianity.** Delighting in such paradoxes, Bayle suggests further that Muslims following the principles of their faith ought to use violence to liquidate other religions and yet they tolerate them instead. Christians, on the other hand, though commanded to eschew all violence and stick to purely peaceful preaching and proselytizing, from the outset strove to overthrow and exterminate with fire and sword everyone who was not of their religion.23
…

Le Clerc might argue that the obstinate Jews 'ne savent guère mieux raisonner que les Mahométans,' both Muslims and Jews resisting only because they 'n'apprennent nullement à raisonner juste,'25 but Bayle retorted that although faith assures us Christianity is the true religion, by rational assessment and all worldly tests, Islam's claims are superior. For not only is the Islamic world more tolerant and less cruel but it has far less blood on its hands. **'Dans toutes leurs persécutions contre les Chrétiens,' counters Bayle, the Muslims slaughtered far fewer people in the name of their religion than the Christians massacred during the St Bartholomew's Day Massacre of 1572 in Paris alone.**26

https://archive.org/details/enlightenmentcon0000isra/page/596/mode/2up?view=theater

But it was arguably Bayle, more than any other writer of the Early Enlightenment, who most effectively deployed the principle of moral universalism which so impressed Tyssot as a way of discrediting theological justifications for empire, military conquest, and religious expansion in the Indies. **Bayle was probably the first major philosopher, apart from Locke, to use the burgeoning travel literature of the age to assess and evaluate the relationship between Europe and the non-European world.** However, in contemplating relations between Europeans and non-Europeans, he came to dramatically different conclusions from Locke. For the latter even though he refrained from justifying dominion over lands once belonging to Amerindians on the ground of their being 'utterly strangers to Christianity,' stipulating that their idolatry and ignorance 'gives us noe right to expel or treat them ill,' nevertheless, as we have seen, judged that the biblical injunction to 'replenish the whole earth,' and claims based on the argument from effective vacancy, *did* stretch to legitimizing dispossession of the natives.26 Bayle, by contrast, thought that only universal moral criteria could be brought to bear in such a case, questioning the moral, cultural, and political legitimacy of European colonization especially where this was based on theological claims.27

Bayle, proceeding from the same monist philosophical premisses and categorical universalism as Spinoza and van den Enden before him, and Meslier and Diderot later, seems, in several parts of his *oeuvre*, to have a special axe to grind, regarding the missionizing ambitions of the Jesuits in the Far East. He vehemently deplores what he considers the arrogant and unjust proceedings of the missionaries as well as colonial companies, merchants, seamen, and soldiers, clearly implying that China, Japan, Siam, India, and other parts of Asia would not just be morally, culturally, and politically better off without not just these European intruders with their warehouses, goods, ships, and guns, but should certainly also rid themselves of the missionaries who were importing and intolerant and aggressively proselytizing new faith, theology, moral system, and education.

Despite being bound to do so in partly veiled terms, Bayle emphatically endorsed the refusal of the Japanese to allow the Spanish and Portuguese friars to resume their quest for converts there, after their expulsion by the shogunate, in the 1620s and 1630s, in what Bayle significantly chooses to interpret as a struggle to defend the integrity and independence of Japan from European colonial ambitions and pretensions. **Bayle, in his most insinuatingly sardonic fashion, pronounces it extremely 'unfortunate' that the Japanese, 'not having sufficient illumination to renounce their false religion,' failed to make the correct decision as 'between persecuting and being persecuted' and, opting for the former, expelled the Christian missionaries. Despite having made such a disastrously wrong choice, though, he adds, they can perhaps draw some slight comfort from knowing they could 'have preserved their traditional government, customs and worship only by ridding themselves of the Christians.'**
…

Indeed, had the 'true faith' after all been successful in Japan, holds Bayle, it is certain the Christians would have practised what he calls the 'cruel maxims' of the Spaniards, and before long 'by means of slaughtering and hanging, as in America, have brought all Japan under their yoke.'28 Bayle's antipathy to missionaries and efforts at conversion is equally manifest in his discussion of China.29 Astoundingly, he suggests the only reliable solution for the thorny problem facing the Chinese, in his day, was

immediately to expel all the Christian missionaries. **In his *Commentaire philosophique*, he imagines a Chinese imperial council discussing the Jesuits and advising the emperor to eject them all from his dominions 'comme des pestes publiques.'**

Bayle's imagined Chinese advisers press the emperor never to allow them to return: for to do so would be to introduce into his realms 'la semence perpétuelle du carnage et de la désolation des villes et du plat pays.'30 If permitted to stay, the missionaries would doubtless behave impeccably to begin with, peacefully preaching, teaching, and flattering their hosts – apart, that is, from promising Paradise, and threatening Hell, in the afterlife. **But no sooner did they command enough proselytes to seek dominance politically and militarily, avers Bayle, than they would undoubtedly suppress, coerce, persecute, and kill everyone standing in their way or who preferred indigenous Chinese religions.** To secure the upper hand, they would also spread sedition on all sides and organize armed insurgency against the emperor and his advisers. **Should the emperor attempt to resist, they would threaten to summon whole 'crusades' from the West.** Slaughtering large numbers and trampling all opposition under foot, they would replace the emperor, once overwhelmed, with another of their choosing and one more willing to submit to the eternal truths proclaimed by the church.31

Were the Chinese emperor indeed to banish the missionaries, held Bayle, this would be 'avec raison et justice.'32 They would have been ejected not because the Chinese were intolerant but exactly the reverse, because the Jesuits were. **These remarks were, in a way, extremely prescient. For the papacy, ruling on the problem of the Chinese Rites controversy, after a long debate in 1700-1, overruled the Jesuits, declared Confucianism 'atheistic,' and forbade Chinese Catholics to participate in Confucian rites.**33 **On hearing of this, the Chinese emperor, K'ang-Hsi, retaliated by expelling the missionaries.** The papacy's shift to a more confrontational, intolerant stance towards Confucianism in turn reinforced the prevailing impression in Europe that the Chinese neo-Confucianists were indeed, as Arnauld, Malebranche, and other critics of the Jesuits urged, 'atheists' and 'Spinozists.'34 **The expulsion of the Jesuits from China, with Christianity's intolerance being cited as the reason, was later approved by Voltaire and d'Argens, in terms precisely echoing those of Bayle.**35

Denouncing the Crusades, and the Spanish conquest of the Americas 'par des cruautés qui font horreur,' Bayle predicted that the missionaries' zeal would wreak comparable havoc in the future in whichever parts of the world faith 'n'a pas encore ensanglanté.' In singling out for special censure European colonial initiatives using requirements of faith as their justification for imposing western dominance and intolerance,36 his chief concern, clearly, was to discredit use of theological arguments as justifications for any kind of conquest, despoilment, enslavement, or empire.

https://www.gutenberg.org/files/17147/17147-h/17147-h.htm#page113

71. It will, however, be well to consider the argument that M. Bayle puts forward to show that one cannot refute the objections which reason opposes to the Mysteries. It is in his comment on the Manichaeans (p. 3140 of the second edition of his *Dictionary*). 'It is enough for me', he says, 'that it be unanimously acknowledged that the Mysteries of the Gospel are above reason. For thence comes the necessary conclusion that it is impossible to settle the difficulties raised by the philosophers, and in consequence that a dispute where only the light of Nature is followed will always end unfavourably for the theologians, and that they will see themselves forced to give way and to take refuge in the canon of the supernatural light.' **I am surprised that M. Bayle speaks in such general terms, since he has acknowledged himself that the light of Nature is against the Manichaeans, and for the oneness of the Principle, and that the goodness of God is proved incontrovertibly by reason.**

https://www.gutenberg.org/files/17147/17147-h/17147-h.htm#page208

And on the other side, or in other passages, he seems to show more approval of the opinions of those who preserve God's goodness at the expense of his greatness, as Plutarch does in his book against the Stoics. **'It was more reasonable', he says, 'to say' (with the Epicureans) 'that innumerable parts' (or atoms flying about at haphazard through an infinite space) 'by their force prevailed over the weakness of Jupiter and, in spite of him and against his nature and will, did many bad and irrational things, than to agree that there is neither confusion nor wickedness but he is the author thereof.' What may be said for both these parties, Stoics and Epicureans, appears to have led M. Bayle to the επεχειν of the Pyrrhonians, the suspension of his judgement in respect of reason, so long as faith is set apart; and to that he professes sincere submission.**

136. **Pursuing his arguments, however, he has gone as far as attempting almost to revive and reinforce those of the disciples of Manes,** a Persian heretic of the third century after Christ, or of a certain Paul, chief of the Manichaeans in Armenia in the seventh century, from whom they were named Paulicians.
…

144. Let us return to Zoroaster, who led us to Oromasdes and Arimanius, the sources of good and evil, and let us assume that he looked upon them as two eternal principles opposed to each other, although there is reason to doubt this assumption. It is thought that Marcion, disciple of Cerdon, was of this opinion before Manes. M. Bayle acknowledges that these men used lamentable arguments; but he thinks that they did not sufficiently recognize their advantages or know how to apply their principal instrument, which was the difficulty over the origin of evil. **He believes that an able man on their side would have thoroughly embarrassed the orthodox, and it seems as though he himself, failing any other, wished to undertake a task so unnecessary in the opinion of many people.** 'All the hypotheses' (he says, *Dictionary*, v., 'Marcion', p. 2039) 'that Christians have established parry but poorly the blows aimed at them: they all triumph when they act on the offensive; but they lose their whole advantage when they have to sustain the attack.' **He confesses that the 'Dualists' (as with Mr. Hyde he calls them), that is, the champions of two principles, would soon have been routed by *a priori* reasons, taken from the nature of God; but he thinks that they triumph in their turn when one comes to the**
***a posteriori* reasons, which are taken from the existence of evil.**
...

152. M. Bayle places the Greek philosopher Melissus, champion of the oneness of the first principle (and perhaps even of the oneness of substance) in conflict with Zoroaster, as with the first originator of duality. Zoroaster admits that the hypothesis of Melissus is more consistent with order and *a priori* reasons, but he denies its conformity with experience and *a posteriori* reasons. **'I surpass you', he said, 'in the explanation of phenomena, which is the principal mark of a good system.'**
...

156. M. Bayle, in the article entitled 'Paulicians' inserted by him in his *Dictionary,* follows up the pronouncements he made in the article on the Manichaeans. **According to him (p. 2330, lit. H) the orthodox seem to admit two first principles, in making the devil the originator of sin. M. Becker, a former minister of Amsterdam, author of the book entitled *The World Bewitched*, has made use of this idea in order to demonstrate that one should not assign such power and authority to the Devil as would allow of his comparison with God.** Therein he is right: but he pushes the conclusions too far.

https://archive.org/details/pretendeddifficu00gurd/page/136/mode/2up?view=theater

Monsieur *Bayle*, as fond as he shews himself upon all Occasions of the *Hypothesis* which pretends to account for Good and Evil by Two contrary Principles; was yet sensible, that Two such contrary Natures, unless they acted with something like Freedom, could never account for Good and Evil; and therefore when he is making an Apology for *Zoroaster*, he represents him as justifying his Two Principles in this Manner: “**That it was with his Two Principles for some Time, as it was with Mr. *Hobbs*'s Men in a State of Nature,** and before the Establishment of Societies; that every Man was an Enemy to every other Man, and did each other all the Mischief they could; and thus, says he, it was with the Two Principles at first, **till they, as well as Mr. *Hobbs*'s Men, weary of such a confused State of Things, in which one Principle was continually overturning what the other was building up, came at last to an Accommodation, and joyned amicably together for the future, in the several Productions of Nature.**” *

* Histor. Dict. in voce Zoroaster.

Mr. *Bayle* enters into so many Particulars in his Vindication of this Doctrine of *Zoroaster* that we may believe he look'd upon it as the most rational Solution of the present Difficulty. But from hence we may observe, That Two contrary Principles, so long as they acted Necessarily and to the utmost of their Power, could produce nothing but a State of the utmost Confusion and Disorder; because this is supposed and allowed to have been the State of Things previously to the Agreement of the Two Principles: and then without such Agreement, every Thing must have been still in Confusion, and different from what we see at present; **and therefore were it possible that this Account of Things could be the Truth, yet it would do the *Atheist* no Service, unless he would allow the Existence of Beings that act upon Choice, which he always steadily denies,** and while he does so, can have no Right to any Advantage from this *Hypothesis*.

https://archive.org/details/pretendeddifficu00gurd/page/192/mode/2up?view=theater

And therefore Mr. *Bayle* need not have put on such an Air of Concern, as he affects to do * at the *Hypothesis* of free Agents; as if the admitting such particular Self-movers must necessarily exclude an Universal Mover. **He brings an Instance from the *Chinese*, among which People the Belief it seems of many Self-movers had this Effect; the first Universal MOVER being wholly left out of their System of Religion.**

* In voce Spinosa.

But then it must be observed, That the Belief of Free Beings had not this Effect, **till they had so far sunk the Notion of a GOD, as to make Him only an *Anima Mundi*, that was acted upon by Matter, as our Souls are acted upon by our Bodies; and had raised the particular Souls, that animated the several Parts of the World, to such an Height, as to be almost entirely independent upon Him; which is the**

***Chinese Philosophy*, as Mr. *Loubiere* assures us.** But so long as 'tis acknowledged, that the Self-moving Power is derived from GOD, and depends upon Him for its Continuance; so long as 'tis confessed, that in Him we *live, and move*, so long there can be no Fear of shutting out a GOD, from our taking in free Agents. **And I am persuaded Mr. *Bayle* * would have seen no Danger to Religion from free Agency if this had not threatned his darling Notion of a Principle of Evil; for he could easily see that all his Arguments drawn from the Moral Evil that appears in the World, must lose much of their Force, if once Free Agents were allowed of;** because then God might be the Original Cause of Motion, and yet not the Cause of Moral Evil, of the wicked Acts committed by Men, or of the blasphemous Words they sometimes utter.

* *Bayle*'s Dictionary, Voce Spinosa.

https://archive.org/details/enlightenmentcon0000isra/page/668/mode/2up?view=theater

Total separation of morality and religion was indeed the very cornerstone of Radical Enlightenment, the point at which the systems of Spinoza and Bayle almost totally converge. To detachment of morality from theology, Bayle added, to the consternation of the whole Huguenot diaspora, the proposition that revealed religion based on miracles, church dogma, and an afterlife, whether Christian or not, is neither requisite nor helpful, in upholding a moral order geared to the well-being of society. **Here, Bayle and, later, Diderot ventured beyond Spinoza: for where Christianity, for the latter, teaches 'obedience' to socially useful moral principles, Bayle removes the force even of this,** claiming a society sincere in upholding the Christian ethic would be ill adjusted to the realities of life and unable to survive for long. **The more one studies the history of one's own time, and previous centuries, he argues, the more one sees that every society threatened by neighbours would soon collapse 'si elle se conformoit à l'esprit évangélique.'**20
…

Society cannot subsist, contends Bernard, without 'la pratique de ces devoirs' and hence, 'atheism,' in the sense of denial of a Creator, providence, and revelation, violates society's most precious concerns vastly more than idolatry or paganism, indeed entails 'la destruction totale des sociétez'.45 **But Bayle totally disagreed.** Stressing the frightful consequences of bigotry, cruelty, and credulity, and noting that pagan Greek cults inculcate dread of wholly immoral gods mostly moved by base and violent passions, he argued that anyone reared in such a milieu will be incapable of grasping that pride, greed, ambition, lasciviousness, love of luxury, violence, and desire for vengeance are immoral. On the contrary, what the idolatrous cults of the Graeco-Roman world demanded of men, was exclusively subservience, adoration, and flattery. **In Bayle's eyes, Greek pagan religion meant 'la renversement de la morale' which is why, he alleges, Socrates felt it requisite to stake his life against such idolatry.**46
…

If the political leadership of the Hellenic city-states and republican Rome successfully countered the viciousness fostered by their publicly established cults this was entirely due, contends Bayle, to the influence on public life of reason and the philosophers. Atheistic thinkers like Epicurus, he remarked, believed in no gods but nevertheless had an admirable ability to formulate moral concepts by examining what was and what was not 'conforme aux règles de la raison.'49
…

The idea that ancient philosophers, before Christ, were capable of forging a viable system of moral theory 'whereof,' as Locke put it, 'the world could be convinced,' an ethics able to underpin law and institutions as, in their view, Christianity does, was precisely what the *rationaux*, together with Locke, denied. To them, it was self-evidently true that reason alone is inadequate.
…

Locke's, Le Clerc's, and Bernard's dictum **'the greatest part cannot know, and therefore they must believe'** was indeed persuasive.53 **Philosophy and reason may be wholly ineffective guides for most, countered Bayle, but they sufficed to instruct the magistrates in the Greek city-states, and in Rome, and therefore for producing philosophically and morally based legislation which did effectively curb the untutored and restrain the religiously fomented immorality of the majority.**
…

Morally and educationally, argues Bayle, religion and philosophy in ancient Greece and Rome stood in direct opposition. Their admirable administrative, legal, and civic achievements stemmed from philosophical reason locked in combat with 'la théologie fabuleuse'; **the good they accomplished was not because but in spite of the latter.**

https://archive.org/details/divinelegationof176501warb/page/72/mode/2up?view=theater

IV. In the last place, he says,a “that the lives of the several atheists of antiquity fully shew, that this principle does not necessarily produce depravity of morals." He instances “in *Diagoras*, *Theodorus*, *Evemerus*, *Nicanor*, and *Hippon*: whose virtue appeared so admirable to a father of the church, that he would enrich religion with it, and make theists of them, in spite of all antiquity.” And then descends to “*Epicurus* and his followers, whom their very enemies acknowledged to be unblameable in their actions, as the *Roman Atticus*, *Cassius*, and elder *Pliny*;” and closes this illustrious catalogue with an encomium on the morality of *Vanini* and *Spinosa*. **But this is not all; for he tells us fartherb of whole nations of atheists, “which modern travelers have discovered in the islands or continents of *Afric* and *America*, which, in point of morals, are rather better, than worse, than the idolaters who live around them. It is true, that these atheists are savages, without laws, magistrate, or civil policy: but this (he says)c makes an argument *à fortiori*: for if they live peaceably together out of civil society, much rather would they do so in it, where equal laws restrain men from injustice.”** He is so pleased with this argument, that he reduces it to this enthymeme:d

> “Whole nations of atheists, divided into independent families, have preserved themselves from time immemorial without law. **Therefore, much stronger reason have we to think they would still preserve themselves, were they under one common master, and one common law, the equal distributer of rewards and punishments.**"

…

The question is, and I have been frequently obliged to repeat it, Mr. *Bayle* so industriously affecting to forget or mistake it, *whether atheism be destructive to the body of a society?* **And yet he, whose business is to prove the negative, brings all his arguments from considerations, which either affect not the gross body of mankind, or affect not that body, in society: in a word, from the lives of *sophists* or *savages*; from the example of a few speculative men far above the view of the common run of citizens; or from *that* of a barbarous crew of *savages* much farther below it.** All his facts and reasonings then being granted, they still fall short and wide of his conclusion.

But the last stroke of his apology is more extravagant than all the rest: for having proved atheism very consistent with a state of nature, lest it should happen to be found not so consistent with civil society, but that one of them must rise upon the ruins of the other, he gives a very palpable hint which of the two he thinks should be preserved; by making it a serious question, discussed in a set dissertation,i WHETHER CIVIL SOCIETY BE ABSOLUTELY NECESSARY FOR THE PRESERVATION OF MANKIND?j and very gravely resolving it in the negative.

> i. *Contin. des Pens. Div*. c. cxviii. j. Si les societéz sont absolument necessaires pour conserver le genre humain.

https://books.google.fi/books?id=7j8PdlgFRDAC&lpg=PP1&hl=fi&pg=PA294#v=onepage&q&f=false

Bayle’s Clarification on atheism is another intensification of his theory in which he said he just did not happen to know any immoral atheists, and he asked readers if they had any information please send it to him and he would consider it. Next, he started presenting his thesis that there was a society of atheists in the world in his time that was getting on much better than any European society. Bayle had been following the information coming to Europe about China and accepted the picture that China was, in fact, a society of atheists, was a highly moral society, and was much more stable and ethical than any European society.

…

Some present-day commentators, like Antony McKenna and Gianluca Mori, have been developing **this picture of Bayle as a complete sceptic in epistemology and metaphysics and as a positive moralist in human affairs.** Some see something like this already in Montaigne, Charron, and La Mothe Le Vayer.23

https://www.gutenberg.org/files/17147/17147-h/17147-h.htm#page258

It so happens that the ancient Stoics were not far removed from this system. M. Bayle remarked upon this himself in his *Dictionary* in the article on 'Chrysippus', rem. T. It is of importance to give his own words, in order sometimes to face him with his own objections and to bring him back to the fine sentiments that he had formerly pronounced: 'Chrysippus', he says (p. 930), 'in his work on Providence examined amongst other questions this one: Did the nature of things, or the providence that made the world and the human kind, make also the diseases to which men are subject? He answers that the chief design of Nature was not to make them sickly, that would not be in keeping with the cause of all good; but Nature, in preparing and producing many great things excellently ordered and of great usefulness, found that some drawbacks came as a result, and thus these were not in conformity with the original design and purpose; they came about as a sequel to the work, they existed only as consequences. For the formation of the human body, Chrysippus said, the finest idea

as well as the very utility of the work demanded that the head should be composed of a tissue of thin, fine bones; but because of that it was bound to have the disadvantage of not being able to resist blows. Nature made health, and at the same time it was necessary by a kind of concomitance that the source of diseases should be opened up. **The same thing applies with regard to virtue; the direct action of Nature, which brought it forth, produced by a counter stroke the brood of vices.** I have not translated literally, for which reason I give here the actual Latin of Aulus Gellius, for the benefit of those who understand that language (Aul. Gellius, lib. 6, cap. 1):
…

I do not think that a pagan could have said anything more reasonable, considering his ignorance of the first man's fall, the knowledge of which has only reached us through revelation, and which indeed is the true cause of our miseries. If we had sundry like extracts from the works of Chrysippus, or rather if we had his works, we should have a more favourable idea than we have of the beauty of his genius.'

https://books.google.fi/books?id=GulESADToWsC&lpg=PA1&hl=fi&pg=PA129#v=onepage&q&f=false

Thus, when Bayle makes remarks about 'the Stoics,' they are almost always highly critical. **The Stoics are called 'the Pharisees of Paganism,' for example, for their unfair campaign of vilification against Epicurus.** 'The Stoics professed a great severity in their morals,' Bayle wrote, so that 'to contend with these people was almost as dangerous as it is at this day to be at variance with Bigots.'9

https://books.google.fi/books?id=mTdUtsbybqkC&lpg=PP1&hl=fi&pg=PA131#v=onepage&q&f=false

When Bayle turns to the epistemological debates between the Stoics and the Sceptics, he emphasises precisely those sceptical objections that could be brought to bear against the modern Cartesians. In 'Arcesilaus,' for example, Bayle observes that it was reported that the question was put to Zeno:

> [W]hat will be the case if the wise man should not be able to know any thing clearly, and if he must admit of any thing for true which is not clear and evident? And that Zeno answered, He will clearly comprehend some things, and therefore will admit of nothing which is obscure. He should afterwards have laid down a rule whereby to judge what things are clearly comprehended. **That which Zeno gave was opposed by Arcesilaus, who urged to him, that falsehood may appear under the shape of truth, as that therefore one would be at a loss to distinguish the one for the other. Zeno granted that nothing could be comprehended, if that which does not exist can appear in the same form as that which does exist; but he denied that there could be that conformity of ideas betwixt that which is and that which is not. Arcesilaus on the other hand insisted upon this conformity.**23

The mistake the Stoics made was to insist that there was necessarily a phenomenological distinction between what was true and what was false; this sceptical objection also lay at the heart of Bayle's anti-Cartesian epistemology, too, for the 'clear and distinct idea' could not be the basis of indubitable knowledge, insofar as it did not carry any kind of guarantee of its own veracity. One implication of this was that the proof of God's existence presented by Descartes in the third of his *Meditations* could not be granted.

https://archive.org/details/crisisofeuropean0000haza/page/158/mode/2up?view=theater

Miracles are against all reason. There is nothing more consonant with God's infinite greatness than His maintenance of the laws which He Himself established; there could be nothing more unworthy than to imagine Him intervening to interrupt their regular operation. And intervening for what, pray? **Intervening about something as paltry and insignificant compared with the march of the Universe, as the birth or death of a prince?**

"*The more we study the ways of man, the more we are forced to recognize that pride is his ruling passion, and that he will give himself grandiose airs even when his affairs are at their sorriest. Frail and infirm as he is, he quite persuades himself that when he comes to die, the whole of nature is stirred to its very depths and that Heaven itself must needs go out of its way to lend a touch of splendour to his obsequies. Foolish, ludicrous vanity! If we looked at the universe aright, we should seen realize that the birth or death of a prince was a very small matter indeed against the background of the universal order, far too small for Heaven to make a pother about.* ***We should say, with the wisest and loftiest of all old Rome's philosophers (Seneca), that it is true indeed that the solicitude of Providence includes even ourselves, but that, though we have our allotted place in the general scheme of things, the Heavenly purpose is directed to something far greater than our particular preservation,*** *and that, while we derive great benefits from the movements of the heavenly bodies, it is not merely for the sake of this earth that they set themselves in motion."*1

https://archive.org/details/crisisofeuropean0000haza/page/106/mode/2up?view=theater

The name of Sextus Empiricus was hardly known in our schools. *The allurements of the epoch which he described so subtly were as unknown there as was the southern continent, when Gassendi gave us a brief account of it and opened our eyes. Cartesianism put the finishing touches on the work,* ***and now no sound philosopher has any doubt that the sceptics were in the right when they said that the qualities of the objects which we apprehend with our senses are merely appearances.*** *Anyone may say* "I feel the heat when I am close to the fire," *but not* "I know that heat is in itself, what I think it is." *That is the way these*

early Pyrrhonists looked at the matter. ***To-day, the new school adopts a more positive tone. They say that heat, smell, colour and so on are not objects of our senses but modifications of our mind.*** *We know that external objects are not what they appear to us to be. There was an idea that extent and motion might be excluded from this rule, but that was found to be impossible; for if the objects of our senses appear to us to be coloured, hot, cold, odorous, when, as a matter of fact, they are not so, what is to prevent their appearing to be of such and such an extent, of such and such a shape and design, at rest or in motion, when in reality they are none of these things?* ***Those are the kind of ideas with which the new school of philosophy would strengthen the Pyrrhonist position, and which I decline to admit.***

https://archive.org/details/enlightenmentint0000unse_i6k5/page/294/mode/2up?view=theater

Then, in the fall of 1764, Diderot discovered that Le Breton, the crafty publisher of the *Encyclopédie*, had made extensive cuts in several articles after Diderot had read the proofs. **The article mutilated most severely was "Pyrrhonienne ou sceptique philosophie," and the passages cut most drastically were those in which Diderot had eulogized Bayle's character, abused Bayle's clerical persecutors, and restated, in appreciative detail, Bayle's skeptical philosophy.** Diderot burst out in impotent rage and could barely be persuaded to resume work on the remaining volumes of the *Encyclopédie*; still, while the experience was an infuriating setback for Diderot, it was also a wry tribute to Bayle's corrosive power.

https://www.gutenberg.org/files/17147/17147-h/17147-h.htm#page337

But as in this system all is connected and harmonious, all following from reasons and nothing being left incomplete or exposed to the rash discretion of perfect indifference, it seems that it was not pleasing to M. Bayle: **for he was here somewhat biassed in favour of such indifference, which, notwithstanding, he contested so strongly on other occasions.** He was much given to passing from one extreme to the other, not with an ill intention or against his own conviction, but because there was as yet nothing settled in his mind on the question concerned. He contented himself with whatever suited him for frustrating the opponent he had in mind, his aim being only to perplex philosophers, and show the weakness of our reason; **and never, in my opinion, did either Arcesilaus or Carneades argue for and against with more eloquence and more wit. But, after all, one must not doubt for the sake of doubting: doubts must serve us as a gangway to the truth. That is what I often said to the late Abbé Foucher, a few specimens of whose work prove that he designed to do with regard to the Academicians what Lipsius and Scioppius had done for the Stoics, and M. Gassendi for Epicurus, and what M. Dacier has so well begun for Plato.** It must not be possible for us to offer true philosophers such a reproach as that implied in the celebrated Casaubon's answer to those who, in showing him the hall of the Sorbonne, told him that debate had been carried on there for some centuries. What conclusions have been reached? he said to them.

https://books.google.fi/books?id=me6ig1nqlKIC&lpg=PT604&hl=fi&pg=PT604#v=onepage&q&f=false

Possibly even more significant were some of the paradoxical views presented in the articles "Pyrrho" and "Zeno" that undermined critical portions of Cartesian philosophy. **Bayle showed that the same sceptical arguments that led the Cartesians to question whether secondary qualities really exist in the world can lead to doubts about whether primary mathematical qualities also exist.** Bayle's argument, in part derived from the sceptic Simon Foucher, led Berkeley to develop his theory. David Hume was immersed in Bayle's texts when he wrote his major work, *Treatise of Human Nature*.

https://books.google.fi/books?id=cQ8xzDLYWfsC&lpg=PP1&hl=fi&pg=PA276#v=onepage&q&f=false

Foucher's contribution centers on challenging **the central Cartesian claim that some of our ideas, those of the mathematical or primary qualities, can give us knowledge of the external world, while those of sensory or secondary qualities (tastes, smells, colors, sounds, etc.) cannot.** Descartes and all others (Galileo, Hobbes, Spinoza, Malebranche, Locke, etc.), of the "new philosophers" who had distinguished primary and secondary qualities had offered standard sceptical reasons for contending that secondary qualities were entirely subjective, that is, in the mind, whereas primary qualities were objective that is, were qualities of the real external world (and hence that a mathematical physics of the real world was possible). **Bayle had noted that modern philosophy began with the ancient Pyrrhonist, Sextus Empiricus, who provided the reasons for doubting the reality of secondary qualities.**3 **Hume later said that the fundamental principle of all of what he called the "modern philosophy"**

> **is the opinion concerning colors, sounds, tastes, smells, heat and cold: which it asserts to be nothing but impressions in the mind, deriv'd from the operation of external objects, and without any resemblance to the qualities of the objects.** … This principle being once admitted, all the other doctrines of that philosophy seem to follow by an easy consequence. For upon the removal of sounds, colors, heat, cold and other sensible qualities from the rank of

> continu'd independent existences, we are reduc'd merely to what are called primary qualities, as the only *real* ones, of which we have any adequate notion.4

Foucher challenged this fundamental principle in two ways, first by questioning if *any* ideas could give us knowledge of external objects, and second by using the *same* sceptical arguments that established the subjectivity of secondary qualities to establish the subjectivity of primary ones.

https://books.google.fi/books?id=7j8PdlgFRDAC&lpg=PP1&hl=fi&pg=PA291#v=onepage&q&f=false

Bayle tells us that Gassendi made people aware of the arguments of Sextus Empiricus and the Abbé Foucher had applied such arguments to Cartesianism and undermined any arguments for the real existence of primary or secondary qualities in the real world. **(Bayle's use of Foucher's arguments became the way they were passed on into the eighteenth century to readers of Bayle's *Dictionnaire* such as George Berkeley and David Hume.)** Thus in terms of the Cartesian approach, all that we could know about are ideas in our own minds. We could not tell if these corresponded to the world outside of us.

https://books.google.fi/books?id=7j8PdlgFRDAC&lpg=PP1&hl=fi&pg=PA305#v=onepage&q&f=false

> **Pierre Bayle, in his article "Pyrrhon" in the *Dictionnaire historique et critique*, rem. B, asserted that modern philosophy began with the reintroduction of Sextus (although Bayle has the date about eighty years later than it actually took place).**

https://archive.org/details/enlightenmentcon0000isra/page/788/mode/2up?view=theater

Philosophically, perhaps the work's most striking feature is its uncompromising redefinition of scepticism and insistence on turning scepticism into a tool, or first step, of reason itself. Instead of taking scepticism to be chiefly a means of questioning reason, as was usual in Montaigne and many others, **Diderot, here emulating Bayle and several of the clandestine manuscripts, turns scepticism into an instrument primarily for questioning what men believe.** A true philosopher to his mind is someone who weighs all arguments carefully, doubting everything which he and other have been taught or urged to believe, embracing as true only what reason and empirical observation confirm to be true.35 **What is unequivocal here is the rejection of all fideist, Pascalian, and Lockean solutions to the problems of faith, Creation, and miracles, and emulation of Bayle and Spinoza in rejecting all attempted distinctions between truth 'au-dessus de la raison' and truth 'contre la raison,'** that is to judge what is true exclusively on the ground of rational demonstration. 'Si je renonce à ma raison,' remarks Diderot, in his later additions to the text, 'je n'ai plus de guide.'36 **While still ostensibly repudiating atheism, he also strongly reaffirms Bayle's cardinal principle that 'superstition' is a greater evil than atheism.**37

The chief line of enquiry in the *Pensées philosophiques* is whether the 'argument from design' on which the Newtonian system, and hence Voltaire's strategy, hinges remains cogent. In the prevailing Lockean-Newtonian climate of the time this was, of course, no easy doctrine to call into question. **Is it not the very height of absurdity, exclaimed one French Newtonian in 1751, to deny that eyes are for seeing, ears for hearing, and teeth intended for chewing? yet, observes this writer, 'c'est ce que nie Spinosa' in his *Ethics*.**38

---

https://archive.org/details/enlightenmentint0000unse_i6k5/page/290/mode/2up?view=theater

David Hume found Bayle congenial all his life. **As a young rebel in search of an alternative to Presbyterianism, he discovered ancient atheists, skeptics, and rationalists through the writings of Bayle;** this was the time when he noted with approval a maxim by the ancient Greek poet Epicharmus: "Keep sober and remember to be skeptical."9 And as the full-fledged philosopher, in his *Enquiries* and his *Dialogues Concerning Natural Religion*, he followed Bayle's arguments and often accepted Bayle's conclusions – usually without mentioning Bayle's name.

> 9. Mossner: *Life of Hume*, 78. In the light of the Enlightenment's commitment to common sense and to action, Hume's rejection of Pyrrhonism is revealing: he thought it intellectually excessive, emotionally paralyzing, but in the long run, also ineffective: **"A Stoic or Epicurean displays principles, which may not only be durable, but which have an effect on conduct and behavior. But a Pyrrhonian cannot expect, that his philosophy will have any constant influence on the mind: of if it had, that its influence would be beneficial to society." But then, men are rarely content to rest in Pyrrhonist principles; these are usually subverted by "action, and employment, and the occupations of common life."** Like the other philosophes, **Hume would not surrender the virtues of the *vita activa* for those of the *vita contemplativa*, no matter how attractively the latter might present themselves.** (See Hume: *Enquiry Concerning Human Understanding*, in *Works*, IV, 130-1.)

https://archive.org/details/enlightenmentint0000unse_i6k5/page/66/mode/2up?view=theater

When Hume looked back on this period, he remembered it as a time of internal debate, which ended with the victory of classical philosophy. **“Upon the whole,” he wrote to Hutcheson in 1739, shortly after he had finished the *Treatise*, “I desire to take my Catalogue of Virtues from Cicero’s *Offices*, not from the *Whole Duty of Man*. I had, indeed, the former Book in my Eye in all my Reasonings.”**4
…

Hume’s *Dialogues Concerning Natural Religion* is an even more direct testimonial to antiquity than this: it is an imitation of Cicero’s *De Natura Deorum*, which it follows closely in argument, exposition of doctrines, number and disposition of speakers, and even anecdotes. In choosing Cicero, and especially *De Natura Deorum*, Hume was making an ambitious choice; **and surely nothing would have gratified Hume more than the modern judgment that he had surpassed his admired “Tully” in the *Dialogues*.**

https://archive.org/details/enlightenmentint0000unse_i6k5/page/402/mode/2up?view=theater

When [Hume] was in Paris in 1765, he looked back across the Channel and observed that the English were “relapsing fast into the deepest Stupidity, Christianity & Ignorance.”4 This dismayed him, for while he did not expect much from the world, he could not bring himself to be complacent about stupidity and ignorance – that is to say, Christianity. **When he wrote about religion, as he often did, he was as implacable as Holbach and as sardonic as Voltaire;** his convictions and purposes were theirs, even though his techniques were largely his own.

>
> Hume, from whose fascinating narrative the great mass of the reading public are still contented to take their opinions, **hated religion so much that he hated liberty for having been allied with religion,** and has pleaded the cause of tyranny with the dexterity of an advocate while affecting the impartiality of a judge.

https://archive.org/details/enlightenmentint0000unse_i6k5/page/356/mode/2up?view=theater

[Hume’s] last months were cheered by his loving friends and by reading in Lucretius and Lucian, the two most implacable enemies of religion – one the fiercest, the other the wittiest – that antiquity had produced. William Cullen, one of a battery of distinguished physicians attending Hume in his last illness, reported that Hume jovially found only one regret at leaving this world: **he “thought he might say he had been very busily employed in making his countrymen wiser and particularly in delivering them from the Christian superstition, but that he had not yet compleated that great work.”**9
…

This did not stop the omnivorous interviewer [Boswell]: “I know not how I contrived to get the subject of Immortality introduced. He said he never had entertained any belief in Religion since he began to read Locke and Clarke,” and added “flatly” that “the Morality of every Religion was bad, and, I really thought, was not jocular when he said ‘that when he heard a man was religious, he concluded he was a rascal, though he had known some instances of very good men being religious.’”

https://books.google.fi/books?id=eZSPCwAAQBAJ&lpg=PP1&hl=fi&pg=PA261#v=onepage&q&f=false

If commentators generally agree that the Scottish Enlightenment was characterized by a blend of Christian and Stoic ideas, they also agree that David Hume (1711-76) is an exception to this trend – both regarding Christianity and Stoicism.
…

Moore (2007: 162) points out Hume’s aspiration to be a truthful “anatomist” rather than a “painter” of human nature**, his treating natural abilities like intelligence and good humor as virtues, and not just benevolence, his linking the moral sense to sympathy, and his conception of justice as an artificial virtue rather than as grounded on natural benevolence.** Such differences also emerge in their respective views of Stoic ideas. Commentators have discussed how Hume’s interpretation of Cicero’s *honestum* as humanity in the sense of a faint “feeling for others that links all mankind in an aversion to cruelty” differs from Hutcheson’s understanding of *honestum* as benevolence, that is the desire to promote the public good (Moore 2007: 385; Harris 2009: 173).

A passage from the *Enquiry concerning Human Understanding* (1748) will serve to introduce Hume’s criticisms of Stoic moral philosophy:

> It is certain, that, while we aspire to the magnanimous firmness of the philosophic sage, and endeavour to confine our pleasures altogether within our own minds, we may, at last, render our philosophy like that of *Epictetus*, and other *Stoics*, **only a more refined system of selfishness,** and reason ourselves our of all virtue, as well as social enjoyment. *(Hume 2000: 35)*

Hume takes up the Augustinian criticism that the Stoic system is ultimately selfish and morally problematic, yet the target is different. Rather than denouncing the vanity of the Stoics' confidence in self-cultivation, Hume points at the problematic dimensions of the ideal of apathy. Discussing the Stoic attitude to compassion and humanity, Hume's later-withdrawn essay *Of Moral Prejudices* attacks the treatment of pity by Epictetus – **in a similar tone Hutcheson used when speaking only of the "lower Stoicks":**

> When your Friend is in Affliction, says *Epictetus*, you may counterfeit a Sympathy with him, if it give him Relief, but take Care not to allow any Compassion to sink into your Heart, or disturb that Tranquility, which is the Perfection of Wisdom. *(Hume 1987: 540)*

Similarly, the fourth Appendix to the *Enquiry concerning the Principles of Morals* (1751) **accuses Epictetus of having "scarcely ever mentioned the sentiment of humanity and compassion, but in order to put his disciples on their guard against it"** (Hume 2006: 107). Many moral philosophers who, like Hutcheson, tied their accounts of morality principles like sympathy or benevolence (which are in some cases presented as "Christian" principles) might have agreed that the conception of virtue presented by *some* Stoics requires a too detached and morally problematic stance towards our fellow human beings. **Hume, however, direct his criticism against the central Stoic figure Epictetus himself, and not just against some "lower Stoicks."**

More generally, Hume criticizes the effects of the

> grave philosophic Endeavour after Perfection, which, under Pretext of reforming Prejudices and Errors, strikes at all the most endearing Sentiments of the Heart, and all the most useful Byasses and Instincts, which can govern a human Creature. The *Stoics* were remarkable for this Folly among the Antients; and I wish some of more venerable Characters in latter Times had not copy'd them too faithfully in this Particular. *(Hume 1987: 539; see also M. Stewart 1991: 285f.; Moore 2007: 156f.)*

…

From a different angle, Hume alludes to the Stoics' vanity in the *Natural History of Religion* (1757), where he reproaches them for having bestowed "many magnificent and even impious epiphets on their sage, that he alone was rich, free, a king, and equal to the immortal gods" (Hume 1998: 174; see also M. Stewart 1991: 287; Brooke 2012: 179f.).

Hume also expresses serious doubts about the *practicability* of Stoicism, **since too much power is attributed to reason, the weakness of which Hume emphasizes throughout his philosophy.** In the frequently discussed *Letter to a Physician* (1734), allegedly written after a mental breakdown, Hume points out the negative influence of the Stoic ideal of self-cultivation on our lives.8 He writes how, impressed by Cicero, Seneca and Plutarch's

> beautiful Representations of Virtue & Philosophy, I undertook the Improvement of my Temper & Will, along with my Reason & Understanding. I was continually fortifying myself with Reflections against Death, & Poverty, & Shame, & Pain, & all the other Calamities of Life. *(Hume 2011: 14)*

The crucial theme is the rejection of externals such as riches, life and health as indifferent, and the exclusive focus on the internal good of virtue, which is advertised in Stoic therapy and self-cultivation. **In an active life, such ideas might serve as guidelines, but "in Solitude they serve to little other Purpose, than to waste the Spirits"** (ibid.). This dovetails with Hume's general criticism that the Ancient moralists philosophized "without regarding human Nature" (ibid.: 16).

The unnatural Stoic ideals of self-perfection have their equivalent on the side of religion, where Hume rejects the problematic moral consequences of equally unnatural "monkish" (and Calvinist) virtues like self-denial and humility (Hume 2006: 73; 1998: 163). **In *A Dialogue*, Hume writes about the Augustinian Pascal that he "made constant profession of humility and abasement, of the contempt and hatred of himself; and endeavoured to attain these supposed virtues, as far as they are attainable"** (Hume 2006: 122). Pascal's austerities, and his rejection of even the most innocent pleasures ultimately lead to an artificial life, departing from the maxims of common reason and bound by religious superstition and philosophical enthusiasm (Hume 2006: 123).

In his philosophy of religion, **Hume attacks the Stoics not only for their superstition and enthusiasm, but more particularly for their ideas about providence** – a point with significant implications. In the *Enquiry concerning Human Understanding*, he addresses the question of liberty and

necessity, and his criticism against the Stoics evidently concerns the religious hypothesis in general. Hume's target is the idea of a whole "ordered with perfect benevolence," according to which every "physical ill" his its specific place:

> From this theory, some philosophers, the ancient *Stoics* among the rest, derived a topic of consolation under all afflictions, while they taught their pupils that those ills under which they laboured were, in reality, goods to the universe; **and that to an enlarged view, which could comprehend the whole system of nature, every event became an object of joy and exultation.** *(Hume 2000: 76)*

…

Whereas Hutcheson tried to combine some broadly Christian and broadly Stoic streams of thought, Hume confronts them both. However difficult it may be to reach an adequate interpretation of Hume's four essays on happiness (*The Epicurean*, *The Stoic*, *The Platonist* and *The Sceptic*, from 1742), the voice of the Skeptic, who objects to the Stoic – who insists that virtue produces happiness – that "no perfect or regular distribution of happiness and misery is ever, in this life, to be expected" (Hume 1987: 178), seems to echo Hume's own views.9

https://books.google.fi/books?id=GulESADToWsC&lpg=PA1&hl=fi&pg=PA177#v=onepage&q&f=false

The virtue of justice was quite distinct from that of benevolence; and was an example of what Hume called an artificial virtue, insofar as it 'produce[d] pleasure and approbation by means of an artifice or contrivance, which arises from the circumstances and necessities of mankind.'142 With the Epicureans, and against the Stoics, Hume located the origins of justice in a social convention for mutual advantage. **And when Hutcheson objected to Hume calling justice an artificial virtue, Hume denied that it was unnatural, just that it was artificial, and he quoted Horace's Epicurean opinion that utility was the mother of justice – the same tag that Grotius had deployed, first approvingly, in *De Jure Praedae*, and later disapprovingly, in *De Jure Belli et Pacis*.**143

This general hostility to Stoicism found expression in a number of other writings. The second, 1742 edition of the *Essays* contained four character sketches, 'The Epicurean,' 'The Stoic,' The Platonist' and 'The Sceptic,' **with the Stoic – subtitled 'the man of action and virtue' – presented as wallowing in smugness, which is punctured in the following essay by the Platonist, who charges that 'Thou surely art conscious of the hollowness of thy pretended probity'**144 **and that 'Thou art thyself thy own idol.'**145

https://archive.org/details/enlightenmentcon0000isra/page/54/mode/2up?view=theater

Nevertheless, Hume devotes his powerful philosophical mind and sophisticated social criticism to essentially conservative political, social, and moral goals and was relentless in his attack on the pretensions of philosophy itself. **The ground freed by pruning theology's sway, he proposed to occupy not with 'reason,' whose dominion, he, like Locke, strives to curb, and even ridicule, but with custom, habit, and practical good sense.** Not only does Hume insist our knowledge always derives from experience, he combined this with sceptical arguments, **to extend Locke's attempts to narrow the scope of philosophy, seeking to curb the pretensions of natural philosophy too.** Echoing Newton's empiricist strictures, as well as reacting somewhat to the euphoria surrounding his achievements, and the sweeping claims of other philosophers, **he asserts in his *Enquiry Concerning Human Understanding* (1748) that 'it must certainly be allowed that nature has kept us at a great distance from all her secrets and has afforded us only the knowledge of a few superficial qualities of objects, while she conceals from us those powers and principles on which the influence of these objects entirely depends.'**46

Hume sought to restrict the range of philosophy's applicability in the search for truth and, still more, its practical applicability.47 **The latter ensured a head-on clash with the efforts to construct a secular morality and reason-based social theory and politics in Spinoza, Bayle, and Diderot,** as we see from his strictures concerning the place of reason in the making and upholding of moral values. Already, in his first major work, the *Treatise of Human Nature* (1739), Hume takes up an argument which subsequently remained a central strand of his philosophy: 'since morals have an influence on the actions and affections, it follows, that they can not be deriv'd from reason; and that because reason alone, as we have already prov'd, can never have any such influence. **Morals excite passions, and produce or prevent actions. Reason of itself is utterly impotent in this particular. The rules of morality, therefore, are not conclusions of our reason.**'48 **He proceeds similarly in his *Enquiry Concerning the Principles of Morals* (1751), the work Hume himself dubbed 'of all my writings, historical, philosophical, or literary, incomparably the best'** albeit one which, like his previous works, also 'came unnoticed and unobserved into the world.' Here, Hume firmly eschews all theological criteria, granting that the 'end of moral speculations is to teach us our duty, and, by proper representations of the deformity of vice and beauty of virtue, beget correspondent habits, and engage us to avoid the one, and embrace the other'; **but he also refuses to accept that any such result could stem 'from inferences and conclusions of the understanding,' on the ground that reason has no hold over individuals and cannot 'set in motion the active powers of men.'**49 Custom must do the work**.**

…

The fundamental unity and equality of Man urged by the Radical Enlightenment, being based on the idea of a shared reason, and the equivalence of individual volitions or motivation as proved by 'reason,' is definitely not for Hume, whose downplaying of 'reason,' and insistence on experience and practice, undoubtedly reinforced his anti-black bias and inclination 'to suspect that the Negroes and in general all the other species of men (for there are four or five different kinds) to be naturally inferior to the whites.'50
…

No matter how defective a form of government, it still acquires legitimacy, **no matter how violent, illegitimate, and upstart in origin, argues Hume, merely from the fact of 'long possession' of power and through the 'right of succession,'** a basic principle in Hume's politics and morality as well as theory of property.55 If chastity and marital fidelity are very widely prized in human societies because the 'long and helpless infancy of man requires the combination of parents for the subsistence of their young' and this in turn predicates the sanctity of the marriage bed, **the same experience of the facts of nature, in Hume's opinion, ensures that marital infidelity 'is much more pernicious in women than in men. Hence the laws of chastity are much stricter over the one sex than over the other,'** and Hume feels this is as it should be.56
…

'Where birth is respected, unactive, spiritless minds remain in haughty indolence and dream of nothing but pedigrees and genealogies; the generous and ambitious seek honor and authority and reputation and favour. Where riches are the chief idol, corruption, venality, rapine prevail; arts, manufactures, commerce, agriculture flourish.' Consequently, **Hume thought the 'former prejudice, being favourable to military virtue,' better suited to monarchies and the latter, being more favourable to 'industry, agrees better with a republican government.'**59

Hume's very choice of words shows he had no particular fondness for monarchy or social hierarchy *per se*. His preferring mixed government to absolute monarchy was doubtless reinforced by his perception that poverty and inequality extend furthest under absolute monarchy, and that excessive inequality harms society as a whole,60 though he also believed the social fabric, with all its inequalities, was a delicate thing which could not be sensibly or safely challenged or changed by anything, least of all 'reason.' **Above all, he was emphatic in his belief that philosophy and 'reason' have no business in trying to transform the world.** His conservative scepticism represents a more systematic attack on the capacity of reason than perhaps any other eighteenth-century assault on *l'esprit philosophique*. **Hence, despite the fact that in the long run perhaps no one, next to Spinoza himself, did more to erode belief in miracles, the 'argument from design,' and the supernatural, Hume nevertheless must be regarded as a firm anti-democrat and, on the whole, more of an opponent than an ally of the Radical Enlightenment.**

https://www.marxists.org/archive/lenin/works/1895/misc/engels-bio.htm

> **These gentlemen preached a criticism which stood above all reality, above parties and politics, which rejected all practical activity, and which only "critically" contemplated the surrounding world and the events going on within it.** These gentlemen, the Bauers, looked down on the proletariat as an uncritical mass. Marx and Engels vigorously opposed this absurd and harmful tendency. In the name of a real, human person – the worker, trampled down by the ruling classes and the state – **they demanded, not contemplation, but a struggle for a better order of society.**

https://m.harunyahya.com/tr/works/716/Idealism-The-Philosophy-Of-The-Matrix-And-The-True-Nature-Of-Matter/chapter/1663/Introduction-We-are-Watching-a-Copy-of-Our-Lives

> > **Once you deny objective reality, given us in sensation, you have already lost every weapon against fideism [reliance on faith alone], for you have slipped into agnosticism or subjectivism—and that is all that fideism requires. A single claw ensnared, and the bird is lost. And our Machists** [adherents of Machism, developed by the Austrian philosopher Mach, one of the leaders of modern positivism] **have all become ensnared in idealism, that is, in a diluted, subtle fideism;** they became ensnared from the moment they took "sensation" not as an image of the external world, but as a special "element." It is nobody's sensation, nobody's mind, nobody's spirit, nobody's will.1

> Russell is a latter-day enlightener who has inherited from the old enlightenment not so much its enthusiasm as its idealistic prejudices. Russell is a sceptic through and through. He counterposes the peaceful and gradual methods of science and technology to the violent methods of revolution. **But he believes just as little in the salutary force of scientific thought as he does in the force of revolutionary action.** In his polemic with Nearing he attempts under the cover of pseudo-socialist phrases to belittle, discredit and compromise the revolutionary initiative of the Russian proletariat. **In his polemic against the biologist Haldane he makes a mockery of scientific-technical optimism. In his pamphlet *Icarus* he openly expresses his conviction that the best outcome would be the destruction of all our civilization.** And this man, **worm-eaten through and through with scepticism, egoistic, reclusive and aristocratic,** considers himself called upon to give advice to the British proletariat and to warn it against our communist intrigues! **The British working class is entering a period when it requires the greatest belief in its mission and its strength.**

https://archive.org/details/enlightenmentint0000unse_i6k5/page/414/mode/2up?view=theater

Hume had largely completed the manuscript by 1751, revised it carefully, and circulated it among a few chosen friends, including Adam Smith. They urged him to suppress it, and reluctantly, comically proclaiming himself the victim of tyranny, Hume acceded. But he was too fond of the *Dialogues* to permit it to remain in permanent obscurity: in the last months of his life he took precise, almost pedantic measures to guarantee its publication after his death. His solicitude was appropriate to its object: **the *Dialogues* is Hume's "Dictionnaire philosophique," the epitome of his life's work; his "Nathan der Weise," dramatizing his deepest convictions, a work of literary art impressive even to those who reject its conclusions; his "Neveu de Rameau," a conscious, free imitation of a favorite classic, Cicero's *De natura deorum*, which makes its point as forcibly by the resonances evoked by its borrowings as by its departures from the model.**
...

Besides, the universe resembles a watch or a house far less than it does an animal or a vegetable: Philo mischievously proposes that the Creator might be a vegetable rather than a craftsman. Nor is this all: if we observe the universe without our ordinary preconceptions, we may well conclude that the intelligence that created it was little better than an amateurish bungler who, for all we know, made and discarded other worlds before he settled on this one.1

> 1. **This imaginative speculation was a favorite with the philosophes: in his short story, *Songe de Platon*, Voltaire supposes that while God himself is perfect, he left the creation of this world to a lesser angel who made a poor job of it. Hence the presence, indeed prevalence, of evil.**

Little, very little, remains of the "religious hypothesis" after this assault. No matter how rationally argued or energetically defended, it is unconvincing and probably untrue. **"*To know God,*" concludes Philo, significantly quoting Seneca, "*is to worship him.* All other worship is indeed absurd, superstitious, and even impious."**2 **A reasonable man can do no more than to give a philosopher's calm recognition to the possibility that "*the cause of order in the universe probably bear some remote analogy to human intelligence*"; but nothing follows from that recognition except the pleasure of modest, rational assent to a sensible proposition.**3 **It warrants no belief in extraordinary tales, justifies no prayer and no church, and does not even provide guidance to conduct.**

http://american_almanac.tripod.com/dehoyos.htm

> **Voltaire asserts in *Plato's Dream* that the "Eternal Geometrician" gave the evil divinity Demogorgon – the ruler of the netherworld in ancient mythology – "a bit of mud that is called Earth" to arrange as he saw fit.** After fashioning what Demogorgon considered a "masterpiece," the evil god was surprised to find himself coming under attack by the other genies attendant to the Great Demiurge, Demiurge also being a specific gnostic subordinate deity who creates the material universe. With his characteristic adolescent wit, Voltaire has the genies say:
>
> > "Your onions and artichokes are very good things; but I don't see what your idea was in covering the earth with so many venomous plants, unless you had the intention of poisoning the inhabitants. ... [you only have] four or five kinds of men; **it is true that you have given this last animal what you call reason; but in all conscience, that reason of his is too ridiculous and comes too close to madness.** Moreover, it appears to me that you set no

> great store by that two-footed animal, since you have given him so many enemies and so little defense, so many maladies and so few remedies, so many passions and so little wisdom. Apparently you do not want many of those animals to remain on earth. ...”

Demogorgon blushed: he fully sensed that there was moral evil and physical evil in the work he had done, **“but,” says Voltaire in a swipe at Leibniz's *Theodicy*, “he maintained that there was more good than evil.”**

At this point in the dream, the genies rage in a battle of polemics against each other over who had made the best planet, until the “eternal Demiurge” silences them, saying:

> “You have made some things good and some bad, because you have much intelligence and because you are imperfect; **your works will last only a few hundreds of millions of years, after which, having learned more, you will do it better;** it belongs to me alone to make things perfect and immortal.”

https://archive.org/details/BarruelMemoirsIllustratingTheHistoryOfJacobinism/page/n55/mode/2up?view=theater

Voltaire leaned to Deism, and seemed for some time to have adopted it; but, insensibly falling into Spinosa’s systems, he knew not what to believe. Consulting at one time D’Alembert, at another Frederic, he was, during the remainder of his life, a prey to remorse, if doubts and anguish of mind void of repentance can be so called. At nearly fourscore he expresses himself in the following manner; “**Doubts encompass us round, *and doubting is a disagreeable state*.** Is there a God such as he is said to be? A soul such as is imagined? Analogies such as are laid down? Is there any thing to be hoped for after this life? **Was Gilimer in the right to laugh, though stripped of his dominions, when brought before Justinian; or Cato in preferring suicide to the sight of Caesar? Is glory then but an illusion?** Shall Mustapha, in the effeminacy of his harem, beaten, ignorant, proud, and committing every folly, be happier, provided he digests well, than the Philosopher who digests ill? **Are all men equal before the Great Being that animates nature? In that case, could the soul of Ravaillac be equal to that of Henry IV, or had neither of them a soul?** Let the heroic philosophers unravel all this; for my part I can make nothing of it.”20

D’Alembert and Frederic, being alternately pressed by these questions, answered each after his own way. Unable to fix his own opinion, the former frankly confesses he has not the gift of solving them: “I own to you,” says he, “that concerning the existence of God, **the Author of the System of Nature seems too warm and dogmatic; and on this subject Scepticism seems the most rational.** *What do we know about it?* is with me an answer to most metaphysical questions; and the natural reflection must be, that since we know nothing of the matter, it is, doubtless, unnecessary that we should know more.”21

https://archive.org/details/in.ernet.dli.2015.218820/page/n233/mode/2up?view=theater

The co-editor of the *Encyclopédie* was d’Alembert, who wrote the mathematical articles, together with a magnificent preface; later he resigned his share in the work, because the radical materialism of Diderot and most of his assistants did not suit his conciliatory and somewhat nervous spirit nor his exact scientific mode of thought. **Himself he professed a kind of phenomenalism which sounds almost like a presage of Kant and was certainly higher than the naïve dogmatism of the Encyclopaedists; he felt himself forced, he declared, to the assumption that “all we see is sense-phenomenal” and there is nothing outside of us to correspond to that which we think we see.**

https://quod.lib.umich.edu/e/evans/N25379.0001.001?id=DLPS1;lvl=1;note=inline;rgn=main;view=trgt

* **The following summary of Mr. Hume's doctrines, published some years before his death, Bishop Home says, was never, so far as he could find, questioned, as to its fidelity or accuracy, either by Mr. Hume, or his friends.**
…

That the soul of man is not the same this moment, that it was the last: that we know not what it is; that it is not one, but many things, and that it is nothing at all.
…

That the external world does not exist, or at least, that it's existence may reasonably be doubted.

That the universe exists in the mind, and that the mind does not exist.

That the universe is nothing but a heap of perceptions, without a substance.

…

That man, in all his perceptions, actions and volitions, is a mere passive machine, and has no separate existence of his own, being entirely made up of other things, of the existence of which he is by no means certain; **and yet, that the nature of all things depends so much upon man, that two and two could not be equal to four, nor fire produce heat, nor the sun light, without an act of the human understanding.**
…

That adultery must be practised, if men would obtain all the advantages of life; **that, if generally practised, it would in time cease to be scandalous; and, that, if practised secretly and frequently, it would by degrees come to be thought no crime at all.**

Lastly, as the soul of man, according to Mr. Hume, becomes every moment a different being, the consequence must be, that the crimes committed by him at one time cannot be imputable to him at another.

---

http://www.garynorth.com/freebooks/docs/pdf/unholy_spirits.pdf

David Hume, in the middle of the eighteenth century, provided the classic answer of the skeptic: natural law really does not exist as a force independent of man's mind. Natural law is nothing more than the agreement among men that certain actions follow necessarily from prior actions. **Cause-and-effect relationships, in other words, are nothing but *conventions*.** The sensation of pain when I thrust my finger into boiling water may have no relation to that water. I may experience pain each time, but experience is not the same as rigorous mechanical law. We simply call certain events effects of prior events (the causes). **Nominalism, that is, the denial of the existence of metaphysical forms which order nature, had grown to maturity in the philosophy of Hume.** Whirl once again became king, despite the fact that men naively think that the laws or conventions of their minds relate in some way to a hypothetically lawful universe out there beyond our senses. **Law becomes convention.** As a result, confidence turns into skepticism.

> Prof. Howard Birack: "We assume time is narrow because it is as a clock – **one second is one second for everyone!** Cause precedes effect – fruit rots, water flows downstream. We're born, we age, we die. The reverse never happens... **None of this is true! Say goodbye to classical reality, because our logic collapses on the subatomic level... into ghosts and shadows.**" [*teaching a class on quantum physics*]
>
> https://creation.com/a-new-age-of-quantum-madness
>
> **But rather than embrace the notion of God,[5] Davies attacks the idea of unchanging physical laws. Instead, he proposes that the laws of physics have evolved along with the universe—his term is 'flexi-laws'.** The younger the universe, so goes the theory, the more flexible the laws are; so as the universe ages, the laws become less and less flexible, until they 'focus' on today's.

Men do not normally choose universal skepticism, but Hume's arguments seemed to make it impossible to avoid such a choice. **Hume's arguments were useful in refuting dogmatic theology, so his skepticism could be used against eighteenth-century Christianity, but the price paid for this anti-Christian weapon soon proved to be too high. Such was the conclusion of the philosopher who still stands as *the* philosopher of the modern world, Immanuel Kant.**

Hume's ideas, Kant later wrote, awoke him from his dogmatic slumbers, but the decade of his conversion to Humean skepticism (1763-72) led him to search for certainty, and certainty clearly was not to be found in the contingent rules of human experience. On that, Hume and Kant were in agreement. First comes dogmatism, then skepticism, and finally, Kant said, truly critical certainty. "**Scepticism is thus a resting-place for human reason,** where it can reflect upon its dogmatic wanderings and make survey of the region in which it finds itself, so that for the future it may be able to choose its path with more certainty. **But it is no dwelling-place for permanent settlement.** Such can be obtained only through perfect certainty in our knowledge, alike of the objects themselves and of the limits within which all our knowledge of objects is enclosed."34 To find *a priori* certainty, Kant concluded, men must be humble. They must limit their questions to those that can be answered by the combination of sense data (experience) as interpreted by the universal, fixed categories of human thought.

This Kantian humility is bogus. It is the humility of self-proclaimed autonomous man. It is the humility of the man who says: "The visible, scientific world is capable of being discovered and molded by man's mind and man's activities as a rational species, and nothing that man is incapable of understanding scientifically is relevant in the external world." **But if this is true, *then how can man's morality be autonomous from scientific cause and effect, and yet also be connected to the realm of rational human action?*** In other words, how can man's personality be preserved in a world of strict cause and effect?

>
> Recent interpreters of Kant, such as Wood and Korsgaard, have identified several powerful arguments that purport to refute all ethical theories other than Kant's own. But Buddhists have the resources to respond to these arguments. They can block the regress to humanity as an end by rejecting Kant's criticisms of the intrinsic value of happiness. **Kant argues that autonomous self-legislation is the only possible source of moral obligation. But Kant's views depend on regarding the rational mind as an autonomous self, an indefensible attitude.** Buddhists present an ethical perspective that does not involve autonomy or a self. Wood's transcendental argument for the necessity of seeing ourselves as free is a failure. **And Korsgaard's arguments for the practical necessity of the idea of freedom apply only to ordinary people, and not to advanced spiritual practitioners, who have access to a better state that doesn't involve constructing an identity.**

>
> At first Indian philosophy is orthodox, inimical to reason, supporting itself on the Vedas as interpreted by the saints; in its second stage, beginning to regard itself as something, it undertakes to confirm the truths of religion. **Very soon, under the breath of the Indian Descartes, the hosts of material gods are changed into abstractions and moral faculties.** Indra with his three heads, and the more subtle trinity of Brahma, founded on the idea of Being in itself, of its creative word, and of the grand soul of things, both become mere metaphysical abstractions. Finally, philosophy revolts against dogma, crushes tradition into powder, peoples the world with sterile atoms; and, furious to destroy everything, turns at last against itself.
>
> **Doubt arrived at its last limit, faith is born again of spiritual death. A new religion springs out of this abyss of abstractions; the East is still so full of God that scepticism only ends there by giving birth to the New Testament of India.**
>
> In its most extreme departures from orthodoxy, Indian doubt retains its gods, only contesting their eternal duration. When, from examination after examination, philosophy reached the absolute void, **instead of shrinking from the abyss like the European doubter, the Indian went on until he arrived at a new belief.** Outside all created things, outside every form or limit, beyond light and darkness, beyond the bounds of all thought, he found a God who had no relation with the world. **Never did Christianity, even in the heart of the Middle Age, so absolutely anathematise Matter.** To the Oriental the visible world was an imposture; he wished to tear off the mask that covered the universe.
> ...
>
> Here, as it were, at the antipodes both of Nature and Tradition, it found another heaven, another god; **for out of the last efforts of philosophy to overthrow everything, came forth the revelation of Buddha,** a religion which counts to-day a number of adherents greater than the united hosts of all who profess Christianity and Islamism.

...

Nothing can be known without sense data, but without the categories of human thought to assemble the data into coherent wholes, experience tells us nothing. There is therefore no way of knowing anything beyond our senses *as categorized and ordered* by the concepts of the autonomous mind. "Thus the order and regularity in the appearances, which we entitle *nature*, we ourselves introduce. We could never find them in appearances, had not we ourselves, or the nature of our mind, originally set them there."35 The human understanding, he concluded, is "the *faculty of rules*."36

It is therefore man's autonomous mind which creates that entity which we know as nature. **The "stuff out there," that is, the so-called "things in themselves," must be forever unknown and unknowable to us.** We can only know nature through our own *a priori* categories of reason. *Man's mind legislates the laws of nature!* "Thus the understanding is something more than a power of formulating rules through comparison of appearances; it is itself the lawgiver of nature. Save through it, nature, that is, synthetic unity of the manifold of appearances according to rules, would not exist at all..."37 *Man is the ultimate creator of his own reality.* **Man is autonomous. In this there is certainty of knowledge. This is the so-called "humility" of Kantian philosophy.**

https://archive.org/details/in.ernet.dli.2015.218820/page/n325/mode/2up?view=theater

> In the same way Kant hurls man down to the depths of powerlessness and darkness and proves to him irrefutably that he is separated from knowledge of the “true” world, the world-in-itself, by insuperable barriers; but at the same time he makes him the creator and absolute lawgiver of the empirical world, whose enormous expanses can no longer make him fearful. **The *Pure Reason* thus marks at once the lowest subjection and the highest triumph of human reason: man is a vanishingly small point in the universe, but this cipher imposes its laws on the universe.**
> …
>
> At the time of the wonderful discoveries made by Gauss and Riemann of the non-Euclidean geometries, it was believed that the transcendental philosophy had received its death-blow. But so far are they from refuting it that they in fact constitute its confirmation. **For Kant maintained that Euclidean space was *our* idea—ours only, but for us the one possible and necessary conception.** Other spaces are thinkable, but not imaginable. Kant’s doctrine of the a-priorism of space would only be refuted if a man appeared who could visually imagine a non-Euclidean geometry, a flatland life, or a four-dimensional world. **The same is true of the extraordinary discoveries of Einstein; they prove unambiguously that many times are possible, and that the idea of an absolute time valid for all parts of space is a human fiction. From this numerous investigators concluded that the transcendental philosophy was no longer tenable.** For instance, in his admirable *Lectures on the Physical Basis of Natural Science* Franz Exner says: “If we ask ourselves what remains of the absolute concept of space and time postulated and set up by Kant, we must answer, almost nothing.” **But surely Kant’s epoch-making achievement was just that he *destroyed* the idea of absolute space and time.** His whole system is anticipated Relativity, and Relativity is nothing but the exact, scientific establishment of the Kantian doctrine by methods which were not yet at his disposal.

…

Cornelius Van Til, a twentieth-century Christian philosopher and theologian, has argued throughout his career that Kant's philosophy is the touchstone of all modern thought.

…

Spend five minutes or so carefully studying this quotation from Van Til, and the logical tricks of modern (or ancient) atheistic humanism will never be a threat to you again. Pay particular attention to his concept of the "secret treaty" between rationalism and irrationalism - a treaty against God. (For added readability, I have broken his three original paragraphs into seven.)

…

> First there is the need for authority that grows out of the existence of the endless multiplicity of factual material. Time rolls its ceaseless course. It pours out upon us an endless stream of facts. And the stream is really endless on the non-Christian basis.
>
> For those who do not believe that all that happens in time happens because of the plan of God, the activity of time is like to that, or rather is identical with that, of Chance. Thus the ocean of facts has no bottom and no shore.
>
> **It is this conception of the ultimacy of time and of pure factuality on which modern philosophy, particularly since the days of Kant, has laid such great stress. And it is because of the general recognition of the ultimacy of chance that the rationalism of the sort that Descartes, Spinoza and Leibniz represented, is out of date. It has become customary to speak of post-Kantian philosophy as irrationalistic.**
>
> > https://archive.org/details/tractatustheolog00elweuoft/page/n17/mode/2up?view=theater
> > **[1883]**
> >
> > **Among German philosophers Kant is, perhaps, the last, who shows no traces of Spinozism.** Hegel has declared, that "to be a philosopher one must first be a Spinozist."
>
> It has been said that Kant limited reason so as to make room for faith. Hence there are those who are willing to grant that man's emotions or his will can get in touch with such aspects of reality as are not accessible to the intellect. The intellect, it is said, is not the only, and in religious matters not even the primary, instrument with which men come into contact with what is ultimate in human experience. There is the world of the moral imperative, of aesthetic appreciation, of the religious a priori as well as the world of science. **There is in short the world of "mystery" into which the prophet or genius of feeling or of will may lead us.**
>
> It is of the greatest import to note that the natural man need not in the least object to the kind of authority that is involved in the idea of irrationalism. And that chiefly for two reasons. In the first place, the irrationalism of our day is the direct lineal descendant of the rationalism of previous days. **The idea of pure chance has been inherent in every form of non-Christian thought in the past. It is the only logical alternative to the position of Christianity, according to which the plan of God is back of all. Both Plato and Aristotle were compelled to make room for it in their maturest thought.** The pure "non-being" of the earliest rationalism of

> Greece was but the suppressed "otherness" of the final philosophy of Plato. So too the idea of pure factuality or pure chance as ultimate is but the idea of "otherness" made explicit. Given the non-Christian assumption with respect to man's autonomy, the idea of chance has equal rights with the idea of logic.
>
> In the second place, modern irrationalism has not in the least encroached upon the domain of the intellect as the natural man thinks of it. Irrationalism has merely taken possession of that which the intellect, by its own admission, cannot in any case control. **Irrationalism has a secret treaty with rationalism by which the former cedes to the latter so much of its territory as the latter can at any given time find the forces to control. Kant's realm of the noumenal has, as it were, agreed to yield so much of its area to the phenomenal, as the intellect by its newest weapons can manage to keep in control. Moreover, by the same treaty irrationalism has promised to keep out of its own territory any form of authority that might be objectionable to the autonomous intellect.**
>
> The very idea of pure factuality or chance is the best guarantee that no true authority, such as that of God as the Creator and Judge of men, will ever confront man. If we compare the realm of the phenomenal as it has been ordered by the autonomous intellect to a clearing in a large forest, we may compare the realm of the noumenal to that part of the same forest which has not yet been laid under cultivation by the intellect. The realm of mystery is on this basis simply the realm of that which is not yet known.40

This "secret treaty" between the scientific phenomenal realm and the personalistic noumenal realm has one major purpose: *to shove God out of the universe*.
…

The naive Newtonians did not understood that Newton had personally rested his case for a coherent universe on God's providence, **and that when Kant destroyed men's faith in Newton's providentialism, he thereby in principle destroyed the foundation of predictable science. If God does not hold the universe together, then who does? Man? Man's mind? The *a priori* categories of man's mind? What a feeble foundation!**
…

First, Kant triumphed over Newton, as men were told that the innate categories of their minds provide order to the random noumenal world "out there." Then, after 1964, a world view close to don Juan's began to triumph over Kant, at least within a growing segment of the student population, as well as inside the American book-buying public. **People began to take Castaneda's anti-rational proposition quite seriously: there *is* a separate reality. In fact, there are many realities. Each autonomous man makes his own, in terms of his own categories. The linguistic confusion of the tower of Babel is now paralleled by the confusion of the "universal language" of Kant's categories. (This is the essence, I suspect, of the prevailing epistemology of all those in hell: total autonomy and isolation.)** Kant's faith that universal categories of the human mind necessarily exist and give order to the world is being abandoned; it is "every man for himself."
…

It was Kant, after all, who had asserted that "the understanding is something more than a power of formulating rules through comparison of appearances; it is itself the lawgiver of nature. Save through it, nature, that is, synthetic unity of the manifold of appearances according to the rules, would not exist at all…"77 The old sorcerer saw what Castaneda's simplistic nineteenth-century rationalism did not prepare him to see, but what humanistic philosophers have maintained for two hundred years: "The world is such-and-such or so-and-so only because we tell ourselves that that is the way it is. If we would stop telling ourselves that the world is so-and-so, the world would stop being so-and-so."78

http://www.christianciv.com/ChristCivEssay_Pt2.htm#Ethics

Kant cannot justify his rule of equal treatment for all humans on the basis of his philosophy because *he cannot even know if other people exist.* According to him, all universals are a projection of the individual, autonomous human mind. To know that other people exist would be to know things-in-themselves, the noumenal world, which is impossible on his view. And even in his isolated, solipsistic world, Kant cannot account for the integration of universals with particulars because his universal begins as a pure blank, excluding all particularity.

https://archive.org/details/christianityand00andrgoog/page/n155/mode/2up?view=theater

It was reserved to Kant (d. 1804) to make Agnosticism an integral part of his philosophy. He affirmed that all we can know of things external to us is their phenomena; of what is back of these phenomena, and

underlying them, we are, and must be, ignorant. Of the three great objects of knowledge, God, Nature, and Man, we can affirm nothing certain.
…

Professor Seth ("Scottish Philosophy") remarks: "Kant is the *fons et origo* of the most cultured agnosticism of the day."

https://archive.org/details/heine-on-the-history-of-religion-and-philosophy-in-germany/page/79/mode/2up?view=theater

Immanuel Kant's life story is difficult to describe, because he had neither a life nor a story. He lived a mechanically ordered, almost abstract bachelor existence in a quiet isolated lane in Königsberg, an old city on the north-eastern border of Germany. **In my opinion, not even the great cathedral clock there went about its daily labor with less passion and more regularity than its compatriot Immanuel Kant.** Getting up, drinking coffee, writing, giving lectures, eating, walking: everything had its set time, and the neighbors knew that it was exactly half past three when Immanuel Kant, in his grey frock-coat, rattan cane in hand, emerged from his front door and strolled in the direction of small Lindenallee, which is still called "Philosopher's Way" on his account. He walked there eight times back and forth in every season, and when the weather was dismal or grey clouds indicated rain, one would see his servant, old Lampe, walking with anxious concern behind him, a long umbrella under his arm, like an image of Providence.

What a remarkable contrast between the external life of this man and his destructive, world-crushing thought! Indeed, had the citizens of Königsberg sensed the true meaning of this thought, they would have been in much greater dread of him than of the executioner — the executioner, namely, who only kills people. But the good citizens saw in him only a professor of philosophy, and when he walked by at the proper time, they gave him friendly greetings, and set their watches.

If, however, **Immanuel Kant, the great destroyer in the realm of thought, far surpassed Maximilian Robespierre in terrorism,** the two, on the other hand, had certain similarities, which invite us to compare them. First, we find in both the same unrelenting, cutting, unpoetic, and sober honesty. Next, we find in both the same aptitude for distrust, only that the first exercises it upon thought and calls it criticism, whereas the second uses it against people and calls it republican virtue.
…

Why, though, did Kant write his *Critique of Pure Reason* in the grey, dry style of a paper bag? **Since he rejected the mathematical form of the Descartes-Leibniz-Wolffians, I think he was afraid that philosophical science would forfeit some of its dignity if it expressed itself in an easy, accessibly bright tone.** He thus gave it a rigid, abstract form which coldly rejected all familiarity with the lower spiritual classes. He wanted, in aristocratic fashion, to separate himself from the contemporary "popular philosophers" who strove for the most bourgeois clarity, and he clothed his thoughts in courtly and chilled officialese.145 Here, the philistine shows himself in full. But perhaps Kant needed an even more carefully deliberate language for his carefully deliberate mode of thought, and he was incapable of creating a better one. Only genius finds a new word for the new thought. But Immanuel Kant was no genius. **Feeling this deficiency, just like the good Maximilian, Kant was even more distrustful of genius, and in his *Critique of Judgment*, he even claims that genius has nothing to do with science, its contributions belonging solely to the realm of art.**

Kant did much harm with the starchy and ponderous style of his major work. His soul-less imitators mimicked him in this regard, **and this led to the superstition among us that good writing was incompatible with being a philosopher. But at least the mathematical form of philosophy could no longer be used after Kant, who mercilessly criticized it in the *Critique of Pure Reason*. He said that mathematical form in philosophy creates nothing but card houses, just as philosophical form in mathematics is mere chatter.** For in philosophy there can be no definitions like those in mathematics, where definitions are not discursive, but intuitive, that is, can be demonstrated in intuition; what are called definitions in philosophy can only be produced experimentally, hypothetically; really true definitions appear only at the end, as results.146

How is it that philosophers demonstrate so much fondness for mathematical form? **This fondness began as far back as Pythagoras, who designated the principles of things by numbers.**147 This was a thought of genius. In a number, everything sensuous and finite is stripped away, and yet it designates something definite and this definite thing's relationship to something else definite, which, when also expressed by a number, has the same characteristics of non-sensuousness and non-finiteness. In all of this, numbers are like ideas, which have the same characteristics and the same relationship to each other. **Ideas, as they appear in our minds and in nature, can very well be designated by numbers; but the number remains always the mere sign of the idea, not the idea itself.** The master is always aware of this difference; the pupil however forgets it and transmits to his students only a hieroglyphics of numbers, mere numerals, whose living meaning is no longer known and which are parroted with a sort of school pride. The same is true of the other elements of mathematical form. **The spiritual in its eternal movement cannot be fixed; just as little by line, triangle, square, and circle as by number. Thought can be neither counted nor measured.**
…

I have already mentioned that the *Critique of Pure Reason* did not make the least sensation when it appeared. **Only several years later when a few astute philosophers wrote commentaries about it did it awaken the attention of the public, and in 1789 nothing was more talked about in Germany than Kant's philosophy.** It already had a profusion of commentaries, anthologies, explanations, reviews, apologies, etc. **You need only glance at the first good philosophical catalogue you find, and the enormous number of works which appeared at the time about Kant gives ample testimony of the spiritual movement which started with this one man.** In one, you see bubbling enthusiasm, in the other a bitter annoyance, and in many a wide-eyed curiosity about the end results of this spiritual revolution. We have uprisings in the world of ideas just as you do in the material world, and tearing down the old dogmatism makes us as hot as storming the Bastille makes you. **To be sure, here too there were just a few old invalids who defended dogmatism, that is, Wolffian philosophy. It was a revolution and it did not lack in atrocities. Among the faction of the past, it was the truly good Christians who were the least indignant about these atrocities. Indeed, they wanted even more terrible atrocities in order to exhaust all patience, and thus to spark the counterrevolution, as necessary reaction, all the more quickly.** There were philosophical pessimists here just as you had political pessimists. Some of our pessimists deceived themselves so far as to think that Kant had a secret agreement with them, and that he had only destroyed all previous proofs of God's existence so that the world would see that one can never reach knowledge of God through reason, and that one would therefore be forced to adhere to revealed religion.

https://en.wikisource.org/wiki/Schopenhauer_as_Educator#3

So the first danger in whose shadow Schopenhauer lived was—isolation. **The second is called—doubting of the truth. To this every thinker is liable who sets out from the philosophy of Kant, provided he be strong and sincere in his sorrows and his desires, and not a mere tinkling thought-box or calculating machine.** We all know the shameful state of things implied by this last reservation, and I believe it is only a very few men that Kant has so vitally affected as to change the current of their blood. **To judge from what one reads, there must have been a revolution in every domain of thought since the work of this unobtrusive professor: I cannot believe it myself.** For I see men, though darkly, as themselves needing to be revolutionised, before any "domains of thought" can be so. **In fact, we find the first mark of any influence Kant may have had on the popular mind, in a corrosive scepticism and relativity.**

https://www.gutenberg.org/files/19322/19322-h/19322-h.htm

Why all the rejoicing over the appearance of Kant that went through **the learned world of Germany, three-fourths of which is made up of the sons of preachers and teachers—why the German conviction still echoing, that with Kant came a change for the *better*?** The theological instinct of German scholars made them see clearly just *what* had become possible again. … A backstairs leading to the old ideal stood open; the concept of the "true world," the concept of morality as the *essence* of the world (—the two most vicious errors that ever existed!), **were once more, thanks to a subtle and wily scepticism, if not actually demonstrable, then *at least* no longer *refutable*…**

https://archive.org/details/in.ernet.dli.2015.218820/page/n237/mode/2up?view=theater

It was the amateurish confusion between philosophic speculation and exact research, and nothing else, that made it possible for so many even of the most intelligent men of the age to accept materialism as a creed. **The solution of the problem had to wait for Kant, who showed that in reality it was two wholly disparate spheres of the human reason that were in question, and that this could not be properly grasped unless they were treated apart from each other.** And, for that matter, the efforts that are made ever and again, even today, to gloss over or to reject the limits so dearly marked out by Kant, **to be metaphysical as a natural scientist or scientific as a metaphysician, indicate, not a necessary attitude of the time as it did with the materialists of the French Enlightenment, but only an antediluvian imbecility.**

http://aynrandlexicon.com/lexicon/kant,_immanuel.html

Kant's expressly stated purpose was to save the morality of self-abnegation and self-sacrifice. He knew that it could not survive without a mystic base—and what it had to be saved from was *reason*.

Attila's share of Kant's universe includes this earth, physical reality, man's senses, perceptions, reason and science, all of it labeled the "phenomenal" world. The Witch Doctor's share is another, "higher," reality, labeled the "noumenal" world, and a special manifestation, labeled the "categorical imperative," which dictates to man the rules of morality and which makes itself known by means of a *feeling*, as a special sense of duty.
…

No, Kant did not destroy reason; he merely did as thorough a job of undercutting as anyone could ever do.

If you trace the roots of all our current philosophies—such as pragmatism, logical positivism, and all the rest of the neo-mystics who announce happily that you cannot prove that you exist—you will find that they all grew out of Kant.
…

Plato was more than a Platonist; despite his mysticism, he was also a pagan Greek. As such he exhibited a certain authentic respect for reason, a respect which was implicit in Greek philosophy no matter how explicitly irrational it became. The Kantian mysticism, however, suffers from no such pagan restraints. It flows forth triumphantly, sweeping the prostrate human mind before it. Since man can never escape the distorting agents inherent in the structure of his consciousness, says Kant, "things in themselves" are in principle unknowable. Reason is impotent to discover anything about reality; if it tries, it can only bog down in impenetrable contradictions. Logic is merely a subjective human device, devoid of reference to or basis in reality. Science, while useful as a means of ordering the data of the world of appearances, is limited to describing a surface world of man's own creation and says nothing about things as they really are.

Must men then resign themselves to a total skepticism? No, says Kant, there is one means of piercing the barrier between man and existence. Since reason, logic, and science are denied access to reality, the door is now open for men to approach reality by a different, *nonrational* method. The door is now open to *faith*. Taking their cue from their needs, men can properly *believe* (for instance, in God and in an afterlife), even though they cannot prove the truth of their belief. … "I have," writes Kant, "therefore found it necessary to deny *knowledge*, in order to make room for *faith*."

https://counter-currents.com/2017/09/between-capital-archaic-socialism/

But liberalism, notes Michéa, has become the philosophy of skepticism and generalized deconstruction. There is all the difference in the world between a socialism of ordinary folk and a socialism of intellectuals, the latter being nothing more than a championing of causes by a deconstructivist elite. Liberalism is the philosophy of "indifferentiation anchored in the movement of the uniformity of the market" (p. 133). It is a central thesis of the book that liberalism creates individuation in human societies so that the individual is increasingly isolated and social cohesion declines, while paradoxically and running parallel to this development, the economic structures of the world become increasingly uniform, dominated by the power of capital and concentrated in the hands of an increasingly wealthy few.

https://journals.jcu.edu.au/linq/article/download/2317/2271

Similarly, for all its bravura deconstruction of the university into its constitutive contradictions, **Derrida's analysis is filled with a Kantian longing.** After all, what is the unrepresentable idea of the university other than an improvisation on Kant's theme of the "noumenon," forever beyond the reach of human representation yet forever tempting us to represent it?

https://archive.org/details/OurCauseByDr.WilliamLutherPierce1976

The subject of my talk was the importance of White Americans developing a sense of racial identity and racial pride if we are to survive. When I finished, a White student, about 17-years-old, rose to ask the first question. His question was, "What makes you think it's so important for the White race to survive?"

I was flabbergasted and at a loss for words.
…

But the thing which bothered me even more than the phony collective racial guilt which had been pumped into those boys and girls, was my inability to answer the White kid's question.
Why ***should*** we survive? That's one of those questions like, why is good better than evil? Or, nowadays, why is heterosexuality any better than homosexuality? If two people want to have sex together, who are we to say that it's better that they be a man and a woman than that they be two men or two women? A related question concerns racial mixing: why shouldn't a Black man and a White woman, or vice versa, live together if they can be happy? These are questions which most White people, even normal healthy White people, cannot answer satisfactorily today.

A hundred years ago, before the Jews came flooding into our country and taking over our mass media and our educational system, we might not have really needed answers. We just ***knew*** that it was important for our race to survive and to make progress. We ***knew*** that homosexuality and interracial sex were wrong. Our intuition told us this. The answers were in our souls even if we couldn't express them in words. But then the Jews—who are clever people, very clever people—

came along, and they began asking these very questions. And when we couldn't answer them, they began providing their own answers.
…

The kid who believes that the purpose of life is happiness, knows that there are not many things on this earth happier than a bunch of pickaninnies splashing in a mud puddle. And the businessman who believes that the purpose of life is to make money knows that a Black customer's money is just as green as a White customer's.

A person who accepts that sort of basis, indeed, ***cannot*** see any really convincing reason why the White race should survive.

> http://www.amnation.com/vfr/archives/011568.html
>
> Zmirak's point is that if Derbyshire's atheism and Darwinism were true, then Derbyshire would have absolutely no basis for believing in *any* of the things he believes in, **including not only the doctrines of atheism and Darwinism, but even his own personhood and reason.**
> …
>
> As I recently explained here, according to the consistent Darwinian view (i.e., the Darwinian view without the escape hatch of unprincipled exceptions), **the only reason people believe or say or do anything is that the instinct to believe or say or do that thing was planted in them by chance genetic mutations that occurred in their distant ancestors and were then passed down to the present generation by natural selection.** Therefore a man has a certain belief, not because it is true, and not because he believes in the possibility of truth as such, but because that belief, having been planted in his ancestors by a random genetic mutation, helped his ancestors survive (i.e., natural selection), or, alternatively, because a distant female ancestor of his had a random genetic mutation that made her want to mate with a male who had that belief, which he in turn had acquired through a random genetic mutation (i.e., sexual selection), or, alternatively, because the man himself has a random genetic mutation which plants that belief in him.

https://en.wikisource.org/wiki/The_Works_of_the_Emperor_Julian/Fragment_of_a_letter_to_a_priest#cite_ref-16

Let us not admit discourses by Epicurus or Pyrrho; but indeed the gods have already in their wisdom destroyed their works, so that most of their books have ceased to be. Nevertheless there is no reason why I should not, by way of example, mention these works too, to show what sort of discourses priests must especially avoid; and if such discourses, then much more must they avoid such thoughts.

https://pyrrhonism.medium.com/epicureanism-versus-pyrrhonism-6932797eb414#_ftn2

This is the case with Pyrrhonism and Epicureanism, both of which are philosophical descendants of Democritus, causing them to have much in common. Epicurus even openly admired Pyrrho, and he studied under one of Pyrrho's students.[3] The Pyrrhonist philosopher, Sextus Empiricus, even referred to Epicurus as "wise"[4] – praise he gave to no other dogmatist.

> [4] Sextus Empiricus, *Against the Grammarians*, Chapter 3, Section 57.

On a practical basis, the Epicureans and the other Hellenistic school of hedonism, the Cyrenaics, are largely in agreement with the Pyrrhonists about the senses: they're all we have to go on. **This is in opposition to other schools that claim to provide things beyond the senses to guide us.** Diogenes Laertius reports this on the Pyrrhonist view of the senses:

> *In response, those who put forward doctrines claim that the skeptics do away even with life, insofar as they cast out all the things from which life is constituted. But the skeptics say that these critics engage in misrepresentation. For skeptics do not deny that seeing occurs, but they claim ignorance about how we see. For, we accept a given appearance, but not as if it also were such.* ***We perceive that fire burns, but we refrain from declaring whether it has a burning nature.*** *And we see that someone is moving, and that he perishes. But we don't know how these things occur.* ***Thus, they say, we only take a stand against the non-evident things that subsist beside the appearances. … This is the reason why Timon in his*** **Pytho** ***avows that he has not stepped beyond customary norms.*** *And he says the following in his* Appearances*: "But appearance prevails everywhere it goes."* ***And in his work*** **On Sense Perceptions** ***he says, "I do not posit that honey is sweet, but I concede that it seems so." And, in the first book of his*** **Pyrrhonian Arguments***, Aenesidemus says that Pyrrho determined nothing in a dogmatic fashion because of the opposition of arguments, but that he followed*

> ***appearances. … Thus, according to the skeptics, that which appears is the criterion. Aenesidemus says this, and so does Epicurus.***[5]

Diogenes is a little unclear here at the end as he fails to mention that by "criterion" the Pyrrhonists mean the criterion of action, whereas Epicurus means it to be the criterion of truth, **but the key point here is that the Pyrrhonists and Epicureans agree on what criteria to use for decision making: the senses.**

In Plutarch's *Table Talk* there's an argument that Epicurean epistemology is just disguised Pyrrhonism. [6]

> *Now for wine! I should like to know what made you suspect that it is cold.' I replied: 'Do you actually think that this is my own theory?' 'Who else's?' Florus said, and I answered: 'I remember coming upon Aristotle's discussion of this question too, not recently but quite a long time ago.* ***And Epicurus in his* Symposium *has discussed the matter at great length. The sum of what he has to say, I think, is this: he holds that wine is not hot in an absolute sense, but has in it certain atoms productive of heat and others of cold;*** *some of these it throws off when it comes into the body and others it attracts out of the body until it adapts itself to us, whatever our constitution and nature may be. Accordingly, some men become thoroughly hot when drinking, others experience the contrary.'* ***'This', said Florus, 'carries us via Protagoras straight to Pyrrho; for it is clear that we shall go on about oil, about milk and honey, and other things in like manner and shall avoid saying about each what its nature is by defining them in terms of their mixtures and union with each other.'***

https://books.google.fi/books?id=MSu2w3FqepoC&lpg=PP1&hl=fi&pg=PA60#v=onepage&q&f=false

Of the three named teachers of Epicurus it should be kept in mind that Pamphilus was a Platonist, Praxiphanes a Peripatetic, and Nausiphanes a Democritean atomist.
…

Nausiphanes, however, was no narrow physicist. His reputation for learning was high, and specific testimony to his proficiency in rhetoric has been preserved.24 Attention to this subject was perhaps a necessity, because it was the money-making branch among contemporary studies.25 No specific evidence exists to indicate that he shared an interest in mathematics with the Platonists or in plants and animals with the Peripatetics. His claim to originality arises from his reaction to the contemporary skepticism of Pyrrho, who, after the upsetting experience of viewing the wisdom of Persia and India in the train of Alexander, had returned to deny the possibility of knowledge. Nausiphanes, while yet a young man, became his pupil and was captivated not by his doctrines but by his disposition, which was imperturbable.26 **Epicurus, in turn, becoming the pupil of Nausiphanes, conceived a like admiration of Pyrrho's conduct "and was continually asking for more information about him."**27 Here may consequently be discerned one possible origin for the famous Epicurean doctrine of ataraxy or tranquillity of soul. **The practice of Pyrrho was closer to this than to the cheerfulness (*euthumia*) of Democritus, although Epicurus cultivated this also. It is to be remembered too that Pyrrho recommended abstention from public life (*apragmosune*),** which should remind us that Epicurus disapproved of all public careers.
…

The imperturbability of Pyrrho was indifference and a sort of resignation to belief in the impossibility of knowledge. **With this sort of resignation it is clear that neither Nausiphanes nor Epicurus had any patience. The distinction of becoming the first dogmatists may perhaps be claimed by them.** Nausiphanes admired only the disposition of Pyrrho and rejected his skepticism.

https://books.google.fi/books?id=MSu2w3FqepoC&lpg=PP1&hl=fi&pg=PA303#v=onepage&q&f=false

[Epicurus] seems at first to have admired the great skeptic, perhaps for his serenity, but later he revolted violently and resolved that happiness must be based upon the certainty of knowledge rather than upon resignation to the belief that knowledge was impossible. **In the heat of this revulsion he declared Pyrrho "incapable either of learning or of being instructed" and became dogmatic on the subject of dogmatism, asserting "that the wise man will dogmatize and not be a doubter."**4

https://archive.org/details/humanalltohuman033380mbp/page/n233/mode/2up?view=theater

275. Cynics and Epicureans.—The cynic recognises the connection between the multiplied and stronger pains of the more highly cultivated man and the abundance of requirements; he comprehends, therefore, that the multitude of opinions about what is beautiful, suitable, seemly and pleasing, must also produce very rich sources of enjoyment, but also of displeasure. In accordance with this view he educates himself backwards, by giving up many of these opinions and withdrawing from certain demands of culture; he thereby gains a feeling of freedom and strength; and gradually, when habit has made his manner of life endurable, his sensations of displeasure are, as a matter of fact, rarer and weaker than those of cultivated people, and approach those of the domestic animal; moreover, he experiences everything with the charm of contrast, **and—he can also scold to his heart's content; so that thereby he again**

rises high above the sensation-range of the animal. The Epicurean has the same point of view as the cynic; there is usually only a difference of temperament between them. Then the Epicurean makes use of his higher culture to render himself independent of prevailing opinions, he raises himself above them, whilst the cynic only remains negative. He walks, as it were, in wind-protected, well-sheltered, half-dark paths, whilst over him, in the wind, the tops of the trees rustle and show him how violently agitated is the world out there. The cynic, on the contrary, goes, as it were, naked into the rushing of the wind and hardens himself to the point of insensibility.

---

https://en.wikisource.org/wiki/Lives_of_the_Eminent_Philosophers/Book_X

He says himself that he first came into contact with philosophy at the age of fourteen. Apollodorus the Epicurean, in the first book of his *Life of Epicurus*, says that he turned to philosophy in disgust at the schoolmasters who could not tell him the meaning of "chaos" in Hesiod.[4] According to Hermippus, however, he started as a schoolmaster, but on coming across the works of Democritus turned eagerly to philosophy. 3. **Hence the point of Timon's allusion[5] in the lines:**

> **Again there is the latest and most shameless of the physicists, the schoolmaster's son[6] from Samos, himself the most uneducated of mortals.**

...

Diotimus[7] the Stoic, who is hostile to him, has assailed him with bitter slanders, adducing fifty scandalous letters as written by Epicurus; and so too did the author who ascribed to Epicurus the epistles commonly attributed to Chrysippus. 4. They are followed by Posidonius the Stoic and his school, and Nicolaus and Sotion in the twelfth book of his work entitled *Dioclean Refutations*, consisting of twenty-four books; **also by Dionysius of Halicarnassus.** They allege that he used to go round with his mother to cottages and read charms, and assist his father in his school for a pitiful fee;[8] further, that one of his brothers was a pander and lived with Leontion the courtesan; **that he put forward as his own the doctrines of Democritus about atoms and of Aristippus about pleasure; that he was not a genuine Athenian citizen,** a charge brought by Timocrates and by Herodotus in a book *On the Training of Epicurus as a Cadet*; **that he basely flattered Mithras,[9] the minister of Lysimachus, bestowing on him in his letters Apollo's titles of Healer and Lord.**

...

6. **It is added that he corresponded with many courtesans,** and especially with Leontion, of whom Metrodorus also was enamoured. It is observed too that in his treatise *On the Ethical End* he writes in these terms:[11] "I know not how to conceive the good, apart from the pleasures of taste, sexual pleasures, the pleasures of sound and the pleasures of beautiful form." **And in his letter to Pythocles: "Hoist all sail, my dear boy, and steer clear of all culture."** Epictetus calls him preacher of effeminacy and showers abuse on him.
...

9. But these people are stark mad. For our philosopher has abundance of witnesses to attest his unsurpassed goodwill to all men – his native land, which honoured him with statues in bronze; **his friends, so many in number that they could hardly be counted by whole cities,** and indeed all who knew him, held fast as they were by the siren-charms of his doctrine, save Metrodorus[16] of Stratonicea, who went over to Carneades, being perhaps burdened by his master's excessive goodness; the School itself which, while nearly all the others have died out, continues for ever without interruption through numberless reigns of one scholarch after another;[17] 10. his gratitude to his parents, his generosity to his brothers, his gentleness to his servants, as evidenced by the terms of his will and by the fact that they were members of the School, the most eminent of them being the aforesaid Mys; **and in general, his benevolence to all mankind. [πάντας αὐτοῦ φιλανθρωπία] His piety towards the gods and his affection for his country no words can describe. He carried deference to others to such excess that he did not even enter public life. He spent all his life in Greece, notwithstanding the calamities which had befallen her in that age;[18] when he did once or twice take a trip to Ionia, it was to visit his friends there.[19]**
...

He further says that **Epicurus did not think it right that their property should be held in common, as required by the maxim of Pythagoras about the goods of friends;** such a practice in his opinion implied mistrust, and without confidence there is no friendship. In his correspondence he himself mentions that he was content with plain bread and water. And again: "Send me a little pot of cheese, that, when I like, I may fare sumptuously." Such was the man who laid down that pleasure was the end of life. And here is the epigram[20] in which Athenaeus eulogizes him:

> 12. Ye toil, O men, for paltry things and incessantly begin strife and war for gain; **but nature's wealth extends to a moderate bound, whereas vain judgements have a limitless range.** This message Neocles' wise son heard from the Muses or from the sacred tripod at Delphi.[21]

…

31. **They reject dialectic as superfluous;** holding that in their inquiries the physicists should be content to employ the ordinary terms for things.[43]

…

32. **Nor is there anything which can refute sensations or convict them of error: one sensation cannot convict another and kindred sensation, for they are equally valid; nor can one sensation refute another which is not kindred but heterogeneous, for the objects which the two senses judge are not the same;[45] nor again can reason refute them, for reason is wholly dependent on sensation; nor can one sense refute another, since we pay equal heed to all.** And the reality of separate perceptions guarantees[46] the truth of our senses.

> https://archive.org/details/moraldarwinismho0000wike/page/70/mode/2up?view=theater
>
> **One of the "benefits" of Epicurean materialism is that it allows its adherents to claim omniscience. Lucretius's *On the Nature of Things* claims to tell the truth about everything because (as with Epicurus) Lucretius maintained that he had "seen" the very fundamental constituents of all that there was, is, or could be: atoms and the void.** And as with Epicurus, these constituents are utterly without complexity; that is, completely intelligible to the human mind. **Once we know what an atom is – and who could fail to grasp it, it is so simple – and we know how atoms move through the void, we know everything.**

…

"Moreover, there is an infinite number of worlds, some like this world, others unlike it.[67] For the atoms being infinite in number, as has just been proved, are borne ever further in their course. For the atoms out of which a world might arise, or by which a world might be formed, have not all been expended on one world or a finite number of worlds, whether like or unlike this one. Hence there will be nothing to hinder an infinity of worlds.

…

"Nay more: **we are bound to believe** that in the sky revolutions, solstices, eclipses, risings and settings, and the like, take place without the ministration or command, either now or in the future, of any being who at the same time enjoys perfect bliss along with immortality.

…

79. "But when we come to subjects for special inquiry, there is nothing in the knowledge of risings and settings and solstices and eclipses and all kindred subjects that contributes to our happiness; **but those who are well-informed about such matters and yet are ignorant what the heavenly bodies really are, and what are the most important causes of phenomena, feel quite as much fear as those who have no such special information** – nay, perhaps even greater fear, when the curiosity excited by this additional knowledge cannot find a solution or understand the subordination of these phenomena to the highest causes.

…

81. "There is yet one more point to seize, namely, that the greatest anxiety of the human mind arises through the belief that the heavenly bodies are blessed and indestructible, and that at the same time they have volitions and actions and causality inconsistent with this belief; **and through expecting or apprehending some everlasting evil, either because of the myths, or because we are in dread of the mere insensibility of death, as if it had to do with us;** and through being reduced to this state not by conviction but by a certain irrational perversity, so that, if men do not set bounds to their terror, **they endure as much or even more intense anxiety than the man whose views on these matters are quite vague.**

…

91. "**The size of the sun and the remaining stars relatively to us is just as great as it appears.**[118] [*This he states in the eleventh book "On Nature." For, says he, if it had diminished in size on account of the distance, it would much more have diminished its brightness; for indeed there is no distance more proportionate to this diminution of size than is the distance at which the brightness begins to diminish.*] **But in itself and actually it may be a little larger or a little smaller, or precisely as great as it is seen to be.** For so too fires of which we have experience are seen by sense when we see them at a distance.

…

104. **And there are several other ways in which thunderbolts may possibly be produced. Exclusion of myth is the sole condition necessary;** and it will be excluded, if one properly attends to the facts and hence draws inferences to interpret what is obscure.
…

There are three motives to injurious acts among men – hatred, envy, and contempt; and these the wise man overcomes by reason. Moreover, he who has once become wise never more assumes the opposite habit, not even in semblance, if he can help it. He will be more susceptible of emotion than other men: that will be no hindrance to his wisdom. **However, not every bodily constitution nor every nationality would permit a man to become wise.**

Even on the rack the wise man is happy. He alone will feel gratitude towards friends, present and absent alike, and show it by word and deed. 118. When on the rack, however, he will give vent to cries and groans. **As regards women he will submit to the restrictions imposed by the law,** as Diogenes says in his epitome of Epicurus' ethical doctrines. **Nor will he punish his servants; rather he will pity them and make allowance on occasion for those who are of good character. The Epicureans do not suffer the wise man to fall in love; nor will he trouble himself about funeral rites; according to them love does not come by divine inspiration:** so Diogenes in his twelfth book. The wise man will not make fine speeches. **No one was ever the better for sexual indulgence, and it is well if he be not the worse.**

119. **Nor, again, will the wise man marry and rear a family: so Epicurus says in the *Problems* and in the *De Natura*.** Occasionally he may marry owing to special circumstances in his life. Some too will turn aside from their purpose.
…

120b. The school holds that sins are not all equal; that health is in some cases a good, in others a thing indifferent; **that courage is not a natural gift but comes from calculation of expediency;** and that friendship is prompted by our needs. One of the friends, however, must make the first advances (just as we have to cast seed into the earth), but it is maintained by a partnership in the enjoyment of life's pleasures.
…

For verily there are gods, and the knowledge of them is manifest; but they are not such as the multitude believe, seeing that men do not steadfastly maintain the notions they form respecting them. **Not the man who denies the gods worshipped by the multitude, but he who affirms of the gods what the multitude believes about them is truly impious.**
…

And he who admonishes the young to live well and the old to make a good end speaks foolishly, not merely because of the desirableness of life, but because the same exercise at once teaches to live well and to die well. **Much worse is he who says that it were good not to be born, but when once one is born to pass with all speed through the gates of Hades.**[133] 127. For if he truly believes this, why does he not depart from life? It were easy for him to do so, if once he were firmly convinced. If he speaks only in mockery, his words are foolishness, for those who hear believe him not.
…

By pleasure we mean the absence of pain in the body and of trouble in the soul. 132. It is not an unbroken succession of drinking-bouts and of revelry, not sexual love, not the enjoyment of the fish and other delicacies of a luxurious table, which produce a pleasant life; it is sober reasoning, searching out the grounds of every choice and avoidance, and banishing those beliefs through which the greatest tumults take possession of the soul. **Of all this the beginning and the greatest good is prudence. Wherefore prudence is a more precious thing even than philosophy; from it spring all the other virtues,** for it teaches that we cannot lead a life of pleasure which is not also a life of prudence, honour, and justice; nor lead a life of prudence, honour, and justice, which is not also a life of pleasure. For the virtues have grown into one with a pleasant life, and a pleasant life is inseparable from them.

133. "Who, then, is superior in thy judgement to such a man? He holds a holy belief concerning the gods, and is altogether free from the fear of death. He has diligently considered the end fixed by nature, and understands how easily the limit of good things can be reached and attained, and how either the duration or the intensity of evils is but slight. **Destiny, which some introduce as sovereign over all things, he laughs to scorn, affirming rather that some things happen of necessity, others by chance, others through our own agency. For he sees that necessity destroys responsibility and that chance or fortune is inconstant; whereas our own actions are free, and it is to them that praise and blame naturally attach.**
134. **It were better, indeed, to accept the legends of the gods than to bow beneath that yoke of destiny which the natural philosophers have imposed.** The one holds out some faint hope that we may escape if we honour the gods, while the necessity of the naturalists is deaf to all entreaties.

…

136. He differs from the Cyrenaics[135] with regard to pleasure. **They do not include under the term the pleasure which is a state of rest, but only that which consists in motion.**
…

137. He further disagrees with the Cyrenaics in that they hold that pains of body are worse than mental pains; at all events evil-doers are made to suffer bodily punishment; whereas Epicurus holds the pains of the mind to be the worse; at any rate the flesh endures the storms of the present alone, the mind those of the past and future as well as the present. In this way also he holds mental pleasures to be greater than those of the body.
…

Come, then, let me set the seal, so to say, on my entire work as well as on this philosopher's life by citing his *Sovran Maxims*,[137] therewith bringing the whole work to a close and making the end of it to coincide with the beginning of happiness.

1. 139. A blessed and eternal being has no trouble himself and brings no trouble upon any other being; hence he is exempt from movements of anger and partiality, for every such movement implies weakness.
…

11. **If we had never been molested by alarms at celestial and atmospheric phenomena, nor by the misgiving that death somehow affects us, nor by neglect of the proper limits of pains and desires, we should have had no need to study natural science.**

12. 143. It would be impossible to banish fear on matters of the highest importance, if a man did not know the nature of the whole universe, but lived in dread of what the legends tell us. Hence without the study of nature there was no enjoyment of unmixed pleasures.

13. There would be no advantage in providing security against our fellow-men, so long as we were alarmed by occurrences over our heads or beneath the earth or in general by whatever happens in the boundless universe.
…

29. 149. Of our desires some are natural and necessary; others are natural, but not necessary; others, again, are neither natural nor necessary, but are due to illusory opinion. [***Epicurus regards as natural and necessary desires which bring relief from pain, as e.g. drink when we are thirsty; while by natural and not necessary he means those which merely diversify the pleasure without removing the pain, as e.g. costly viands; by the neither natural nor necessary he means desires for crowns and the erection of statues in one's honour.*** – *Schol.*]

https://archive.org/details/moraldarwinismho0000wike/page/38/mode/2up?view=theater

The modern reader of Epicurus is often confused by Epicurus's repetition that one must "become accustomed to" this or that aspect of his theory, and "not become accustomed to" some other rival, nonmaterialist approach. We, who are generally quite accustomed to materialism, think that he should simply have said that *this* is true and *that* is false. **But Epicurus himself nearly always speaks of training the mind to a kind of belief, and the word he uses most frequently is *nomisdein*,** the etymology of which is quite illuminating.14 As a verb, it means to hold or own as a custom or usage, or to recognize by custom. Ironically, its extended meaning includes recognition of the religious beliefs acknowledged by the customs of one's city, or more generally, the recognition of the existence of the gods as such. The root of the verb is *nomos*, custom or convention, or the laws based on custom. **Epicurus was self-consciously creating a new habit, a new custom to replace the old. Meditation on his eternal principles, the immortal atoms, was meant to displace the habits of mind brought about by belief in the eternal gods.** His use of *nomisdein* reflects the gap between his invisible fundamental principles, and the visible universe they purport to explain.

> 14. **The frequency of *nomisdein*, or some compatible word, where we would expect an assertion of fact is too great to ignore.** See the following (I have noted where he used a word other than *nomisdein*): DL "Epicurus" 10.49, 52 ("it is necessary to hold the opinion," *dei ten doxan katechein*); 10.53-56, 58-59, 60 ("it is necessary not to proclaim," *ou dei katagorein*); 10.63 ("it is necessary to view," *dei sunoran*); 10.73-74, 76-77, 78 ("it is necessary to opine," *dei doxasdein*); 10.80.

https://www.sacred-texts.com/cla/fsgr/fsgr07.htm#an_fr_113_1

Here again Epicurus found refuge in the old Ionian theory of Atoms and the Void, which is supposed to have originated with Democritus and Leucippus, a century before. But Epicurus seems to have worked out the Atomic Theory more in detail, as we have it expounded in Lucretius' magnificent poem**. In particular it was possibly he who first combined the Atomic Theory with hylozoism; i.e. he conceived of the Atoms as possessing some rudimentary power of movement**

and therefore able to swerve slightly in their regular downward course. That explains how they have become infinitely tangled and mingled, how plants and animals are alive, and how men have Free Will.
…

Epicureanism had certainly its sublime side; and from this very sublimity perhaps arose the greatest flaw in the system, regarded as a rational philosophy. It was accepted too much as a Revelation, too little as a mere step in the search for truth. **It was based no doubt on careful and even profound scientific studies, and was expounded by the master in a vast array of volumes. But the result so attained was considered sufficient. Further research was not encouraged.** Heterodoxy was condemned as something almost approaching 'parricide'.113_2 The pursuit of 'needless knowledge' was deliberately frowned upon.113_3

> 113_3 Epicurus congratulated himself (erroneously) that he came to Philosophy καθαρὸς πάσης παιδείας, 'undefiled by education'. Cf. Fr. 163 to Pythocles, παιδείαν δὲ πᾶσαν, μακάριε, φεῦγε τὸ ἀκάτιον ἀράμενος, 'From education in every shape, my son, spread sail and fly!'

When other philosophers were working out calculations about the size of the Sun and the commensurability of the sun-cycle and the moon-cycle, Epicurus contemptuously remarked that the Sun was probably about as big as it looked, or perhaps smaller: since fires at a distance generally look bigger than they are. The various theories of learned men were all possible but none certain. And as for the cycles, how did any one know that there was not a new sun shot off and extinguished every day?113_4 **It is not surprising to find that none of the great discoveries of the Hellenistic Age were due to the Epicurean school.** Lucretius, writing 250 years later, appears to vary hardly in any detail from the doctrines of the Master, and Diogenes of Oenoanda, 500 years later, actually repeats his letters and sayings word for word.

It is sad, this. It is un-Hellenic; it is a clear symptom of decadence from the free intellectual movement and the high hopes which had made the fifth century glorious.

https://books.google.fi/books?id=Ct9K-x61CH0C&lpg=PP1&hl=fi&pg=PA67#v=onepage&q&f=false

As Philodemus' writings make clear, **it was normal for contemporary Epicureans to assign virtually biblical status not to the writings of Epicurus alone, but jointly to those of the foursome known simply as οι άνδρες, 'the Great Men.'** These infallible four were the founding figures of the school, Epicurus, Metrodorus, Hermarchus and Polyaenus,35 and all four were treated as absolutely and equally authoritative.

https://books.google.fi/books?id=Ct9K-x61CH0C&lpg=PP1&hl=fi&pg=PA71#v=onepage&q&f=false

[Lucretius] must be astonishingly out of touch with current opinion on the matter.47 It is as if an evangelical missionary in twentieth-century Britain were to tell the public 'If you are going to believe things like that, you might as well deny that God made the world in six days.'

This last is the analogy which suggests the title of my chapter, 'Lucretius the fundamentalist.'48 Lucretius cannot, in my view, be an interacting member of any current philosophical circle. His inspiration comes from the unmediated scriptures of the philosopher he reveres, Epicurus himself. **Like any fundamentalist, he does not expect the numerous contributions made since the composition of his sacred scriptures, either by his school or by its critics, to have added anything worth taking into account.**

I recognize the paradox of speaking in these quasi-religious terms about a self-declared enemy of *religio*. But it is Lucretius himself who, in his proems to books III and V, declares the religious nature of his devotion: Epicurus, whose divinely conceived philosophy is Lucretius' own inspiration and guide, was himself a god, indeed a god who eclipsed the traditional Olympian deities in the importance of his benefactions to mankind.

>
> I know our modern Unbelievers would think themselves greatly injured if we charged them with any want of Ability, and so would their Predecessors; **for we find *Lucretius* perpetually Talking with such an Air of Assurance, as if he had actually wrested the Thunderbolt out of *Jupiter*'s Hands; and yet he appears to have been a careless Examiner into Nature, when he accounted for the Production of animals from insensible Matter, by Worms arising from corrupted Carcasses;** which was the only Account he could give of Animal Productions, *viz.* of Life and Sensation;* And yet our present *Atheists* must acknowledge, That he pronounced in this Case as a poor Philosopher, and before he had made a fair Examination: **For I think Equivocal Generations are now generally given up.**
>
> * Quippe videre licet vivos existere vermes, stercore de tetro putrorem cum sibi nacta est, &c.

https://en.wikisource.org/wiki/Moral_letters_to_Lucilius/Letter_33

4. Suppose we should desire to sort out each separate motto from the general stock; to whom shall we credit them? To Zeno, Cleanthes, Chrysippus, Panaetius, or Posidonius? **We Stoics are not subjects of a despot: each of us lays claim to his own freedom. [Non sumus sub rege: sibi quisque se vindicat.] With them,[4] on the other hand, whatever Hermarchus says, or Metrodorus, is ascribed to one source. In that brotherhood, everything that any man utters is spoken under the leadership and commanding authority[5] of one alone.**

> 5. For the phrase *ductu et auspiciis* see Plautus, *Amph.* i. 1. 41 *ut gesserit rem publicam ductu imperio auspicio suo*; and Horace, *Od.* i. 7. 27 ***Teucro duce et auspice Teucro*.** The original significance of the phrase refers to the right of the commander-in-chief to take the auspices.

https://www.academia.edu/6410739/The_fragments_of_Numenius_of_Apamea

This is what the Epicureans learnt (although it would have been better if they hadn't): no-one has ever caught them opposing Epicurus in any way. And since they all think that they are agreeing with a sage, one can understand why they use this title of themselves. Among later Epicureans, it became an almost invariable rule never to say anything that contradicted themselves or each other or Epicurus, on any matter worth mentioning. **Innovation with them is a crime – or rather a sacrilege – and is condemned.** So no-one dares to do it, and their doctrines rest in great tranquillity due to their constant agreement with each other. **The Epicurean school is like a true republic, completely free of political friction, a single mind shared by all, a single policy.** This is why there have been enthusiastic members of the school – and are and, I suppose, will be.

https://www.english.enoanda.cat/the_inscription.html

... [as is supposed by] some of the philosophers **and especially the Socratics. They say that pursuing natural science and busying oneself with investigation of [celestial phenomena] is superfluous and unprofitable, and they do [not even] deign [to concern themselves with such matters.]**

Fr. 5

[Others do not] explicitly [stigmatise] natural science as unnecessary, being ashamed to acknowledge [this], but use another means of discarding it. For, **when they assert that things are inapprehensible, what else are they saying than that there is no need for us to pursue natural science?** After all, who will choose to seek what he can never find?

Now Aristotle and those who hold the same Peripatetic views as Aristotle say that nothing is scientifically knowable, because things are continually in flux and, on account of the rapidity of the flux, evade our apprehension. We on the other hand acknowledge their flux, but not its being so rapid that the nature of each thing [is] at no time apprehensible by sense-perception. And indeed [in no way would the upholders of] the view under discussion have been able to say (and this is just what they do [maintain] that [at one time] this is [white] and this black, while [at another time] neither this is [white nor] that black, [if] they had not had [previous] knowledge of the nature of both white and black.

https://archive.org/details/in.ernet.dli.2015.55010/page/n695/mode/2up?view=theater

Epicurus would like to explain the operation of the atoms on purely mechanical principles; but as he is interested in ethics far more than in cosmology, and is anxious to preserve free will as the source of moral responsibility and the prop of personality, he abandons Democritus in mid-air, and supposes a kind of spontaneity in the atoms: they swerve a bit from the perpendicular as they fall through space, and so enter into the combinations that make the four elements, and through them the diversity of the objective scene.[20]

https://archive.org/details/in.ernet.dli.2015.186497/page/n221/mode/2up?view=theater

"The reason why Epicurus brought in this theory was his fear lest, if the atom were always carried along by the natural and necessary force of gravity, we should have no freedom whatever, since the movement of the mind was controlled by the movement of the atom. **The author of the atomic theory, Democritus, preferred to accept the view that all events are caused by necessity, rather than to deprive the atoms of their natural motions.** XI. **Carneades showed greater insight: his doctrine was that the school of Epicurus could have maintained its cause without this fictitious swerve.**

https://archive.org/details/naturesgodhereti0000stew_o9j9/page/252/mode/2up?view=theater

Pieces of radical freedom are scattered in the works of the Stoics and Pre-Socratics as well as in every major religious tradition, but for the purposes of understanding the revolutions of the early modern world, Epicurus arrives at the points that matter. In the *Syllabus* included in his I-am-an-Epicurean letter, Jefferson bottles up the central intuition in a concentrated formula. "Man is a free agent."171 At the same time, the philosophy of Epicurus and his successors is very much at odds with the idea of "the freedom of the will" that characterizes the common conception of things. In a universe where every atom follows its prescribed course, there can be no arbitrary capacity for action such as that which is commonly attributed to the free will. Epicurus grapples with this knotty paradox by means of his doctrine of the *clinamen* – the notion that the atoms engage in occasional, unpredictable swerves as they fall through space. **Guiding Epicurus's thought on this point is a profound insight about the mutual interdependence of freedom, the apparent contingency of all things in an infinite universe, and the inherent incompleteness of our understanding of it. But it takes quite some effort to extract this pearl from the murky dogma of the swerwing atoms.**

Beginning with Hobbes, the heirs of Epicurus in the early modern world approach the problem by separating the useful idea of freedom from the confused idea of free will. Freedom in the abstract, says Hobbes, means simply the "absence of opposition," that is, the absence of any outside force that prevents a thing from pursuing what it wants.172 Freedom therefore describes only the circumstances or conditions in which a thing operates, not the faculty of the will itself: "No liberty can be inferred to the will, desire, or inclination." **When we say that the will (or any particular inclination) has "freedom," Hobbes continues, the only thing we can really mean is that it has "power," that is, the ability to overcome whatever hindrances stand in its way.**

169. **The question of the *possibility of things that do not happen* has already been examined by the ancients. It appears that Epicurus, to preserve freedom and to avoid an absolute necessity, maintained, after Aristotle, that contingent futurities were not susceptible of determinate truth.** For if it was true yesterday that I should write to-day, it could therefore not fail to happen, it was already necessary; and, for the same reason, it was from all eternity. Thus all that which happens is necessary, and it is impossible for anything different to come to pass. But since that is not so it would follow, according to him, that contingent futurities have no determinate truth. **To uphold this opinion, Epicurus went so far as to deny the first and the greatest principle of the truths of reason, he denied that every assertion was either true or false.** Here is the way they confounded him: 'You deny that it was true yesterday that I should write to-day; it was therefore false.' The good man, not being able to admit this conclusion, was obliged to say that it was neither true nor false. **After that, he needs no refutation, and Chrysippus might have spared himself the trouble he took to prove the great principle of contradictories, following the account by Cicero in his book *De Fato*:** 'Contendit omnes nervos Chrysippus ut persuadeat omne Αξιωμα aut verum esse aut falsum. Ut enim Epicurus veretur ne si hoc concesserit, concedendum sit, fato fieri quaecunque fiant; si enim alterum ex aeternitate verum sit, esse id etiam certum; si certum, etiam necessarium; ita et necessitatem et fatum confirmari putat; sic Chrysippus metuit ne non, si non obtinuerit omne quod enuncietur aut verum esse aut falsum, omnia fato fieri possint ex causis aeternis rerum futurarum.' M. Bayle observes (*Dictionary*, article 'Epicurus', let. T, p. 1141) 'that **neither of these two great philosophers [Epicurus and Chrysippus] understood that the truth of this maxim, every proposition is true or false, is independent of what is called *fatum*: it could not therefore serve as proof of the existence of the *fatum*, as Chrysippus maintained and as Epicurus feared.** Chrysippus could not have conceded, without damaging his own position, that there are propositions which are neither true nor false. But he gained nothing by asserting the contrary: for, whether there be free causes or not, it is equally true that this proposition, The Grand Mogul will go hunting to-morrow, is true or false. Men rightly regarded as ridiculous this speech of Tiresias: All that I shall say will happen or not, for great Apollo confers on me the faculty of prophesying. If, assuming the impossible, there were no God, it would yet be certain that everything the greatest fool in the world should predict would happen or would not happen. That is what neither Chrysippus nor Epicurus has taken into consideration.' Cicero, lib. I, *De Nat. Deorum*, **with regard to the evasions of the Epicureans expressed the sound opinion (as M. Bayle observes towards the end of the same page) that it would be much less shameful to admit that one cannot answer one's opponent, than to have recourse to such answers.**

https://archive.org/details/Marx_Karl_-_Doctoral_Thesis_-_The_Difference_Between_the_Democritean_and_Epicure/page/n15/mode/2up?view=theater

Contrast this with Epicurus:

> “Necessity, introduced by some as the absolute ruler, *does not exist*, but some things are *accidental*, others depend on our *arbitrary will*. Necessity cannot be persuaded, but chance is unstable. **It would be better to follow the myth about the gods than to be a slave to the *heimarinene* [what has been decreed, destiny] of the physicists.** For the former leaves hope for mercy if we do honour to the gods, while the latter is inexorable necessity. But it is *chance*, which must be accepted, *not God*, as the multitude believe.”39 “It is a misfortune to live in necessity, but to live in necessity is not a necessity. On all sides many short and easy paths to freedom are open. Let us therefore thank God that no man can be kept in life. It is permitted to subdue necessity itself.”40

The Epicurean Velleius in Cicero says something similar about Stoic philosophy:

> **"What are we to think of a philosophy in which, as to ignorant old women, everything seems to occur through fate? ... by Epicurus we have been redeemed, set free.”**41

Thus Epicurus even *denies disjunctive judgment* so as not to have to acknowledge any concept of necessity.42

True, it is claimed that Democritus also used the concept of chance, but of the two passages on this matter which can be found in Simplicius43 the one renders the other suspect, **because it shows clearly that it was not Democritus who used the category of chance, but Simplicius who ascribed it to him as a consequence. For he says: Democritus assigns, generally speaking, no cause for the creation of the world, he *seems* therefore to make chance the cause.** Here, however, we are concerned not with the *determination of the content*, but with the *form* used *consciously* by Democritus. The situation is similar in regard to the report by Eusebius that Democritus made chance the ruler of the universal and divine and claimed that here it is through chance that everything happens, whereas he excluded chance from human life and empirical nature and called its supporters foolish.44
...

The enthusiasm and the seriousness with which Democritus introduces this manner of explanation into the observation of nature, the importance he attaches to the striving to ascertain causes, are naively expressed in his avowal:

> **“I would rather discover a new aetiology than acquire the Persian crown.”**46

Once again Epicurus stands directly opposed to Democritus. Chance, for him, is a reality which has only the value of possibility. ***Abstract possibility*, however, is the direct *antipode of real possibility*. The latter is restricted within sharp boundaries, as is the intellect; the former is unbounded, as is the imagination.** Real possibility seeks to explain the necessity and reality of its object; abstract possibility is not interested in the object which is explained, but in the subject which does the explaining. The object need only be possible, conceivable. That which is abstractly possible, which can be conceived, constitutes no obstacle to the thinking subject, no limit, no stumbling-block. Whether this possibility is also real is irrelevant, since here the interest does not extend to the object as object.

Epicurus therefore proceeds with a boundless nonchalance in the explanation of separate physical phenomena.

More light will be thrown upon this fact by the letter to Pythocles, later to be considered. Suffice it here to draw attention to Epicurus' attitude to the opinions of earlier physicists. **Where the author of *De Placitis philosophorum* and Stobaeus quote the different views of the philosophers concerning the substance of the stars, the size and shape of the sun and similar matters, it is always said of Epicurus: He rejects none of these opinions, *all could* be right, he adheres to the possible.**47 Yes, Epicurus *polemicises* even against the rationally determining, and for precisely this reason one-sided, method of explanation by real possibility.

Thus Seneca says in his *Quaestiones naturales*: Epicurus maintains that all these causes are possible, and then attempts in addition still other explanations. **He *blames* those who claim that any particular one of them occurs, because it is rash to judge apodictically about that which can only be deduced from conjectures.**

One can see that there is no interest in investigating the real causes of objects. All that matters is the tranquillity of the explaining subject. Since everything possible is admitted as possible, which corresponds to the character of abstract possibility, the *chance of being* is clearly transferred only into the *chance of thought*. The only rule which Epicurus prescribes, namely, that “the explanation should *not contradict* sensation," is self-evident; for to be abstractly possible consists precisely in being free from contradiction, which therefore must be avoided. **And Epicurus confesses finally that his method of explaining aims only at the *ataraxy*21 *of self-consciousness,* not *at knowledge of nature in and for itself*.**50

https://archive.org/details/Marx_Karl_-_Doctoral_Thesis_-_The_Difference_Between_the_Democritean_and_Epicure/page/n27/mode/2up?view=theater

Finally, Bayle,18 supported by the authority of Augustine,29 who states that Democritus ascribed to the atom a spiritual principle — an authority, by the way, who in contrast to Aristotle and the other ancients is without any importance — reproaches Epicurus for having thought out the concept of declination instead of this spiritual principle. **But, on the contrary, merely a word would have been gained with this "soul of the atom," whereas the declination represents the real soul of the atom, the concept of abstract individuality.**

https://archive.org/details/Marx_Karl_-_Doctoral_Thesis_-_The_Difference_Between_the_Democritean_and_Epicure/page/n55/mode/2up?view=theater

By contrast, Epicurus' theory of the celestial bodies and the processes connected with them, or his theory of meteors (in this one term he includes it all), stands in opposition not only to Democritus, but to the opinion of Greek philosophy as a whole. Worship of the celestial bodies is a cult practised by all Greek philosophers. **The system of the celestial bodies is the first naive and nature-determined existence of true reason [*Vernunft*].** The same position is taken by Greek self-consciousness in the domain of the mind [*Geist*]. It is the solar system of the mind. **The Greek philosophers therefore worshipped their own mind in the celestial bodies.**

Anaxagoras himself, who first gave a physical explanation of heaven and in this way brought it down to earth in a sense different from that of Socrates, answered, when asked for what purpose he was born: *For the observation of the sun, the moon and the heaven*.1 Xenophanes, however, looked up at heaven and said: The One is God.2 The religious attitude of the Pythagoreans, Plato and Aristotle to the heavenly-bodies is well known.

Indeed, Epicurus opposes the outlook of the whole Greek people.

Aristotle says it often seems that the concept provides evidence for the phenomena and the phenomena for the concept. Thus all men have an idea of the gods and assign the highest region to the divine, barbarians as well as Hellenes, and in general all who believe in the existence of the gods, evidently connecting the immortal with the immortal, for otherwise it is impossible. **Thus if the divine exists – as it actually does – then what we say about the substance of the celestial bodies is also correct.** But this corresponds also to sensuous perception, insofar as human conviction is concerned. For throughout the time that has passed, according to the memories handed down from people to people, nothing seems to have changed, either in heaven as a whole, or in any part of it. Even the name seems to have been handed down from the ancients to the present time, and they assumed that which we also say. **For not once, not twice, but an infinite number of times have the same views come down to us.** For since the primary body is something different, apart from the earth and the fire and the air and the water, they called the highest region "ether," from *thein aei* [to run always], giving it the by-name: eternal time.3 **But the ancients assigned heaven and the highest region to the gods, because it alone is immortal. But the present teaching testifies that it is indestructible, ungenerated and not subject to any mortal ills.** In this way our concepts correspond at the same time to intimations about God.4 But that there is one heaven is evident. It is a tradition handed down from our ancestors and the ancients and surviving in the form of the myths of later generations, that the heavenly bodies are gods and that the divine encompasses all nature. **The rest was added in mythical form for the belief of the masses, as useful for the laws and for life.** Thus the myths make the gods resemble man and some of the other living creatures, and invent similar things connected with and related to this. If we discard the additions and hold fast only to the first, namely, the belief that the primary substances are gods, then we must consider this as having been divinely revealed, and we must hold that after all sorts of art and philosophy had, in one way or another, been invented and lost again, these opinions came down to us like relics.5

https://archive.org/details/theistsatheiststst0000moln/page/30/mode/2up?view=theater

The materialist thesis was best argued by Lucretius whose position, inherited from his much-admired philosophic model, Epicurus, has not been essentially improved upon ever since the first century B.C. He holds the monopoly of materialist atheism the way perhaps Spinoza holds it for spiritualist atheism.

https://archive.org/details/in.ernet.dli.2015.231118/page/n177/mode/2up?view=theater

Like Euripides, Lucretius is a modern; his thought and feeling are more congenial to our time than to the century before Christ. Horace and Virgil were deeply influenced by him in their youth, and recall him

without name in many a lordly phrase; but the attempt of Augustus to restore the old faith made it unwise for these imperial protégés to express too openly their admiration and their debt. The Epicurean philosophy was as unsuited to the Roman mind as epicurean practices suited Roman taste in the age of Lucretius.* Rome wanted a metaphysic that would exalt mystic powers rather than natural law; **an ethic that would make a virile and martial people rather than humanitarian lovers of quiet and peace;** and a political philosophy that, like those of Virgil and Horace, would justify Rome's imperial mastery. In the resurrection of faith after Seneca, Lucretius was almost forgotten. Not till Poggio rediscovered him in 1418 did he begin to influence European thought.

https://www.english.enoanda.cat/the_inscription.html

For indeed, while honouring supreme Zeus and Demeter as deities, [we regard human beings] not as [their] slaves, [but as their friends.]
…

[Let us not think that the gods are capable of examining people who are unjust] and base and [noble] and just. [Otherwise the] greatest disturbances [will be created in our souls.]

Fr. 19

[Let us then contradict Homer, who] talks [all sorts of nonsense] about them, [representing them sometimes as adulterers, sometimes as] lame, [sometimes as thievish, or even as being struck by mortals with a spear,] as well as inducing the craftsmen to produce inappropriate portrayals. **Some statues of gods shoot arrows and are produced holding] a bow, [represented] like Heracles in Homer; others are attended by a body-guard of wild beasts; others are angry with the prosperous, like Nemesis according to popular opinion; whereas we ought to make statues of the gods genial and smiling, so that we may smile back at them rather than be afraid of them.**

https://en.wikisource.org/wiki/Ante-Nicene_Fathers/Volume_IV/Origen/Origen_Against_Celsus/Book_I/Chapter_VIII

And here Celsus must be convicted of self-contradiction. **For from other treatises of his it is ascertained that he was an Epicurean; but here, because he thought that he could assail Christianity with better effect by not professing the opinions of Epicurus, he pretends that there is a something better in man than the earthly part of his nature, which is akin to God,** and says that "they in whom this element, viz., the soul, is in a healthy condition, are ever seeking after their kindred nature, meaning God, and are ever desiring to hear something about Him, and to call it to remembrance." **Observe now the insincerity of his character!** Having said a little before, that "the man who had embraced a system of good doctrine ought not, even if exposed to danger on that account from men, to disavow it, or pretend that he had done so, nor yet openly disown it," he now involves himself in all manner of contradictions. **For he knew that if he acknowledged himself an Epicurean, he would not obtain any credit when accusing those who, in any degree, introduce the doctrine of Providence, and who place a God over the world. And we have heard that there were two individuals of the name of Celsus, both of whom were Epicureans; the earlier of the two having lived in the time of Nero, but this one in that of Adrian, and later.**

https://jewishencyclopedia.com/articles/4167-celsus

In designating his opponent by the opprobrious epithet of "Epicurean," Origen was misled by his prejudice; for Celsus, according to his own teachings, was an eclectic, following Plato and perhaps also Philo. Moreover, he must have lived after Hadrian's time, probably flourishing about 180 under Marcus Aurelius (161-180), since he mentions the Marcionites and the Marcellians. **Lucian, who also denounced Christianity, dedicated to him his "Alexander, the Lying Prophet"** ("Alex." xxi.).

https://www.sacred-texts.com/cla/luc/wl2/wl218.htm

Well, well, if any one does cast reflections of that sort upon us, we shall at least have a precedent to plead. **Arrian himself, disciple of Epictetus, distinguished Roman, and product of lifelong culture as he was,** had just our experience, and shall make our defence. He condescended, that is, to put on record the life of the robber Tilliborus. The robber we propose to immortalize was of a far more pestilent kind, following his profession not in the forests and mountains, but in cities; *he* was not content to overrun a Mysia or an Ida; *his* booty came not from a few scantily populated districts of Asia; one may say that the scene of his depredations was the whole Roman Empire.
…

It was an occasion for a Democritus, nay, for an Epicurus or a Metrodorus, perhaps, a man whose intelligence was steeled against such assaults by scepticism and insight, **one who, if he could not detect the precise imposture, would at any rate have been perfectly certain that, though this escaped him, the whole thing was a lie and an impossibility.**
...

A time came when a number of sensible people began to shake off their intoxication and combine against him, chief among them the numerous Epicureans; in the cities, the imposture with all its theatrical accessories began to be seen through. It was now that he resorted to a measure of intimidation; **he proclaimed that Pontus was overrun with atheists and Christians,** who presumed to spread the most scandalous reports concerning him; he exhorted Pontus, as it valued the God's favour, to stone these men.
...

Well, it was war to the knife between him and Epicurus, and no wonder. What fitter enemy for a charlatan who patronized miracles and hated truth, than the thinker who had grasped the nature of things and was in solitary possession of that truth? **As for the Platonists, Stoics, Pythagoreans, they were his good friends; he had no quarrel with them.** But the unmitigated Epicurus, as he used to call him, could not but be hateful to him, treating all such pretensions as absurd and puerile.
...

It was with his eye on this Italian propaganda, too, that he took a further step. This was the institution of mysteries, with hierophants and torch-bearers complete. The ceremonies occupied three successive days. On the first, **proclamation was made on the Athenian model to this effect: 'If there be any atheist or Christian or Epicurean here spying upon our rites, let him depart in haste; and let all such as have faith in the God be initiated and all blessing attend them.'** He led the litany with, 'Christians, avaunt!' and the crowd responded, 'Epicureans, avaunt!'
...

Coming across Epicurus's *Accepted Maxims*, the most admirable of his books, as you know, with its terse presentment of his wise conclusions, he brought it into the middle of the market-place, there burned it on a fig-wood fire for the sins of its author, and cast its ashes into the sea. He issued an oracle on the occasion:

> The dotard's maxims to the flames be given.

The fellow had no conception of the blessings conferred by that book upon its readers, of the peace, tranquillity, and independence of mind it produces, of the protection it gives against terrors, phantoms, and marvels, vain hopes and inordinate desires, of the judgement and candour that it fosters, **or of its true purging of the spirit, not with torches and squills and such rubbish, but with right reason, truth, and frankness.**
...

But secondly I was still more concerned (a preference which you will be very far from resenting) to strike a blow for Epicurus, that great man whose holiness and divinity of nature were not shams, who alone had and imparted true insight into the good, and who brought deliverance to all that consorted with him.

---

https://archive.org/details/moraldarwinismho0000wike/page/106/mode/2up?view=theater

In the spring of 1417 Epicureanism was awakened from its deep slumber. Poggio Bracciolini, infected with the characteristic Renaissance desire to recover ancient manuscripts, happened upon a copy of Lucretius's *De Rerum Natura*. **In 1430 Ambrogio Traversari published a Latin version of Diogenes Laertius's *Lives of the Eminent Philosophers*,** which contained not only a biography of Epicurus (and Democritus as well), but Epicurus's three famous letters explaining his doctrines in outline and a collection of Epicurean maxims as well.

https://archive.org/details/enlightenmentint0000unse_i6k5/page/304/mode/2up?view=theater

In 1563 the French Humanist Denis Lambin elaborated this line of defense: in his fine critical edition of *De rerum natura* (which silenced textual arguments for three centuries) **he asserted that Lucretius's philosophical ideas are so patently absurd that they need no refutation and can do no harm.** The ideas of a poet, Lambin suggested, matter little; even Homer is full of impieties and obscenities. What does matter is Lucretius's brilliant evocation of nature, the beauty of his language, and the elevation of his moral sentiments – at least some of the time. This prudent divorce of despicable atheism from admirable poetry, blunted, without silencing, attacks on Lucretius and assured survival to a pagan writer whom pious men looked upon with unmitigated aversion and growing concern. Saved by the industry and adroitness of a late Humanist, Lucretius became a favorite with a small coterie of materialists, with the *libertins* in the late seventeenth century, and finally, with the philosophes.

The continuing popularity of Lucretius was buttressed by the rehabilitation of Lucretius' teacher, Epicurus, undertaken almost single-handedly by Pierre Gassendi, a priest of unimpeachable orthodoxy. Quite like the medieval admirers of Ovid, Gassendi – "the best

philosopher among literary men and the best literary man among philosophers,"9 **– began by clearing Epicurus's character and proceeded by defending his philosophy.**

> 9. Gibbon: *Essai sur l'étude de la littérature*, in *Miscellaneous Works*, IV, 22. **This *bon mot* reads like an unacknowledged reminiscence of Diderot's remark, published in 1755, that it could be said of Gassendi, "Never was a philosopher a better humanist, nor humanist such a good philosopher."** "Epicuréisme," *Encyclopédie*, in *Oeuvres*, XIV, 525.

…

Gassendi, who knew most leading intellectuals of his time, was neither a great scientist nor a great philosopher, but he powerfully influenced both great scientists and great philosophers: **Leibniz thought that Locke was more deeply indebted to Gassendi than to anyone else,** and Voltaire wrote in 1738 that Newton had admired Gassendi as a most intelligent man, entirely correct in his ideas on God, space, and time.1

> The *metaphysics* of the seventeenth century, represented in France by *Descartes*, had *materialism* as its *antagonist* from its very birth. The latter's opposition to Descartes was personified by *Gassendi*, the restorer of *Epicurean* materialism. French and English materialism was always closely related to *Democritus* and *Epicurus*.

https://books.google.fi/books?id=wrx9BgAAQBAJ&lpg=PP1&hl=fi&pg=PA205#v=onepage&q&f=false

Pintard, for his part, subscribes to that point of view which holds that these free-thinkers assembled around Gassendi. **He concedes that after Gassendi's death (1655) they went into an eclipse until 1680,** but he maintains that their works were often printed following their eclipse. **Finally, he stresses the close relationship between those who wrote in the first part of the century and those who came after 1680, particularly Bayle and Fontenelle.**

Indeed, in Pintard's opinion, the event which assured the triumph of libertinism was the revival of Gassendi and his disciples in the salon of Mme de la Sablière, in the work of Guillaume Lamy and a whole group of followers interested in the problem of the animal soul, and especially in Chaulieu, La Fare, and the Marquis de Lassay. **Bayle had noted this appeal of Gassendi in 1686:** "Depuis l'apologie de M. Gassendi pour les moeurs et pour la morale de ce philosophe [Epicurus] on est si bien revenu de la vieille préoccupation, que c'est à présent une chose trop commune que d'être Gassendiste à cet égard-là."
…

In addition, Bayle quoted Guy Patin, and suggested in 1701 and 1703 the publication of the *Naudeana* and the *Patiniana*. **He was extremely interested in Gassendi, while he wrote of La Mother in 1675:** "Il y a bien de l'érudition, mail il y a encore plus d'impiété. Ce sont des coups de jeunesse, je l'avoue; je ne sais pourtant si l'auteur s'en est repenti, car toute sa vie il a écrit à la défense du Pirrhonisme d'une manière qui ne sentoit pas son âme fort dévote."

https://books.google.fi/books?id=wrx9BgAAQBAJ&lpg=PP1&hl=fi&pg=PA220#v=onepage&q&f=false

This forced Descartes to define "esprit": "J'entends en effet l'esprit, non comme une partie de l'âme, mais comme la totalité de l'âme pensante." Descartes identified it with the inner reality of the person, and insisted that it is the only thing which cannot be separated from the *moi*. Gassendi, of course, did not accept this. **It was this divergence of opinion which led Descartes to address Gassendi as Mr. Flesh, and Gassendi to respond by calling Descartes Mr. Spirit.**

Gassendi criticizes continually point after point in Descartes's *Méditations*. **Where Descartes regards as uncertain the testimony of the senses, Gassendi maintains that they are our only source of**

external knowledge. Where Descartes stresses that they deceive, Gassendi, conceding that they may often lead to error, insists that they also lead to truth. **Where Descartes believes that the mind has the capacity of creating ideas within itself, Gassendi asserts that the mind does not possess any idea which does not come from the senses.**

https://books.google.fi/books?id=tSE6DwAAQBAJ&lpg=PT200&hl=fi&pg=PT181#v=onepage&q&f=false

In Paris, Mersenne and Sir Kenelm Digby helped Hobbes secure the publication of *De cive* in 1642 and its dispersal thereafter, and both Mersenne and Gassendi wrote letters of commendation for Samuel Sorbiere, the historiographer royal, to use in arranging the publication of a second edition of the book in Amsterdam early in 1647. In defiance of their initial instructions, Sorbiere added the letters to the prefatory material of both the third edition, which was published in Amsterdam later that year, and his own French translation, which appeared two years thereafter. **If *De cive* was an immediate sensation, it was partly because it came so well recommended.**
…

Father Pierre Gassendi, **who was as celebrated for his revival of Epicureanism as was Mersenne for his sponsorship of science,** was cut from similar cloth.21 Both were clearly eager to promote Hobbes's doctrine, for they were both unstinting in their praise for his book. For Mersenne, Hobbes was "that incomparable man" and *De cive* "that outstanding work." He termed his English friend's tome "a great literary treasure." **Because it presented a "noble philosophy, no less clearly demonstrated than the Elements of Euclid," that would cause the reader to "renounce … all the triflings" of the skeptics and make him "confess a dogmatic doctrine based on the firmest of footings," it should be considered a "golden book, augmented and adorned with jewels."** Gassendi spoke similarly of "the excellent Hobbes." He could think of no "writer who examines an argument more deeply than" his friend, and he knew "no one who in his philosophical work is more free from prejudice." As for *De cive*, though the French priest prudently distanced himself from its highly unorthodox treatment of the Christian religion, he nonetheless described it as "truly uncommon, and worthy of being handled by all who are sensible of higher things." In Paris, he remarked, "so few copies of the book were printed, that they produced rather than satisfied a thirst for it." **If Sorbiere should bring other writings by Hobbes "to light," Gassendi continued, he would "have bestowed a great blessing on the whole nation of those who take philosophy seriously.**"22

https://archive.org/details/bim_early-english-books-1641-1700_the-second-part-of-the-n_baxter-richard_1680/page/n149/mode/2up?view=theater

I wonder that *Hobbes de cive* should be magnified by such Frenchmen as *Gassendus, Sorberius* and *Mersennus*: But it seems some French Philosophers (and Prelates too) are looser in their principles of policie and Loyalty than we are.

https://onlinelibrary.wiley.com/doi/epdf/10.1111/zygo.12679

In 1676, a French Jesuit René Rapin had already called Hobbes "one of the boldest Epicureans of modern times" who followed Epicurus "without compromise" (Rapin 1676, 54, cited in Malcolm 2002, 499).
…

Harris then delivered his putatively devastating blow to Spinoza's idea of God. He argued that if cogitation was as essential to matter as extension, then all particles must be an independent entity of "*Thinking Substance or Body*." **Then, every atom will be equal to every other atom in regard to "this *Cogitative Power*." The *reductio ad absurdum*, according to Harris, was: "either there is no Deity at all, or else that every Particle of Matter must be a God by itself"** (Spinoza 1677b; Harris 1698d, 46, 12). Thus, "if this be his [Spinoza'] Opinion, there cannot possibly be a more unaccountable, absurd and impossible Notion of God advanced" since if "*Substance, Matter* and *God*, signifie all the same thing, and all Matter be *Essentially Cogitative*," then all is God, thus underscoring Spinoza's panentheism. However, the only trouble was that Spinoza had actually never gone that far (Spinoza 1677b; Harris 1698d, 47, 14).
…

If God were to be subjugated to a "Physical necessity," then it makes God "nothing at all but Nature, and deprives" both God and humans the "Noble Principle of *Freedom of Will*: **and then they know that there can be no such things as Rewards and Punishments proportionable to Men's Actions; but that all things are alike, without any distinction of Good and Evil."** All of that because of Hobbes's and Spinoza's insistence on being such "zealous Sticklers for a *Corporeal Deity*." Thus, Harris continued that the **"God of the Corporealists is not the True Deity, whatever they may pretend, but a blind, stupid, senseless Idol," that has the name of God immorally affixed to it** (Harris 1698d, 49, 50, 50-51). This fear factor was not inconsiderable, so Harris repeated this in the Sixth of his Boyle Lectures: "That *Justice is founded in Power, and that whatever is Enacted by a Soveraign Power can't be Unjust*," **thereby making room for the quintessence of arbitrary creation of moral and judicial categories as the terminus ad quem of Hobbism and Spinozism** (Harris 1698b, 21).

...

Whether it was from the assertion that "*Good* and *Evil* are only *Thetical things*," **or Spinoza's view that "Bonum et malum nihil Positivum in Rebus scilicet, in se consideratis indicant" or Hobbes's view that "There is nothing simply nor absolutely Good or Evil, nor any common Rule about them to be taken from the Objects themselves, but only from the Person; who calleth that Good which he likes or desires, and that Evil which he hates.**" Another quote of Hobbes that Harris utilized for his polemical purpose was: "That Good and Evil are only Names that signify our Appetites and Aversions; which in different Tempers, Customs, and Doctrines of Men are different" (Spinoza 1677a, *passim*; Spinoza 1677b, 164; Hobbes 1651; Steenbakkers 1997; Harris 1698a, 6, 24, 79).

https://books.google.fi/books?id=LT5WAAAAYAAJ&pg=PA80#v=onepage&q&f=false

Not long before the Death of *Grotius*, another *English* author appear'd, of a Character quite different from that of *Selden*, I mean o *Thomas Hobbes*; **a great Mathematician, and one of the most penetrating Genius's of his Age.** It is great Pity he suffer'd himself to be misled by the Indignation he had conceiv'd against those, whom he look'd upon as the seditious Disturbers of the Peace of his Country: Had he philosophiz'd without Prejudice, and with a sincere Regard to Truth only; he would doubtless have done her very great signal Service. He publish'd at *Paris* 1642, his p Treatise *de Cive*; **wherein, amongst other dangerous Errours, he endeavours to establish, and that too in the Geometrical Method, the Hypothesis of *Epicurus*; which makes Self-Preservation and Self-Interest, to be the original Causes of Civil Society.**
...

Hobbes *created himself by this Work many Enemies;* ***but, as Mr.*** **Bayle *says,* q *the more discerning and judicious Part of Mankind were forc'd to acknowledge, that no one had ever yet penetrated so far into the Foundations of Civil Policy.*** *Lambert Velthuysen,* a famous Philosopher of the united Provinces, boldly undertook the Defence of this Treatise *De Cive*, as far as related to *Hobbes's* Manner of demonstrating the Laws of Nature.
...

It thereupon we sometimes find in his Works, some seeming Contradictions; **'tis probably, because he durst not trust the Reader with the whole of his Notions;** and was willing to provide for a Retreat, in case he should not be able to stand the Shock of his Adversaries. He had several of 'en; but t they did not all succeed alike. **He pass'd for an Atheist; and perhaps they were not very much out in their Judgments, who thought him so; for he admitted none but Corporeal Substances.**

https://archive.org/details/moraldarwinismho0000wike/page/112/mode/2up?view=theater

If we may provide the briefest statement that characterizes the Galilean-Newtonian revolution, we might call it the vindication of atomism through the victory of mathematics. A quick victory it was too. For at the beginning of the seventeenth century Galileo was questioned by the Inquisition and put under house arrest, and by the dawn of the eighteenth century Newton was considered a demigod who had unlocked every secret of nature, a mortal whose thoughts were identical with God's.
...

In regard to the revival of Epicurean materialism, **the arguments of Nicolas Copernicus (1473-1543) in his *De Revolutionibus Orbium Coelestum* (1543), which placed the sun at the center of the universe and not the earth, were not nearly as important as the publication by Galileo of his *Siderius Nuncius* (*The Starry Messenger*) in 1610.** Galileo was a lens grinder, brilliant mathematician, powerful rhetorician, implacable foe of Aristotelianism and guarded advocate of materialist atomism.
...

Galileo devoted the first part of *The Starry Messenger* to a detailed description of the actual imperfections of the moon, imperfections previously hidden to the naked eye. The moon, rather than being perfectly smooth and round like a fine jewel in the heavens, was "full of cavities and prominences," "precipitous crags" and "jagged peaks." By the wondrous artifice of the spyglass, Galileo trumpeted, "one may learn with all the certainty of sense evidence that the Moon is not robed in a smooth and polished surface but is in fact rough and uneven, covered everywhere, just like the Earth's surface, with huge prominences, deep valleys, and chasms."4 **To find that one of the heavenly bodies was made of dirt, just like the earth, was a great preparation for the acceptance of Epicureanism, for it meant the eradication of the notion that the heavens were made of some unearthly substance, and therefore paved the way for acceptance of the Epicurean assertion that the universe was homogeneous, made everywhere of one quite humble substance – the lifeless, inglorious atom.**

We who are so accustomed to the knowledge that the moon is made of quite earthy elements, cannot fully appreciate the shock caused by Galileo's reduction of the heavens to the humility of the earth – and doing it not by argument (the only weapon of Epicurus) but by the senses with the aid of a new man-made device. **If the moon were mere dust, then also, it seemed, were the rest of the heavenly bodies – all the way up to God's abode.**

http://www.perseus.tufts.edu/hopper/text?doc=Perseus%3Atext%3A1999.01.0166%3Abook%3D10%3Asection%3D886d

> It is rather the novel views of our modern scientists[1] that we must hold responsible as the cause of mischief. For the result of the arguments of such people is this,—**that when you and I try to prove the existence of the gods by pointing to these very objects—sun, moon, stars, and earth—as instances of deity and divinity, people who have been converted by these scientists will assert that these things are simply earth and stone,** [886e] incapable of paying any heed to human affairs, and that these beliefs of ours are speciously tricked out with arguments to make them plausible.

...

Bruno, who was openly indebted to Lucretius, preached the infinity of the universe with evangelical zeal, and wrote the famous Italian dialogue *De l'infinito universe e mondi*, **which combined the radical Augustinian affirmation of God's omnipotence with Epicurean arguments about the infinite universe and the plurality of worlds.** Subsequently, he was burned at the stake on February 17, 1600. But Bruno's fate and Galileo's caution aside, there was no doubt that the spyglass revealed a universe for more immense than had previously been suspected, and the step to infinity was (paradoxically) a small one.7 **This amazing instrument promised to settle with "ocular certainty … all the disputes which have vexed philosophers through so many ages,"**8 and it seemed to be settling things on the side of Epicurean materialism.

...

Since direct empirical evidence could not clinch the Epicurean account of nature in the seventeenth century,11 what did secure such atomism as the reigning view of science during this scientific revolution? Ironically, **it was the analogy based on the effectiveness of geometry as applied to heavenly objects understood as points in astronomy, and gross earthly objects (projectiles) treated as points in ballistics.** Witness the following famous statement of Galileo:

> Natural philosophy is written in a great Book, which holds itself at all times open before our eyes – I mean, the universe itself. But no one can understand it unless to begin with he sets himself to master the language, and recognize the characters, in which it is written. It is written in mathematical language, and the characters are triangles, circles, and other geometrical figures.12

As historian of science Stephen Toulmin rightly points out, **in contrast to the original form of atomism in Democritus, Epicurus and Lucretius, Galileo "treated the atoms as the physical counterparts of the infinitesimal units of geometry."**13 This advance on ancient atomism via the identification of atomic points with geometric points actually made Epicureanism theoretically stronger in modernity than it had been in antiquity **because atomism could now borrow its legitimacy, rigor and eternality from mathematics,** with the result that the successful application of mathematics to nature on the macroscopic level seemed to "prove" the existence of atoms on the microscopic level even if Galileo had no such magical spyglass to provide "ocular certainty."

https://voxday.net/2009/02/28/daniel-dennett-comic-superstar/

You can trust biologists. Because physicists get amazingly accurate results.

https://plato.stanford.edu/entries/ockham/#NatuPhil

> For Ockham, there is no need for real "mathematical" entities such as numbers, points, lines, and surfaces as distinct from individual substances and qualities. Apparent talk about such things can invariably be parsed away, via the theory of connotation or exposition, in favor of talk about substances and qualities (and, in certain theological contexts, a few relations). This Ockhamist move is illustrative of and influential on an important development in late medieval physics: **the application of mathematics to non-mathematical things, culminating in Galileo's famous statement that the "book of nature" is written in the "language of mathematics."**
>
> Such an application of mathematics violates a traditional Aristotelian prohibition against *metabasis eis allo genos,* grounded on quite reasonable considerations. **The basic idea is that things cannot be legitimately compared in any respect in which they differ in species.** Thus it makes little sense to ask whether the soprano's high C is higher or lower than Mount Everest—much less to ask (quantitatively) *how much* higher or lower it is. But for Aristotle, straight lines and curved lines belong to different species of lines. Hence they cannot be meaningfully compared or measured against one another. The same holds for rectilinear motion and circular motion.
> ...
>
> Once one realizes that we can appeal to connotation theory, and more generally the theory of exposition, without invoking new entities, **the door is opened to applying mathematical**

analyses (all of which are exponible, for Ockham) to all kinds of things, and in particular to physical nature.

…

The crux of the story is this: the existence of an underlying order to things, which the elegance of mathematics captures, is an occasion for awe and wonder, supporting the belief that the universe is intelligently designed. **Of course, this essentially religious response of Pythagoras, this natural reaction of awe and wonder, was anathema to Epicurus because it so easily slips into a recognition that such intricate, intelligible order must be the result of intelligent design,** and *that* would link the divine to nature as a cause.15

In fact, when Euclid's *Elements*, the greatest book on mathematics in the ancient world, was rediscovered in the Renaissance, the original reaction was Pythagorean, or more exactly, Platonic.16 By this I mean that the response to the profundity of Euclid was a kind of semi-religious awe, and the successful application of his geometry to practical matters was likewise an incitement to wonder in regard to the underlying order of created things. As claimed above, **this response, following the Pythagorean spirit, was purely natural, and indeed seems to have been the inspiration behind Galileo's use of mathematics; that is, in spirit, Galileo might well be considered a Pythagorean.**

But even if such is the case, by completely identifying the Euclidean point with the Epicurean atom, Galileo prepared the way for the Epicurean revolution in science, and consequently, for the ultimate quenching of the Pythagorean approach to mathematics.17 The reason is simple: the complete identity of the geometric point and the atom entailed the acceptance of the reductionism inherent in such atomism, by stripping nature of all but the simplest mathematical properties of the point (now considered by Galileo to be a real atomic object).

https://en.wikisource.org/wiki/Lives_of_the_Eminent_Philosophers/Book_IX#Democritus

"[Democritus] would seem," says Thrasylus, "to have been an admirer of the Pythagoreans. Moreover, he mentions Pythagoras himself, praising him in a work of his own entitled *Pythagoras*.[60] He seems to have taken all his ideas from him and, if chronology did not stand in the way, he might have been thought his pupil." Glaucus of Rhegium certainly says that he was taught by one of the Pythagoreans, and Glaucus was his contemporary. Apollodorus of Cyzicus, again, will have it that he lived with Philolaus.

https://books.google.fi/books?id=yjaEkWbwBm0C&lpg=PP1&hl=fi&pg=PA203#v=onepage&q&f=false

The figure of Pythagoras becomes the pivotal point of Nietzsche's chronological maneuvering. Previous historians had taken Pythagoras and the Pythagoreans to be roughly contemporary. Here Nietzsche performs a sweeping revision: **Pythagoras is a master of superstition who creates a cult of religious followers quite different from the scientific types in the community.** These scientific types came much later than Pythagoras and have nearly no connection to him philosophically. **The later Pythagoreans, in this account, became mathematical atomists who perfected the materialism of Democritus.** This aligns the chronological order with the order of discovery as Nietzsche sees it. These later Pythagoreans would be treated separately; **using not only Democritus but also Heraclitus, they discovered a theory closely approximating Nietzsche's own theory at this point of time,** insofar as this could be found in the ancient world.
…

His contention that the Pythagorean community comprised two factions was a thesis Nietzsche borrowed from Erwin Rohde, the author of *Psyche* and many important articles on philology and a close friend.82 Generally, the pre-Platonic philosopher lecture series is closely associated with, and indebted to, Erwin Rohde. Nietzsche wrote to Rohde on June 11, 1872, that Pythagorean *philosophy* occurs after atomism but before Plato and that Pythagoras had not already discovered all the embryonic forms of this philosophy. **Pythagorean number theory, according to Nietzsche, was a new philosophical direction occasioned by the (apparent) failure of the Eleatics, Anaxagoras, and Leucippus.**

https://oxfordre.com/classics/view/10.1093/acrefore/9780199381135.001.0001/acrefore-9780199381135-e-5939

Simmias (1) (or Simias) of *Thebes (1), a main character in *Plato (1)'s Phaedo (and in Plutarch's De genio Socratis, which contains many echoes of the Phaedo), was evidently a veteran member of Socrates' circle. **Although, with *Cebes, he was 'together with' (συγγίγνεσθαι) Philolaus in Thebes (Phaedo 61d–e), his Pythagorean credentials (see Pythagoras (1)) are poor; Plato represents him putting forward an un-Pythagorean theory of soul (as a 'kind of harmony' of bodily constituents),** and generally as a sound (Socratic) philosopher, and instigator of arguments (Phaedrus 242b).

https://archive.org/details/in.ernet.dli.2015.55010/page/n377/mode/2up?view=theater

> At Thebes Philolaus the Pythagorean deposed the earth from the center of the universe, and reduced it to the status of one among many planets revolving about a "central fire."[9] Leucippus, pupil of Philolaus, attributed the origin of the stars to the incandescent combustion and concentration of material "drawn onward in the universal movement of the circular vortex."[10] At Abdera Democritus, pupil of Leucippus **and student of Babylonian lore,** described the Milky Way as a multitude of small stars, and summarized astronomic history as the periodical collision and destruction of an infinite number of worlds.[11]

https://archive.org/details/in.ernet.dli.2015.55010/page/n387/mode/2up?view=theater

> **As Parmenides' denial of motion and change was a reaction against the fluid and unstable metaphysics of Heracleitus, so his monism was a counterblast to the atomism of the later Pythagoreans.** For these had developed the number theory of their founder into the doctrine that all things are composed of numbers in the sense of indivisible units.[12] **When Philolaus of Thebes added that "all things take place by necessity and by harmony,"[13] everything was ready for the Atomic school in Greek philosophy.**
>
> About 435 Leucippus of Miletus came to Elea, and studied under Zeno; there, perhaps, he heard of the number atomism of the Pythagoreans, for Zeno had aimed some of his subtlest paradoxes at this doctrine of plurality.[14] Leucippus finally settled in Abdera, a flourishing Ionian colony in Thrace. **Of his direct teaching only one fragment remains: "Nothing happens without a reason, but all things occur for a reason, and of necessity."[15]** Presumably it was in answer to Zeno and Parmenides that Leucippus developed the notion of the void, or empty space; in this way he hoped to make motion theoretically possible as well as sensibly actual.

https://plato.stanford.edu/entries/atomism-ancient/#PlatPlat

> **Simplicius also compares Pythagorean views to Democritean atomism, inasmuch as both theories posit a cause for hot and cold, rather than taking these to be fundamental principles, as the Aristotelians do.**

…

If points are real (i.e., if atoms can simply function as actual, geometrical points in space), then it follows that the real world, the atomic world, is purely geometrical. **That means, of course, that the goal of science comes to be the reduction of the rich world of everyday experience – the world of colors, smells, tastes and so on – to the invisible world of geometrical, atomic reality.** Ultimately, then, the visible form (or species, such as "dog"), the color, the taste, the smell and even the sound can all be reduced to mathematical relationships. It is clear from his polemical treatise *Il Saggiatore* (*The Assayer*, 1623) that Galileo did accept the reductionism of atomism and incorporated it into his goal of geometrizing nature.

> Hence I think that tastes, odors, colors, and so on are no more than mere names so far as the object in which we place them is concerned, **and that they reside only in the consciousness [of the perceiver]. Hence if the living creature were removed [who senses such qualities], all these qualities would be wiped away and annihilated.** But since we have imposed upon them special names, distinct from those of the other and real qualities mentioned previously [of shape, position, and relation], we wish to believe that they really exist as actually different from those.18

Just as Galileo's identification of Euclidean points with atomic points reinforced the Epicurean notion that everything in nature could be reduced to material points, **so also (whether Galileo intended it or not) his identification of geometric and atomic points reinforced the Epicurean assertion that nature was self-contained and governed by internal necessity with which the divine could not interfere.** To illustrate, there is no need to invoke any outside principles or causes when we add 5+7. In and of themselves, without any divine aid, the numbers added together equal 12, and this operation works universally and eternally. Over and above this, it seems that not even divine power could make it false. **Mathematical relationships seem to be independent of, and imperturbable by, divine power. The same is true of course for geometrical figures and relationships.** Simply because of the intrinsic necessity of two points making a line, and the joining of three straight lines to each other to form a triangle, the three inferior angles of the triangle thus formed must, in and of themselves, without divine aid and in seeming defiance of divine power, equal two right angles.

https://www.gutenberg.org/files/17147/17147-h/17147-h.htm#page236

> Spinoza, moreover, sought a metaphysical necessity in events. He did not think that God was determined by his goodness and by his perfection (which this author treated as chimeras in relation to the universe), but by the necessity of his nature; **just as the semicircle is bound to enclose only right angles, without either knowing or willing this.**

…

Thus, the very notion of laws of nature in the modern sense had its source precisely in this assumption of the identity of the geometrical point with the atomic point. But this identity had an obvious Epicurean effect beyond the intention of Galileo: it allowed nature to be considered a closed system that locked divine interference out of nature. Just as God, it would seem, cannot make 5+7 not equal 12, nor can he make a triangle's interior angles not equal to two right angles, so also he cannot disrupt the natural necessity expressed in the relationship of atomic points. **God becomes just like the gods of Epicurus, utterly powerless to interfere with nature, for the inner laws of mathematics and geometry are eternal and unbreakable.**

> https://en.wikisource.org/wiki/Laocoon_(Blake)
>
> The Gods of Greece & Egypt were Mathematical Diagrams. See Plato's Works.

...

When asked by Napoleon where God was in Laplace's *Traité de la méchanique céleste*, Laplace triumphantly proclaimed, "Sire, I have no need of that hypothesis." Even when the very principles of Laplace's *System of the World* were destroyed by the advance of more powerful instruments and more powerful minds, **the confidence gained by Laplace's provisional victory remained; that is, even when the Epicurean foundation of eternal atomic points was swept away at the end of the nineteenth century, the habit of mind remained (and remains).** As a consequence, materialists still believe that Laplace's remark is sufficient to parry any attempt to reintroduce intelligent design, **even though its original and only power lay in a quite peculiar situation:** the acceptance of the eternality of matter, the motion of which was inert and which followed the lawlike confines of geometry, coupled with the attempt to inject God, as an alien element, into this closed system.

...

Newton tried to fit God into the Epicurean system by asserting that the atomic points were only quasi-eternal. Ironically, it was the "quasi" that made Newtonianism so effective a medium for the reintroduction of full-fledged Epicurean materialism, for Newton argued:

> All these things being considered, it seems probable to me that God in the beginning formed matter in solid, massy, hard, impenetrable, moveable particles, of such sizes and figures, and with such other properties, and in such proportion to space, as most conduced to the end for which he formed them; and **that these primitive particles being solids, are incomparably harder than any porous bodies compounded of them, even so very hard as never to wear or break in pieces; no ordinary power being able to divide what God himself made one in the first creation.**21

The assertion that God created the atoms "as never to wear or break in pieces" – just shy of being eternal – made it easier for Christians, against the centuries-long animosity towards Epicureanism, to embrace that very materialism designed by Epicurus to remove all divine action from nature, and consequently from human affairs. Such a compromise – a Christian God creating Epicurean atoms – ended, of course, in the eventual squeezing out of the divine by the materialism, **thereby attesting to Epicurus's genius in designing a deity-proof view of nature. For once the atoms were accepted as quasi-eternal, it soon became a established habit of mind to think of them as eternal, and it therefore became unclear why they needed a cause for their existence.**

...

But if we look more closely, we find in Newton a mixture of incongruous elements from rival cosmologies. In fact, Newton's putting them together greatly facilitated the revival of full-fledged Epicurean cosmology, for (again) it removed the scruples of Christians in accepting the materialism they had been taught to fear. **Contrary to Newton's insistence, if the laws arise from the very nature of the atom acting as a physical, geometrical point, then it is difficult to see why it is "unphilosophical" to assert that the "origin of the world … might arise out of a chaos by the mere laws of Nature,"** especially since Lucretius had already provided an argument, based on Epicurean principles, that the random motion of purposeless atoms could create, over time, the order in nature that we experience.

...

The advent of Darwin's *The Origin of Species* in 1859 was simply the result of the complete Epicurean system falling into place, causing the ejection of the alien element of divine design inserted by Newton.

https://www.newoxfordreview.org/documents/the-christian-the-epicurean/

Most history textbooks identify Deism as a new, rational religion invented by the Enlightenment. Deism was not new, however; it was a revived Epicurean theology wearing a thin Christian disguise, and Deism soon declared itself to be a religion independent of Christianity, rather than just a modification of it.

> https://onlinelibrary.wiley.com/doi/epdf/10.1111/zygo.12679
>
> In his first sermon, Bentley identified the fact that in the 1690s, it was existentially unviable to profess openly one's own atheism, thereby prompting those with such sensibilities to **"shelter and**

> **screen themselves under a new one of *Deists*, which is not quite so obnoxious."** Yet, they did "impugn" divine Providence, denied the "*Immortality* of the Soul," "Universal *Judgment* to come, **and of any *Incorporeal* Essence**" (Bentley 1692c, 5-6). In terms of the intellectual genesis of modern-day atheism, **Bentley identified the "birth" of Deism as no birth at all, but a *renaissance* (rebirth) of Epicurus and Democritus, their idea of Atomism** (Bentley 1692c, 7-8).

...

In a new mechanical metaphor unavailable to Epicurus, God is a watchmaker who has built a watch that runs on its own, not a God upon Whom the very continuing existence of the universe immediately depends, nor a God Who passionately attaches Himself to one people in a covenant. The Deist god does not worry about us, and we need not worry about interference from him. This god cannot interfere with nature, for nature is independent and self-sufficient.

The result of this hypothesis was devastating for Christianity. First since nature is independent of the Deist god, and the atoms move by their own iron laws, there could be no miracles. This is, of course, a direct return to the prohibition of miracles by Epicurus. There is an ironic twist however, to the modern form. **The Epicurean gods could not break the laws of atomic motion because they themselves were likewise made of atoms. They did not exist independently of nature in the same way that the Creator God of the Bible does. <u>But the modern Epicureans, precisely because they were transforming Christianity, took some of the old mixed with some of the new.</u> Their Deist god was the creator of nature but – and one can hardly convey the full strangeness of the irony – this god could not break any of the laws of nature he created.**

> Jaeger depicts *Spinocismus* as the ultimate distillation of all that most fatally threatens Christian society.53 Accounting the *Tractatus Theologico-Politicus* 'famosissimus,' **Tübingen's chancellor identifies as its core contention the view that '<u>God cannot act against the Laws of Nature, because he cannot act against His own nature.</u>'**54 Hence, argues Spinoza, there never have been, and never could be, any miracles, Biblical prophecy arises from overactive imaginations, and theology is not the path to truth but useful only to instil 'piety.'55 **Philosophy is proclaimed the sole path to 'truth' and 'salvation' and there is accordingly an overriding need for 'libertas philosophandi' (liberty to philosophize).**56

https://archive.org/details/enlightenmentint0000unse_i6k5/page/98/mode/2up?view=theater

The philosophes' two most reliable sources of inspiration in Roman literature, the two writers to whom they could turn with confidence, certain of finding in them support for their great enterprise, were the greatest poet and the greatest publicist of the late Republic: Lucretius and Cicero.

Titus Lucretius Carus is a mysterious and shadowy figure, although the men of the Enlightenment found themselves completely at home in his *De rerum natura* – that poetic rendering of the most unpoetic of philosophies, Epicureanism. They read it often and quoted it to the purpose; Voltaire had at least six editions and translations in his library, and the other philosophes collected him just as assiduously. Yet they had no way of visualizing Lucretius as a man: none of his letters have survived, **and while his ideas and style pervade the writings of his contemporaries, they quoted him without acknowledgement and passed him over in silence.**

There has been much puzzlement over this silence, and it is the other favorite of the philosophes – Cicero – who at least provides a clue: **in a private letter written in 54 B.C., Cicero tells his brother that Lucretius's *De rerum natura* is contructed with craftsmanship and marked by flashes of genius. Ten years later, in a disingenuous aside in the *Tusculan Disputations*, Cicero implies that he does not know the poem.** Since Cicero was a courageous man, his reason for the denial must reflect a political position. **Lucretius was to the dying Roman Republic much what Hobbes was to the seventeenth century, <u>a disturber of the peace whose work was too great to be ignored but whose name was too disreputable to be praised.</u>** A poet who uses the word *religio* in the pejorative sense in which others used the word *superstitio* was dangerous.

Whatever the circumstances of Lucretius's life, the meaning of his poem was as clear to his readers in Cicero's Rome as it was to his readers in Voltaire's France or Frederick's Prussia. One famous tribute from no less a man than Vergil makes this plain:

> Felix, qui potuit rerum cognoscere causas,
> atque metus omnes et inexorabile fatum,
> subiecit pedibus strepitumque Acherontis avari –

“Happy the man who can know the causes of things, and has trampled underfoot all fears, inexorable fate, and the clamor of greedy hell.”9
…

Still, the real weight of Lucretius’s popularity is hard to assess. It is a plausible reading of the Enlightenment to say that Lucretius had no real hold over it: **deists and atheists alike repudiated his atomism and his teaching that the world arose by chance; no one, except perhaps La Mettrie, accepted his hedonism without modification.** The occasional citations from his epic, therefore, are classical garnishes, decorative but empty.

But such a reading assumes, wrongly I think, that a writer can influence posterity only by compelling it to accept a specific doctrine. **There are other influences, more elusive, perhaps, but equally far reaching:** implicitly as much as explicitly, in his rhetoric and his unflagging zeal against what he considered the forces of obscurantism, Lucretius invited emulation.
…

Certainly, eighteenth-century Christians combated Lucretius as though he were alive. **In the first half of the century, Cardinal de Polignac, a cultivated classicist, found it necessary to malign Epicurus and to refute *De rerum natura* in an interminable didactic poem in Latin;** while the Jesuit *Journal de Trévoux*, usually urbane and generous, especially toward the classics, took the time to denounce Lucretius for his impiety. When Lagrange’s translation appeared, Grimm reported in his newsletter that it was widely considered part of the philosophes’ “favorite project of destroying religion”;5 **and when Holbach’s *Système de la nature* was condemned by the *parlement* of Paris in August 1770, the *parlement* accused the book of “reviving” and “expanding” the “system of Lucretius”**6 **– all of which shows that the philosophes had no monopoly on exaggerating the influence of antiquity on modernity.**

https://books.google.fi/books?id=Mau9wgEACAAJ&lpg=PP1&hl=fi&pg=PA81#v=onepage&q&f=false

For if Voltaire possessed at least six editions and translations of Lucretius in his library, and privately scoffed at Cardinal Polignac’s *Anti-Lucretius*,32 **for him, with his providential deism, belief in fixity of species, fervour for Locke and Newton, and commitment to the idea that morality is divinely delivered, Lucretius was no friend, but a challenging, disturbing complication, philosophically and politically,** no inspiration but a menace with respect to final ends and divine Providence that he felt driven to combat.33 Without demolishing Lucretius, Voltaire could not counter the anti-deist critique of Diderot, d'Holbach, and the other eighteenth-century materialists.

If the Radical Enlightenment too viewed Lucretius as the vital bridge connecting ancient Greek materialism with the Renaissance, and Spinozism, where Diderot and d’Holbach applauded, Voltaire, in his last years, furiously demurred. **Loudly invoking the same Memmius, the patron and friend to whom Lucretius addresses his great poem, in his *Lettres de Memmius à Ciceron* (1771), when replying to d’Holbach’s *Système de la nature* (1770), Voltaire tellingly directs his attack simultaneously against Lucretius *and* Spinoza.** By merging his two targets into one he underlined his argument that his Enlightenment combats only priests, and not priests and kings together, like his wrong-headed unnamed Radical Enlightenment adversaries, while also discreetly pointing to the partnership of Diderot and d’Holbach, his target behind the scenes. **Voltaire had no difficulty with their offensive against religion and priestcraft, it was Diderot’s, Raynal’s, and d’Holbach’s denouncing the alleged alliance of priests and kings, a strategy bound to mobilize all the world’s courts and monarchs against the *philosophes*, that deeply alarmed him.** The *philosophie moderne* proselytizing materialist atheism that he opposed, held Voltaire, threatened to wreck the *philosophes*’ standing and (his) reputation where it counted most – at court in Berlin, Petersburg, and Versailles, and in aristocratic circles everywhere. Modern materialism’s advance Voltaire deemed a catastrophe for the *philosophes*’ future, though it would damage him less than the rest, he joked sourly, as he expected to die shortly **and would soon discover who was right concerning the soul’s composition and immortality – Plato or Spinoza, Saint Paul or Epictetus, Christianity or Confucianism.**34

Closely coupling Spinozism with Epicurus and Lucretius was a central feature of Voltaire’s late stance but, by the 1770s, also typified the stance of those, like Lichtenberg, the Göttingen scientist and *litterateur*, among the great prophets of self-emancipation of the *Aufklärung*, who, **while pronouncing Lucretius and Spinoza the twin towering heroes of the human spirit, kept their rejection of the political and social status quo strictly private.** While circumventing the Spinozists’ scheme to transform society and politics, **Goethe and Lichtenberg endorsed Spinoza’s non-providential, evolutionary, and self-creating conception of reality,** the stance Voltaire consistently, and in many writings from the late 1760s onwards, expressly repudiated.

https://archive.org/details/BarruelMemoirsIllustratingTheHistoryOfJacobinism/page/n49/mode/2up?view=theater

Among the Sophisters we should compare Voltaire to Agamemnon, and D'Alembert to Ulysses. If the comparison be too noble, see the latter cunning, cringing, and even yelping like the fox.
…

Voltaire was fiery, passionate and impetuous; D'Alembert cold, reserved, prudent and crafty.—Voltaire was fond of show, D'Alembert almost feared to be seen. **The one, like the chief who is obliged to mask his battery, reluctantly used dissimulation while he wished to wage open war with Christianity, *and die on a heap of Christians*, whom he terms Bigots, *immolated at his feet*5—The other, by instinct a dissembler, waged war like the partizan who, from behind a bush, smiles to see his enemy fall into the snares he has laid.**6 Voltaire, transcendent in polite literature, was but superficial in mathematicks. In the latter D'Alembert was profound, indeed he owed all his reputation to them; for in everything else he was a dry, finical, and confused writer; sometimes as mean and vulgar as Voltaire is noble, easy, and elegant, he would plod to turn a bad epigram, while the latter would have wittily filled whole volumes.

https://archive.org/details/enlightenmentcon0000isra/page/844/mode/2up?view=theater

But Diderot's radical views and devious intellectual strategy rendered the enterprise far more precarious also in this respect than it would have been in the hands of a genuine Lockean or Newtonian, adherent of the *voltairianisme* of the 1740s, or even **the much more cautious and more 'Baconian' d'Alembert.**

https://archive.org/details/radicalenlighten0000isra/page/12/mode/2up?view=theater

The pattern is the same in the later French *Encyclopédie* edited by Diderot and d'Alembert: **for all the lavish praise heaped on Locke by d'Alembert in his preliminary discourse to the *Encyclopédie*** – praise which, as we shall see, may have had a diversionary purpose – **in the body of the *Encyclopédie* itself the coverage given to Locke is far less, scarcely one fifth, of the coverage accorded to Spinoza.**41

https://archive.org/details/BarruelMemoirsIllustratingTheHistoryOfJacobinism/page/n77/mode/2up?view=theater

Prepossessed by these *references*, against the existence of God, let the reader turn to the articles of ENCYCLOPEDIA and EPICURISM. In the former he will be told, *that there is no being in nature that can be called the first or last, and that a machine infinite in every way must necessarily be the Deity*. **In the latter the atom is to be the Deity. It will be the primary cause of all things, by whom and of whom every thing is active, essentially of itself, *alone unalterable, alone eternal, alone immutable*; and thus the reader will be insensibly led from the God of the Gospel to the heathenish fictions of an Epicurus or a Spinosa.**

https://archive.org/details/radicalenlighten0000isra/page/516/mode/2up?view=theater

For apart from the obvious fact that little further use is found for Bacon, **d'Alembert was utterly convinced society needs two distinct levels of ideas, one composed of popular philosophy to enlighten the wider but unsophisticated public and, completely different, philosophical truth as cultivated by *philosophes* such as himself and Diderot.** While publicly proclaiming them heroes of incomparable wisdom and stature, **privately, among his friends and intimates, d'Alembert – and still more, Diderot – was highly critical of much of Locke's philosophy and rejected key elements of Newton.**7 One has to bear in mind that the *Encyclopédie* was produced in a fraught intellectual and ideological atmosphere with the constant threat of suppression emanating especially from the Church and the *parlements* – but at times also sections of the royal Court – hanging over it.8 **Reassuring noises about its doctrinal implications had to be made, above all in its preface,** to allay the fears of Church and State, which by no means necessarily matched the views of its compilers. **For the crucial point about Newton, Locke, and Bacon is that these thinkers were, from the 1730s, everywhere regarded, even among the most reactionary sections of the French Church, and by the Spanish and Portuguese Inquisition, as intellectually safe writers,** innovative perhaps but entirely supportive of revealed religion, Providence, and the political and social order.

https://archive.org/details/BarruelMemoirsIllustratingTheHistoryOfJacobinism/page/n125/mode/2up?view=theater

Who can reconcile this antichristian zeal, ever emphatic, and in a state of ebullition when his imagination is heated, with that real admiration which he often expressed for the Gospel? The following is an anecdote I had from Mr. Beauzée, a member of the academy. Going one day to see Diderot, he found him explaining a chapter of the Gospel to his daughter, as seriously and with as much concern as the most Christian parent could have done. Mr. Beauzée expressed his surprize. "I understand you," said Diderot, "but in truth where could I find better lessons to give her?"

D'Alembert would never have made such an avowal as this. **Though the constant friend of Diderot, we find throughout their lives, and their philosophic course, that same difference which marked their first essays in the apostleship. Diderot spoke out whatever he thought at the moment, D'Alembert never said a word but what he wished to say. I will defy any one to find his real opinion on *God*, or on the *soul*, except in his private correspondence with the conspirators.** His works have all the obscurity and cunning of iniquity, but he is the fox that infects and then burrows himself. Easier would it be to follow the meanderings of the eel, or trace the windings of the serpent gliding through the grass, than to discover the tortuous course he follows in those writings which he owns.23

> 23. From the criticism made of his works in our Helvian Letters the result is this: **D'Alembert will never declare himself a sceptic, or whether he knows of the existence of a God or not. He will even let you think that he believes in God; and then begin by attacking certain proofs of a Deity;** he will tell you that, from zeal for the Deity, man must know how to choose among those proofs. He will end by attacking them all, with a *yes* on one object, and a *no* a little while on the same; he will entangle the minds of his readers, he will raise doubts in them, and smile to see them fallen without perceiving it, into the very snare he had prepared for them**.** He never tells you to attack religion, but he will tempt you with a stand of arms, or place them in your hands ready for combat. (*See his Elements of Philosophy and our Helvian Letters, Let.* xxxvii). He will never declaim against the morality of the church or the commandments of God; but he will tell you that *there does not exist a single catechism on morality fitted to the capacities of youth*; and that it is to be hoped there will at length appear a Philosopher who will supply that *desideratum* (*See Elem. of Phil.* No. 12). **He will not pretend to deny the sweets of virtue; but he will tell you, "that philosophers would have better known our nature, had they been satisfied with simply confining the happiness of this life to the exemption from pain."** (*Preface of the Encyclopedia*). He will not offend his reader by obscene descriptions, but he will tell him. Art. HAPPINESS, "Men all agree as to the nature of happiness; they declare it to be the same as pleasure, or at least they are indebted to pleasure for all that is most delicious in it." **And thus his young pupil is transformed into an Epicurean without knowing it.**

https://archive.org/details/Marx_Karl_-_Doctoral_Thesis_-_The_Difference_Between_the_Democritean_and_Epicure/page/n1/mode/2up?view=theater

The experts know that no preliminary studies that are even of the slightest use exist for the subject of this treatise. **What Cicero and Plutarch have babbled has been babbled after them up to the present day. Gassendi, who freed Epicurus from the interdict which the Fathers of the Church and the whole Middle Ages, the period of realised unreason, had placed upon him,** presents in his expositions15 only one interesting element. He seeks to accommodate his Catholic conscience to his pagan knowledge and Epicurus to the Church, which certainly was wasted effort. It is as though one wanted to throw the habit of a Christian nun over the bright and flourishing body of the Greek Lais. It is rather that Gassendi learns philosophy from Epicurus than that he could teach us about Epicurus' philosophy.

This treatise is to be regarded only as the preliminary to a larger work in which I shall present in detail the cycle of Epicurean, Stoic and Sceptic philosophy in their relation to the whole of Greek speculation.16 The shortcomings of this treatise, in form and the like, will be eliminated in that later work.

> 16. Marx never realised his plan to write a larger work on the Epicurean, Stoic and Sceptic philosophies.

To be sure, Hegel has on the whole correctly defined the general aspects of the above-mentioned systems. But in the admirably great and bold plan of his history of philosophy, from which alone the history of philosophy can in general be dated, it was impossible, on the one hand, to go into detail, and on the other hand, **the giant thinker was hindered by his view of what he called speculative thought *par excellence* from recognising in these systems their great importance for the history of Greek philosophy and for the Greek mind in general. These systems are the key to the true history of Greek philosophy.** A more profound indication of their connection with Greek life can be found in the essay of my friend Köppen, *Friedrich der Grosse und seine Widersacher.*17

> 17. This refers to the following passage from the book by Karl Friedrich Köppen, *Friedrich der Grosse und seine Widersacher*, Leipzig, 1840: "Epikureismus, Stoikismus und Skepsis sind die Nervenmuskel und Eingeweidesysteme des antiken Organismus, deren unmittelbare, natürliche Einheit die Schönheit und Sittlichkeit des Altertums bedingte, und die beim Absterben desselben auseinanderfielen" (S. 39) ("Epicureanism, Stoicism and Scepticism are the nerve muscles and intestinal system of the antique organism whose immediate, natural unity conditioned the beauty and morality of antiquity, and which disintegrated with the decay of the latter"). **Köppen dedicated his book to Karl Marx.**

...

Philosophy, as long as a drop of blood shall pulse in its world-subduing and absolutely free heart, will never grow tired of answering its adversaries with the cry of Epicurus:

Not the man who denies the gods worshipped by the multitude, but he who affirms of the gods what the multitude believes about them, is truly impious.19

Philosophy makes no secret of it. **The confession of Prometheus:**

> In simple words, I hate the pack of gods [Aeschylus, *Prometheus Bound*]

is its own confession, its own aphorism against all heavenly and earthly gods who do not acknowledge human self-consciousness as the highest divinity. It will have none other beside.

But to those poor March hares who rejoice over the apparently worsened civil position of philosophy, it responds again, as Prometheus replied to the servant of the gods, Hermes:

> Be sure of this, I would not change my state
> Of evil fortune for your servitude.
>
> Better to be the servant of this rock
> Than to be faithful boy to Father Zeus. (Ibid.)

Prometheus is the most eminent saint and martyr in the philosophical calendar.

https://archive.org/details/Marx_Karl_-_Doctoral_Thesis_-_The_Difference_Between_the_Democritean_and_Epicure/page/n7/mode/2up?view=theater

In the note I quote only one passage from Clement of Alexandria,7 a Father of the Church who deserves to be prominently mentioned with regard to Epicurus, **since he reinterprets the warning of the apostle Paul against philosophy in general into a warning against Epicurean philosophy, as one which did not even once spin fantasies concerning providence and the like.**8

> 8. Ibid., p. 295 [I, 11]. "Beware lest any man despoil you through philosophy and vain deceit, after the tradition of men, after the elements of the world and not after Christ" [Col. ii, 8] branding not all philosophy, but the Epicurean, which Paul mentions in the Acts of the Apostles [Acts xvii, 181], which abolishes providence... **and whatever other philosophy honours the elements, but places not over them the efficient cause, nor apprehends the Creator.**

https://archive.org/details/Marx_Karl_-_Doctoral_Thesis_-_The_Difference_Between_the_Democritean_and_Epicure/page/n59/mode/2up?view=theater

In the theory of meteors therefore appears the soul of the Epicurean philosophy of nature. Nothing is eternal which destroys the ataraxy of individual self-consciousness. The heavenly bodies disturb its ataraxy, its equanimity with itself, because they are the existing universality, because in them nature has become independent.

Thus the principle of Epicurean philosophy is not the *gastrology* of Archestratus as Chrysippus believes26 **but the absoluteness and freedom of self-consciousness – even if self-consciousness is only conceived in the form of individuality.**

> 26. Athenaeus, *Banquet of the Learned*, III, 104. ... **One ... must with good reason approve the noble Chrysippus for his shrewd comprehension of Epicurus' "Nature", and his remark that the very centre of the Epicurean philosophy is the *Gastrology* of Archestratus...**

If abstract-individual self-consciousness is posited as an absolute principle, then, indeed, all true and real science is done away with [*aufgehoben*] inasmuch as individuality does not rule within the nature of things themselves. But then, too, everything collapses that is transcendentally related to human consciousness and therefore belongs to the imagining mind. **On the other hand, if that self-consciousness which knows itself only in the form of abstract universality is raised to an absolute principle, then the door is opened wide to superstitious and unfree mysticism. Stoic philosophy provides the historic proof of this.** Abstract-universal self-consciousness has, indeed, the intrinsic urge to affirm itself in the things themselves in which it can only affirm itself by negating them.

Epicurus is therefore the greatest representative of Greek Enlightenment, and he deserves the praise of Lucretius:27

> **When human life lay grovelling in all men's sight, crushed to the earth under the dead weight of religion** whose grim features loured menacingly upon mortals from the four quarters of the sky, a man of Greece was first to raise mortal eyes in defiance, first to stand erect and brave the challenge. Fables of the gods did not crush him, nor the lightning flash and growling menace of the sky... **Therefore religion in its turn lies crushed beneath his feet, and we by his triumph are lifted level with the skies.**

https://www.marxists.org/archive/marx/works/1845/german-ideology/ch03a.htm

In connection with the Stoics, *Democritus* is also mentioned in the following way: a muddled passage of Diogenes Laertius (*Democritus*, Book IX, 7, 45), which in addition has been inaccurately translated, is copied out from some textbook, and made the basis for a lengthy diatribe about Democritus. This diatribe has the distinguishing feature of being in direct contradiction to its basis, i.e., to the above-mentioned muddled and inaccurately translated passage, and converts “peace of mind” (Stirner’s translation of □□□□□□□, in Low German *Wellmuth*) into “rejection of the world”. **The fact is that Stirner imagines that Democritus was a Stoic, and indeed of the sort that the unique and the ordinary school-boyish consciousness conceive a Stoic to be.** Stirner thinks that “his whole activity amounts to an endeavour to detach himself from the world”, “hence to a rejection of the world”, and that in the person of Democritus he can refute the Stoics. That the eventful life of Democritus, who had wandered through the world a great deal, flagrantly contradicts this notion of Saint Max’s; **that the real source from which to learn about the philosophy of Democritus is Aristotle and not a couple of anecdotes from Diogenes Laertius;** that Democritus, far from rejecting the world, was, on the contrary, an empirical natural scientist and the first encyclopaedic mind among the Greeks; that his almost unknown ethics was limited to a few remarks which he is *alleged* to have made when he was an old, much-travelled man; that his writings on natural science can be called philosophy only *per abusum*, [by abuse, i.e., improperly, wrongly] because for him, in contrast to Epicurus, the atom was only a physical hypothesis, an expedient for explaining facts, just as it is in the proportional combinations of modern chemistry (Dalton and others) — all this does not suit the purpose of Jacques le bonhomme. Democritus must be understood in the “unique” fashion, Democritus speaks of euthymia, hence of peace of mind, hence of withdrawal into oneself, hence of rejection of the world. **Democritus is a Stoic, and he differs from the Indian fakir mumbling “Brahma” (the word should have been “Om”),**[50] **only as the comparative differs from the superlative, i.e., “only *in degree*”.**

Of the Epicureans our friend knows exactly as much as he does of the Stoics, viz., the unavoidable schoolboy’s minimum. He contrasts the Epicurean “hedone”, [pleasure] with the “ataraxia” [equanimity, imperturbability, intrepidity] of the Stoics and Sceptics, **not knowing that this “ataraxia” is also to he found in Epicurus and, moreover, as something placed higher than the “hedone” — in consequence of which his whole contrast falls to the ground. He tells us that the Epicureans “teach *only a different attitude to the world*” from that of the Stoics; but let him show us the (non-Stoic) philosopher of “ancient or modern times” who does not do “only” the same. Finally, Saint Max enriches us with a new dictum of the Epicureans: “the world must be deceived, for it is my enemy”.** Hitherto it was only known that the Epicureans made statements in the sense that the world must be *disillusioned* and especially freed from fear of gods, for the world is my *friend*.

To give our saint some indication of the real base on which the philosophy of Epicurus rests, **it is sufficient to mention that the idea that the state rests on the mutual agreement of people, on a *contrat social* (□□□□□□□□ [contract]), is found for the first time in Epicurus.**

The extent to which Saint Max’s disclosures about the Sceptics follow the same line is already evident from the fact that **he considers their philosophy more radical than that of Epicurus.** The Sceptics reduced the theoretical relation of people to things to *appearance*, and in practice they left everything as of old, being guided by this appearance just as much as others are guided by actuality; they merely gave it another name. **Epicurus, on the other hand, was the true radical Enlightener of antiquity; he openly attacked the ancient religion, and it was from him, too, that the atheism of the Romans, insofar as it existed, was derived.** For this reason, too, Lucretius praised Epicurus as the hero who was the first to overthrow the gods and trample religion underfoot; for this reason among all church fathers, from Plutarch to Luther, Epicurus has always had the reputation of being the atheist philosopher *par excellence,* and was called a swine; for which reason, too, **Clement of Alexandria says that when Paul takes up arms against philosophy he has in mind Epicurean philosophy alone.** (*Stromatum*, Book I [chap. XI], p. 295, Cologne edition, 1688.) Hence we see how “cunning, perfidious” and “clever” was the attitude of this open atheist to the world in directly attacking its religion, **while the Stoics adapted the ancient religion in their own speculative fashion, and the Sceptics used their concept of “appearance” as the excuse for being able to accompany all their judgments with a *reservatio mentalis.***

https://archive.org/details/moraldarwinismho0000wike/page/290/mode/2up?view=theater

Nothing was so important for reestablishing the divinity-free universe in modernity than the rehabilitation of the eternal atom, for its very eternality eliminated the need for God the creator, and allowed nature to be self-sustained and self-contained. **The brilliance of Epicurus's original strategy was made clear in modernity when all attempts (even and especially Newton's) to integrate a creator with Epicurean atomism ended with the atoms reasserting their self-subsistent eternality,** thereby making the creator superfluous.

> https://www.english.enoanda.cat/the_inscription.html
>
> **[Since the first bodies cannot be broken up by anyone,] whether he is god or man, one is left to conclude that these things are [absolutely] indestructible, [beyond the reach of] necessity.** For if [they were destroyed,] in accordance with [necessity, into the nonexistent, all things would have perished.]

...

But the destruction of the eternal atom occurred (if we cared to pinpoint a date) in 1897, in the Cavendish Laboratory at Cambridge, England, when J.J. Thompson identified a negatively charged particle of much less mass than hydrogen, the lightest known element. So began the unraveling of the atom into a miniature universe of subatomic particles, not only electrons, protons and neutrons, but mesons, muons and pions, and so on until tens of such subatomic particles have turned into hundreds. **This was not the simple, eternal point of Epicurus, Galileo and Newton.**

Added to this was the discovery of radioactivity during roughly the same period, wherein it became clear that atoms were not eternal, but could quite easily decay. Even above this, the solidity of the atom vanished as well. Not only could it be split, but it consisted mostly of empty space, as Ernest Rutherford discovered when, in 1909, he directed alpha particles at a thin metal sheet, and found that only a very small number were deflected (when they hit the positively charged nucleus), but most went right through. The radius of the atom, as it turns out, is ten thousand times greater than the radius of the nucleus – most of the atom is empty.

...

To recall our analysis, the self-contained nature of physical laws in the modern sense relied on an identity of the Euclidean and atomic point, so that the inner necessity of mathematical relations really existed in nature. **This mathematical necessity was the true binding force of those laws of nature that supposedly disallowed any divine interference** (and, thereby, achieved an Epicurean end). Once the identity of the atom and the point was broken, that is, once the atom lost its geometrically precise and indestructible nature and revealed itself to be not only far more complex than any mathematical entity but also contingent, then the inner necessity of mathematical relationships no longer had their natural counterpart. **A sign of this is the independence of nature from mathematics, or if we want to look at it's the other way around, the dependence of the mathematical analysis of nature upon nature itself (seen in the frenzied attempts to stretch and invent new modes of mathematical analysis to describe the ever-stranger, ever more complex world of physics uncovered in the twentieth and twenty-first centuries).** When Newtonians thought that all of nature had been captured with Euclidean geometry as modified by calculus, then it made sense to claim that nature was a self-contained system and that the laws of nature precluded any external interference. But with the fall of Newtonianism, mathematical analysis once again depends upon nature, and continues to need restructuring in order to capture the actual discovered complexity of nature. **Nature itself breaks the closed circle of mathematical necessity.**

...

All this, one would think, would lead to a reassessment of the belief that nature is a closed system and that material processes were sufficient to explain what previously had been attributed to immaterial intelligence, but the materialist *habit* of mind has continued long after the theoretical presuppositions that undergirded it have fallen away. Materialists still act as if the Epicurean-Newtonian universe is intact, and certified free from deity and soul.

https://www.basicincome.com/bp/pantheismcertainlyis.htm

Men believed in atoms centuries before they had any experimental evidence of their existence. It was apparently natural to do so. And the sort of atoms we naturally believe in are little hard pellets—just like the hard substances we meet in experience, but too small to see. The mind reaches this conception by an easy analogy from grains of sand or of salt. It explains a number of phenomena; and we feel at home with atoms of that sort—we can picture them. **The belief would have lasted forever if later science had not been so troublesome as to find out what atoms are *really* like.** The moment it does that, all our mental comfort, all the immediate plausibility and obviousness of the old atomic theory, is destroyed. The real atoms turn out to be quite alien from our natural mode of thought. They are not even made of hard "stuff" or "matter" (as the imagination understands "matter") at all: they are not simple, but have a structure: they are not all the same: and they are unpicturable. **The old atomic theory is in physics what Pantheism is in religion—the normal, instinctive guess of the human mind, not utterly wrong, but needing correction.** Christian theology, and quantum physics,

are both, by comparison with the first guess, hard, complex, dry and repellent. The first shock of the object's real nature, breaking in on our spontaneous dreams of what that object ought to be, always has these characteristics. **You must not expect Schrödinger to be as plausible as Democritus; he knows too much. You must not expect St Athanasius to be as plausible as Mr Bernard Shaw: he also knows too much.**

https://history.aip.org/exhibits/heisenberg/physics-and-philosophy.html

In the philosophy of Democritus the atoms are eternal and indestructible units of matter, they can never be transformed into each other. With regard to this question modern physics takes a definite stand against the materialism of Democritus and for Plato and the Pythagoreans. The elementary particles are certainly not eternal and indestructible units of matter, they can actually be transformed into each other. As a matter of fact, if two such particles, moving through space with a very high kinetic energy, collide, then many new elementary particles may be created from the available energy and the old particles may have disappeared in the collision. **Such events have been frequently observed and offer the best proof that all particles are made of the same substance: energy.** But the resemblance of the modern views to those of Plato and the Pythagoreans can be carried somewhat further. **The elementary particles in Plato's *Timaeus* are finally not substance but mathematical forms.** "All things are numbers" is a sentence attributed to Pythagoras. The only mathematical forms available at that time were such geometric forms as the regular solids or the triangles which form their surface. **In modern quantum theory there can be no doubt that the elementary particles will finally also be mathematical forms but of a much more complicated nature.**

---

https://chalcedon.edu/resources/books/noble-savages-exposing-the-worldview-of-pornographers-and-their-war-against-christian-civilization

Unwin rejected the atomistic view of man and society. Its application to the problems of culture could have only a destructive and uncomprehending effect:

> **It is sometimes said that a human society is a mere collection of males and females. That, in my view, is a profound error.** It would be as true to say that a chemical substance like water is a mere collection of electrons and protons. **Instead, it is an aggregation of atomic groups, which are held together by invisible forces that are not yet understood.** First, the electrons and protons are gathered together into atoms, which vary in size and constitution. These are then collected into molecules. The event we call water emerges from this structure.
>
> In a similar manner, a human society is not a collection of individuals but of human groups, which are held together by forces that have not yet been analysed and understood. The males and females are first united into families, which vary in size and constitution. These are then gathered into clans, moieties, and territorial units. There are also cultural and economic groups, such as secret societies, brotherhoods, sisterhoods, guilds, unions, federations, and fraternities. The event we call a human society emerges from this structure.
>
> **The outstanding difference is that, whereas, so far as we know, an electron can only be part of one atom at one time, a human being can be a member of any number of human groups.** But this fact does not alter the fundamental nature of a society's structure.6

https://books.google.fi/books?id=MSu2w3FqepoC&lpg=PP1&hl=fi&pg=PA63#v=onepage&q&f=false

As for Epicurus himself, even if strict in his views about chastity, there is no doubt that he was an irritating pupil. It will be recalled how he put his early instructor in a corner over the topic of chaos. The following extract reveals no more the irritable teacher than the irritating pupil; the reference is to Nausiphanes: "Well, good riddance to the braggart, for that rotter, when in a temper, would have a torrent of the sophistic bluster at the tip of his tongue, like many another of the servile creatures."36 **It may be mentioned that Epicurus classified all men as slaves who, like the physicists, believed in Necessity, or, like the poets, in Fate, or, like Theophrastus, in Fortune, or, like the people, in divine interference, or like the Platonists, in astral deities, or those who, by pursuing the conventional education, surrendered their freedom for the pursuit of power, fame, or wealth.**

https://books.google.fi/books?id=Zymp_kM33ZcC&lpg=PP1&hl=fi&pg=PA75#v=onepage&q&f=false

Though Epicurus was not at all inclined to speak in praise of political ambition and the pursuit of lasting fame, even he was prepared to acknowledge that **“the life of freedom (*eleútheros bíos*) is incompatible with the acquisition (*ou dúnatai ktēsasthai*) of great wealth.”** For, like his more politically oriented compatriots, he was persuaded that **riches cannot be gathered “without servile behavior (*thēteía*) towards dynasts (*dúnastai*) or mobs.**”41

> **Ancient philosophers have vaunted of poverty as the safe-guard of independence: Voltaire, that he might be independent, wished to become rich; and he was equally to be commended. The ancients were unacquainted with that secret wealth which may at once be dispersed and secured, in various countries, beyond the reach of power.** Confiscation and its abuses, amongst them, rendered wealth as dangerous as fame, or popular favour. The extent of the Roman empire, and the smallness of the Grecian republics, alike prevented men from the concealment of their riches, or their persons. The difference of manners among neighbouring nations, the almost general ignorance of foreign languages, and a less degree of intercourse throughout the world, were then so many impediments to a change of country. **The ancients likewise knew less of the conveniencies of life, which among us are become necessary to all who are not born in poverty.** Their climate subjected them to less numerous real wants; and the wealthy were more addicted to magnificence, refinement in debauchery, excess, and caprice, than to habitual and daily convenience. **Thus, as it was more easy for them to be poor, and more difficult to be rich without danger, riches were not among them, as among us, the means of escaping from unjust oppression.**

Already in *Natural Right and History* **[Strauss] referred to the poem of Lucretius as "the greatest document of philosophic conventionalism and, in fact, its only document available to us that is both authentic and comprehensive. ..."**45
...

As already implied in his linking Rousseau and Hobbes to Lucretius, the Epicureans indicated for Strauss the presence in pre-modern times of the modern alternative. In Lucretius and the Epicureans, wrote Strauss, "... premodern thought seems to come closer to modern thought than anywhere else."51 The pivotal ancients-moderns distinction for Strauss was not, of course, a rigid periodization but a characterization of the predominant understanding of the end and nature of political life before and after Machiavelli. On each side of the divide between the ancients and moderns, there are present representatives, at least, of the other side. And then too, the divide is one between the predominant understandings of *political thinkers,* and if only in the light of Athens's treatment of Socrates, it can be said that societies only more or less incorporate such understandings. **As the "modern" Epicureans were present in ancient times, so, Strauss has suggested, there is in modern times an "ancient" way of thinking as well as reservoirs of common sense which can provide support for a *healthy* liberal democracy.**52

https://archive.org/details/crisisofeuropean0000haza/page/286/mode/2up?view=theater

Then a wholly new brand, a wholly new pattern of morality came upon the scene; the code of self-respect; a psychological morality. It was not averse from drawing on the ancient world, which, in truth, it vastly preferred to Christianity. Nevertheless, its main appeal was to Reason. However, it was a polite, a civilized reason, not the old austere, uncultured brand; it was a reason that betrayed little or nothing of its erstwhile rigidity. **“Let us forget all about those days when to be harsh meant to be virtuous. Polished manners, gallantry, the art of pleasing are now all held in esteem. As for hatred of evil, that should last as long as the world, but let us congratulate ourselves that people now call pleasure what rude and untutored folk of old called vice. Do not compose your stock of virtues from old notions which uncouth and savage nature implanted in primeval man.”**2 This new morality did not

exclude the pleasures of the senses, nor did it banish the passions, provided they were regulated and kept within bounds. … Of course! However, this new code could not claim to have a binding, still less universal, mandate. Duly to understand and practise it, one must be a Saint-Évremond, or a Sir William Temple, or a Lord Halifax. It was the code of the aristocrat, the exquisite, the disillusioned; its structure was frail; it meant making the best of both worlds; **adaptation rather than domination was its note.**

https://archive.org/details/radicalenlighten0000isra/page/606/mode/2up?view=theater

Unlike Blount, Sir William Temple (1628-99), a far less abrasive deist but likewise a key figure in the emergence of English deism, **seems to borrow little or nothing directly from Spinoza.** Yet Temple was a widely read man who, as we know from his own writings, was familiar with Fontenelle and greatly admired Machiavelli, Sarpi, Montaigne, and Saint-Evremond.53 Like Blount, he too learnt from Isaac Vossius, **a deist, Epicurean, and Sinophile** from who he chiefly derived his enthusiasm for Confucianism.54 Furthermore, it seems that his partiality for republican ideas – despite being a servant of the royal house of Stuart – and religious and intellectual toleration, both strongly reflected in his *Observations upon the United Provinces of the Netherlands* (1673), were stimulated by his long residence as English ambassador in Holland and personal friendship for De Witt. **The two most distinctive features of Temple's thought, his Epicureanism and admiration for Confucius, the 'most learned, wise and virtuous of all the Chineses'** may not demonstrate, any more than his residence in The Hague at a time Spinoza lived there, that he knew the latter's philosophy.

https://books.google.fi/books?id=Mau9wgEACAAJ&lpg=PP1&hl=fi&pg=PA89#v=onepage&q&f=false

Real "Lucretians" during the early modern age, observed Taylor, were figures like St. Evremond, Fontenelle, or Temple, **standing aside from both religious faith *and* awareness of any need to forge a beneficent new order. The Anglo-Irish Epicurean Sir William Temple (1628-99) perfectly combined early modern drawing on Epicurean moral philosophy with turning his back on research into the sciences.**55

https://www.gutenberg.org/files/2332/2332-h/2332-h.htm#link2H_4_0007

He avoided the great offices of State with a caution almost pusillanimous, and confined himself to quiet and secluded departments of public business, in which he could enjoy moderate but certain advantages without incurring envy. If the circumstances of the country became such that it was impossible to take any part in politics without some danger, he retired to his library and his orchard, and, while the nation groaned under oppression, or resounded with tumult and with the din of civil arms, amused himself by writing memoirs and tying up apricots.
…

For in truth his faultlessness is chiefly to be ascribed to his extreme dread of all responsibility, to his determination rather to leave his country in a scrape than to run any chance of being in a scrape himself.
…

The moderns, Sir William owns, have found out the circulation of blood; but, on the other hand, they have quite lost the art of conjuring; nor can any modern fiddler enchant fishes, fowls, and serpents by his performance. He tells us that **"Thales, Pythagoras, Democritus, Hippocrates, Plato, Aristotle, and Epicurus made greater progresses in the several empires of science than any of their successors have since been able to reach";** which is just as absurd as if he had said that the greatest names in British science are Merlin, Michael Scott, Dr. Sydenham, and Lord Bacon.
…

The doctrine of Temple, not a very comfortable doctrine, is that the human race is constantly degenerating, and that the oldest books in every kind are the best in confirmation of this notion, he remarks that the Fables of Aesop are the best Fables, and the Letters of Phalaris the best Letters in the world.

https://archive.org/details/crisisofeuropean0000haza/page/126/mode/2up?view=theater

During his stay in Holland, which lasted from 1666 to 1672, he became acquainted with a certain Jew whose name was Spinoza. It gave him pleasure, des Maizeaux tells us, to see "some of the famous philosophers and men of learning who were then in The Hague, particularly, Heinsius, Vossius and Spinoza." We do not know precisely what passed between them; what we do know is that, long after the interview took place, Saint-Évremond was still haunted by the memory of Spinoza. **"In the humble and pensive solitary of Ryneburg and Stilla Veerkade, French libertinism, which, till now has been no more than a vague desire to be free, an impatience of rule, and a revolt against dogma, a spiritual Fronde in other words, is on the look-out for, and now thinks it has found, the required apologist for its unbelief, the right man to give a logical basis and formal expression to the aims it has most at heart."**1

http://blog.despinoza.nl/log/waarom-ontving-richard-popkin-niet-de-nobelprijs-voor-spinoza-studies-2.html

The Prince of Condé had led the French invasion of the Netherlands in 1672 and established his headquarters in Utrecht. In May of 1673 he became sick and had to stay in bed. He invited the most learned men of Utrecht to talk to him. Then, the text relates, **"It is reported that he was desirous to see Spinoza, and told him smiling, *That if he would follow him into France, he would put him in a way to live conformably to the Principles of his Theology; that Paris neither wanted fine Women, nor Pleasures; although he look'd upon him as a Deist, and a Man who had no Religion, he was charm'd with the Conversation he had with him*."**
…

(Morelli said Spinoza told him the details of his visit to the prince over and over again.) The prince would make Spinoza part of his court, would protect him, house and feed him, and give him a pension of one thousand écus. Morelli said Spinoza turned this down because he was afraid that not even the great Prince of Condé could protect him from the bigots in Paris. (Condé was the protector of quite a few people of dubious religious views, including Molière and Isaac de la Peyrère.)

https://sacred-texts.com/phi/spinoza/corr/corr45.htm

One of my friends sent me a short time since a pamphlet called “Homo Politicus,” of which I had heard much. **I have read it, and find it to be the most pernicious work which men could devise or invent.** Rank and riches are the author's highest good; he adapts his doctrine accordingly, and shows the means to acquire them; **to wit, by inwardly rejecting all religion, and outwardly professing whatever best serves his own advancement, also by keeping faith with no one, except in so far as he himself is profited thereby. For the rest, to feign, to make promises and break them, to lie, to swear falsely, and many such like practices call forth his highest praises.** When I had finished reading the book, I debated whether I should write a pamphlet indirectly aimed against its author, wherein I should treat of the highest good and show the troubled and wretched condition of those who are covetous of rank and riches; finally proving by very plain reasoning and many examples, that the insatiable desire for rank and riches must bring and has brought ruin to states.

How much better and more excellent than the doctrines of the aforesaid writer are the reflections of Thales of Miletus, appears from the following. **All the goods of friends, he says, are in common; wise men are the friends of the gods, and all things belong to the gods; therefore all things belong to the wise. Thus in a single sentence, this wisest of men accounts himself most rich, rather by nobly despising riches than by sordidly seeking them. In other passages he shows that the wise lack riches, not from necessity, but from choice. For when his friends reproached him with his poverty he answered, “Do you wish me to show you, that I could acquire what I deem unworthy of my labour, but you so diligently seek?”** On their answering in the affirmative, he hired every oil-press in the whole of Greece (for being a distinguished astrologer he knew that the olive harvest would be as abundant as in previous years it had been scanty), and sub-let at his own price what he had hired for a very small sum, thus acquiring in a single year a large fortune, which he bestowed liberally as he had gained it industriously, &c.

https://hal.science/hal-03857041/document

The work published under that pseudonym, Pacifius à Lapide, was in fact written or edited by the Nuremberg jurist Philipp Andreas Oldenburger (1617-1678).
…

Already the second paragraph includes some very impious passages, such as the following (the parts in brackets are only on the 1668 edition):

> **And do not listen to the appeal of religion, for it is nothing but coaxing and superstitious piety, nay, a pure deception that the political man, if he wants to attain his goal, will take little account of.** [Come to think of it, I do not recall who it was that wrote that he did not believe that one could make a good emperor of a good Christian or that a good Christian could be a good emperor, but I would add that, given the way things are today, **he who wishes to be a good Christian cannot be a good counsellor, a good courtier, or a good civil servant either. *For today religion is nothing but an empty name.***]”34

…

Similar patterns emerge from Oldenburger’s use of Balzac. The following assertions are accompanied by a reference to Balzac’s *Apologie contre le docteur de Louvain*: **“So this is the true political religion; this is how it should be played today, to believe in one way with the mouth and another with the heart, as did certain monks in Spain who, after having celebrated mass and taught theology publicly for twenty years, when their final hour**

> **arrived, revealed themselves to have been of the Jewish faith although of the Christian confession."**49

https://archive.org/details/leo-strauss-persecution-and-the-art-of-writing/page/152/mode/2up?view=theater

If a man believes that the most useful or important books are contemporary ones, he will hardly ever experience the need for historical interpretation. This was the case of Spinoza. The only book which he published under his name is devoted to the philosophy of Descartes. The only books (apart from the Bible) on which he ever wrote extensively, were books by Descartes and Boyle, i.e. by contemporaries. The authority of Socrates, Plato and Aristotle, to say nothing of their followers, did not carry much weight with him. **He admired Epicurus, Democritus, Lucretius and their followers much more.**16 **Yet there are hardly any unambiguous traces of his having studied their works, or the remnants of their works, with any assiduity; he had easy access to their teaching through the writings of Gassendi, a contemporary. As regards political philosophy in particular, he flatly declares that all political philosophy prior to his own is useless.**17 **He confesses to owe much to certain "outstanding men who have written many excellent things about the right way of life, and who have given counsels full of wisdom to mortals";**18 **he probably has in mind authors like Seneca and Cicero;** but the doctrines to which he refers are by their nature easy for everyone to understand.

https://www.google.fi/books/edition/Spinoza_Life_and_Legacy/4snKEAAAQBAJ?hl=en&gbpv=1&pg=PA909&printsec=frontcover

He would have been surprised, Spinoza admits in the same letter, had Boxel invoked instead those ancient thinkers for whom he felt greater respect – Epicurus, Democritus, Lucretius "or one of the Atomists or defenders of the atoms," but found it unsurprising he should cite precisely those ancient Greek thinkers "who thought up occult qualities, intentional species, substantial forms [qualitates occultas, species intentionales, formas substantiales] and a thousand more such idle notions," **these being the very men who contrived also spectres and ghosts giving credence to grandmothers' tales "with a view to disparaging Democritus whose high reputation they so envied they burned all the books he had published amidst so much acclaim."**37 This last alludes to a passage in Diogenes Laertius (AD 180-240), historian of the Greek philosophers, who records that so averse to Democritus' philosophy was Plato that he would like to have burnt it all. **Opening a rare window on Spinoza's biases in the field of ancient philosophy and personal likes and dislikes, this passage breathes real antipathy to scholasticism and to Platonism, and high regard for precisely those Greek thinkers, Democritus, Epicurus, and Lucretius, whom early modern scholars decried and marginalized.**

> https://archive.org/details/tractatustheolog00elweuoft/page/6/mode/2up?view=theater
>
> I grant that they are never tired of professing their wonder at the profound mysteries of Holy Writ; **still I cannot discover that they teach anything but speculations of Platonists and Aristotelians, to which (in order to save their credit for Christianity) they have made Holy Writ conform;** not content to rave with the Greeks themselves, they want to make the prophets rave also; showing conclusively, that never even in sleep have they caught a glimpse of Scripture's Divine nature.

https://books.google.fi/books?id=U2OfzQEACAAJ&lpg=PP1&hl=fi&pg=PA17#v=onepage&q&f=false

This poses a problem for Spinoza. **Even though he shares the epicurean rejection of creation *ex nihilo* and of teleology, as well as the position about the inseparability of mind and body, still current advances in physics refute the epicurean position that there are only atoms and void. Further, Spinoza's own position – both in the *Ethics* and in the *Theological Political Treatise* – about the necessity of Nature is incompatible with the accidental nature of the clinamen.** In his reply (*Ep*. 54), the first point Spinoza makes is to deny that the world is made by chance – that is, he denies the clinamen as exemplifying corpuscularianism.

Boxel presses on in a third letter by appealing to the authority of past philosophers (*Ep*. 55). **In the final letter of exchange (*Ep*. 56), Spinoza responds: 'The authority [*auctoritas*] of Plato, Aristotle and Socrates carries little weight with me. I should have been surprised if you had produced Epicurus, Democritus, Lucretius.'**13 This is the moment Spinoza affirms his epicureanism as a response to the second provocation by Boxel. He clarifies that despite his rejection of epicurean corpuscularianism in his previous letter, he still holds onto the rejection of creationism as well as the inseparability of mind and body – whereby there are no spirits. **The physics according to which only atoms and void exist, and the idea that nothing can be arbitrarily added to nature, can be separated, whereby modern epicureanism can reject the former but retain the latter.**

https://archive.org/details/enlightenmentcon0000isra/page/466/mode/2up?view=theater

Spinoza, then, did not exaggerate the differences between his philosophy and Stoicism in the preface to the fifth part of the *Ethics* **where he criticizes the Stoics for holding that the emotions 'depend entirely on our will, and that we can have absolute rule over them,'** remarking that 'experience protests against this, and forced them, in spite of their principles, to confess that much practice and a [different] application are needed to restrain and moderate them.'249
…

Reason alone cannot curb emotion, and the only way to master a passion in Spinoza and Du Marsais is by summoning up another, stronger impulse.251 Mostly, men are led more by appetite than reason, and this is why politics and the state are needed to reinforce reason and supply the restraints society needs, **but reason can ally with, deflect, and modify passions already present, demonstrating one's true self-interest;** and insofar as damaging impulses are checked, Man becomes more rational.
…

But where, **for the Stoics, our minds are an aspect of the cosmic intellect, an emanation or fragment of God,**256 and its reason seeks to harmonize with that wider rationality so that in learning to live according to nature one proportionately moves towards God, for Spinoza mind is simply identical to body under another aspect, that is the body's sensibility.

Neither does the mind control the body, held Spinoza, who also criticizes the Stoic doctrine of the soul in his early treatise *De intellectus emendatione* of around 1660-1,257 nor the body the mind; rather all one's thoughts are absolutely coincident with fluctuations in the body.358 Men are governed, like everything else, by their *conatus*, the term Spinoza uses to designate 'that striving by which each thing seeks to persevere in its own being' or the 'actual essence of the thing.'258 **Where Stoic virtue, while contributing to happiness, has a transcendent moral quality, beauty, and fineness apart from any utility or instrumental value, there are no naturally uplifting moral qualities in Spinoza,** and Spinoza's happiness (*laetitia*) is merely awareness of one's success in conserving one's own being, and of passing to a higher state of completeness, or perfection, while sadness, conversely, is a falling away from one's perfection. Whereas in Stoicism, virtue is diminished in some sense by being assessed by its practical results for oneself, or others, rather than as a pattern of behaviour, orientated to what is intrinsically rational and fine in itself, reinforced by practice, the whole flowing from a disposition towards nature's (divine) rationality, Spinoza's 'virtue' lacks this transcendent quality.260

Since desire, or *conatus*, is the fundamental drive, in Spinoza, it is the motive force behind rationality also. Rationality is inherent in man; but he conceives of it as also a passion at odds with other passions. Unlike the Stoics, Spinoza (like Bayle) sees both rationality and virtue as anchored in self-interest and the individual's basic drives.261 **Accordingly, Spinoza, in one of his most characteristic moves, introduces a radically naturalistic definition of virtue: the 'more each person searches for what is useful to him, that is to preserve his being, and is able to do this, the more he is endowed with virtue.'**262 **This is a tenet, like Mandeville's similar concept later, utterly remote from the spirit of Greek moral philosophy generally, and not just Stoic and Christian ethics. In Spinoza, there is no innate 'good' or 'bad,' or any 'Natural Law' distinct from the mechanics of the *conatus*,** and while rationality shows the wise what is just, or conducive to the common good, there can be no generally agreed rules for a collectively adopted code of 'good' and 'bad' except within a particular society, under the laws of a particular state.

https://archive.org/details/bim_early-english-books-1641-1700_the-second-part-of-the-n_baxter-richard_1680/page/n33/mode/2up?view=theater

And the root of all this mans inhumanity is his Epicurean principles of Philosophy about God and *Nature*, supposing God to be but the *Eternal necessary necessitating first cause of all things and motions, as the Sun is of Light and heat, who can do no more, nor less than he doth*, moving the world as a Clock or Watch by meer invariable necessity, that never did or can do a miracle, or alter the necessitating course of nature: And that man hath no self determining free-will at all, but is moved as necessarily as an Engine; And that God is no governour, nor hath no Laws (but mens) nor no *Justice*, nor *Mercy*, these being not to be attributed to him, but only natural motion or necessitation; **And that he that lyeth, murdereth, stealeth, rebelleth is equally moved to it by God, as he that speaketh truth, and doth all that is just and good: and therefore it is but our narrow minds and ignorance, that taketh one thing to be better or worse than another, or to be sin or duty, save in respect to our commodity and the will of the strongest.**

https://archive.org/details/naturesgodhereti0000stew_o9j9/page/300/mode/2up?view=theater

THE VIRTUE of the deists is often, with better cause, identified with the virtue of the Stoics. Spinoza's ethics is often cast as a version of Stoicism, and Shaftesbury's is said to be nothing but Stoicism. **If one were to keep score by number of citations and favorable mentions, then America's revolutionary deists, too, would have to be counted as Stoics rather than Epicureans.** The first professionally produced play in the colonies, and by far the most popular, was Joseph Addison's *Cato*, a

play all about Stoic “virtue” – a word that is hurled across the stage more than thirty times in the course of the drama.123
…

Indeed, **Stoic virtue is close enough to deist virtue that the same rhetoric often served for both,** and thus Stoic authors – always much more acceptable in polite society – were used to put a respectable face on radical ideas.125

> 125. **In the ancient world – the thoroughly untrustworthy Seneca comes to mind – the convergence of Stoicism and Epicureanism was often, if warily, noted. In early modern debates over the infinite universe, the Stoics sometimes served as the source of a superficially safer version of that dangerous doctrine. Diderot went so far as to represent Stoicism and Epicureanism as two sides of the same story. In the debates over virtue, Stoicism often served to put a respectable face** – the dignified visage of a Cicero, a Seneca, a Marcus Aurelius – **on ideas that might otherwise have looked quite outré.**

…

Deist virtue never reached the degree of austerity and self-denial of the Stoics because it simply wasn’t the same thing. The Stoics “had many admirable and virtuous precepts,” the authors of *Cato’s Letters* allow, but “their philosophy was too rigid.” **“It is the highest stupidity to talk of subduing the passions,” they argue, firmly distancing themselves from the doctrines of their namesake.**126

https://archive.org/details/moraldarwinismho0000wike/page/206/mode/2up?view=theater

While many of the Enlightenment *philosophes* quoted the Stoics (as more evidence of the superiority of paganism over Christianity), the true source of their paganism was Epicurean materialism. Why? The triumph of Newtonian mechanics, the view of nature that grounded Deism, meant the triumph of Democritus, Epicurus and Lucretius, not Zeno the Stoic. Consequently, Deists did not appeal to the natural philosophy of the Stoics (where fire is the basic element, and the providence of God directs all things to their natural ends), **or if they did, it was only insofar as the materialism of the Stoics matched the materialism of the Epicureans.** Rather, it was the moral arguments of the Stoics that enamored Deists, but again, such appeals to virtue could fit just as well with the original asceticism of Epicurus. **Even so, Deists soon shifted to a kind of utilitarianism based on pleasure and pain, a view directly antagonistic both to Christianity and Stoicism, but quite at home with the new Epicurean hedonism.**

https://www.gutenberg.org/cache/epub/2333/pg2333-images.html#link2H_4_0008

There was one sect which, however absurd and pernicious some of its doctrines may have been, ought, it should seem, to have merited an exception from the general censure which Bacon has pronounced on the ancient schools of wisdom. The Epicurean, who referred all happiness to bodily pleasure, and all evil to bodily pain, might have been expected to exert himself for the purpose of bettering his own physical condition and that of his neighbours. **But the thought seems never to have occurred to any member of that school. Indeed their notion, as reported by their great poet, was, that no more improvements were to be expected in the arts which conduce to the comfort of life.**

> “Ad victum quae flagitat usus
> Omnia jam ferme mortalibus esse parata.”

This contented despondency, this disposition to admire what has been done, and to expect that nothing more will be done, is strongly characteristic of all the schools which preceded the school of Fruit and Progress. Widely as the Epicurean and the Stoic differed on most points, they seem to have quite agreed in their contempt for pursuits so vulgar as to be useful. The philosophy of both was a garrulous, declaiming, canting, wrangling philosophy. Century after century they continued to repeat their hostile war-cries, Virtue and Pleasure; **and in the end it appeared that the Epicurean had added as little to the quantity of pleasure as the Stoic to the quantity of virtue.**

It is on the pedestal of Bacon, not on that of Epicurus, that those noble lines ought to be inscribed,

> “O tenebris tantis tam clarum extollere lumen
> Qui primus potuisti, ILLUSTRANS COMMODA VITAE.”

> https://www.gutenberg.org/cache/epub/46333/pg46333-images.html#CHAPTER_VIIIc

> **Even in Europe we find considerable differences of appetite between Northern and Southern peoples.** A Spaniard will live for a week on a German's dinner.

https://archive.org/details/in.ernet.dli.2015.503389/page/n129/mode/2up?view=theater

> **In the Latin South, where one needs little to live on and does little work,** where there is no coal and therefore no industrialism, where thought and feeling are racially different, there developed anarchist and syndicalist tendencies **whose wish-picture was the dissolution of the great national organisms into systemless, small self-sufficing groups, Bedouin-like swarms occupied in doing nothing.** But in the North, where hard winters mean harder work and make such work not only possible but essential, where from time immemorial the battle has been against hunger and cold combined, there arose out of the Germanic will-to-power, and its urge to large-scale organization, systems of authoritarian Communism which aim at a proletarian dictatorship over the whole world.

https://archive.org/details/moraldarwinismho0000wike/page/154/mode/2up?view=theater

To summarize, **with Bacon modern Epicureanism moved from being passive in regard to the limits of nature (as it had been in Epicurus), to being active;** that is, it moved from being ascetic to hedonistic. The hedonism was based on the desire to remove the obstacles to desire, and sets up a kind of circular, self-perpetuating motion. **Our desires cause us to test and overcome the limits of nature,** and as the limits and imperfections are progressively removed, our desires will be progressively released, only to demand that further limits be removed (thereby duplicating the spiraling confidence of Machiavelli's bold prince).
...

Ironically, the seeds of the Baconian transformation were present in Epicurus. We recall his statement: "If the things which produce the pleasures of profligate men dissolved the intellect's fears about phenomena of the heavens and about death and pains ... then we would not have reason to criticize them, since they would be filled with pleasures from every source and would contain no feeling of pain or distress from any source – and that is what is bad."

https://archive.org/details/academicquestio00cice/page/134/mode/2up?view=theater

For who is there of you who has not learnt the *κύριαι δόξαι* of Epicurus, that is to say, his fundamental maxims? because they are sentiments of the greatest gravity intended to guide men to a happy life, and enunciated with suitable brevity. Consider, therefore, whether I am not translating this maxim of his correctly.

> **"If those things which are the efficient causes of pleasures to luxurious men were to release them from all fear of the gods, and of death, and of pain, and to show them what are the proper limits to their desires, we should have nothing to find fault with; as men would then be filled with pleasures from all quarters, and have on no side anything painful or melancholy, for all such things are evil."**

https://archive.org/details/academicquestio00cice/page/158/mode/2up?view=theater

What is your idea, O Torquatus, of this?—**that you, a man of your name, of your abilities, of your high reputation, should not dare to allege in a public assembly what you do, what you think, what you contend for, the standard to which you refer everything, the object for the sake of which you wish to accomplish what you attempt, and what you think best in life.** For what can you claim to deserve, when you have entered upon your magistracy, and come forward to the assembly, (for then you will have to announce what principles you intend to observe in administering the law, and perhaps, too, if you think fit, you will, as is the ancient custom, say something about your ancestors and yourself,)—what, I say, can you claim as your just desert, if you say that in that magistracy you will do everything for the sake of pleasure? and that you have never done anything all your life except with a view to pleasure? **Do you think, say you, that I am so mad as to speak in that way before ignorant people? Well, say it then in the court of justice, or if you are afraid of the surrounding audience, say it in the senate: you will never do so.** Why not, except that such language is disgraceful? Do you then think Triarius and me fit people for you to speak before in a disgraceful manner?
...

Say, in any assembly you please, that you do everything with a view to avoid suffering pain: if you do not think that even this language is sufficiently dignified, or sufficiently honourable, say that you will do everything during your year of office, and during your whole life, for the sake of your own advantage; that you will do nothing except what is profitable to yourself, nothing which is not prompted by a view to your own interest. **What an uproar do you not suppose such a declaration would excite in the assembly, and what hope do you think you would have of the consulship which is ready for you?**

https://books.google.fi/books?id=fj8oQ4lzteIC&lpg=PP1&hl=fi&pg=PA395#v=onepage&q&f=false

> The Manlii, a house of the patriciate renowned for pride and energy, saw their last consul in 65, and several members perished on the side of Pompeius or for the Republic. **That consul**

adhered to the doctrines of Epicurus.91 The friend of Horace is credited with eloquence, and he may have been a poet.92 No surprise, therefore, if Torquatus in fact renounced the career of honours, disdaining ambition, intrigue, or subsidy from Caesar. **Thus ended the Manlii.**

And can you follow these principles, which, when by yourself, or in conversation with your dearest friends, you do not dare to profess and avow openly? But you have those maxims constantly in your mouth which the Peripatetics and Stoics profess. In the courts of justice and in the senate you speak of duty, equity, dignity, good faith, uprightness, honourable actions, conduct worthy of power, worthy of the Roman people; you talk of encountering every imaginable danger in the cause of the republic—of dying for one's country. When you speak in this manner we are all amazed, like a pack of blockheads, and you are laughing in your sleeve: for, among all those high-sounding and admirable expressions, pleasure has no place, not only that pleasure which you say consists in motion, and which all men, whether living in cities or in the country, all men, in short, who speak Latin, call pleasure, but even that stationary pleasure, which no one but your sect calls pleasure at all.

http://www.perseus.tufts.edu/hopper/text?doc=Perseus%3Atext%3A2007.01.0048%3Abook%3Dpos%3D3%3Asection%3D116

Can anything be expedient, then, which is contrary to such a chorus of virtues? **And yet the Cyrenaics, adherents of the school of Aristippus, and the philosophers who bear the name of Anniceris find all good to consist in pleasure and consider virtue praiseworthy only because it is productive of pleasure.** Now that these schools are out of date, Epicurus has come into vogue—an advocate and supporter of practically the same doctrine. **Against such a philosophy we must fight it out "with horse and foot," as the saying is, if our purpose is to defend and maintain our standard of moral rectitude.**

[117] For if, as we find it in the writings of Metrodorus,[1] not only expediency but happiness in life depends wholly upon a sound physical constitution and the reasonable expectation that it will always remain sound, then that expediency—and, what is more, the highest expediency, as they estimate it—will assuredly clash with moral rectitude. For, first of all, what position will wisdom occupy in that system? The position of collector of pleasures from every possible source? **What a sorry state of servitude for a virtue—to be pandering to sensual pleasure! And what will be the function of wisdom? To make skilful choice between sensual pleasures?** Granted that there may be nothing more pleasant, what can be conceived more degrading for wisdom than such a rôle?

Then again, if anyone hold that pain is the supreme evil, what place in his philosophy has fortitude, which is but indifference to toil and pain? **For, however many passages there are in which Epicurus speaks right manfully of pain, we must nevertheless consider not what he says, but what it is consistent for a man to say who has defined the good in terms of pleasure and evil in terms of pain.**

And further, if I should listen to him, **I should find that in many passages he has a great deal to say about temperance and self-control; but "the water will not run," as they say.** For how can he commend self-control and yet posit pleasure as the supreme good? For self-control is the foe of the passions, and the passions are the handmaids of pleasure.

[118] And yet when it comes to these three cardinal virtues, those philosophers shift and turn as best they can, and not without cleverness. They admit wisdom into their system as the knowledge that provides pleasures and banishes pain; they clear the way for fortitude also in some way to fit in with their doctrines, when they teach that it is a rational means for looking with indifference upon death and for enduring pain. **They bring even temperance in —not very easily, to be sure, but still as best they can;** for they hold that the height of pleasure is found in the absence of pain. Justice totters or rather, I should say, lies already prostrate; **so also with all those virtues which are discernible in social life and the fellowship of human society.** For neither goodness nor generosity nor courtesy can exist, any more than friendship can, if they are not sought of and for themselves, but are cultivated only for the sake of sensual pleasure or personal advantage.

https://penelope.uchicago.edu/Thayer/E/Roman/Texts/Cicero/Cato_Maior_de_Senectute/text*.html#ref36

13 43 I often heard from my elders—who, in turn, said they, when boys, had heard it from old men—that Gaius Fabricius used to marvel at the story told him, while an envoy at the headquarters of King Pyrrhus, by Cineas of Thessaly, that **there was a man[37] at Athens who professed himself "wise"** and used to say that everything we do should be judged by the standard of pleasure. **Now when Manius Curius and Tiberius Coruncanius learned of this from Fabricius they expressed the wish that the Samnites and Pyrrhus himself would become converts to it, because, when given up to pleasure, they would be much easier to overcome.**

[37] *i.e.* Epicurus, who claimed to be not only φιλόσοφος but σοφός.

http://attalus.org/translate/valerius4a.html#c3

The prayers of Fabricius were in agreement with those spurned gifts. For when he went as ambassador to Pyrrhus, and heard Cineas the Thessalian telling the king of a certain Athenian famous for his wisdom, **who was of opinion that men should do nothing except for pleasure's sake, he**

regarded it as a monstrous saying, and immediately made a prayer that such wisdom might grip Pyrrhus and the Samnites. Though the Athenians might glory in their learning, yet there is no prudent person who would not rather choose to follow the self-denial of Fabricius, than the precepts of Epicurus.
This was proved true by the outcome. For that city which indulged so much in pleasure, lost a very large empire, but the hard-working country took its own; and the latter city could bestow that liberty, which the former could not defend.

https://en.wikisource.org/wiki/Moral_letters_to_Lucilius/Letter_123

10. And then we begin to speak as follows: "Virtue, Philosophy, Justice – this is a jargon of empty words. The only way to be happy is to do yourself well. To eat, drink, and spend your money is the only real life, the only way to remind yourself that you are mortal. Our days flow on, and life – which we cannot restore – hastens away from us. Why hesitate to come to our senses? This life of ours will not always admit pleasures; meantime, while it can do so, while it clamours for them, what profit lies in imposing thereupon frugality? **Therefore get ahead of death, and let anything that death will filch from you be squandered now upon yourself. You have no mistress, no favourite slave to make your mistress envious; you are sober when you make your daily appearance in public; you dine as if you had to show your account-book to 'Papa'; but *that* is not living, it is merely going shares in someone else's existence.** 11. **And what madness it is to be looking out for the interests of your heir,** and to deny yourself everything, with the result that you turn friends into enemies by the vast amount of the fortune you intend to leave! **For the more the heir is to get from you, the more he will rejoice in your taking-off!** All those sour fellows who criticize other men's lives in a spirit of priggishness and are real enemies to their own lives, playing schoolmaster to the world – you should not consider them as worth a farthing, nor should you hesitate to prefer good living to a good reputation."

12. These are voices which you ought to shun just as Ulysses did; he would not sail past them until he was lashed to the mast. They are no less potent; **they lure men from country, parents, friends, and virtuous ways;** and by a hope that, if not base, is ill-starred, they wreck them upon a life of baseness.

https://penelope.uchicago.edu/Thayer/E/Roman/Texts/Plutarch/Lives/Pyrrhus*.html#ref24

14 1 Now, there was a certain Cineas, a man of Thessaly, with a reputation for great wisdom, **who had been a pupil of Demosthenes the orator, and was quite the only public speaker of his day who was thought to remind his hearers, as a statue might, of that great orator's power and ability.** Associating himself with Pyrrhus, and sent by him as ambassador to the cities, he confirmed the saying of Euripides, to wit, "all can be won by eloquence

> That even the sword of warring enemies might gain."

2 At any rate, **Pyrrhus used to say that more cities had been won for him by the eloquence of Cineas than by his own arms;** and he continued to hold Cineas in especial honour and to demand his services. It was this Cineas, then, who, seeing that Pyrrhus was eagerly preparing an expedition at this time to Italy, and finding him at leisure for the moment, drew him into the following discourse. "The Romans, O Pyrrhus, are said to be good fighters, and to be rulers of many warlike nations; if, then, Heaven should permit us to conquer these men, how should we use our victory?" 3 And Pyrrhus said: "Thy question, O Cineas, really needs no answer; the Romans once conquered, there is neither barbarian nor Greek city there which is a match for us, but we shall at once possess all Italy, the great size and richness and importance of which no man should know better than thyself." After a little pause, then, Cineas said: "And after taking Italy, O King, what are we to do?" 4 And Pyrrhus, not yet perceiving his intention, replied: "Sicily is near, and holds out her hands to us, an island abounding in wealth and men, and very easy to capture, for all is faction there, her cities have no government, and demagogues are rampant now that Agathocles is gone." "What thou sayest," replied Cineas, "is probably true; but will our expedition stop with the taking of Sicily?" 5 "Heaven grant us," said Pyrrhus, "victory and success so far; and we will make these contests but the preliminaries of great enterprises. For who could keep his hands off Libya, or Carthage, when that city got within his reach, a city which Agathocles, slipping stealthily out of Syracuse and crossing the sea with a few ships, narrowly missed taking? And when we have become masters here, no one of the enemies who now treat us with scorn will offer further resistance; there is no need of saying that." 6 "None whatever," said Cineas, "for it is plain that with so great a power we shall be able to recover Macedonia and rule Greece securely. But when we have got everything subject to us, what are we going to do?" **Then Pyrrhus smiled upon him and said: "We shall be much at ease, and we'll drink bumpers, my good man, every day, and we'll gladden one another's hearts with confidential talks."** 7 And now that Cineas had brought Pyrrhus to this point in the argument, he said: "Then what stands in our way now if we want to drink bumpers and while away the time with one another? **Surely this privilege is ours already, and we have at hand, without taking any trouble, those things to which we hope to attain by bloodshed and great toils and perils, after doing much harm to others and suffering much ourselves.**"

8 By this reasoning of Cineas Pyrrhus was more troubled than he was converted; he saw plainly what great happiness he was leaving behind him, but was unable to renounce his hopes of what he eagerly desired.

https://newepicurean.com/epicurus/the-crucial-doctrines-of-epicurus-revised-version/

> 7. **For the sake of feeling confidence and security in regard to other men, some men wish to be eminent and powerful, failing to remember the limits of kingly power. If such men happen to achieve a life of safety, then they have attained their goal, which is a good.** But if their lives are not in fact safe, they have failed in obtaining the goal for the sake of which they originally desired power, and that is the result that generally occurs according to Nature.

…

Again, at supper, where all sorts of topics were discussed, and particularly that of Greece and her philosophers, Cineas happened somehow to mention Epicurus, and set forth the doctrines of that school concerning the gods, civil government, and the highest good, explaining that they made pleasure the highest good, **but would have nothing to do with civil government on the ground that it was injurious and the ruin of felicity,** and that they removed the Deity as far as possible from feelings of kindness or anger or concern for us, into a life that knew no care and was filled with ease and comfort. 4 **But before Cineas was done, Fabricius cried out and said: "O Hercules, may Pyrrhus and the Samnites cherish these doctrines, as long as they are at war with us."**

https://oll.libertyfund.org/title/goodwin-the-morals-vol-5#lf0062-05_head_047

31. No sufficient praise therefore or equivalent to their deserts can be given those who, for the restraining of such bestial passions, have set down laws, established policy and government of state, instituted magistrates and ordained good and wholesome laws. But who are they that utterly confound and abolish this? Are they not those who withdraw themselves and their followers from all part in the government? Are they not those who say that the garland of tranquillity and a reposed life are far more valuable than all the kingdoms and principalities in the world? Are they not those who declare that reigning and being a king is a mistaking the path and straying from the right way of felicity? And they write in express terms: “We are to treat how a man may best keep and preserve the end of Nature, and how he may from the very beginning avoid entering of his own free will and voluntarily upon offices of magistracy, and government over the people.” And yet again, these other words are theirs: **“There is no need at all that a man should tire out his mind and body to preserve the Greeks, and to obtain from them a crown of wisdom; but to eat and drink well, O Timocrates, without prejudicing, but rather pleasing the flesh.” And yet in the constitution of laws and policy, which Colotes so much praises, the first and most important article is the belief and persuasion of the Gods.** Wherefore also Lycurgus heretofore sanctified the Lacedaemonians, Numa the Romans, the ancient Ion the Athenians, **and Deucalion universally all the Greeks,** through prayers, oaths, oracles, and omens, rendering them devout and affectionate to the Gods by means of hopes and fears at once.
…

And it is not the greatest indignity, that, **of so many sects of philosophers as have been extant, [the Epicureans] alone should enjoy the benefits that are in cities, without having ever contributed to them any thing of their own; but far worse is it that, while there are not even any tragical or comical poets who do not always endeavor to do or say some good thing or other in defence of the laws and policy,** these men, if peradventure they write, write of policy, that we may not concern ourselves in the government of the commonweal, of rhetoric, that we may not perform an act of eloquence, and of royalty, that we may shun the living and conversing with kings. Nor do they ever name any of those great personages who have intermeddled in civil affairs, but only to scoff at them and abolish their glory. Thus they say that Epaminondas had something of good, but that very little, or μικκόν, for that is the very word they use. They moreover call him iron-hearted, and ask what ailed him that he went marching his army through all Peloponnesus, and why he did not rather keep himself quiet at home with a night-cap on his head, employed only in cherishing and making much of his belly. **But methinks I ought not in this place to omit what Metrodorus writ in his book of Philosophy, when, utterly abjuring all meddling in the management of the state, he said thus: “Some, through an abundance of vanity and arrogance, have so deep an insight into the business of it, that in treating about the precepts of good life and virtue, they suffer themselves to be carried away with the very same desires as were Lycurgus and Solon.”** What is this? Was it then vanity and abundance of vanity, to set free the city of Athens, to render Sparta well-policied and governed by wholesome laws, that young men might do nothing licentiously, nor get children upon common courtesans and whores, and that riches, delights, intemperance, and dissolution might no longer bear sway and have command in cities, but law and justice? For these were the desires of Solon. **To this Metrodorus, by way of scorn and contumely, adds this conclusion: “It is then very well beseeming a free-born gentleman to laugh heartily, as at other men, so especially at these Solons and Lycurguses.” But such a one, O Metrodorus, is not a gentleman, but a servile and dissolute person, and deserves to be scourged, not with that whip which is for free-born persons, but with that scourge strung with ankle-bones,** with which those gelded sacrificers called Galli were wont to be chastised, when they failed of performing their duty in the ceremonies and sacrifices of the Goddess Cybele, the great Mother of the Gods.

http://www.perseus.tufts.edu/hopper/text?doc=Perseus%3Atext%3A1999.01.0236%3Atext%3Ddisc%3Abook%3D2%3Achapter%3D20

Since then you are well pleased with them, hear the contrary: **That there are no Gods, and, if there are, they take no care of men, nor is there any fellowship between us and them; and that this piety and sanctity which is talked of among most men is the lying of boasters and sophists, or certainly of legislators for the purpose of terrifying and checking wrong doers.**[7]—Well done,

philosopher, you have done something for our citizens, you have brought back all the young men to contempt of things divine.—What then, does not this satisfy you? **Learn now, that justice is nothing, that modesty is folly, that a father is nothing, a son nothing.**—Well done, philosopher, persist, persuade the young men, that we may have more with the same opinions as you and who say the same as you. From such principles as these have grown our well constituted states; by these was Sparta founded: Lycurgus fixed these opinions in the Spartans by his laws and education, that neither is the servile condition more base than honourable, nor the condition of free men more honourable than base, and that those who died at Thermopylae[8] died from these opinions; and through what other opinions did the Athenians leave their city?[9] **Then those who talk thus, marry and beget children, and employ themselves in public affairs and make themselves priests and interpreters. Of whom? of gods who do not exist: and they consult the Pythian priestess that they may hear lies, and they report the oracles to others.** Monstrous impudence and imposture.

http://www.attalus.org/translate/aelian_f1.html

[10] One of the orgeones from Eleusis ... **A castrated and androgynous man (if we should grant that he be a man), one who is enfeebled in soul through the study of Epicurus and has become womanish.** Having borne a torch before Stratocles in Athens, a eunuch and a she-male, bewitched and bound as if in an unbreakable chain.
...

[He], sharing in evil wisdom and the atheistic words of Epicurus **and cultivating she-males just for the pleasure of it,** which that man praises, that youth and she-male, ...
...

Then he set at naught the holy things of the Eumolpidae and the Ceryces and the other families who were holy and dear to the gods, choosing a wisdom infamous and effeminate.

And burning to show that god does not care about human affairs, he went to the megaron and thrust himself in; there of course only the hierophant was permitted to go, according to the rule of the rite, but for him it was not allowed. But when he had dared this audacity, a shuddering overcame him and he fell sick with a lengthy disease, and consumption took him; and whatever he dared, crying out and saying, and declaiming tragically in the manner of the most impious persons, and vowing to break off [the life-thread of] the infamous and accursed soul, and at length succeeding in this.

https://www.cs.uky.edu/~raphael/sol/sol-entries/epsilon/2405

And also the Messenians, the ones who live in Arcadia, expelled those reputed to be members of this, let us say, "manger", **saying that they were corrupters of the youth and attaching to their doctrine the stain of infamy because of their effeminacy and impiety;** and they gave orders that, before sunset, the Epicureans be out of the borders of Messenia and that after they had left, the priests purify the temples and the *timouchoi* (this is the name Messenians give to their magistrates) purify the whole city, as delivered from some filthy contaminations and offscourings.

[Note] that in Crete the citizens of Lyktos[9] **chased away some Epicureans who had come there.** And a law was written in the local language, stating that whoever thought of adhering to this effeminate and ignominious and hideous doctrine were enemies of the gods and should be banished from Lyktos; but if anybody dared to come and neglect the orders of the law, he should be bound in a pillory near the office of the magistrates for twenty days, naked and with his body spread with honey and milk, so that he would be a meal for bees and flies and the insects would in the stated time kill them. After this time, if he were still alive, **he should be thrown from a cliff, dressed in women's clothes.**

https://ccel.org/ccel/schaff/anf07/anf07.iii.ii.iii.xvii.html#fnf_iii.ii.iii.xvii-p1.2

The system of Epicurus was much more generally followed than those of the others; not because it brings forward any truth, but because the attractive name of pleasure invites many.[431] For every one is naturally inclined to vices. Moreover, for the purpose of drawing the multitude to himself, he speaks that which is specially adapted to each character separately. He forbids the idle to apply himself to learning; he releases the covetous man from giving largesses to the people; he prohibits the inactive man from undertaking the business of the state, the sluggish from bodily exercise, the timid from military service. The irreligious is told that the gods pay no attention to the conduct of men; the man who is unfeeling and selfish is ordered to give nothing to any one, for that the wise man does everything on his own account. To a man who avoids the crowd, solitude is praised. One who is too sparing, learns that life can be sustained on water and meal. **If a man hates his wife, the blessings of celibacy are enumerated to him; to one who has bad children, the happiness of those who are without children is proclaimed; against unnatural[432] parents it is said that there is no bond of nature.**

[432] There is another reading, “adversus parentes impio,” “to the son whose conduct to his parents is unnatural.”
…

Although he does not say this in word, yet he teaches it in fact. For when he maintains that the wise man does everything for his own sake, he refers all things which he does to his own advantage. And thus he who hears these disgraceful things, will neither think that any good thing ought to be done, since the conferring of benefits has reference to the advantage of another; nor that he ought to abstain from guilt, because the doing of evil is attended with gain. **If any chieftain of pirates or leader of robbers were exhorting his men to acts of violence, what other language could he employ than to say the same things which Epicurus says:** that the gods take no notice; that they are not affected with anger nor kind feeling; that the punishment of a future state is not to be dreaded, because souls die after death, and that there is no future state of punishment at all; that pleasure is the greatest good; **that there is no society among men; that every one consults for his own interest; that there is no one who loves another, unless it be for his own sake;** that death is not to be feared by a brave man, nor any pain; for that he, even if he should be tortured or burnt, should say that he does not regard it. There is evidently sufficient cause why any one should regard this as the expression of a wise man, since it can most fittingly be applied to robbers!

https://archive.org/details/alexandriaandher00kinguoft/page/60/mode/2up?view=theater

The “Contrat Social,” and the rest of their doctrines, moral and metaphysical, will always have their admirers on earth, as long as that variety of the human species exists for whose especial behoof Theodorus held that laws were made; and the whole form of thought met with great approbation in after years at Rome, where Epicurus carried it to its highest perfection. After that, under the pressure of a train of rather severe lessons, which Gibbon has detailed in his “Decline and Fall of the Roman Empire,” little or nothing was heard of it, save *sotto voce*, perhaps, at the Papal courts of the sixteenth century. To revive it publicly, or at least as much of it as could be borne by a world now for seventeen centuries Christian, was the glory of the eighteenth century. **The moral scheme of Theodorus has now [1854] nearly vanished among us, at least as a confessed creed; and, in spite of the authority of Mr. Locke’s great and good name, his metaphysical scheme is showing signs of a like approaching disappearance.** Let us hope that it may be a speedy one; for if the senses be the only avenues to knowledge; if man be the measure of all things; and if law have not, as Hooker says, her fount and home in the very bosom of God himself, then was Homer’s Zeus right in declaring man to be “the most wretched of all the beasts of the field.”

---

https://voxday.net/2010/06/19/atheism-and-action/

It is not atheism itself that is the problem, but as I explained in TIA, atheism *combinea* with a burning ambition to achieve immortality through material ends.
…

For such men of burning ambition, ideology is nothing more than a means to a self-serving end. Men have little to fear from an atheist libertarian or a Christian monarch, **but they have everything to fear from an ambitious atheist who dreams of great actions and is determined to leave the world with the recollection of his existence.**

https://archive.org/details/LeoStraussThoughtsOnMachiavelli_201411/page/n289/mode/2up?view=theater

Machiavelli's claim that he has taken a road not yet trodden by anyone implies that in breaking with the Socratic tradition he did not return to an anti-Socratic tradition, although he could not help agreeing in numerous points with the Socratic tradition on the one hand and the anti-Socratic tradition on the other. We have indicated the kinship of his thought with hedonism. **But he agrees with classical political philosophy against classical hedonism in admitting the high dignity of political life. For classical hedonism, honor and glory are contemptible; for Machiavelli the pleasure deriving from honor and glory is genuine and perhaps the highest pleasure. Classical hedonism, we may say, is insufficiently attentive to the conditions and the context of the highest pleasure,** which it sees to be dependent on philosophy. Since philosophy consists in ascending from opinion to knowledge, and opinion is primarily political opinion, philosophy is essentially related to the city; as transcending the city, it presupposes the city; philosophy must therefore be concerned with the city or be politically responsible. In this important respect Machiavelli agrees with classical political philosophy over against classical hedonism.211

https://archive.org/details/LeoStraussThoughtsOnMachiavelli_201411/page/n219/mode/2up?view=theater

Machiavelli indicates his fundamental disagreement with Aristotle's doctrine of the whole by substituting "chance" (*caso*) for "nature" in the only context in which he speaks of "the beginning of the world." **Polybius had called the cyclical change of regimes a change which takes place "according to nature"; Machiavelli says that that cyclical change occurs "by chance."** By this he does not mean that the changes of regimes occur without any order or regularity, at random or haphazardly, for he shows that they occur with necessity and in an unalterable sequence. He understands "chance" in opposition to "prudence":115 the cyclical change of regimes does not occur because it has been planned by any being or because it serves an end. The substitution of "chance" for "nature," or the understanding of nature as chance was imputed to Democritus in particular. **Among "the philosophic family" surrounding Aristotle in Dante's Limbo we find "Democritus who ascribes the world to chance."** From the point of view of Aristotle, or of Plato, every doctrine which understands the world as the work of soulless bodies not tending towards ends in fact identifies nature and chance.116 By substituting chance for nature when mentioning "the beginning of the world," Machiavelli indicates that he has abandoned the teleological understanding of nature and natural necessity for the alternative understanding. **He speaks very frequently of "accidents" but never of "substances." Just as he never mentions souls in the *Prince* and the *Discourses*, he speaks in those books not of "substances" but of "bodies."**

https://archive.org/details/LeoStraussThoughtsOnMachiavelli_201411/page/n199/mode/2up?view=theater

"In the beginning of the world, the inhabitants being scarce, **men lived for some time dispersed in similitude to the beasts.**"63 If we assume that in considering this sentence Machiavelli remembered the fact that there are gregarious beasts, he would be making two suggestions by means of the sentence quoted: in the beginning of the world men lived both dispersed and in similitude to the beasts. In addition, **the Bible denies that in the beginning of the world men—Adam and Eve—lived dispersed. Certainly, Machiavelli's notion of the beginning of the world is not the Biblical but rather the "Epicurean" notion which presupposes the eternity of "matter";** by assuming that matter is uncreated, one could admit the necessity of evil or of sin without derogating from God's goodness.64

https://www.researchgate.net/publication/233642240_In_the_Shadow_of_Lucretius_the_Epicurean_Foundations_of_Machiavelli%27s_Political_Thought

Although repeated attempts have been made over the last half-century to make sense of Machiavelli's *Discourses on Livy* as an exposition of classical republicanism, such endeavours are bound to fail. After all, Machiavelli rejected the teleology underpinning the discursive republicanism of the ancients, and his understanding of the ends pursued by republics was profoundly at odds with the understanding predominant in ancient Greece and Rome. **If he had a classical mentor, it cannot, then, have been Aristotle or Cicero or one of the ancient historians. If he had such a mentor, it was surely Lucretius, the leading Roman critic of ancient political idealism--a figure so important to the Florentine that in the late 1490s he copied by hand in its entirety *De rerum natura* and that he drew on it throughout his subsequent career. Machiavelli's republicanism is best understood as an appropriation, critique and reworking of ancient Epicureanism.**

> And I should have wished to show you that the same deliberate rejection of the moral code which smoothed the paths of absolute monarchy and of oligarchy, signalised the advent of the democratic claim to unlimited power,—that one of its leading champions avowed the design of corrupting the moral sense of men, in order to destroy the influence of religion, and a famous apostle of enlightenment and toleration wished that the last king might be strangled with the entrails of the last priest.

https://books.google.fi/books?id=mTdUtsbybqkC&lpg=PP1&hl=fi&pg=PA23#v=onepage&q&f=false

But the differences between Machiavellian and Senecan political theory are not just a matter of the one being more tough-mindedly ruthless than the other; rather, they develop out of a radically different approach to princely politics itself. **The ideological fulcrum of Seneca's argument was his claim that the introduction of the principate had restored to the Romans their freedom. The opening sentence of Machiavelli's book, on the other hand, sharply separates principalities from republics** – 'All states, all dominions that have held and do hold empire over men have been and are either republics or principalities' – **and Machiavelli nowhere suggests that a principality can ever be a free regime.**78 **Seneca's argument had depicted the prince as the 'mind' of the**

‘body politics,’ whereas Machiavelli’s princes are never integrated into the states they rule but always remain external to them, as his language of princes ‘acquiring’ states tends to suggest. These differences in turn are generated by Machiavelli’s total rejection of the Stoic providential rationalism that underpins Seneca’s entire political theory. In Machiavelli’s view, not only is Stoic providentialism false but belief in its truth fosters a debilitating psychology, which in turn generates disastrous politics.

On the level of metaphysics, Machiavelli denies Stoic determinism. Chapter 25 begins with Machiavelli noting that he is ‘not unaware that many people have held and hold today the opinion that things of the world are governed by *fortuna* and by God in such a way that men have no power to correct them with their prudence.’ Such people, he suggests, subscribe to a version of what is known as the ‘lazy argument’ that has been deployed against the Stoics since antiquity: ‘and for this reason they could judge that there is no point in sweating much over things: better to leave oneself to be governed by fate [ma lasciarsi governare alla sorte].’79 **Machiavelli rejects this view, ‘so as not to rule out our free will,’** implicitly denying the Stoic claim that it is submission to providence that guarantees our freedom, and goes on to state his famous opinions, **‘I judge that it might be true that fortune is arbiter of half of our actions, but also that she leaves the other half, or close to it, for us to govern.’**80 ***Fortuna* becomes pure contingency once more,** and politics correspondingly become a far more uncertain and unstable kind of activity.
…

Machiavelli’s denial that the subjects of a prince retain their liberty is part of his effort to drive a wedge between the prince and his principality and to treat the former as standing outside the latter and owing nothing to it. The prince and his principality do not make up a harmonious whole; rather, the one ‘acquires’ the other and uses it in the service of his – not its – ends. Although Lipsius may agree that the prince’s subjects are not politically free, he nevertheless still insists, against Machiavelli, that the well-constituted state is an integrated unity of the prince and the people. Machiavelli in *The Prince* is chiefly interested in the ‘new prince’ who comes to power either through *virtù* (which is to say, by dint of his own arms) or *fortuna* (by dint of other people’s), **and he has little to say about hereditary principalities.**

> As for teachings like those which Plato put into the mouths of Thrasymachus and Callicles, it suffices here to say that those Platonic characters stop where both Socrates and Machiavelli begin; the originators of such teachings **have not even grasped the essential connection between ruling and service or between private vice and public benefit because they look at political things in the perspective of the exploiter of the city and not in the perspective of its founder.**

https://oll.libertyfund.org/title/hall-collected-works-of-james-wilson-vol-1#lf4140_label_595

We are told, that, without education, we should have been in a state of perfect indifference as to virtue and vice; that an education, opposite to that which we have received, would have taught us to regard as virtue that which we now dislike as vice, and to despise as vice that which we now esteem as virtue. In support of these observations, it is farther said, that moral sentiment is different in different countries, in different ages, and under different forms of government and religion; **in a word, that it is as much the effect of custom, fashion, and artifice, as our taste in dress, furniture, and the modes of conversation.** Facts and narratives have been assembled and accumulated, to evince the great diversity and even contrariety that subsists concerning moral opinions**. And it has been gravely asked, whether the wild boy, who was caught in the woods of Hanover, would feel a sentiment of disapprobation upon being told of the conduct of a parricide.** An investigation of those facts and narratives cannot find a place in these lectures; though the time bestowed on it might be well employed. **It may, however, be proper to observe, that it is but candid to consider human nature in her improved, and not in her most rude or depraved forms. “The good experienced man,” says Aristotle, “is the last measure of all things.”u To ascertain moral principles, we appeal not to the common sense of savages, but of men in their most perfect state.**

Epicurus, as well as some modern advocates of the same philosophy, seem to have taken their estimates of human nature from its meanest and most degrading exhibitions; but the noblest and most respectable philosophers of antiquity have chosen, for a much wiser and better purpose, to view it on the brightest and most advantageous side. “It is impossible,” says the incomparable Addison,v6 “to read a passage in Plato or Tully, and a thousand other ancient moralists, without being a greater and a better man for it. On the contrary, I could never read some modish modern authors, without being, for some time, out of humour with myself, and at every thing about me. **Their business is to depreciate human nature, and consider it under its worst appearances. They give mean interpretation and base motives to the worthiest actions—in short, they endeavour to make no distinction between man and man, or between the species of men and that of brutes.**”

https://oll.libertyfund.org/title/acton-the-history-of-freedom-and-other-essays#lf0030_label_020

Epicurus differed but little from the propounders of the code of revolutionary despotism. All societies, he said, are founded on contract for mutual protection. Good and evil are conventional terms,

for the thunderbolts of heaven fall alike on the just and the unjust. The objection to wrongdoing is not the act, but in its consequences to the wrongdoer. **Wise men contrive laws, not to bind, but to protect themselves; and when they prove to be unprofitable they cease to be valid.**

https://www.marxists.org/archive/marx/works/1892/01/socialism-germany.htm

> Be that as it may, for the time being it is not we who are being destroyed by legality. **It is working so well for us that we would be mad to spurn it as long as the situation lasts.** It remains to be seen whether it will be the bourgeois and their government who will be the first to turn their back on the law in order to crush us by violence. That is what we shall be waiting for. You shoot first, *messieurs les bourgeois*.

https://newepicurean.com/epicurus/the-crucial-doctrines-of-epicurus-revised-version/

32. Natural justice arises from a covenant between men for their mutual advantage to refrain from harming one another.

33. **For those living things that are unable to enter into a covenant to refrain from harming one another, nothing is just or unjust, and this applies also to those men who are either unwilling or unable to enter into such a covenant.**

34. **Justice has no independent existence,** but results only from the agreement of men to enter mutual covenants to refrain from harming one another.

35. **Injustice is not evil in itself;** it is evil because fear of not escaping punishment necessarily arises from it.

36. It is not possible for men who secretly violate a mutual covenant not to harm one another to believe that they will always escape detection. Even if they have escaped it ten thousand times already, so long as they live they cannot be certain that they will not be detected.

37. In general, justice is the same for all, for justice is a mutual advantage in the dealings of men with each other, but in different nations and under different circumstances, the application of justice may differ.

38. Among those actions which the law sanctions as just, that which is determined to be of mutual advantage is in fact just whether or not it is universally regarded to be so. But if a law, once established, is determined not to be mutually advantageous, then it is by nature unjust. **As to those laws which were at first just, but later become unjust, such laws were in fact just for the period in which they were of mutual advantage, at least in the eyes of those who do not confound themselves with empty words, but look to the actual facts.**

https://books.google.fi/books?id=MSu2w3FqepoC&lpg=PP1&hl=fi&pg=PA295#v=onepage&q&f=false

The importance he attached to the topic is indicated by the relatively ample coverage in the Authorized Doctrines, eight items out of forty, and every one anti-Platonic. **In respect of the origin of Justice he holds to the theory of the "social contract," which by no mere coincidence experienced its European revival with Hobbes and Locke during the brief interval that witnessed the only public vogue of Epicurean studies in modern times.**15 **Epicurus, however, would have brushed aside the criticism directed against the doctrine in its modern form, that the theory implies a degree of sophistication too advanced for a primitive society. He extended its application to the brute creation.** Unlike Plato's Justice, it was not man-made but "of Nature," Authorized Doctrine 31: "The Justice of Nature is a covenant of advantage to the end that men shall not injure one another or be injured." This is one of several instances where Epicurus seized upon a fertile idea in Platonic thought and transferred it to a new matrix of meanings. **Plato had written: "It seems advantageous to those who are incapable of escaping the evil of injustice and seizing its rewards to strike a bargain with one another neither to practice unjustice nor to suffer it."**16 **This is the "political contract"; there is no mention of Nature. By looking to Nature for the sanction of it Epicurus changed it to the "social contract."**

https://en.wikisource.org/wiki/Of_Anger/Book_I#VIII.

"What then? do not men, even in the height of their anger, sometimes let their enemies go whole and unhurt, and refrain from injuring them?" They do: but when do they do so? **It is when one passion overpowers another, and either fear or greed gets the upper hand for a while. On such occasions, it is not thanks to reason that anger is stilled, but owing to an untrustworthy and fleeting truce between the passions. [Cum adfectus repercussit adfectum et aut metus aut cupiditas aliquid impetravit. Non rationis tunc beneficio quievit, sed affectuum infida et mala pace.]**

https://books.google.fi/books?id=INcgAwAAQBAJ&lpg=PP1&hl=fi&pg=PA178#v=onepage&q&f=false

To reiterate an earlier observation: **if there is a close precedent for the physics of matter in motion among the ancients, it would be the stricter atomism of Lucretius, in which there are no immanent qualities of grandeur and heroism of the kind I have attributed to the pre-Socratics' understanding of nature, and for whom the visible world is generated by the sheer, accidental "swerve" of one contentless atom into another.** For Lucretius, the hedonism stemming from materialistic view of life meant that a man should cultivate his pleasures in private and avoid the pain, violence and stupidity of politics. **The genius of liberalism beginning with Hobbes might be characterized as erecting a new theory of the just society on the very basis of this individuating ontology of motion.**

https://archive.org/details/enlightenmentcon0000isra/page/582/mode/2up?view=theater

The first writer systematically to attack the doctrines of Original Sin, and sinfulness of sexual pleasure outside marriage, was Adriaen Beverland (1650-1716), who, as we have seen, was arrested and then expelled from Holland, in 1679, for insinuating lascivious thoughts into the minds of the young, in his Spinozistic *De peccato originali* (1678). This work subsequently became widely known in Europe after reappearing, at Amsterdam in 1714, in a French-language version prepared by Jean-Frédéric Bernard which was again reissued in 1731 and 1741.52 **An expert classicist, Beverland had spent years researching the subject of erotic life in the classical world in the Dutch and English university libraries and composed a long manuscript on ancient eroticism, entitled *De prostibulis veterum*,** subsequently confiscated and suppressed by the Leiden University authorities. **In his *De peccato originali*, Beverland argues, citing Hobbes and Spinoza, that the story of the Fall had been misunderstood for millennia and is nothing more than a poetic allegory describing Adam and Eve's discovery of sexual intercourse.**53 Developing a form of philosophical pantheism embedded in a general theory of eroticism, Beverland sought to liberate readers from negative feelings regarding the private parts and the sex act.34

https://www.google.fi/books/edition/Spinoza_Life_and_Legacy/4snKEAAAQBAJ?hl=en&gbpv=1&pg=PA1030&printsec=frontcover

Interestingly, Beverland, who was distinctly more interested in the group movement than in Spinoza the person, **styles Adriaan Koerbagh "Amstelodamensis ille Thales," the Thales of Amsterdam, implying he was the first real, authentic philosopher of the age endeavouring to demolish theology's doleful sway over individual life and thought, establish independence of judgement, and promote sexual emancipation of the individual.**114
…

Spending lavishly on books, lady friends, wine and junketing in taverns where Spinozists congregated, as well as on paintings, medals, coins, shells, and other "curiosa," in four years Beverland reportedly exhausted a large legacy he had inherited in 1675.118 In 1678, **forgoing the opportunity of a lucrative career in law,** he focused on completing his chief scholarly project, a general encyclopaedia of ancient eroticism entitled *De Prostibulis Veterum* [On the Prostitution of the Ancients].119

In the late 1670s, officially studying in Leiden, Beverland spent more of his time in The Hague consorting with an emancipated lady friend, the Juffrouw Liefeld, and writing a second book, *De Peccato originali*, that "atheistic and libidinous work" as the Calvinist preacher Leonard Ryssenius calls, it,120 published according to its title-page (like Meyer's *Philosophia*) at "Eleutheropolis" [i.e. Freedom City]. Partly an exercise in Bible criticism, invoking Hobbes, Spinoza, Koerbagh, La Peyrère, and Van den Enden, **it seeks to prove that the dogma of Original Sin taught by all churches (except the Socinians) entirely lacks Scriptural basis,** being a pious fraud contrived during Christianity's formative period to mislead the ignorant and superstitious, as it had "over many centuries." **Beverland held that "the Pentateuch appears to have been forged centuries after Moses by a soothsayer [Ezra]," as explained (following Hobbes) by "that companion of Koerbagh, and disciple of Van den Enden," Spinoza.**121
…

Curiously, Beverland characterizes Spinoza as **"that true descendant of Lucian [genuinum Luciani nepotem, Spinosam],"** referring to the ancient Near Eastern satirist Lucian (*c.* 125-after 180 AD), who specialized in ridiculing superstition, belief in the supernatural, and irrational religious observances. This ancient satirist, a second century AD Greek Sophist (of Aramaic-speaking background) who travelled from Antioch to Italy, Gaul, Macedonia, and Greece, and wrote in Greek, seems an odd choice for a classical comparison, for Lucian was not, as Klever observes, the source of any of Spinoza's philosophical ideas. But the caustic, mocking strain in Spinoza's conversation flaying pedants, preachers, and long venerated earlier philosophers, Plato and Aristotle especially, did strike some as reminiscent of Lucian's satirical mocking of gods and popular belief. Van den Enden, another mocker, likewise was called a veritable "Lucianist."123

https://archive.org/details/enlightenmentcon0000isra/page/560/mode/2up?view=theater

Proclaiming the concept of basic equality, **Spinoza, Bayle, and Diderot, the three greatest architects of Radical Enlightenment, fix the purpose of the state as the maximization of peace, security, and freedom for the majority, a criterion which in turn provides a universal benchmark by which to judge the actions of regimes of whatever hue or character.** Indeed, with the introduction of this criterion every regime, in theory, automatically falls into one of two categories – either promoting or failing to promote the 'common good' or what Diderot calls the *volonté générale*. **It was precisely this Spinozistic dualism of good and bad political systems evaluated in terms of the 'common good' which Paine later invoked when contrasting 'governments which arise out of society, in contradistinction to those which arose out of superstition and conquest.'**61

http://www.racerealist.com/yockey_2.htm

> **Liberalism is Rationalism in politics. It rejects the State as an organism, and can only see it as the result of a contract between individuals.** The purpose of Life has nothing to do with States, for they have no independent existence. Thus the "happiness" of "the individual" becomes the purpose of Life. Bentham made this as coarse as it could be made in collectivizing it into "the greatest happiness of the greatest number." If herding-animals could talk, they would use this slogan against the wolves. **To most humans, who are the mere material of History, and not actors in it, "happiness" means economic well being. Reason is quantitative, not qualitative, and thus makes the average man into "Man."** "Man" is a thing of food, clothing, shelter, social and family life, and leisure. **Politics sometimes demands sacrifice of life for invisible things. This is against "happiness," and must not be.** Economics, however, is not against "happiness," but is almost co-extensive with it. **Religion and Church wish to interpret the whole of Life on the basis of invisible things, and so militate against "happiness."** Social ethics, on the other hand, secure economic order, thus promote "happiness."

Where, for Descartes, human minds are equal because they are intrinsically separate from bodies and equally capable of reason and, for Locke, because each soul is equally valid and potentially redeemable through spiritual striving, in van den Enden, Spinoza, Mandeville, and Diderot, with their one-substance monism, there is an altogether neater conjunction of instinct, appetite, will, and mind. Whether men act rationally or irrationally, whether they are primitive or sophisticated, ignorant or knowledgeable, ultimately makes no difference. **Man's motivation is always the same and men's wills always equivalent. Whether a given mind has clear and distinct ideas, or is confused, it 'endeavours,' as Spinoza expresses the point in proposition ix or part iii of the *Ethics*, 'to persist in its own being over an indefinite period of time and is conscious of this *conatus*'** [Mens tam quatenus claras, et distinctas, quam quatenus confuses habet ideas, conatur in suo esse perseverare indefinita quadam duratione, et hujus sui conatus est conscia].62

https://www.studylight.org/commentaries/eng/acc/job-1.html

> *And he will curse thee to thy face.*—אם לא על פניך יברכך ***im lo al paneycha yebarechecca*****,** "If he will not bless thee to thy appearances." He will bless thee only in proportion to the temporal good thou bestowest upon him; to the providential and gracious *appearances* or *displays* of thy power in his behalf. If *thou* wilt be gracious, *he* will be pious. **The exact maxim of a great statesman, Sir Robert Walpole: *Every man has his price*. "But you have not bought such a one?" "No, because I would not go up to his price. He valued himself at more than I thought him worth; and I could get others cheaper, who, in the general muster, would do as well."**

https://www.gutenberg.org/cache/epub/1468/pg1468-images.html#linknoteref-17

> According to [Charles II], every person was to be bought: but some people haggled more about their price than others; and when this haggling was very obstinate and very skilful it was called by some fine name. The chief trick by which clever men kept up the price of their abilities was called integrity. The chief trick by which handsome women kept up the price of their beauty was called modesty. The love of God, the love of country, the love of family, the love of friends, were phrases of the same sort, delicate and convenient synonymes for the love of self.

https://archive.org/details/naturesgodhereti0000stew_o9j9/page/522/mode/2up?view=theater

> 135. Michael Zuckert gets the idea when he suggests that **Lockean Property "involves an extension of rights from the spheres of one's own life, body, and actions to the external world. It proclaims the rightful power of human beings to make the external their own in the same way they can make their bodies their own."** Zuckert, *The Natural Rights Republic* (University of Notre Dame Press, 1996), p. 221, and *Launching Liberalism* (University Press of Kansas, 2002.)

https://archive.org/details/moraldarwinismho0000wike/page/170/mode/2up?view=theater

Locke, not Marx, was the first to redefine human beings as *homo faber*, "man, the worker," or more accurately, as *homo oeconomicus*, economic man – man, who by his labor, lives for the accumulation of material goods as the highest good. That is, of course, quite distinct from designating us as *homo sapiens*, for this older designation presumed that there was *sapientia*, "wisdom" about heavenly things, things higher than material things. But Locke, following Hobbes (who was following Epicurus), called philosophy down from the heavens, as it were, and focused our efforts on the only real world, the material world, so that our efforts might remake it, our labor redeem it, and the pursuit of wealth might provide a new plenty that would turn the earth into a *real*, not mythical, land of plenty. The recent political phrase "It's the economy, stupid," used by former President Clinton to remind his followers of the true goal of politics, was merely a restatement of Locke's reduction of the political goal to the pursuit and expansion of material gratification.

https://archive.org/details/worshippingstate0000wike/page/222/mode/2up?view=theater

The twist that Locke puts on Hobbes's account is his extension of the natural right of self-preservation to include the right to property – in fact, the limitless accumulation of property.7 So in escaping the chaotic state of nature for civil society, we put ourselves under a civil sovereign to save our lives *and* preserve our property. **Hence, in Locke's famous words, "The great and chief end … of men's uniting into commonwealths and putting themselves under government is the preservation of their property."**8
…

And this makes Locke definitely liberal: *in cutting off any higher goal than the preservation of life and property, Locke was siding with Machiavelli and Hobbes in defining the state as purely secular and concerned with the body alone.*
…

Locke was thus the inventor of the "classical liberal" state, concerned with protecting property rights, especially the property rights of the new commercial class, that is, the merchants and money-men who were displacing the old noble class. That is the stratum of society that Locke identified with in England's Glorious Revolution in 1688, **the moneyed class that wrested control from the king and nobles and placed political power in the hands of the Parliament, which better represented its own interests.**

And in the nineteenth century there was yet another wave of newly rich because of the immense wealth gained in the various enterprises of the industrial revolution. They used Locke against the established order (who, ironically, were the heirs of the winners in the Revolution of 1688, who had displaced the established order of that day). Locke became the (classical) liberal guide for these newly prosperous Englishmen.
…

But Locke had ties to radical liberalism, too. As a member of the anti-royalist party he spent time on the continent as a political exile (1683-1689). **And there he became well-acquainted with the circle of Spinozan radicals.**

https://archive.org/details/worshippingstate0000wike/page/244/mode/2up?view=theater

Locke is, as we noted above, studiously and strangely ambiguous. He seems to speak at one and the same time as if he's a proponent of something like the Christian natural law tradition and as if he accepts the materialistic natural rights position set out by Hobbes. **Locke seems to have a foot in each camp. He seems to belong with the Deists who looked back on pagan virtue with admiration, and also to the utilitarians who look forward to a hedonistic paradise.**

But where Locke *really* stands, what foot he really puts his weight on, should be clear from the fact that he shifts the goal of government from virtue to the limitless accumulation of material goods. **And it is now crystal clear where Lockean liberalism leads. Today all liberals, whether classical or radical, speak in terms of Hobbesian *natural rights*, not natural law.**

https://www.catholicworldreport.com/2013/06/17/when-the-state-replaces-god/

The father of classical or conservative liberalism is John Locke, **a very ambiguous figure, to say the least.** Locke's aim was to secularize the state, make it entirely defined by this worldly bodily welfare. In his words, the sole aim of government is the protection of property—not the encouragement of virtue, not the care of the souls of the citizens, not a preparation for the next life, **but merely to see to it that its citizens could make money, and those who made it could keep it.**
…

Yet, Locke believed that religion was necessary as a kind of moral prop for this essentially economic endeavor—**religion is necessary to control the unpropertied masses!**—so he didn't want Christianity thrown out.
…

The radicals argued that religion was merely a prop protecting the propertied classes in society, the so-called capitalists (which, of course, was true, given Locke's assumptions).

https://books.google.nl/books?id=X_1MAQAAMAAJ&hl=nl&pg=PP14#v=onepage&q&f=false

Agreeably to his *Chimerical*, and *Atheistical* notions of their GOD, they dream after *Epicurus*; That Men by those Necessary, Mechanical, Unguided Laws of Nature, sprang like Mushrooms out of the Earth, by the genial warmth of the Sun. And *from this Original, and first Condition of Mankind, they* frame that which they call the *State of Nature*, which they assert to be a state of perfect Liberty and Equality; out of which Men first came by their own Consent, in a free Election of a Multitude, or a Select Number, or a single Person, unto whom they transferred their Natural Rights, and gave them Authority to Rule, and Govern them. *They likewise teach*, That this State of Nature, before Men came out of it, was a State of War, and Liberty to Destroy one another; and That the intolerable Inconveniences of it obliged the Primogenial Men to come (*they know not how*) into a Social State of Civil Government, in which they might live securely from the Violences of one another. *From hence again they teach*, That the whole Power, and Authority of the Sovereign in all Forms of Government, is primarily from, and ultimately resolved into the People, who have certain unalienable Rights and Priviledges, which they neither did, nor could confer upon the Supreme Magistrate; and that, if he misuses, or abuses the Power they conferred upon him, they may take it away from him, and Depose him, or, if he Resists them, Kill him, and at any time defend their Natural, and Unalienable Rights against him by Force of Arms, *which also is one of those unalienable Rights*: And That another of those Inherent, Inalienable Rights, of which they cannot divest themselves, is, Not to be Subject to any Laws and Matters of Religion, but to believe, and profess what Doctrines, and Institute what Modes of Worship they please; and in order to this, to form themselves into Religious Societies, in *which the Prince hath no more Power over the Peasant, than the Peasant hath over him*.

https://books.google.nl/books?id=X_1MAQAAMAAJ&hl=nl&pg=PP44#v=onepage&q&f=false

From this general Neglect, and Contempt of *Logick* in *Epicurus*, and for not Arguing like a Man of Reason, the great *Latin Philosopher* also tells us, that almost none read his Books, but those of his own Sect; whereas all read the Works of *Plato*, and of the *Platonick* Writers, and that the *Epicureans* became such from that Wicked Principle of their Master, *That nothing but what brings Pleasure is Honourable, and Just*. He calls both his *Physical*, and *Moral* Notions, his *Dreams*, and *Imaginations*, as this author, for the same Reasons, throughout his whole Book, calls Dr. *Tindal*'s Book of the RIGHTS his RAVINGS, **and particularly, as to the Original of Civil Government, from the *Belluine State* of Nature; which, with all its Absurdities our Deists have espous'd, Right Reason taught this greatest Philosopher, as well as Orator among the *Romans* to despise it, and led him to an *Hypothesis*, very near the *Mosaick* Account of the Original of Mankind, and of Civil Government;** for as this Author hath well observed, he taught, That *Wedlock was the first Society among Men, and that Tribes, Cities, Colonies, and Common-wealths arose by orderly Encrease from Families*; *and* whosoever will consider his Words in * the Margin, must needs admire the Concinuity of his Notion of the Rise of Men, and Civil Societies, and the great Agreement between it, and the six first Chapters of *GENESIS*, **which had he been so happy as to have read, how would he have been ravished to find his Scheme so exactly answer the Propagation of Mankind;** First, from one single Man and Woman join'd in *Holy Wedlock* by their Creator, and then again after the *Flood*, from one single Family, by which the Earth was again Replenished. **The *Deist*'s State of Nature, which is the Corner-stone in the Foundation of the Book of the RIGHTS, is as contrary to the Reasoning of this Philosopher, as to the Narrative of *Moses*; and I appeal to their Consciences, depraved as they are, let them but observe the Directions of their own Thoughts, if they do not find within themselves a Natural Tendency, and Willingness to prefer this *Hypothesis* of *Tully*, and the *Mosaick* Account of the Original of Mankind, and Civil Government, before *Epicurus*'s Dreams of them,** and a strong Aversion in their Reason, to close with that Chymerical Account of the *State of Nature*, and Liberty, which they derive from him, and with the Insuperable Difficulties, and both Natural, and Moral Absurdities, which attend that Atheistical, and Precarious *Hypothesis*.

I would desire as many of them, as are not yet as deaf as an Adder to the Charms of Reason, to consider, what Dishonour it reflects on the Wisdom, and Goodness of God, to suppose, he could Concreate, or let his Servant Nature Comproduce **a *Cadmean* Multitude of Men, and Women in a State of War, and Liberty, to destroy one another, out of which they had no better way to come out, but by as *yet* insignificant Signs, and Sounds, by the help of which they are supposed to have expressed their Minds,** and chosen a Multitude, or a few, or one single Person to Govern them with a Reserve, and Exception of such, and such Rights, which they would not, or could not surrender. **Let my Soul be with *Socrates*, *Plato*, or *Tully*, rather than with these *Christian Epicureans*, who are equally abandoned to *Reason*, and *Faith*, and to the Natural Dictates and Directions of the one, as well as the Supernatural Revelations of the other.**

https://books.google.nl/books?id=X_1MAQAAMAAJ&hl=nl&pg=PA92#v=onepage&q&f=false

Afterwards he makes those Men, **thus sprung up out of the Earth, like so many Mushrooms,** to wander up and down like Wild Beasts, in the Condition describ'd in the foregoing pages. Now,

Here you have a Clear, Comprehensive, and exact Description of the very Thing we have been hitherto seeking for, *viz*. Of our Author's, and his Master's Darling *State of Nature*. **Here you have it set off in its Native Colours, without any Paint, Equivocations, Sophisms, or other the like Knavish Contrivances and Disguises, us'd by the Modern *Atheists*, to conceal from us, what they mean by their *State of Nature*, when they employ those Terms.** *Epicurus* fancied, that Mankind Originally was the Casual, but necessary Product of Mere, but Blindly Operating *Nature*; and, for this Reason, calls their Primitive Condition, the *State of Nature*. **Wherefore, you now plainly see, what is precisely meant by those *Words*, to wit, a State wherein Mankind was squeez'd up out of the Earth, like so many Pumpions,** by a *Mere Necessity* of *Nature*, *Nature so Compelling*, says *Epicurus*; that is, by an *Absolutely, Irresistible, Unavoidable, Blind, Unthinking, Undesigning Necessity of* * *Fate,* or of the Universal Laws of *Nature*, i.e. of Motion, Rest, Gravity, &*c*. **And if you do but consider, what has been hitherto said, you'll perceive, at first sight, how Naturally and Necessarily all our Author's, and his Master's Doctrine deliver'd in the preceding Quotations does agree to, spring from, and Only and Solely center in this pretended *State* of *Nature*.** To be short, in an Assertion intuitively evident, 'tis absolutely impossible, so much as to conceive any other *State* of *Nature*, besides the fore-mentioned, wherein, or by Virtue of which those Prerogatives can be ascrib'd to reasonable Creatures, which our Author and his Masters attribute to Mankind, upon the account of that Condition, which they call, a *State of Nature*. **For, herein, and *herein alone*, Men are *perfectly Equals*, and therefore cannot lose that *Equality*, but by their own *Consent*,** as our Author has it. Here, every one has a *Right to every thing, even to one another's Bodies*. Here Men are *Subject* to no Laws at all; here there neither is, nor can be, either *Justice* or *Injustice*, either *Right* or *Wrong*, *Transgression* or *Sin* committed. And hence it is, that *all Power* is *Originally in*, and *immediately* from the *People*. Hence it is, that they neither are, nor can be Subject to any *Laws* at all, but to those of their own *Chusing* or *Making*. That the *Old* and *New Testament*, are no *Laws* at all, but where the Common-wealth made them so. Hence it is, That Mankind, both *in* and *out* of that *State* of *Nature*, have a *Natural, Inalienable, Inherent Right, to Believe and Profess whatever they please*. That the *Power Naturally* Reverts to 'em upon the *Supposition* of Mal-Administration, with a Natural Right to *Punish* their *Sovereign*, &c. **All the other Points of the Doctrine deliver'd hitherto by our Authors, do singly Center in this *Epicurean* State of *Nature*. Suppose that *Doctrine*, and you immediately Establish this *State*. Suppose this *State*, and you immediately Establish that *Doctrine*.** They mutually and necessarily infer each other.

The aggressive and selfish instincts of each individual which Hobbes's sovereign seeks to curb, and which Hobbes views in an essentially negative light, in Spinoza, van Leenhof, and Mandeville – following on from the de La Courts – are instead pitted against each other, in society, and rather than being repressed, are transmuted with the help of Spinoza's mechanics of the passions into positive and beneficial equivalents. **As Spinoza expresses this idea in his *Ethics*, 'it is when every man is most devoted to seeking his own advantage that men are of most advantage to one another,' an insight, one might suspect, rooted in his early experience as a merchant and in business.**55

The main difference here between Spinoza and Mandeville is that where the first deems these 'bad' impulses transformed into 'good,' the latter sees men behaving at the behest of society in ways perceived as 'good,' 'virtuous,' or 'chaste' which, however, do not correspond to genuine 'virtue' but rather an elaborate system of hypocrisy. Men do the right things, argues Mandeville, not by and large out of virtue, but rather for 'honour,' influence, and to avoid disapproval and 'shame.'56 But the difference in this case too may be more apparent than real since Mandeville speak of 'virtue' in the conventional sense **while Spinoza, as so often, redefines the term to denote something quite different from what is conventionally meant.**
…

In Spinoza, as in Bayle and Diderot, the ultimate measure of good and evil is not precisely the law, despite our obligation to obey it, and could not be, for laws are not infrequently misconceived, ineffective, disastrous, or despotic, **but rather the 'common good,' Diderot's 'general will.'** This fundamental disagreement about the nature of law is clearly rooted in a no less profound disagreement about the nature of morality. **Hobbes, in practice, denies there is such a thing as a secular morality underlying law and politics, since, for him, it is only where men conceive of commandments about good and bad as being divine in origin that they can amount to more than the arbitrary dictates of the sovereign.**68 **Here Mandeville may well be closer to Hobbes than to Spinoza.**

I freely own that if this question was to be decided by the authority of legislators or philosophers it must go against us. For those men generally take it for granted that Vice is pernicious to the public; and that men cannot be kept from vice but by the fear of God, and the sense of a Future State: whence they are induced to think the belief of such things necessary to the well-being of human-kind. This false notion

hath prevailed for many ages in the world, and done an infinite deal of mischief, being in truth the cause of religious establishments, and gaining the protection and encouragement of laws and magistrates to the clergy and their superstitions. **Even some of the wisest among the ancients, who agreed with our sect in denying a Providence and the Immortality of the Soul, had nevertheless the weakness to lie under the common prejudice, that vice was hurtful to societies of men. But England hath of late produced great philosophers,**2 **who have undeceived the world, and proved to a demonstration that private vices are public benefits. This discovery was reserved to our times, and our sect hath the glory of it.**

All that is said about a moral sense, or moral beauty, in any signification, either of Alciphron, or Euphranor, or any other, I take to be at bottom mere bubble and pretence. The *καλόν* and the *πρέπον*, the *beautiful* and *decent*, are things outward, relative, and superficial, which have no effect in the dark, but are specious topics to discourse and expatiate upon, as some formal pretenders of our sect, though in other points very orthodox, are used to do. **But should one of them get into power, you would find him no such fool as Euphranor imagines. He would soon shew he had found out that the love of one's country is a prejudice: that mankind are rogues and hypocrites, and that it were folly to sacrifice one's-self for the sake of such:** that all regards centre in this life, and that, as this life is to every man his own life, it clearly follows that charity begins at home. Benevolence to mankind is perhaps pretended, but benevolence to himself is practised by the wise. The livelier sort of our philosophers do not scruple to own these maxims; and as for the graver, if they are true to their principles, one may guess what they must think at the bottom.

ADAM SMITH OFFERED HIS OWN NARRATIVE of the history of modern philosophy in his anonymous 'Letter to the Authors of the *Edinburgh Review*,' which was published in 1756. **With reference to 'natural philosophy' as well as 'morals, metaphysics, and part of the abstract sciences,' he wrote that until recently, and with the exception of Descartes, 'Whatever attempts have been made in modern times towards improvement in this contentious and unprosperous philosophy, beyond what the antients have left us, have been made in England.'**1 He cited in evidence the names of Hobbes, Locke, Mandeville, Shaftesbury, Butler, Clarke, and Hutcheson, all of whom, 'according to their different and inconsistent systems, endeavoured at least to be, in some measure, original; and to add something to that stock of observations with which the world had been furnished before them.' **But, Smith continued, 'This branch of the English philosophy, which seems now to be intirely neglected by the English themselves, has of late been transported into France.'**2 Traces of it were observable in the *Encyclopédie* of Diderot and d'Alembert, he thought, and also in Louis Jean Levesque de Pouilly's recent *Théorie des sentiments agréables*, but 'above all, in the late Discourse upon the origin and foundation of the inequality amongst mankind by Mr. Rousseau of Geneva.'

> Whoever reads this last work with attention, will observe, **that the second volume of the Fable of the Bees has given occasion to the system of Mr. Rousseau,** in whom however the principles of the English author are softened, improved, and embellished, and stript of all that tendency to corruption and licentiousness which has disgraced them in their original author.3

Smith went on to explain why he associated Rousseau with Mandeville by picking out three characteristically Epicurean themes in their respective works – although he did not label them as such. **Both writers denied natural sociability** – in Smith's words, echoing a formulation of Mandeville's from 'A Search into the Nature of Society,' 'there is in man no powerful instinct which necessarily determines him to seek society for its own sake.'4 Both 'suppose the same slow progress and gradual development of all the talents, habits, and arts which fit men to live together in society, and they both describe this progress pretty much in the same manner.' Both, finally, **considered the 'laws of justice, which maintain the present inequality amongst the mankind,' to be 'originally the inventions of the cunning and the powerful, in order to maintain or to acquire an unnatural and unjust superiority over the rest of their fellow-creatures.'**5

http://ml.ci.uc.pt/mhonarchive/histport/pdfEDlTv6oEvu.pdf

Dr. Mandeville represents the primitive state of mankind as the most wretched and miserable that can be imagined: Mr. Rousseau, on the contrary, paints it as the happiest and most suitable to his nature. Both of them however suppose, that there is in man no powerful instinct which necessarily determines him to seek society for its own sake: but according to the one, the misery of his original state compelled him to have recourse to this otherwise disagreeable remedy; according to the other, **some unfortunate accidents having given birth to the unnatural passions of ambition and the vain desire of superiority, to which he had before been a stranger, produced the same fatal effect.**
...

Mr. Rousseau however criticises upon Dr. Mandeville: **he observes, that *pity*, the only amiable principle which the English author allows to be natural to man, is capable of producing all those virtues, whose reality Dr. Mandeville denies.** Mr. Rousseau at the same time seems to think, that this principle is in itself no virtue, but that it is possessed by savages and by the most profligate of the vulgar, in a greater degree of perfection than by those of the most polished and cultivated manners; in which he perfectly agrees with the English author.

https://en.wikisource.org/wiki/1911_Encyclop%C3%A6dia_Britannica/Helv%C3%A9tius,_Claude_Adrien

HELVÉTIUS, CLAUDE ADRIEN (1715-1771), French philosopher and littérateur, was born in Paris in January 1715. He was descended from a family of physicians, whose original name was Schweitzer (latinized as Helvetius). His grandfather introduced the use of ipecacuanha; his father was first physician to Queen Marie Leczinska of France. Claude Adrien was trained for a financial career, but he occupied his spare time with writing verses. **At the age of twenty-three, at the queen's request, he was appointed farmer-general, a post of great responsibility and dignity worth a 100,000 crowns a year. Thus provided for, he proceeded to enjoy life to the utmost, with the help of his wealth and liberality, his literary and artistic tastes. As he grew older, however, his social successes ceased, and he began to dream of more lasting distinctions, stimulated by the success of Maupertuis as a mathematician, of Voltaire as a poet, of Montesquieu as a philosopher.** The mathematical dream seems to have produced nothing; his poetical ambitions resulted in the poem called *Le Bonheur* (published posthumously, with an account of Helvétius's life and works, by C.F. de Saint-Lambert, 1773), in which he develops the idea that true happiness is only to be found in making the interest of one that of all; his philosophical studies ended in the production of his famous book *De l'esprit*. **It was characteristic of the man that, as soon as he thought his fortune sufficient, he gave up his post of farmer-general, and retired to an estate in the country, where he employed his large means in the relief of the poor, the encouragement of agriculture and the development of industries.** *De l'esprit* (Eng. trans. by W. Mudford, 1807), intended to be the rival of Montesquieu's *L'Esprit des lois*, appeared in 1758. It attracted immediate attention and aroused the most formidable opposition, especially from the dauphin, son of Louis XV. The Sorbonne condemned the book, the priests persuaded the court that it was full of the most dangerous doctrines, and the author, terrified at the storm he had raised, wrote three separate retractations; yet, in spite of his protestations of orthodoxy, he had to give up his office at the court, and the book was publicly burned by the hangman. The virulence of the attacks upon the work, as much as its intrinsic merit, caused it to be widely read; it was translated into almost all the languages of Europe. **Voltaire said that it was full of commonplaces, and that what was original was false or problematical; Rousseau declared that the very benevolence of the author gave the lie to his principles; Grimm thought that all the ideas in the book were borrowed from Diderot; according to Madame du Deffand, Helvétius had raised such a storm by saying openly what every one thought in secret;** Madame de Graffigny averred that all the good things in the book had been picked up in her own *salon*.
…

His philosophy belongs to the utilitarian school. The four discussions of which his book consists have been thus summed up: (1) All man's faculties may be reduced to physical sensation, even memory, comparison, judgment; our only difference from the lower animals lies in our external organization. (2) Self-interest, founded on the love of pleasure and the fear of pain, is the sole spring of judgment, action, affection; self-sacrifice is prompted by the fact that the sensation of pleasure outweighs the accompanying pain; it is thus the result of deliberate calculation; we have no liberty of choice between good and evil; there is no such thing as absolute right—ideas of justice and injustice change according to customs. (3) **All intellects are equal; their apparent inequalities do not depend on a more or less perfect organization, but have their cause in the unequal desire for instruction, and this desire springs from passions, of which all men commonly well organized are susceptible to the same degree; and we can, therefore, all love glory with the same enthusiasm and we owe all to education.** (4) In this discourse the author treats of the ideas which are attached to such words as *genius*, *imagination*, *talent*, *taste*, *good sense*, &c**. The only original ideas in his system are those of the natural equality of intelligences and the omnipotence of education, neither of which, however, is generally accepted, though both were prominent in the system of J.S. Mill.**
…

As J. M. Robertson (*Short History of Free Thought*) points out, he had great influence upon Bentham, and C. Beccaria states that he himself was largely inspired by Helvétius in his attempt to modify penal laws.

https://www.marxists.org/archive/marx/works/1845/holy-family/ch06_3_d.htm

In *Helvétius*, who also based himself on Locke, materialism assumed a really French character. Helvétius conceived it immediately in its application to social life (Helvétius, *De l'homme*). The sensory qualities and self-love, enjoyment and correctly understood personal interest are the basis of all morality. **The natural equality of human intelligences, the unity of progress of reason and progress of industry, the natural goodness of man, and the omnipotence of education, are the main features in his system.**
…

There is no need for any great penetration to see from **the teaching of materialism on the original goodness and equal intellectual endowment of men, the omnipotence of experience, habit and education, and the influence of environment on man, the great significance of industry,**

the justification of enjoyment, etc., how necessarily materialism is connected with communism and socialism.

https://archive.org/details/BarruelMemoirsIllustratingTheHistoryOfJacobinism/page/n113/mode/2up?view=theater

HELVETIUS will at one time tell us, **that the only rule by which *virtuous actions* are distinguished from *vicious ones*, is the law of princes, and public utility.** Elsewhere he will say, "that *virtue*, or *honesty*, with regard to individuals, is no more than the *habit of actions personally advantageous*, and that self-interest is the sole scale by which the actions of man can be measured;" **In fine, "that if the virtuous man is not happy in this world, we are justified in exclaiming, *O Virtue! thou art but an idle dream*."**30
…

He will inform children, that "the commandment of loving their father and mother is more the work of education than of nature."35 He will tell the married couple, that "the law which condemns them to live together becomes *barbarous and cruel* on the day they cease to love each other."36

https://en.wikisource.org/wiki/1911_Encyclop%C3%A6dia_Britannica/Holbach,_Paul_Heinrich_Dietrich,_Baron_d%27

HOLBACH, PAUL HEINRICH DIETRICH, Baron d' (1723-1789), French philosopher and man of letters, of German origin, was born at Heidelsheim in the palatinate in 1723. **Of his family little is known; according to J. J. Rousseau his father was a rich parvenu, who brought his son at an early age to Paris, where the latter spent most of his life.**
…

Possessed of easy means and being of hospitable disposition, he kept open house for Helvétius, D'Alembert, Diderot, Condillac, Turgot, Buffon, Grimm, Hume, Garrick, Wilkes, Sterne, and for a time J. J. Rousseau, guests who, while enjoying the intellectual pleasure of their host's conversation, were not insensible to his excellent cuisine and costly wines.
…

"It would be useless and almost unjust to insist upon a man's being virtuous if he cannot be so without being unhappy. So long as vice renders him happy, he should love vice." The restraints of religion were to be replaced by an education developing an enlightened self-interest. The study of science was to bring human desires into line with their natural surroundings. **Not less direct and trenchant are his attacks on political government, which, interpreted by the light of after events, sound like the first distant mutterings of revolution. Holbach exposed the logical consequences of the theories of the Encyclopaedists.** Voltaire hastily seized his pen to refute the philosophy of the *Système* in the article "Dieu" in his *Dictionnaire philosophique*, while Frederick the Great also drew up an answer to it.

https://archive.org/details/enlightenmentcon0000isra/page/794/mode/2up?view=theater

While Epicurean elements gradually became more prominent in the structure of his thought, **La Mettrie's materialism was in crucial respects more Spinozist than Epicurean, especially as regards the mind.** This he interprets as physically indistinguishable from the body, and something whole determined, in the same way that bodies are, our capacity to think arising the organization of our brains, nerves, and other organs rather than owing to the existence of a material 'soul' composed of some subtly elusive substance. **La Mettrie evinced that same strong commitment to 'system' which Cassirer mistakenly thought was not a characteristic of the Enlightenment and which actually characterizes Meslier, Du Marsais, and the entire Radical Enlightenment (as well as Voltaire and Montesquieu), firmly adhering to one substance doctrine.**17 By 1747, he had dropped his earlier pretence to the contrary, openly confessing to being a follower of Spinoza, on the final page of his *L'Homme machine* where he asserts that **'il n'y a dans tout l'univers qu'une substance diversement modifiée,'** a statement which could only be read in Europe at the time as an open declaration of Spinozism.18
…

Despite the strong empiricist bent of La Mettrie's writing, his habit of anchoring his arguments in physiological and medical observations,20 and his familiarity with Locke, **the contemporary debate about his work never focused to any significant extent on Locke, Hobbes (whom he practically never mentions), or Newton, whose physico-theology he rejected outright,**21 **but always rather on Descartes, Malebranche, and Spinoza** – and with good reason, for the most challenging question posed by La Mettrie's empirical materialism, as the Oratorian Lelarge de Lignac observed, in 1753, was whether there is some valid empirical means of proving there is in man a spiritual 'substance' wholly separate from, but temporarily coexisting with, physical 'substance.'22 To rescue Descartes and

Malebranche's substance dualism, Lelarge develops a theory of the *sens intime*, a pervasive sense of the self of which everyone has experience and which he argues must be both a certain and a non-material reality.

However, what is genuinely Spinozistic in La Mettrie is confined to his approach to the mind-body problem, rejection of providence and all teleology, and conception of matter, that is to his philosophy of nature, life, physiology, and the human body, and his eliminating 'free will,' seeing all human action as invariably determined.23 **The rest, on the other hand, was by no means Spinozistic. Given his growing emphasis on the pleasure principle, and his stripping Descartes's dualism down to what he considered its cogent grounding, he did not lack justification for also calling his thought a 'système épicuro-cartésien.'**24 No contradiction was involved, in any case, when in the final summation of his philosophy, the *Discours préliminaire* to his *Oeuvres philosophiques* ('Londres' [Berlin], 1751), he designates himself a *Spinosiste* while also claiming to be thinker who revives 'le système d'Épicure.'25 While the term 'Spinosisme' was frequently affixed to La Mettrie in the late 1740s and early 1750s,26 **in his case there are good grounds to consider the label somewhat problematic.** For while his conception of matter diverges markedly from that of Epicureanism with its atoms and atomic swerve, his theory of motivation and the passions, and holding the pleasure principle to be the prime determinant, does follow a distinctively Epicurean line.27 **Especially crucial, by substituting a modified Epicureanism for Spinoza's ethics, he avoids, unlike other radical writers, any requirement to draw Spinozistic social, moral, and political consequences from hylozoic materialism,** consequences they, in contrast to him, judged essential for the moral order and the well-being of society.
…

Rousset de Missy likewise closely followed the proceedings, as La Mettrie, securely ensconced in Potsdam, turned out more works in rapid succession further elaborating his materialist system. Among the most notable of these, *L'Anti-Sénèque* (1748) proved too much even for the freethinking Frederick the Great, being immediately banned and withdrawn from circulation by personal order of the king.61
…

Neither did he worry overly that there was no real moral basis to La Mettrie's system; but he could hardly be expected to countenance the Frenchman's openly preaching immoralism **and his insolent contention that monarchy is something altogether arbitrary and hence devoid of any moral principle.**63
…

While genuine philosophy, for La Mettrie, must be based on the study of nature, morality has nothing to do with nature but is really just an indispensable fiction, a 'fruit arbitraire de la politique,' devised for purely social reasons and arbitrarily as well as forcibly imposed by society. Since men are determined in what they do by nature and governed by natural impulse, **we are no more criminal in following our basic drives, contends La Mettrie, than is the Nile in inundating precious farmland.**74 Happiness, according to La Mettrie's moral schema, is an essentially individual affair unconnected with the common good, on the one hand and the moral and intellectual progress of the individual on the other. **The world is full of contented imbeciles, he declared, and unhappy *gens d'esprit*.**75 **Philosophy and morality, being opposites, he argues, are in permanent, irresolvable conflict with each other:** 'diamétricalement opposes jusqu'à se tourner le dos'; what can one conclude from this other than that 'la philosophie est absolutement inconciliable avec la morale, la religion et la politique?'76

This was totally unacceptable to Diderot, Dorthous de Mairan, d'Argens, and the *Spinosistes modernes*. The point at which La Mettrie parts company with the Radical Enlightenment was hence precisely where he diverges from Spinozism itself: precisely, in the sharp differentiation he introduces between nature, reason, and philosophy, on the one hand, which reveal what is true and and 'natural' and what he deems the utilitarian myths of virtue, equity, and justice, on the other, all arbitrary political constructions devised to uphold one or another kind of social order. **La Mettrie, unlike Spinoza, Bayle, Du Marsais, and Diderot, forges a naturalism which offers no ethic of equality based on the equivalence of volitions and consciences, or moral system rooted in the idea of equity, or any concept of 'virtue' linked to a 'common good' in which men rationally and naturally share.** Although he agrees with Spinoza's thesis in the *Tractatus* that government is justified by its social functions, not authority conferred by supernatural agency, and that it is necessary that rulers uphold law and order, **he diverges dramatically from Spinozist thinking in claiming the principles of government and justice are nevertheless wholly arbitrary.**77 **Displaying no particular reverence for monarchy, he showed no commitment to republican ideals either.**

Since 'virtue,' indeed any altruistic motive for sharing in an enterprise, or sense of social and political responsibility, is for La Mettrie purely fictional, the veritable 'morale de la nature' in his view is merely the pursuit of physical pleasures combined with the investigation of nature.78

https://books.google.fi/books?id=5ZOPCwAAQBAJ&lpg=PP1&hl=fi&pg=PT342#v=onepage&q&f=false

La Mettrie was and is best known for his *L'Homme-machine* (1747) where he extended Descartes's view that animals were machines to include the human animal. **(La Mettrie was to discover his forerunner Hobbes in the next year.)** But it was his *Anti-Sénèque ou Le souverain bien* (1748) that earned him the distaste of his fellow materialists, D'Holbach and Diderot. In his treatise *Anti-Sénèque*, La Mettrie (1996: 123), perhaps relying in his memory of the battlefields at Fontenoy and perhaps trying to upstage his philosophic rivals, **declared that opium has provided "more happiness to us than the treatises of all the philosophers."** His philosophic treatise was an assault on Stoicism but began with a fair assessment of Seneca and Stoic doctrine: **"Seneca, the most illustrious of the Stoics, or rather of the Eclectics (for he was Epicurean and Stoic at the same time, and he chose and took what he found best in each sect), added the knowledge of truth" to Stoic ideals of virtue and honor.**
…

He then swung into high gear:

> But we shall be anti-Stoics! Those philosophers are sad, strict and unyielding: we shall be cheerful, sweet-natured and indulgent. They are all soul and ignore their bodies; we shall be all body and ignore our souls. They appear impervious to pleasure or pain; we shall glory in feeling both.

La Mettrie championed *volupté* as the mean between short urgent sensual pleasure (*plaisir*) and unattainable permanent happiness (*bonheur*). There is no good "as exquisite as the great pleasure of love," the "more long-lasting, delicious, enticing, uninterrupted and untroubled this feeling is, the happier one is." However, "Seneca was unhappy and he wrote about happiness as one writes for a lost dog. It is true that he was a Stoic, a sort of leper well armed against the pleasures of life" (La Mettrie 1996: 126).

Nature destined humans to aspire for happiness **but virtue is not essential for happiness; vicious thugs are as likely to be happy as Stoic philosophers if they are physiologically well constituted.** Conscience and remorse are the offspring of prejudice: they are useless and harmful since they do not restrain the vicious but poison the pleasures of the virtuous (La Mettrie 1996: 137-8, 141-2).

…

While La Mettrie did not deny that society requires moral guidelines and must protect itself, ensure maintenance of law and order, and impose its own discipline on people's behaviour, agreeing with Spinoza that rabid dogs must be killed and poisonous snakes eliminated,86 **he thought the laws society enforces to accomplish this are inherently arbitrary and ungrounded in either reason or nature.**87 **For Diderot and the new *Spinosistes*, by contrast, human happiness requires us to live consciously, in thought and action, in conformity with the universal laws of nature and reason, not in the Stoic sense of attempting to tame the passions with reason, a goal Diderot, like Spinoza, believed conflicts with nature, but rather, through moderating our passions in accord with the natural circumstances,** shaping and improving the human condition, our common good, and meeting society's needs.88

From a Postmodernist perspective, and that of such contemporary thinkers as Alasdair MacIntyre or Charles Taylor critical of the Enlightenment's efforts to construct a universal secular morality, the disowning of La Mettrie by the *philosophes* places the latter in a poor light. For it implies they unjustly hounded and vilified someone who had seen through the illusions, pretensions, and contradictions they themselves could not resolve. Interpreted thus, La Mettrie emerges as the perceptive and candid thinker who grasped the ugly reality Diderot and the rest were blind to, a victim of dogmatists, hypocrites, and moral cowards who had aroused their fears of having persecution brought down on their own heads, by pointing out the weaknesses in their system and the obstacles to constructing a secular morality on the basis of materialism.89 **For Diderot, holds MacIntyre, while otherwise sharing La Mettrie's physiological materialism, undermined his own attempt 'to find a basis for morality in human physiological nature' by arbitrarily distinguishing between 'desires that are natural to man' and artificially aroused and corrupt impulses nurtured by civilized society.**90 **The marquis de Sade, adds Charles Taylor, was merely following La Mettrie, when later in the century he 'showed how the utter rejection of all social limits could be embraced as the most consistent and thoroughgoing liberation from traditional religion and metaphysics. Morals, law and virtue are to be thrown off.'**91

La Mettrie has hence proved useful to Postmodernists seeking to press their campaign to discredit and sap the moral foundations of what they disparage as the 'Enlightenment project.' **One author claims La Mettrie '"barbarized" the Enlightenment** and set it on a course toward materialism and

mechanism which proved to be irreversible,' arguing that despite being a mediocre thinker, La Mettrie 'proved to be a devastating force in the demise of the old regime.'92
…

La Mettrie may have propounded what Charles Taylor terms 'a morality of purely egoistic gratification' and his philosophy was certainly grounded in the radical materialism developing in France during the first half of the eighteenth century.94 But there were many other radical materialists prior to 1750, with Boulainvilliers, Meslier, Du Marsais, Boulanger, Vauvenargues, d'Argens, Fréret, Helvetius, Boindin, de Maillet, and Diderot prominent among them **and he was neither a characteristic representative of the moral thinking of this group nor a major influence on the post-1750 French *parti philosophique* as a whole.** If Diderot and other exponents of Radical Enlightenment vociferously protested against La Mettrie's moral theory this was not because they feared that, through La Mettrie, the compromising truth was being told, or inconsistencies in their own thought uncovered, or persecution being brought down on themselves, but because they genuinely abhorred and were angered by his views.
…

The moral code society enforces, holds La Mettrie, has no basis in Man's natural disposition. Consequently, laws and social norms, he thought, lack genuine moral force and since law is the only criterion of 'right' and 'wrong,' **obeying the laws wherever popular and theological ideas hold sway, that is to say in practically every state, obliges he who possesses philosophical insight to live a make-believe life, abide by a charade of hypocrisy, myth, lies, and pretence, systematic deception being indispensable, in his view, to managing the human herd.**98 It was this sweeping nihilism and moral cynicism and La Mettrie's explicit contention in his *Discours préliminaire* that all government and legal systems are morally equivalent in being built on 'superstition,' 'prejudice,' and 'myth' which prompted even the Prussian king to prohibit his *Oeuvres philosophiques* in 1751.

La Mettrie, then, in the end diverged drastically from radical thought. **For he refused to accept either that the moral conscience of the true *philosophe* must, in Diderot's words, be in perfect accord with 'morale universelle,'**99 or d'Argens's principle that laws are made to make individuals 'heureux,' and not to oppress them, and that to promote human happiness, laws must ensure and promote the general interest. **La Mettrie's *épicuro-spinosisme* hence brutally departs from the radical principle that whoever is 'virtuous,' as d'Argens expresses it, is a priest of truth, 'et par conséquent de l'Être Suprême, qui lui-même est la vérite.'**100
…

While Diderot and the Radical Enlightenment pressed for the sexual emancipation of the individual, male and female, and scorned – as d'Argens does in his *Songes philosophiques* – traditional Christian conceptions of marriage and especially the irrational cult of female chastity, condemnation of homosexuality, and denial of the right of divorce, and considered the keeping of unwilling and incompatible couples together as a particularly repellent aspect of the tyranny of the family,102 La Mettrie's anarchic brand of hedonism detached from any moral framework was something they whole-heartedly repudiated. To La Mettrie, the voluptuous person loves life more than others, having a healthy body and a free spirit, and is more tranquil and better able to adore nature's beauties 'parce qu'il les connoît mieux qu'un autre.'103 To reduce the pursuit of happiness to pleasure-seeking **and conceive pleasure as a purely physical process – a continual soothing of the nerves, with the pleasures of love, especially sexual intercourse, ranked highest** – seemed to his radical critics to violate the most basic principles on which their social, moral, and political reform programme rested.

This amoralism of his last works sets La Mettrie firmly at odds with the neo-*Spinosistes* and materialists and hence with the Radical Enlightenment. **For his system implies that crime, egoism, spite, and perversion are ultimately no less 'moral,' legitimate, and apt for producing happiness than the 'charity and justice' Spinoza, Bayle, and Diderot proclaim the eternal and unalterable grounding of secular morality. Here indeed was a war *à l'outrance* between what Charles Taylor called 'purely egoistic materialism' and a materialism 'predicated on universal benevolence,' Shaftesbury's and Diderot's 'doing good in the world.'**104 The gulf was further widened by La Mettrie's inference that knowledge and understanding, and therefore emancipation of the individual, are in practice feasible only for a small elite. Most men must remain steeped in superstition and, hence, unemancipated. **However clearly thinkers might demonstrate Man is but a machine, he says, 'le peuple n'en croira jamais rien.'**105 The masses, he asserts, can never be brought to change their outlook or superstitions by philosophy.106

Voltaire reserved his harshest words for La Mettrie even though it was with him alone that he agreed that the *philosophes* should not try to propagate 'philosophical' awareness of fundamental truths about Man, God, and the universe among the common people, as this would be both dangerous to attempt107 and anyway in practice impossible to accomplish.108
…

Hence, La Mettrie, like Voltaire who despised La Mettrie's atheism and materialism, no less than his immoralism, styling him 'ce fou de La Mettrie,'109 **but was in fact closer to La Mettrie's political stance than to the social and political theories of the other materialists,**110 grounded not equality but a new and fundamental kind of inequality. This then, in turn, posed a vexing problem for Diderot, challenging him and his allies to show how their materialism could support the kind of values, and the species of politics, they hinted – and privately if not yet publicly announced – it could. **If Man's mind is biologically determined by his physical make-up what sense does it make to say that the best as well as wisest and most philosophical way is to seek individual happiness through a life based on virtue, especially since in La Mettrie's opinion men are naturally born malicious and bad rather than good?**111 To this question Diderot had to produce a cogent and practicable answer, embodying his principle that there is an organic condition of the body underlying all our states of mind and emotional turns. Our decisions and intellectual processes, he agreed with La Mettrie, are determines by our bodily states, thought deriving from perception and perception arising, by stages, from sensation and sensation ultimately being nothing but 'un toucher diversifié.'112 **But there nonetheless remains, for Diderot, a crucial difference between order and disorder in our states of mind where, for La Mettrie, the deranged individual is as much the product of a blind nature shaping humanity as the happy, tranquil individual.**113 More mechanistic than Diderot's conception, La Mettrie's materialism places less emphasis on the idea of Man and animals as dynamic organic wholes producing harmonies and disharmonies in terms of their own make-up and conduct.114

Here again, Diderot is *Spinosiste*; Le Mettrie is not. Diderot in effect counters La Mettrie by distinguishing between health and sickness, the balanced life and the unbalanced. **The mind of the wise man who loves virtue and the good of all is not something extraneously introduced into human life by an external agent or force, is not a repressive imposition, and is not a metaphysical ideal,** but rather the considered, logical stance of the balanced healthy mind combining intelligence, intuition, and understanding **with properly considered self-interest.**115 Passions, says Diderot, echoing Spinoza, are internal movements. If everyone's state of mind is a constant flux yielding a mêlée of good and bad passions, the good and the bad passions, for Diderot, cannot be straightforwardly equated with those that conduce to more or less tranquillity or feelings of pleasure. **Vital for survival, effectiveness, tranquillity and health is to curb and control emotions that are damaging and disrupt the proper continuities and harmony of the individual's existence,** bearing in mind that everyone depends for his or her security and well-being on their relations with those around him, and society more generally.

If La Mettrie's challenge rests on reasoning derived from the world of medical experience and theory, Diderot's answer relies on a medical analogy, the ideal of the man or woman living well and in health, attuned to the world, to his or her fellows, and him- or herself. **If La Mettrie's nature is driven by a blind necessity producing disorder, mistakes, and cruelty, no less than harmony, Diderot's blind nature is more of a coherent whole, a single substance in a more meaningful sense than La Mettrie's, one in which the overarching coherence of the whole gives its oneness a pervasive significance whch extends also to the realms of ethics and politics.** Diderot no less than Spinoza or La Mettrie banishes all teleology from our world-view. Everything in nature is a product of a blind and unintelligent creative force; **nevertheless, there remains a physico-moral quasi-teleology in which the freak, misfit, despot, and deranged violate and detract from the whole and are not what nature intended.**

The organic coherence of the cosmos is what makes the 'general good' conceivable and politics a proper sphere of action for the *philosophe*. **It was La Mettrie's theory of the biological inequality of men, and ineligibility of most for a rational life free from credulity and prejudice, that served to justify limiting the application of philosophy to the purely private and intellectual, underpinning his thesis that neither politics, nor social organization, nor morality can be guided by the *philosophes*, or even be their proper concern.** Here, as in his rejection of a secular morality based on equality, and endorsement of Frederick's despotism and arbitrary power, La Mettrie's physiological materialism reveals itself to be rather a tool of social hierarchy and political absolutism, and (according to d'Argens) even of the theologians, than a ground for general enlightenment, democratic republicanism, and equality; and this was all the more so in that for him, **the few capable of understanding, and of being emancipated, are not a social or political hierarchy but ultimately a biological elite – those whose physiology and brains happen to be best organized for grasping the workings of nature. To be fully themselves such 'enlightened' men must therefore withdraw from the rest of society.**
…

Thus both the radical wing and the moderate mainstream agreed that La Mettrie's philosophical amoralism, **his principle that happiness, like voluptuousness, is available to everyone equally, 'des bons comme des méchants,' leaving the virtuous no happier than the immoral, a doctrine forcefully restated shortly before his death in his *Anti-Sénèque*,** not only justified but positively required the *philosophes* to disown both the man and his books.121 In the 1760s, d'Argens, having long since renounced his former collaboration with La Mettrie, spoke for all the *philosophes* in accounting

him a kind of Trojan Horse,122 someone who was not in any meaningful way one of them, **insisting that all true *philosophes* were both horrified and astonished that anyone 'aussi pernicieux à la société' should pretend to 'le nom de philosophe' and cast an eternal shame on 'la philosophie.'**123

https://books.google.fi/books?id=Mau9wgEACAAJ&lpg=PP1&hl=fi&pg=PA89#v=onepage&q&f=false

[La Mettrie's] Epicurean outlook exuded a static quality, offering no prospect or project of reform promising to ameliorate the world or make it a more hopeful place than it was in his day for most. Rather, La Mettrie's writings reflect Epicurean aversion to active involvement in the public sphere, recommending those adhering to his recipe for individual happiness to avoid accepting public offices and functions as far as possible. **While striving to influence those who rule, he had no wish for a broader impact via the press.**56 **He broke with Epicurean tradition only in one respect – his impatience with ruses and stratagems to conceal one's philosophical as distinct from political views.** He was un-Epicurean in urging fellow *philosophes* to revolt against the prevailing system philosophically, urging true *philosophes* to be free in their actions a well as their writings: **"monstrons y la fière indépendance d'un républicain" [let's show there the fierce independence of a republican].**57 **But this was his sole genuinely "republican" propensity.**

>
> And what is it to you, how the rest shall think about these things, whether right or wrong? For what have we to do with you? You take care of sheep because they supply us with wool and milk, and last of all with their flesh. Would it not be a desirable thing if men could be lulled and enchanted by the Stoics, and sleep and present themselves to you and to those like you to be shorn and milked? **For this you ought to say to your brother Epicureans: but ought you not to conceal it from others, and particularly before every thing to persuade them, that we are by nature adapted for fellowship, that temperance is a good thing; in order that all things may be secured for you?**[4] Or ought we to maintain this fellowship with some and not with others? With whom then ought we to maintain it? With such as on their part also maintain it, or with such as violate this fellowship? And who violate it more than you who establish such doctrines?

The French philosophers chose John Locke as their master.70 This was the savior they needed. ***The Essay on Human Understanding* became their gospel; they swore by it. John Locke was schooled on Descartes and learned everything that an Englishman could learn from him:** mechanics, the art of analysis, combination, construction, calculation. There was only one thing he was unable to grasp: innate ideas. He thus perfected the doctrine that we attain all our knowledge from outside, through experience. He made the human mind into a kind of calculating device, and the whole human being became an English machine. **This is also true of the human being as constructed by the students of Locke, although they attempt to distinguish themselves from each other by using different names for their points of view. They are all afraid of the final consequences of their first principle, and the follower of Condillac is terrified of being put in the same class as Helvetius, or, even worse, Holbach, or, worst of all, La Mettrie.**71 And yet, it has to be done, and I thus may lump all of the French philosophers of the eighteenth century together, their contemporary followers included, as materialists. ***L'homme machine* is the most ruthlessly consistent book of French philosophy,** and the title is already the last word on its entire view of the world. …

Materialism accomplished its mission in France. It is perhaps now achieving the same results in England, and the revolutionary parties there, namely the Benthamists, the preachers of utility, base themselves on Locke.73 These are mighty spirits who have seized the proper lever to set John Bull into motion.74

https://books.google.fi/books?id=uSEIrw6QryoC&lpg=PP1&hl=fi&pg=PA181#v=onepage&q&f=false

Not until the nineteenth century did liberals develop a conception of individual rights broad enough and consistent enough to constitute a clear rejection of classical republicanism. Even British Whigs had emphasized "the rights of the people" against the monarch, rather than individual rights against the majority. Having inherited this outlook, American Revolutionaries believed that the people possessed the right to speak against the king, but denied that individuals had the right to slander the representatives of the people, as the Tories soon discovered. **Even the Bill of Rights, which Antifederalists sought in order to limit the powers of the Federal government, was as much a states'-rights document as a protector of individual rights.** Modern individualism developed very slowly.16

To have highlighted the distinction between the ancient and the modern philosophers – between the modern theory of natural rights and the classical doctrine of natural law from which it derived – **would not only have threatened**

unity during the Revolutionary era, since some patriots adhered more closely to one doctrine than to the other, but would also have forced the founders to confront contradictions in their own beliefs. **In the early days of the republic the founders' attraction to liberalism grew. But they neither relinquished their attachment to classical republicanism nor noted the logical problems posed by their attempt to live in both intellectual worlds simultaneously.**

He is the zealot of a sect. We are searchers after truth. He wishes to have the question settled. We wish to have it sifted first. **The querulous manner in which we have been blamed for attacking Mr. Mill's system, and propounding no system of our own, reminds us of the horror with which that shallow dogmatist, Epicurus, the worst parts of whose nonsense the Utilitarians have attempted to revive, shrank from the keen and searching scepticism of the second Academy.**

https://www.laits.utexas.edu/poltheory/mill/auto/auto.c02.html

My father, educated in the creed of Scotch presbyterianism, had by his own studies and reflections been early led to reject not only the belief in revelation, but the foundations of what is commonly called Natural Religion.
...

The Sabaean, or Manichaean theory of a Good and Evil Principle, struggling against each other for the government of the universe, he would not have equally condemned; and I have heard him express surprise, that no one revived it in our time. He would have regarded it as a mere hypothesis; but he would have ascribed to it no depraving influence. As it was, his aversion to religion, in the sense usually attached to the term, was of the same kind with that of Lucretius: he regarded it with the feelings due not to a mere mental delusion, but to a great moral evil. He looked upon it as the greatest enemy of morality: first, by setting up factitious excellencies,---belief in creeds, devotional feelings, and ceremonies, not connected with the good of human kind,---and causing these to be accepted as substitutes for genuine virtues: but above all, by radically vitiating the standard of morals; making it consist in doing the will of a being, on whom it lavishes indeed all the phrases of adulation, but whom in sober truth it depicts as eminently hateful. **I have a hundred times heard him say, that all ages and nations have represented their gods as wicked, in a constantly increasing progression, that mankind have gone on adding trait after trait till they reached the most perfect conception of wickedness which the human mind can devise, and have called this God, and prostrated themselves before it.** This *ne plus ultra* of wickedness he considered to be embodied in what is commonly presented to mankind as the creed of Christianity.
...

I am thus one of the very few examples, in this country, of one who has, not thrown off religious belief, but never had it: I grew up in a negative state with regard to it. **I looked upon the modern exactly as I did upon the ancient religion, as something which in no way concerned me.** It did not seem to me more strange that English people should believe what I did not, than that the men I read of in Herodotus should have done so.
...

My father's moral convictions, wholly dissevered from religion, were very much of the character of those of the Greek Philosophers; and were delivered with the force and decision which characterized all that came from him. Even at the very early age at which I read with him the Memorabilia of Xenophon, I imbibed from that work and from his comments a deep respect for the character of Socrates; who stood in my mind as a model of ideal excellence: and I well remember how my father at that time impressed upon me the lesson of the "Choice of Hercules."
...

In his views of life he partook of the character of the Stoic, the Epicurean, and the Cynic, not in the modern but the ancient sense of the word. In his personal qualities the Stoic predominated. His standard of morals was Epicurean, inasmuch as it was utilitarian, taking as the exclusive test of right and wrong, the tendency of actions to produce pleasure or pain. **But he had (and this was the Cynic element) scarcely any belief in pleasure;** at least in his later years, of which alone, on this point, I can speak confidently. **He was not insensible to pleasures; but he deemed very few of them worth the price which, at least in the present state of society, must be paid for them.**

https://www.marxists.org/reference/archive/mill-john-stuart/1863/utility/ch02.htm

To suppose that life has (as they express it) no higher end than pleasure – no better and nobler object of desire and pursuit – they designate as utterly mean and grovelling; as a doctrine worthy only of swine, to

whom the followers of Epicurus were, at a very early period, contemptuously likened; and modern holders of the doctrine are occasionally made the subject of equally polite comparisons by its German, French, and English assailants.

When thus attacked, the Epicureans have always answered, that it is not they, but their accusers, who represent human nature in a degrading light; since the accusation supposes human beings to be capable of no pleasures except those of which swine are capable. If this supposition were true, the charge could not be gainsaid, but would then be no longer an imputation; for if the sources of pleasure were precisely the same to human beings and to swine, the rule of life which is good enough for the one would be good enough for the other. The comparison of the Epicurean life to that of beasts is felt as degrading, precisely because a beast's pleasures do not satisfy a human being's conceptions of happiness. Human beings have faculties more elevated than the animal appetites, and when once made conscious of them, do not regard anything as happiness which does not include their gratification. **I do not, indeed, consider the Epicureans to have been by any means faultless in drawing out their scheme of consequences from the utilitarian principle. To do this in any sufficient manner, many Stoic, as well as Christian elements require to be included.** But there is no known Epicurean theory of life which does not assign to the pleasures of the intellect, of the feelings and imagination, and of the moral sentiments, a much higher value as pleasures than to those of mere sensation.

https://archive.org/details/theistsatheistst0000moln/page/70/mode/2up?view=theater

> **Thus Epicurean morality was never considered very high as a completed ethical system, and had to be supplemented from the arsenal of Stoicism in order to suggest that 'enjoyment' was, after all, an enjoyment of higher things, like friendship, tolerance, and serenity. This thesis is hard to sustain because for the Lucretians there can be no higher or lower attitude, only pragmatically adopted conventions as for the skeptics too, or a resigned acceptance of conventions as for the Stoics.** The neo-Lucretian Clément Rosset praises the atomism of Hobbes for rejecting nature whether in physics or in human products. Hobbes's Leviathan is precisely the product of a convention, a drastic substitute for an impossible morality. **The Epicurean is thus driven to subscribe to the Stoic or skeptic morality, and to find ethical behavior in what Professor Feibleman calls a 'flexibility of belief':** a balancing of attachment with non-attachment, practising active non-interference, maintaining half-beliefs, exercising standpointlessness, and reasoning from an unknown god.

https://books.google.fi/books?id=Zymp_kM33ZcC&lpg=PP1&hl=fi&pg=PA61#v=onepage&q&f=false

Commerce posed a similar threat to public-spiritedness. By accustoming its practitioners to dickering and haggling, it endangered a mean-spirited and selfish individualism inconsistent with the wholehearted commitment to the common good which the *pólis*, as a brotherhood of warriors, demanded.
...

Commercial societies, despite the veneer of bourgeois propriety which they display, are predicated on an emancipation of greed. Over time, they tend to substitute contractual relations – what Thomas Carlyle called "the cash nexus" – for every human tie.132 Of course, acquisitiveness does generate a utilitarian morality all its own.
...

The habit of honesty, and the expectation that it will be reciprocated, link the merchant with his suppliers and with his customers: he assumes that they will abide by their contracts and pay their bills, but he does so only because it is in their interest to sustain their own credit and because he can ultimately depend on their dread of punishment as a guarantee. He does not look for generosity from his fellows, and in the course of hammering out deals, he rarely encounters it. **Except (if he is fortunate) within the bosom of his immediate family, his is a life governed by self-interest, by caution, and by distrust. The businessman's anxious hunger for money and his sense of propriety mask a more fundamental and less respectable passion – the love of mere life.** As one Greek writer of the late fifth century has occasion to note, most men hold possessions and money dear (*philochrēmatoúsin*) because of the things that cast them into fright: things like disease, old age, and the losses caused by fire; things like the deaths of animals and of members of the household – as well as other misfortunes.134 **If the tradesman craves lucre and supports law and order, it is only because he senses that both are a hedge against death. As Madison acknowledged, the foundation of liberal theory and practice is "the great principle of self-preservation."**135
...

To grasp Aristotle's point, we must keep in mind that it is camaraderie which links the citizen-soldier with his fellows. **When he is in danger, he expects them to risk their lives to come to his aid, and he knows that the greatest obstacle to their support is that very fear of violent death which sustains the minimal decency at home in the autonomous marketplace of the liberal polity.**

https://www.marxists.org/archive/marx/works/1848/communist-manifesto/ch01.htm#007

The bourgeoisie, wherever it has got the upper hand, has put an end to all feudal, patriarchal, idyllic relations. **It has pitilessly torn asunder the motley feudal ties that bound man to his "natural superiors", and has left remaining no other nexus between man and man than naked self-interest, than callous "cash payment".** It has drowned the most heavenly ecstasies of religious fervour, of chivalrous enthusiasm, of philistine sentimentalism, in the icy water of egotistical calculation. It has resolved personal worth into exchange value, and in place of the numberless indefeasible chartered freedoms, has set up that single, unconscionable freedom – Free Trade. In one word, **for exploitation, veiled by religious and political illusions, it has substituted naked, shameless, direct, brutal exploitation.**

https://archive.org/details/moraldarwinismho0000wike/page/40/mode/2up?view=theater

The assertion of atomic simplicity was actually a purposeful destruction of the "lure" of believing that "apparent" complexity has a divine source. As Epicurus realized, wonder (the kind of wonder that borders on religious awe) springs naturally from the realization that the thing before us is so complex and well ordered that it must be part of a divine conspiracy of order. **To counter this natural awe – indeed, to redefine it as *un*natural – Epicurus posited the eternal, simple atom to numb such wonder at its very root.**

http://www.quebecoislibre.org/05/050415-14.htm

On page 147 of *Human Action*, Ludwig von Mises writes:

> The historical role of the theory of the division of labor as elaborated by British political economy from Hume to Ricardo consisted in the complete demolition of all metaphysical doctrines concerning the origin and the operation of social cooperation. **It consummated the spiritual, moral and intellectual emancipation of mankind inaugurated by the philosophy of Epicureanism.**

...

And although a lot of attention has been devoted to the influence of Aristotle, Aquinas, the Scholastics, the French liberals and others on Austrian ideas, as far as I know, nobody has ever paid attention to Epicurus.
...

To me, Epicureanism is the closest thing to a libertarian philosophy that you can find in Antiquity. Plato, Aristotle, the Stoics, were all statists to various degrees, glorified political involvement, and devised political programs for their audiences of rich and well-connected aristocrats. Epicurus focused on the individual search for happiness, counselled not to get involved in politics because of the personal trouble it brings, and thought that politics was irrelevant. His school included women and slaves. **He had no political program to offer and one can find no concept of collective virtues or order or justice in his teachings.** On the contrary, the search for happiness implied that individuals should be as free as possible to plan their lives.
...

The section of *Human Action* in which you find the quote I read at the beginning is called, "A Critique of the Holistic and Metaphysical View of Society." In it, Mises denounces all the nonrationalist, nonutilitarian and nonliberal social doctrines which, he says, "must beget wars and civil wars until one of the adversaries is annihilated or subdued."

As most of you probably know, Mises included natural law traditions in these non-scientific doctrines, a crucial point over which Rothbard and many of his followers who are here present disagreed with him. He embraced a utilitarian view instead, for which "Law and legality, the moral code and social institutions are no longer revered as unfathomable decrees of Heaven. They are of human origin, and the only yardstick that must be applied to them is that of expediency with regard to human welfare."
...

Reading the first pages of *Human Action* is like reading an Epicurean treatise. Mises explains in the section "The Prerequisites of Human Action" that "We call contentment or satisfaction that state of a human being which does not and cannot result in any action. [...] The incentive that impels a man to act is always some uneasiness. A man perfectly content with the state of his affairs would have no incentive to change things." He adds a reference here to John Locke who, in his *Essay Concerning Human Understanding*, uses the same type of language. Two pages on, Mises mentions Epicurean ataraxia and again defends Epicurus against the attacks of **"The theological, mystical and other schools of a heteronomous ethic" which, he writes, "did not shake the core of Epicureanism because they could not raise any other objection than its neglect of the 'higher' and 'nobler' pleasures."**

http://darwinianconservatism.blogspot.com/2012/01/lucretian-liberalism-ancient-modern.html

That Epicurean philosophy supports modern classical liberalism is also suggested by Leo Strauss. **In his book *Liberalism: Ancient & Modern*, the central chapter and the longest chapter is his "Notes on Lucretius," thus implying that the Epicureanism of Lucretius anticipates modern liberalism.** Strauss was famous for stressing the "quarrel between the ancients and the moderns." But in the Preface of this book, Strauss noted the modernity of ancient Epicureanism:

> The most extensive discussion is devoted to Lucretius' poem. **In that poem, not to say in Epicureanism generally, premodern thought seems to come closer to modern thought than anywhere else. No premodern writer seems to have been as deeply moved as Lucretius was by the thought that nothing lovable is eternal or sempiternal or deathless, or that the eternal is not lovable.** Apart from this, it may suffice here to refer to Kant's presentation of Epicureanism as identical with the spirit of modern natural science prior to the subjection of that science to the critique of pure reason. (viii)

…

And yet, Strauss worries about the sadness of this Epicurean teaching--that the world that we love is not eternal, because every world is mortal within the eternal universe of atoms in motion. He identifies this as "the most terrible truth" (85, 100, 135).

…

Here is where Strauss and the Straussians depart from Lucretian Epicurean science. Following the Nietzsche of his early and late writings, they look to a new religion--perhaps even an atheistic religiosity--that will hide the "deadly truth" of modern science, and especially Darwinian science. **They thus reject the Epicurean and Darwinian liberalism of Nietzsche's middle writings--*Human, All Too Human* and *Dawn.*** Strauss implied this in his essay on *Beyond Good and Evil* by emphasizing the importance of Nietzsche's affirmation of "the eternal basic text of *Homo natura*": **Strauss and Nietzsche long for eternity rather than evolution.**

---

https://plato.stanford.edu/entries/nietzsche-moral-political/#CritNormCompMPS

An early remark of Nietzsche's suggests his answer:

> **Are we not, with this tremendous objective of obliterating all the sharp edges of life, well on the way to turning mankind into *sand*? Sand! Small, soft, round, unending sand!** Is that your ideal, you heralds of the sympathetic affections? (D 174)

In a later work, Nietzsche says – referring to hedonists and utilitarians—that, **"Well-being as you understand it—that is no goal, that seems to us an *end*, a state that soon makes man ridiculous and contemptible…"** (BGE 225).

> https://archive.org/details/10booksthatscrew0000wike/page/72/mode/2up?view=theater
>
> **THERE ARE MORE WAYS TO DESTROY THE HUMAN RACE THAN reducing it to a pile of smoldering corpses, and John Stuart Mill championed one of the most drab, utilitarianism.** Even so sympathetic a scholar of Mill as Max Lerner felt compelled to say of *Utilitarianism* that Mill's "little book … leaves a trace of dust in the mouth."1 For the unsympathetic, *Utilitarianism* leaves considerably more than a trace, perhaps enough to fill one's shoes and socks as well. Yet no one can gainsay the enormous influence that Mill's "little book" has had.
>
> Perhaps something should be said of Mill's life so we can get an idea about where some of the dust came from. **Mill's father, James, was a social reformer in the very worst sense, a man who, having been liberated from the "irrationalities" of faith, believed with immoderate intensity that the entire destiny and happiness of humanity rested upon his own efforts.** A very dangerous man indeed.
> …
>
> Mill, however, was too short-sighted to see it. He could not envision, for example, the most likely outcome of utilitarianism: that it would lead to a society addicted to ever more intense, barbaric, and self-destructive pleasures, **and that its members would be gibbering cowards in the face of even the smallest pains.** Nor does he imagine that there might exist souls in a utilitarian society who long for something greater, something more noble, something truly more god-like than spending their days maximizing the physical pleasures of the multitude. Such a soul would soon boil over in contempt and vicious rebellion.

https://archive.org/details/scientificorigin0000gasm/page/82/mode/2up?view=theater

In place of individual and natural rights and the competition and movement of free and equal individuals, Haeckel stressed the importance of the bonds of community and the mutual obligation of every individual to society.5

> 5. **Haeckel never really explained how it was theoretically possible for a [human] society to exist, based on mutual harmony and cooperation, if at the same time the basic law of life was the struggle for existence. The two ideas are obviously in contradiction. When it suited him, Haeckel referred to the universality of struggle and on the other hand, when it was**

> **convenient he spoke of the need for national harmony and unity.** At no time did he give any indication that he was aware of a discrepancy in his thinking. In reality, what Haeckel desired was the harmonious cooperation of those individuals within the state, whose survival had already been determined by eugenic selection. **All remaining antagonisms would have to be directed outward, away from Germany,** thus providing a theoretical justification for imperialism. When stressing national unity the struggle for existence could be accounted for solely as a conflict between nations leaving the individual free to subordinate himself to the national state.

...

'**The biologic (sic!) relation of the cells to the tissues and organs' of lower organisms is the** '**same as that which exists among the higher animals between the individuals and the community of which they are component parts.** Each cell, though autonomous, is subordinated to the body as a whole; in the same way in the societies of bees, ants, and termites, in the vertebrate herds and the human state, each individual is subordinate to the social body of which he is a member.'7

> "***Growth for the sake of growth is the ideology of the cancer cell.***"—Edward Abbey

...

To a large extent the tone of the argument was set by the Vice-President of the Monist League, Dr. Johannes Unold, **[1860-1935]** who, in a number of books and in the pages of the journals of the League, warned that all of the 'democratic illusions'9 of the past had to be dispelled. **'In place,' he wrote, 'of the natural right fiction of free and equal individuals,' one had to recognize the 'true nature of man.'**10 Men were not only social animals but 'predatory' ones as well and within society there was to be found a 'natural inequality of differently talented personalities.'11 Monism, therefore, could not allow itself to be 'deluded' by the 'phrases and illusions'12 of liberalism. The 'sharp sense of reality'13 which Monism possessed revealed the limitations of liberal democracy. 'Brutal reality has awakened us from the pretty dreams of good, free, equal, and happy people.'14 Rightly considered, **reality demonstrates that 'unlimited freedom leads to ... a lack of regard for the minority and the progressive deterioration of the majority.'**15

This sweeping criticism of democracy and liberalism was not confined to the writings of Dr. Unold. Professor Heinrich Ziegler, for example, a co-founder of the Monist League, and for a time a colleague of Haeckel, also considered liberalism, equality, and democracy harmful philosophies of political organization. 'Many sociologists,' Ziegler wrote, 'proceed from the idea that men are equal by nature. But day to day experience shows that the doctrine of the equality of men is not correct.'16 **The idea of human equality was an erroneous theory of the Enlightenment philosophers** and unfortunately, Ziegler lamented, 'this false theory is still in operation in our own time.'17

...

For Haeckelian Monism, democracy had to fail because of the basic irresponsibility of the masses, who, it was insisted, are more conscious of their physical needs than of higher and more desirable spiritual matters.27 **The masses are lazy and are 'always finding' their 'greatest happiness in the least amount of work and in the most amount of enjoyment.'**28 They are incapable of independent and responsible political judgment and generally 'listen more readily to promises and flattery than to proposals **which demand difficult performance of duty, self-discipline, renunciation of present pleasures in favor of the future,** and respect for others and for the whole [of society].'29

...

The masses 'think only of their personal advantage and not of the far-off future and so there would always be the danger that in the pursuit of their closest interests – real or imagined – they would neglect to consider the good of the state.'31

...

The Monists, therefore, under the guidance of Haeckel, sought to awaken the Germans to the demands of biology and to the danger of physical decline. **The arguments which they advanced in support of their objectives in this matter were strongly conservative and frequently puritanical to the point of ludicrousness. The Vice-President of the Monist League, Dr. Unold, warned, for example, in a series of feverishly written tracts that 'many talented civilizations have faltered by degeneration through the pursuit of pleasure.'**57 And almost every Monist author warned of the dangers of alcohol and of illicit sexual relations.58 Consumption of alcohol, they averred, over and over again, had to be prohibited, and sexual activity and behavior very severely controlled. **'Of what help to a people,' Dr. Unold cried out, 'are all economic, technical accomplishments and progress when its members, in exorbitant egotistical intoxication with life and enjoyment lose interest in the future of their own nation and sentence themselves to die out and bring about racial suicide by underplaying physical fitness.' The pursuit of pleasure, that is, the consumption of alcohol and involvement in illicit sexual relations, weakens the 'force of life in the coming generation and renders it increasingly unfit in the struggle for existence.'**59 And in the same way in which he criticized liberalism for political disruptiveness, so too did Dr. Unold hold it responsible for

the threatening biological decay of Germany. He equated liberalism with ‘libertinism’ and strongly objected to a philosophy which taught that ‘that which pleases is permissible.’ **Dr. Unold singled out August Bebel, the Social Democratic leader, for especially harsh criticism because of his alleged opinion that sexual conduct should be left to the free choice of the individual.** Unold was alarmed that Bebel did not seem to be ‘aware’ of the fact that the ‘survival of nations and of humanity itself was dependent upon the regulation of sexual needs’ and that he did not understand that ‘uncontrolled freedom and desire will lead to impotence and death.’ Dr. Unold even found that pornography was the fruit of liberal civilization. **He thus self-righteously proclaimed that ‘a person who takes a stand against sexually stimulating and scandalous literature which poisons the [minds] of young people through the frivolous use of art, is also setting himself against the liberal principles.’**60
...

To be sure, one of the principal planks in the platform of the Monist League called for the emancipation of women, but this was increasingly understood by the right-wing leadership of the League in a novel way.
...

If a woman, they complained, is ‘free to disregard the marriage obligations of reproduction there did exist the possibility that she would desire to have no children at all or only one or two.’ The full emancipation of women, therefore, based upon exact equality of the sexes, could lead to ‘racial death.’91
...

And despite all the talk about emancipation, these Monists went even so far as to maintain that there had to be a return to the ‘old-fashioned’ point of view which held that the highest obligation of the woman was to her family and that no social or professional obligation could be given priority over family life.92 In the evolutionary state, it was prophesied, motherhood would be honored and glorified. **Birth control would be prohibited.**

https://carolynyeager.net/himmlers-speech-ss-leaders-homosexuality

The attitude about the inferiority of women is a typical Christian attitude, and we also who have been national socialists up to this day – many even who are strict heathens – have unwittingly adopted this set of ideas.

Der Mensch läßt sich nicht in Retorten hersteilen. Vor das Geheimnis von der Entstehung des Lebens hat Gott einen Schleier gebreitet, den Menschenhand niemals hinwegziehen wird, mag der Mensch auch die Lebensvorgänge selber bis in alle Einzelheiten erforschen. Diese Verwehrung in die letzte Erkenntnis vom Ursprung des Lebens selbst ist ein Grundgesetz des menschlichen Lebens schlechthin und ein Teil der Ordnung des Daseins, wie sie Gott in diese Welt gesetzt hat.

Es gibt heute viele Menschen, die solche Fragen über Wert und Verlust blutswertlicher Erbanlagen nicht bis zum Ende durchdenken wollen. Sie sagen: **Wir erfinden doch so viel, es geht doch auf allen Gebieten so herrlich vorwärts, warum soll es da nicht auch einmal einem Genie gelingen, im chemischen Laboratorium „Erbanlagen“ zu erfinden, wie man ja auch Flugzeugen und Eisenbahnen, Telephon und Radioapparate erfunden hat!** Wer solches fragt, vergißt, daß wir unendlich viel erfinden können, was die *stofflichen* Güter dieser Welt anbetrifft, aber das Geheimnis des Lebens zu entdecken, ist uns verwehrt. Unsere Sprache sagt uns übrigens auch, daß wir nur „entdecken“ oder „erfinden“, was irgendwie schon vorher da war, denn einmal „decken wir es auf ‘ und das andere Mal „finden wir es“; es ist also schon da, uns bisher nur noch nicht bekannt und wird von uns nicht erst geschaffen. Unsere großen Naturwissenschaftler, unsere Physiker und Chemiker wissen das auch ganz genau. **Hier sind uns Grenzen gezogen, die wir Menschen nicht zu überschreiten vermögen.**

Das ist eine Tatsache, mit der wir uns eben abfinden müssen. Wir mögen uns noch so sehr an allen Erfindungen begeistern und uns am technischen Fortschritt der Zeit berauschen. **In den Fragen des Blutes, soweit wir menschliche Erbeigenschaften darunter verstehen, hört aller Fortschrittstaumel auf.** In den Fragen des Blutes gilt nur das Gegebene, das uns von Gott zu treuen Händen überantwortete Erbgut unserer Vorfahren.

Der einzige und wahre Reichtum unseres Volkes ist sein gutes Blut. **Die stofflichen Güter dieser Welt können wir als Volk und als Einzelne verlieren;** das ist nicht weiter schlimm, solange noch das alte deutsche Blut vorhanden ist, weil dieses sie jederzeit wiedererschaffen kann.

https://archive.org/details/winningofwest04roos/page/24/mode/2up?view=theater

Even a strong race, in its prime, and given the task at the right moment, usually fails to perform it; for at the moment the immense importance of the opportunity is hardly ever understood, **while the selfish interests of the individual and the generation are opposed to the interest of the race as a whole.** Only the most far-seeing and high-minded statesmen can grasp the real weight, from the race-standpoint, of the possibilities which to the men of their day seem so trivial. The conquest and settlement rarely take place save under seldom-occurring conditions which happen to bring about identity of interest between the individual and the race.
...

Few indeed are the men who can look a score of years into the future, and fewer still those who will make great sacrifices for the real, not the fancied, good of their children's children; **but in questions of race supremacy the look-ahead should be for centuries rather than decades,** and the self-sacrifice of the individual must be for the good not of the next generation but perchance of the fourth or fifth in line of descent.
...

The British had no far-reaching design to prevent the spread and growth of the English-speaking people on the American continent. They cared nothing, one way or the other, for that spread and growth, **and it is unlikely that they wasted a moment's thought on the ultimate future of the race.** All that they desired was to preserve the very valuable fur-trade of the region round the Great Lakes for their own benefit.

> https://www.gutenberg.org/cache/epub/2612/pg2612-images.html#linknoteref-444
>
> The English sickened and died by hundreds. Even those who were not smitten by the pestilence were unnerved and dejected, **and, instead of putting forth the energy which is the heritage of our race, awaited their fate with the helpless apathy of Asiatics.** It was in vain that Schomberg tried to teach them to improve their habitations, and to cover the wet earth on which they lay with a thick carpet of fern. **Exertion had become more dreadful to them than death.** It was not to be expected that men who would not help themselves should help each other.

http://www.thephora.net/forum/forum/the-academy/religion-and-mythology/26747-how-and-why-liberal-christianity-promotes-open-borders-and-one-worldism?p=830577#post830577

But then again, since I only get this one go-round at consciousness before the hungry spark I call my “self” drops like a match into a toilet, **why should I trouble myself with the dreary business of reproduction? My DNA may be selfish, but so am “I.”** If it’s so bloody determined to replicate itself, it had better rejigger my neurons to offer me a better set of hedonic rewards for taking the effort to do its bidding. So far, no sale.
...

I’ve even read that my dinner companion treasures an interest in the mating habits, hierarchical behavior, and grooming preferences of one particular sub-group of the human species—the Caucasoids. It seems that “Derbyshire” shares a tiny bit more DNA in common with this mating pool, and prefers the way they organize their troop. **So he spends part of his dwindling time beneath the sun consumed with fear that this subspecies might dwindle in size, perhaps even lose their dominance over food sources and habitat to different, more aggressive subspecies with higher birthrates.** Well, each man to his hobby.

Perhaps if I’d fed my reptilian brain its rat, and fathered brats, I’d give in to instinctual worry about their fate. I’d fear that they would find uncongenial the new troop organization imposed by the alien subspecies, and I’d spend my precious resources trying to smooth their way in the world. **Except that then I’d remember I’ll soon enough be dead, and never find out what happened to these self-serving half-copies of me.** Let them negotiate their own dominance patterns with the faster-breeding primates, and survive if they are fit.

http://www.racerealist.com/yockey_2.htm

It is but natural that the economically more astute individuals accumulate most of the mobile wealth into their hands. **They do not however, if they are true Liberals, want authority with this wealth,** for authority has two aspects: power, and responsibility.

> https://www.gutenberg.org/cache/epub/2853/pg2853-images.html#link2HCH0048

> Petronius had the following on his lips: “Make me pretorian prefect, I will deliver Tigellinus to the people, and pacify the city in a day.” **But his innate slothfulness prevailed.** To be prefect meant to bear on his shoulder’s Cæsar’s person and also thousands of public affairs. And why should he perform that labor?

http://elkorg-projects.blogspot.com/2005/12/savitri-devi-cyclic-view-of-history.html

> Modern man is more of a moral coward. He wants the advantages of violent intolerance – which is only natural – but he shuns the responsibility of it.

https://www.gutenberg.org/cache/epub/18267/pg18267-images.html#Page_176

167. All religions are, in the end, based upon certain physical assumptions, which are already in existence and adapt the religions to their needs: for example, in Christianity, the contrast between body and soul, the unlimited importance of the earth as the "world," the marvellous occurrences in nature. If once the opposite views gain the mastery—for instance, a strict law of nature, the helplessness and superfluousness of all gods, the strict conception of the soul as a bodily process—all is over. **But all Greek culture is based upon such views.**
...

Now all these bases, the mythical and the politico-social, have changed; our alleged culture has no stability, because it has been erected upon insecure conditions and opinions which are even now almost ready to collapse.—**When we thoroughly grasp Greek culture, then, we see that it is all over with it.** The philologist is thus a great sceptic in the present conditions of our culture and training: that is his mission.

https://en.wikisource.org/wiki/Page:The_Genealogy_of_Morals.djvu/109

The appearance of the Christian god, as the record god up to this time, has for that very reason brought equally into the world the record amount of guilt consciousness. Granted that we have gradually started on the *reverse* movement, there is no little probability in the deduction, based on the continuous decay in the belief in the Christian god, **to the effect that there also already exists a considerable decay in the human consciousness of owing (ought); in fact, we cannot shut our eyes to the prospect of the complete and eventual triumph of atheism freeing mankind from all this feeling of obligation to their origin, their *causa prima*.**

https://en.wikipedia.org/wiki/Yang_Zhu

The philosophies attributed to Yang Zhu, as presented in Liezi, clash with the primarily Daoist influence of the rest of the work. Of particular note is his recognition of self-preservation (*weiwo* □□), which has led him to be credited with "the discovery of the body".[4] In comparison with other Chinese philosophical giants, Yang Zhu has recently faded into relative obscurity, but his influence in his own time was so widespread that **Mencius (□□) described his philosophies along with the antithetical ideas of Mozi (□□) as "floods and wild animals that ravage the land".[5]**

According to Mencius, “Yang’s principle is, ‘Each for himself’ – which does not acknowledge the claims of the sovereign. Mo's principle is, ‘To love all equally’ – which does not acknowledge the peculiar affection due to a father. To acknowledge neither king nor father is to be in the state of the beast. If their principles are not stopped, and the principles of Confucius set forth, their perverse speaking will delude the people, and stop up the path of benevolence and righteousness”.[6]

https://www.pagebypagebooks.com/Gilbert_K_Chesterton/Orthodoxy/The_Eternal_Revolution_p6.html

> Darwinism can be used to back up two mad moralities, but it cannot be used to back up a single sane one. **The kinship and competition of all living creatures can be used as a reason for being insanely cruel or insanely sentimental;** but not for a healthy love of animals. On the evolutionary basis you may be inhumane, or you may be absurdly humane; but you cannot be human. **That you and a tiger are one may be a reason for being tender to a tiger. Or it may be a reason for being as cruel as the tiger.**

Yang Chu's Discovery of the Body on JSTOR

In his own time Yang Chu (fl. ca. 370-350 B.C.) was regarded as a revolutionary thinker. Mencius considered Yang’s doctrine to be one of the deadliest of the sophistries with which he was forced to contend: “The words of Yang Chu and Mo Ti fill the land.”1 According to A.C. Graham, “[Yang’s] intervention provoked a metaphysical crisis which threatened the basic assumptions of Confucianism and Mohism and set them in new courses.”2

Unfortunately, little solid information about Yang Chu remains; we know his thought only from a handful of anecdotes and quotations, all from hostile sources, together with a few later writings which thought to be derived from his. (This should probably come as no surprise: in ancient China, books were most often compiled

by state ministries of culture, **and Yang's antistate teaching was probably one of the main targets of the Ch'in dynasty burning of the books.**)
…

Aloysius Chang believes that the well-attested material about Yang consists of only four items:

1. "Each for himself" (*wei wo*).
2. "Preserve life, maintain the real, don't get entangled with things."
3. He would not sacrifice a hair from his leg in in order to profit the whole empire (or "in order to *gain* the whole empire" – a different interpretation of the Chinese).
4. He would not serve in the army, nor would he remain in a besieged city.3

…

During the Warring States period the relationship between the individual and the state was being redefined, simultaneously producing a new political order and a new sense of self. By providing a new physical definition of human nature, **Yang Chu freed the Chinese elite from the public ritual roles (and, to a lesser extent, from the clan identifications and traditional obligations to the spirits) that had up to that time dominated and defined them.** By treating public honors, court ceremonial, and feudal relationships as external conditions, he struck at the heart of the traditional ritual order defended by the Confucians. Simultaneously, **he made possible new, nonpublic, nonritual forms of individual self-awareness and self-cultivation that were sharply different from the Confucian and traditional forms.**

https://warpweftandway.com/teaching-yang-zhu/

For Yang Chu, this whole public world was external and null, more likely a hindrance than a help. He ignored all public identification and found value only in the private world. His rejection of the ritual world can be thought of in part as a response to the corruption of public life lamented by Confucius, but his goal was not to rectify the public rituals but to avoid them. **In this corrupted world, splendid ceremonials still dominated public life, but they had been stripped of their ethical content and ritual meaning and were merely entertainments–and risky ones at that.** Because of this loss of meaning and because of the risks (dismemberment and death) involved in the new order, Yang Chu's rejection of public life and dedication to self-cultivation, originally a bold minority position, became widely persuasive.
…

Even his supposed refusal to sacrifice a hair from his leg to benefit the empire can be seen to be a transformation of a legend about the altruistic cultural hero Yu, who labored so diligently for the public good that he wore all the hairs from his thighs. Our version of Yang's refusal comes from hostile sources, but with the help of variants of the Yu legend we can guess at the original Yangist story: in many versions of the legend of Yu, Yu not only wore the hairs from his legs but also made himself lame, and in all versions he went for several years without seeing his family. **The Yangist version of the story must have contrasted the good family man Yang Chu to the masochistic, inhuman altruist Yu (representing the Mohists.)**
…

Yang Chu's doctrine was solidly founded on Chinese traditions of family piety older than Confucius. Traditional Chinese religion was a religion of life, fertility, and nurture. Sacrifices were thought of as food returned to the spirits in gratitude for the fruits of the earth, and long life, health, and descendants were the blessings prayed for by the devout. (One of the *Odes* prays for "the fullness of life," *mi sheng*, in language that prefigures Yangism.) To the ancient Chinese, a man's body (or life) was not his own, but belonged to his parents and ancestors. It was his offering to them, and was impure if blemished or mutilated in any way. Since war, with all its perils, was always one of the main avenues to high position, and since mutilation was the customary punishment for failures even in civilian service, **there was an inescapable tension between a man's duty to his ancestors and his duty to the State.**

https://www.academia.edu/10513801/Yangzhus_Guiji_Yangsheng_and_Its_Modern_Relevance

Guocheng Jiao gives a detail examination on how Yangzhu challenged Mohist doctrines,

> Against Modi's idea of sacrificing oneself to die in order to offer an equal and universal love to others, Yangzhu insisted that one should treasure oneself; as opposed to Modi's idea of the promotion of selflessness with morality being the first principle, Yangzhu suggested that one should avoid to tie oneself up to any external burdens; **as opposed to Modi's appeal to ghosts for ensuring one's good performance in social and political services, Yangzhu enhanced the idea of getting rid of the fears of ghosts to ensure one's spirit is at peace and one's nature intact;** as opposed to Modi's challenge on fate by believing that such a challenge would lead to an artificial effort for an external conquering, Yangzhu enhanced a natural attitude toward life. (Guocheng Jiao 1989)5

More features of Yangzhu Yangsheng philosophy were revealed from Yangzhu's challenge to Confucianism. He was against Confucian benevolent moralism where sacrifice of one's personal interests

for the benefits of family and state were at the centre of personal moral cultivation, Yangzhu enhanced an idea of “guiji” in order to encourage everybody to take care of themselves. Yang believed that if only everybody focused merely on taking care of themselves rather than others, the whole world could be in peace:

> **Po-ch’eng-Tze-kao would not benefit others at the cost of one hair; he renounced his state and retired to plough the fields. The great Yü did not keep even his own body for his own benefit; he worked to drain the flood until one side of his body was paralysed. A man of ancient times, if he had benefited the Empire by the loss of one hair, could not [he] have given it; and if everything in the Empire had been offered to him alone, would not [he] have taken it. <u>When no one would lose a hair, and no one would benefit the Empire, the Empire was in good order.</u>** (Graham 1990)6

Against Confucian moral ideal of “qijia” (□□, *harmonizing the family*), “zhiguo” (□□, *managing/regulating the state*), and “pingtianxia” (□□□, *bringing peace to the world*), **Yangzhu suggested individual should pay full attention to treasure their own lives and not put their lives into potential dangers by neither entering a besieged city (buruweicheng, □□□□) nor holding service at the army (buchujunlü, □□□□).**7 He was opposed to the Confucian use of conventional values as a tool to pursue longevity, riches, fame, and honor. Yangzhu insisted that one should not allow oneself to be tied to material things (buyiwuleixing, □□□□□).8 Yangzhu questioned the value of fame and honor in comparison to life: “If anybody cares for one’s own blame or praise so much by torturing his spirit and body, **he will struggle for a name lasting some hundred years after his death. Can the halo of glory revive his dried bones, or give it back the joy of living**” (Anton Forke 2012)?9

…

It is clear that neither the Mohist “universal love” (*jian’ai*, □□) based on the principle of equality and reciprocation, nor Confucian “graded love” (*ren’ai*, □□) based on filial piety and benevolence, is akin to Yangzhu’s “guiji,” a “self love” based on the natural principle indorsed by heaven and earth. **Unlike Mohist “universal love” which takes social and state’s interests as priority, or Confucian “graded love” that takes family interests as priority, Yangzhu’s “self love” is intended to be related to one’s own physical pleasure and mental happiness to give self a supreme position that surpasses the interests of both the family and the state** by separating “ji” from family and state and giving oneself an independent position of priority. Yangzhu makes himself and his doctrine stand out from the mainstream of Chinese tradition.13

> 13. **As a culture that is derived from agriculture background, Chinese culture has a tradition of emphasis on family and society from far antiquity. <u>Confucius had made a great change by shifting human’s focus from one’s clan to one’s family and from filial piety to one’s dead clan ancestor to one’s living parents</u>** (Yanxia Zhao, *Father and Son in Confucianism and Christianity*, Sussex Academic Press, 2007, p. 21), **however, both himself and his followers never had intention to separate oneself from his family and society. It was Yangzhu who made self become an independent entity separated from both clan and society.**

The structure of Yangzhu’s “guiji” Yangsheng Philosophy is very clear: “ji” as an independent self entity distinguished from both family and society is right at the centre of Yangzhu’s nourishing life philosophy. This means, nourishing life is to adhere to one’s true self.

> Yen-Ping-Chung asked Kuan-Yi-Wu to cherish life. Kuan-Yi-Wu replied: “It suffices to give it its free course, neither checking nor obstructing it.” Yen-Ping-Chung said: “And as to details?” Kuan-Yi-Wu replied: **“Allow the ear to hear what it likes, the eye to see what it likes, the noses to smell what it likes, the mouth to say what it likes, the body to enjoy the comforts it likes to have, and the mind to do what it likes.”** (Anton Forke 2012)14

…

We can now conclude that “guiji” (*treasure oneself*) is not equal to “weiwo” (*for oneself*) at all.22 **When Mencius uses “weiwo” to replace “guiji” to mark Yangzhu’s doctrine, it is clear that he is deliberately putting a selfish cap onto the head of Yangzhu’s tradition.** From my viewpoint, Yangzhu’s “guiji” philosophy is not only a philosophy of “weiwo” (*for one’s own benefits*), but actually a philosophy of “feiwo” (□□, *deny self*) in terms of persuading individuals to give up their social profitable pursuits and encourage them to cut themselves off from all external attachments, including familial, social, and political profits, as well as one’s economical and moral interests. This idea has been inherited and developed by Zhuangzi in his story of “wusangwo” (□□□, *I abandon myself*), and the “wo” that Zhuangzi intended to depart from or throw away, according to Anxian Luo, is the socialized external self and the reason why one should abandon this secular and socialized “wo,” is for returning to one’s true internal self.23

…

Max Weber declares that the traditional Chinese lacks “inward care” and lived by a process of “adjustment to the outside,” so in such a society, “an individual’s place and ‘self’ are not defined by

nature but one’s social standing or relationships with others” (Max Weber 1964).69 **This statement is simply not true in the case of Yangzhu.**
…

Different from the traditional Cartesian concept of “self” as a thinking that is differentiated from the body,71 Yangzhu’s “ji” never “cut off from its relationship to the body” (Anthony Kenny 1988)72 but rather regarded physical life as an integrated part of “ji” that needs to be satisfied and taken care of.

https://www.sacred-texts.com/tao/ycgp/ycgp13.htm

"All these four sages, while alive, had not one day's pleasure, and after their death a reputation lasting many years.

"Yet reputation cannot bring back reality.

"**You praise them and they do not know it, and you honour them and they are not aware of it. There is now no distinction between them and a clod of earth.**
…

"**These two villains while alive took delight in following their own inclination and desires, and after death were called fools and tyrants. Yet reality is nothing that can be given by reputation.**

"Ignorant of censure and unconscious of praise, they differed in no respect from the stump of a tree or a clod of earth.

"The four sages, though objects of admiration, were troubled up to their very end, and were equally and alike doomed to die.

"The two villains, though detested and hated by many, remained in high spirits up to the very end, and they too were equally doomed to die."

https://www.sacred-texts.com/tao/ycgp/ycgp17.htm

YANG CHU said:

"There are four things which do not allow people to rest:

"Long life. Reputation. Rank. Riches.

"**Those who have them fear ghosts, fear men, power, and punishment.** They are always fugitives. Whether they are killed or live they regulate their lives by externals.
…

"There is an old proverb which says:

"Without marriage and an official career a man would be free from half of his yearnings.

"**If men could do without clothes and food there would be no more kings or subjects.**"

https://www.sacred-texts.com/tao/ycgp/ycgp002.htm

To the capital of Liang, in the State of Wei, came all the philosophers, just as they came to Athens. **Here came Mencius, perhaps one of the greatest of the exponents of Confucianism, a veritable St. Paul of the Confucian movement, and the chief opponent of Yang Chu.** Here came Chuang-Tzŭ, most subtle among the Taoist sophists, Li Kuei the great statesman and law-giver, Hsün-tzŭ the philosopher of the doctrine of original evil, Wênt-zu the able follower of Lao-tzŭ, **and Mo-Ti the apostle of brotherly love, whose name is frequently bracketed with Yang Chu in condemnation by Mencius.**
…

"His teaching is quite detestable." says Dr. Legge, and elsewhere he refers to him as the "least-erected spirit who ever professed to reason concerning the duties of life and man." Balfour in his *Oriental Studies* speaks of "the irreproachable Kuan Chung, who is made to utter the most atrocious doctrines," **and it is doubtful if anybody who has a preconceived or inherited basis of morality or dogma will cease to agree with the two opinions quoted above**. For them the tower of philosophy from whence through many windows strangely tinted, opaque or clear, the philosophers view the world as a small thing viewed with interest and careful detachment, must ever seem something a little aloof, a little repellent. About all philosophy there lingers the haunting sense of the coldness, the

dispassion of the philosopher. Marcus Aurelius will always, to most men, seem a little less than perfectly human, Socrates a little more than the perfect doctrinaire. **The world will always turn for guidance to the idealists like Christ and Buddha rather than to the philosophers like Epictetus and Kanada.** The garden of Epicurus has faded from the minds of men. The garden of Gethsemane will for ever remain like a picture engraved deeply in their hearts.

Unlike the poet, the philosopher has no country. And seldom is this so clearly to be seen as in the fragment of Yang Chu, that contains the essence of his philosophy. Elaborated and subtilised, it forms the basis for the Epicurean philosophy in Greece; **in the calm summit of its indifference it attains the ultimate perfection of the ego realised many centuries later by Max Stirner, and is akin in some respects to the Charvaka philosophy in India, while lacking the harsh note of combative scepticism which leaves the Indian doctrine less a philosophy than a rebellion in thought.**

Both philosophies press upon men the importance of happiness during life, but while to Yang Chu the study and cultivation of the senses are all, Brihaspati is content to leave the expression of pleasure in a formula at once singularly empty, and tinged with the indifference and cynicism of one to whom the subject is really of little moment.

> While life remains let a man live happily. **Let him feed on ghee, though he runs in debt.** When once the body becomes ashes, how can it ever return again?

The larger view of the Chinese philosopher in reality transcends the philosophy of Brihaspati by that quality of attention to and intense feeling for life, which in some respects brings him closer to Epicurus, his truer Western prototype, though he accepts no basis of semi-moral self-interest for life, postulates no far-living philosophic deities, and gives to man the solitary satisfaction of his senses, and that only for the brief space of his lifetime.
…

"He who regards as common property a body appertaining to the universe and the things of the universe is a perfect man," says Yang Chu. And this sense of the oneness and freedom of nature is so distinctly true to Taoist teaching that one hesitates to accept the apparent complete antagonism between the two teachings. **The doctrine of universal theft from nature is a purely Taoist doctrine, where all things in nature are common property and all things are stolen.** We steal our very existence from nature, says Lieh Tzu. Such thefts are unconscious thefts.
…

So he evolves a philosophy of life quite logical and quite unmoral, in which all life and all expression of life are centred in the senses, where the cultivation of the senses is the primary law and the gratification of them by the simplest means the ultimate object. Here at any rate, whatever we may dimly suspect, is no metaphysical subtlety. The theory is set before us so plainly, so uncompromisingly, that there is no loophole for escape. **Even Epicurus is weak-kneed beside the calmly smiling sage of Liang.** Here is no philosophic minister to the senses, no subtle qualification. Pleasure is an actual thing, no mere negative phantom. All forms of pleasures are swept into his net. Nothing is bad, nothing is evil.

> "*Allow the ear to hear what it likes, the eye to see what it likes, the nose to smell what what likes, the mouth to say what it likes, the body to enjoy the comforts it likes to have, and the mind to do what it likes.*"

The careful study and cultivation of the senses is the true basis of egoistical philosophy, and it is logically unassailable. It is the basis, if not of much modern thought, at least of a great deal of modern action, and gathers impetus from its reiterated demand from all classes for a fuller, more complete individual expression.
…

The philosopher does not say how this happy condition of life is to be brought about. To him it was possibly a corollary to the discovery of the uselessness of wealth for the purpose of happiness. There is no taint or suspicion of socialism or any tyranny limiting or defining the action of individuals; on the contrary his philosophy is purely individualist and non-authoritarian. **He visualises quite clearly a kind of golden age, a fabulous pre-existing period in the history of the world, where strife for useless power and useless domination and useless fame did not exist, where a full knowledge of the importance of living so brief a life as happily as possible alone guided the actions of men.** In speaking of this period and contrasting it with the later period in which strife and domination and wealth had reduced men to the unhappy condition of manacled slaves, he says:

> "The Ancients knew that all creatures enter but for a short while into life and must suddenly depart in death. Therefore they gave way to their impulses and did not check their natural propensities.

> "They denied themselves nothing that could give pleasure to their bodies; consequently, as they were not seeking fame but were following their own nature, they went smoothly on, never at variance with their own inclinations.
>
> **"They did not seek for posthumous fame. They never did anything criminal, and of glory and fame, rank and position, as well as of the span of their life, they took no heed."**

He was essentially the philosopher of true egoism as opposed to the false egoism under which at his time the world laboured and suffered—**the egoism that oversteps the limits of the true care and cultivation of self and persists, for quite selfish and vain and frequently petty motives, in assuming the care and control of others,** and imposing upon them terms of slavery and hardship, terms that limit and ultimately destroy all individuality, and reduce men to the level of driven and unwilling slaves.

A recent writer [Oscar Wilde] who lent for a brief space a certain dignity to British letters has pointed out, quite truly, that "Selfishness is not living as one wishes to live, it is asking others to live as one wishes to live. And unselfishness is letting other people's lives alone, not interfering with them."

With this selfishness, which is simply the product of a stupid and unreasonable vanity, true egoism has nothing whatever in common. True egoism is essentially unselfish. It suffices for the true egoist to live his own life. Others he will help and assist when help or assistance is required.

So, in the words of Yang Chu:

> "*We may give the feverish rest, satiety to the hungry, warmth to the cold and assistance to the miserable,*"

but for ourselves we must be content to live our own lives, to discover for ourselves the ultimate method of expression for which our lives and natures are suited.
…

On the question of self-sacrifice the philosopher is quite clear. Life of itself is of no importance, save to the liver, and that only for the brief space of his existence. By self-sacrifice there is nothing to be gained, save perhaps a little fame, and if this be at the expense and to the detriment of personality, it is a wrong thing to do. From kindness of heart and a real desire to relieve suffering a man may dispose of and give away those things which are not absolutely essential to his existence. But to himself his life must be sacred. **To spoil one's life for the sake of fame, or because is is considered a splendid thing to do, is to commit a wrong against one's self.** And it is equally wrong that one should be expected to do so. If the world requires this ultimate self-sacrifice, then the world is wrong and the condition of things that calls for this self-sacrifice is wrong. In a chapter devoted to quite clear exposition of this view, a chapter which for its dispassionate contempt of obvious and accepted views has been most singled out for especial condemnation, Yang Chu takes the extreme case of the sage against the universe, and the greater part of the chapter is taken up with a justification of this extreme point of view.

> **"If the ancients," says the philosopher, referring to the golden age of his ideal, "by injuring a single hair could have rendered a service to the world they would not have done it, and had the universe been offered to a single person he would not have accepted it.**
>
> "As nobody would damage a single hair and nobody would do a favour to the world, the world was in a perfect state."

To the philosopher self-sacrifice is simply the corollary of a wrong and unbalanced condition of life. In a community where neither fame nor self-glorification at the expense of others is desired, self-sacrifice would not exist. It would be unnecessary.

Where all are happy and all are contented, there would be no need of either self-sacrifice or self-aggrandisement. That is a simple truth, and if, by the adoption of a false and selfish egoism and a false and equally selfish racial egoism, humanity has reached a point where self-sacrifice has become a good or desirable thing, the fault really lies with the vanity and ignorance that have led humanity to this point, and have ultimately justified a code of morals philosophically unreasonable and unnecessary.

https://en.wikipedia.org/wiki/Charvaka#Mughal_era

Ain-i-Akbari, a record of the Mughal Emperor Akbar's court, mentions a symposium of philosophers of all faiths held in 1578 at Akbar's insistence[77] (also see Sen 2005, pp. 288–289).

https://books.google.fi/books?id=WjhbAAAAQAAJ&pg=PA218#v=onepage&q&f=false

Chárvaka, after whom this school is named, was an unenlightened Bráhman. Its followers are called by the Bráhmans, *Nástikas* or Nihilists. They recognise no existence apart from the four elements, nor any source of perception save through the five organs of sense. They do not believe in a God nor in immaterial substances, and affirm faculty of thought to result from the equilibrium of the aggregate elements. **Paradise, they regard as a state in which man lives as he chooses, free from the control of another, and hell the state in which he lives subject to another's rule.** The whole end of man, they say, is comprised in four things: the amassing of wealth, women, fame and good deeds. **They admit only of such sciences as tend to the promotion of external order, that is, a knowledge of just administration and benevolent government.** They are somewhat analogous to the sophists in their views and have written many works in reproach of others, which rather serve as lasting memorials of their own ignorance.

> https://www.english.enoanda.cat/the_inscription.html
>
> **Military service is dangerous and one is subordinate to others.** Public speaking is full of agitation and nervousness as to whether one can convince. **Why then do we pursue an occupation like this, which is under control of others?**

https://archive.org/details/in.ernet.dli.2015.231118/page/n281/mode/2up?view=theater

These ancient themes might not have harassed Augustus; **what made Tibullus, Propertius, and Ovid really disagreeable to a government that was finding it hard to enlist recruits for the army was the persuasive anti-militarism of this love-loose set. Tibullus laughs at warriors who forage for death when they might have been seducing women. He mourns for the age of Saturn,** when, he imagines,

> there were no armies, no hatred, and no war. ... There was no war when men drank from wooden cups. ... Give me but love, and let others go to war. ... The hero is he whom, when his children have been begotten, old age overtakes in his humble cottage. He follows his sheep, his son follows the lambs, while the good wife heats the water for his weary limbs. So let me live till the white hairs glisten on my head, and I tell in my old man's fashion of the days gone by.[71]

…

To please his patron and his prince Propertius now and then plucked his lyre in praise of war; but to his mistress Cynthia he sang another tune: "Why should I raise sons for Parthian triumphs? No child of ours shall be a soldier."[73] **Not all the martial glory in the world, he assured her, could equal one night with Cynthia.[74]**

…

[Ovid] married twice in early manhood, was twice divorced, and then grazed for a time in public pastures. **"Let the past please others," he sang; "I congratulate myself on being born into this age, whose morals are so congenial to my own."[76]** He laughed at the *Aeneid,* and merely concluded from it that since the son of Venus had founded Rome, it should, if only out of piety, become the city of love.[77]

…

These poems were tolerantly received by Roman society four years after the passing of the Julian reform laws. Great Senatorial families like the Fabii, the Corvini, the Pomponii continued to entertain Ovid in their homes. Buoyant with success, the poet issued a manual of seduction called *Ars amatoria* (2 B.C.). "I have been appointed by Venus," he says, "as tutor to tender love."[86] **He chastely warns readers that his precepts must be applied only to courtesans and slaves;** but his pictures of whispered confidences, secret assignations, billets-doux, raillery and wit, deceived husbands, and resourceful handmaids suggest the middle and upper classes of Rome.

https://www.sacred-texts.com/cla/fsgr/fsgr07.htm#an_fr_107_1

The Garden was not only a philosophical school; it was also a sort of retreat or religious community. There lived there not only philosophers like Mêtrodôrus, Colôtes, Hermarchus, and others; there were slaves, like Mysis, and free women, like Themista, the wife of Leonteus, to both of whom the Master, as the extant fragments testify, wrote letters of intimate friendship. **And not only free women, but women with names that show that they were slaves, Leontion, Nikidion, Mammarion. They were *hetairae*; perhaps victims of war, like many of the unfortunate heroines in the New Comedy; free women from conquered cities, who had been sold in the slave market or reduced to misery as refugees, and to whom now the Garden afforded a true and spiritual refuge. For, almost as much as Diogenes, Epicurus had obliterated the stamp on the conventional**

currency. The values of the world no longer held good after you had passed the wicket gate of the Garden, and spoken with the Deliverer.

https://archive.org/details/tusculandisputat00cicerich/page/242/mode/2up?view=theater

Depending on these dreams, not only Epicurus, Metrodorus, and Hermarchus declaimed against Pythagoras, Plato, and Empedocles, **but that little harlot Leontium presumed to write against Theophrastus:** indeed, she had a neat Attic style; but yet, to think of her arguing against Theophrastus! **So much did the garden of Epicurus[97] abound with these liberties, [tantum Epicuri hortus habuit licentiae]** and, indeed, you are always complaining against them.

> https://penelope.uchicago.edu/Thayer/E/Roman/Texts/Strabo/17C*.html#ref357
>
> The Cyrenaeans who became famous were **Aristippus the Socratic philosopher, who also laid the foundations of the Cyrenaïc philosophy; and his daughter, Aretê by name, who succeeded him as head of the school; and again her son Aristippus, Aretê's successor, who was called Mêtrodidactus;[358]** and Anniceris, who is reputed to have revised the doctrines of the Cyrenaïc sect and to have introduced in place of it those of the Annicerian sect.

Lucretius' Venus and Stoic Zeus on JSTOR

A long-standing problem of Lucretian scholarship is: **why does Lucretius begin his poem on Epicurean physics by invoking the goddess Venus as ruler of nature, and ask her to assist him in the composition of his verses and to give peace to the Romans,** when he and every other Epicurean believed that the gods have no concern whatsoever with this or any other world?
…

I shall argue in this paper that Lucretius was influenced by the contemporary Stoic view of Zeus to fashion an Epicurean divinity, Venus, who would take the place of Stoic Zeus as well as any other ruling deity. Venus, I suggest, was conceived in part as an allegorical rival to Stoic Zeus: she stands for pleasure and a world ordered by its own spontaneous impulses, as opposed to Stoic Zeus who stands for divine might and a world bound by an inexorable divine will. As a rival to Stoic Zeus, moreover, Venus offers a challenge to all religious and philosophical systems that would impose divine tyranny upon the world. Thus, while Venus is a poetic creation that has been shaped by many influences quite apart from Stoicism, it is only when we see her as a creation set within a contemporary philosophical context, in which the Stoics proposed Zeus as the all-mighty ruler of the world, that we have a sufficient explanation why Lucretius would depart so far from Epicurean orthodoxy as to resort to an all-mighty ruling goddess to introduce a poem designed to expel the gods from this world.

https://archive.org/details/moraldarwinismho0000wike/page/66/mode/2up?view=theater

Before tackling the subject of the nature of sexuality, [Lucretius] reminded the reader **that in *no* case are any of our bodily organs created for a purpose – that would mean that we were intelligently designed. “That is a vice in such things that you should vehemently desire to escape and [you ought] to avoid [such] an error with dreadful apprehension.”**13

Since our bodily organs are not designed, we cannot read any moral purpose from our physical sexual constitution. Given that we human beings (and everything else, for that matter) are an accidental result of the random motions of atoms over time, **it is only accidental as well that sexual passion happens to be linked to procreation (and hence to marriage).** The gods certainly do not link the two, since they are not creators. It follows that there is no necessity that *we* link the two. We are not surprised, then, that Lucretius gave some very modern advice to men: **“Ejaculate the liquid collected in the body and do not retain it.”**14
…

But the normal goal of love poetry is singing the praises of the beloved to the heavens, and that is precisely what both Epicurus and Lucretius wanted us to avoid. In doing so, **Epicurean asceticism set itself dead against the greatest love poems of all times – among them, Plato’s *Phaedrus*, *The Song of Songs*, and Dante’s *Divine Comedy* – which all happily link earthly sexual desire and love to the desire for immortality and the divine.**
…

The desire for immortality and to be as divine-like as possible are for Aristotle the actual desires behind all procreation, even on the level of a plant, let alone the level of the rational animal, human being. The parents receive kind of natural immortality through the lives of their children who continue after the natural death of the parents. **But this desire for natural immortality would, for Lucretius, be a danger, because it would not only disturb one’s tranquillity by entanglement in the family (and thereby in the larger affairs of the greater political whole), but kindle the unnatural desire for one’s own immortality after death.**16

...

And so it is by accident (both locally and cosmically) that a male and female happen to meet in the forest, and since sexual desire and procreation are likewise linked only by accident and not divine intention, there is no unnatural sexual desire; therefore, it could just as well be a male and male, or female and female, or other combinations too sickening to suggest (although, as we shall see in a later chapter, **even these will be affirmed with gusto by the unabashed modern Epicurean Alfred Kinsey**).
...

For some reason (not all that clear in Lucretius) the parents desire to watch over and protect their offspring. Soon enough, "Venus has weakened manly strength," and the original Epicurean freedom of primitive man has been traded for the softer common life of the family. With this common life comes the origin of all law, for the separate families make a compact (*foedus*) among themselves not to harm one another.17 From this social compact, all morality evolves.

In Lucretius's account, then, **society was purely artificial, cemented by a merely negative agreement,** and all later laws, rather than being reflections of some natural or eternal law, are rooted in what each particular society has found to be useful.

https://ia803106.us.archive.org/27/items/OnPain/On%20Pain.pdf

When one considers pain's penetration into the realm of procreation, one cannot forget the assault on the unborn, **which typifies the simultaneously weak and bestial character of the Last Man. To be sure, a mind incapable of differentiating between war and murder or crime and disease will definitely select in territorial struggles *the* safest and most pitiful method of killing.**

Rob Ludden-Joyer on X: 1. **Abortion/Contraception lead people to feel a post-modern detachment from LINEAGE. It's just a bundle of cells. What is really important is you being you and like, participating in economy and living your best life. Whatever.**

2. **Now that people are detached from the idea of lineage, and especially if they participate in abortion in some way, they will feel EXTREME COGNITIVE DISSONANCE to take up any position which upholds the idea of importance of LINEAGE.**

3. Now that everyone used to the idea that LINEAGE is arbitrary then this opens up idea that well, then, citizenship, nationality, identity, must also be arbitrary.

4. Abortion/Contraception percolates for a decade in the 1970s and then in 1980's mega-immigration begins in earnest. **You can't criticize mega immigration without basically arguing that LINEAGE is sacred fire. If LINEAGE is sacred fire, then everyone in 1970's is basically guilty of baby-genocide. Who wants to admit that or even think about it. Easier to say RACIST! and actually let's INCREASE immigration.**

https://news.gab.com/2023/11/abortion-is-the-sacrament-of-trashworld/

Consumerist, managerial, liberal society requires all of humanity to be deracinated, stripped of particular, historic ways of life, and every single person reduced to bare individuals. The order that God created for humanity, to have marriage, family, and children, the very necessities for a civilization to function and perpetuate itself is now a consumer lifestyle choice, among a myriad of others. There is no marriage as nearly all of human existence has known it. Now it is merely a legal compact for two adults to live and share property together, to be dissolved whenever there is no longer mutual consent.

Abortion allows women to be unshackled from their *telos,* their divinely-ordained, unique purpose—to bear and rear children. Now, they can be bare economic units consuming whatever they produce, and free to pursue whatever way of life they desire, even to become "men." **The basis of our entire society is the freedom to become whatever you want, created realities be damned.** You don't want to be uniquely bestowed with the power to bring new human life into the world? Then we can kill that life whenever it is created in your body.

Abortion is the sacrament of this total freedom and atomized individualism. It is the barbaric ritual-killing, blood must be shed so you can be free to enjoy brunch and swiping right. **The entirety of American society, and especially what the American views as its highest good, requires abortion be held sacrosanct.**

https://en.wikipedia.org/wiki/Diogenes_of_Oenoanda

"He was a remarkable man and a cosmopolitan man," says Hammerstaedt, commenting upon a quote from Smith's translation of a passage in which Diogenes declares that he set up the inscription: **"Not least for those who are called foreigners, for they are not foreigners. For, while the various segments of the Earth give different people a different country, the whole compass of this world gives all people a single country, the entire Earth, and a single home, the world."** [Archaeology Magazine, August 2015 "In Search of A Philosophers Stone"]

https://www.english.enoanda.cat/the_inscription.html

Fr. 3

[And I wanted to refute those who accuse natural science of being unable to be of any benefit to us.] In this way, [citizens], even though I am not engaging in public affairs, I say these things through the inscription just as if I were taking action, **and in an endeavour to prove that what benefits our nature, namely freedom from disturbance, is identical for one and all.**

And so, having described the second reason for the inscription, I now go on to mention my mission and to explain its character and nature.

Having already reached the sunset of my life (being almost on the verge of departure from the world on account of old age), I wanted, before being overtaken by death, **to compose a [fine] anthem [to celebrate the] fullness [of pleasure] and so to help now those who are well-constituted.** Now, if only one person or two or three or four or five or six or any larger number you choose, sir, provided that it is not very large, were in a bad predicament, I should address them individually and do all in my power to give them the best advice. But, as I have said before, the majority of people suffer from a common disease, as in a plague, with their false notions about things, and their number is increasing (for in mutual emulation they catch the disease from one another, like sheep) **moreover, [it is] right to help [also] generations to come (for they too belong to us, though they are still unborn) and, besides, love of humanity prompts us to aid also the foreigners who come here. Now, since the remedies of the inscription reach a larger number of people, I wished to use this stoa to advertise publicly the [medicines] that bring salvation.** These medicines we have put [fully] to the test; for we have dispelled the fears [that grip] us without justification, and, as for pains, those that are groundless we have completely excised, while those that are natural we have reduced to an absolute minimum, making their magnitude minute.

Fr. 2

... [observing that most people suffer from false notions about things and do not listen to the body] when it brings important and just [accusations] against the soul, alleging that it is unwarrantably mauled and maltreated by the soul and dragged to things which are not necessary **(in fact, the wants of the body are small and easy to obtain—and the soul too can live well by sharing in their enjoyment—while those of the soul are both great and difficult to obtain and, besides being of no benefit to our nature, actually involve dangers).** So (to reiterate what I was saying) **observing that these people are in this predicament, I bewailed their behaviour and wept over the wasting of their lives, and I considered it the responsibility of a good man to give [benevolent] assistance, to the utmost of one's ability, to those of them who are well-constituted.** [This] is the first reason [for the inscription].

I declare that the [vain] fear of [death and that] of the [gods grip many] of us, [and that] joy [of real value is generated not by theatres] and [...and] baths [and perfumes] and ointments, **[which we] have left to the masses, [but by natural science...]**
…

If, gentlemen, the point at issue between these people and us involved inquiry into «what is the means of happiness?» and they wanted to say «the virtues» (which would actually be true), it would be unnecessary to take any other step than to agree with them about this, without more ado. But since, as I say, the issue is not «what is the means of happiness?» but «what is happiness and what is the ultimate goal of our nature?», **I say both now and always, shouting out loudly to all Greeks and non-Greeks, that pleasure is the end of the best mode of life, while the virtues, which are inopportunely messed about by these people (being transferred from the place of the means to that of the end), are in no way an end, but the means to the end.**
…

[So we shall not achieve wisdom universally], since not all are capable of it. But if we assume it to be possible, then truly the life of the gods will pass to men. For everything will be full of justice and mutual love, and there will come to be no need of fortifications or laws and all the things which we contrive on account of one another. As for the necessities derived from agriculture, since we shall have no slaves at that time (for indeed [we ourselves shall plough] and dig and tend [the plants] and [divert] rivers and watch over [the crops), we shall] ... such things as ... not ... time ..., and such activities, [in

accordance with what is] needful, will interrupt the continuity of the [shared] study of philosophy; for [the] farming operations [will provide what our] nature wants.
…

[I am confident, as I address the inscription to you,] my friends, [that many will become healthy in soul. Why do I say this]? What in the world are [the remedies]? The [inscription], dearest friends, [will afford help both] to us [ourselves] and [to others; **for I produced it for the benefit of my fellow-citizens; and] I produced [it] above all [from a desire to help our descendants], in case [they should walk up and down this stoa, as well as showing myself benevolent towards those strangers among us [who are well constituted].**

https://archive.org/details/10booksthatscrew0000wike/page/76/mode/2up?view=theater

Or, to put it another way, as Bentham and the Mills were all atheists, they could not rely upon such a theistic foundation for morality. They had to invent something to take its place. This is trickier than it might sound at first, especially for these three because they were comfortable atheists. **That is, they wanted all the moral benefits of Christianity, except without the Christianity part. They were the kind of self-assured chaps (so common in the nineteenth century) who took the fruits of centuries of Christian moral formation for granted even as they cheerfully chopped down the tree that had borne them.** In consequence, they foolishly thought that because many Englishmen were generally solid and decent folk, moral solidity and decency could be counted on as standard equipment of human nature, and the whole religion thing could be thrown overboard as distracting nonsense. They made the entirely unforgivable assumption we have seen already in Rousseau: that there really is no such thing as original sin.

http://anglicanhistory.org/england/jnfiggis/defects1917/13.html

Before we come to that, let us clear away some of the fog that obscures clear thinking on the relation between Christianity and war. For it is obscured. **Much sentiment is now prevailing to the effect that all war as such is wrong. This is not Christianity, it is nothing but Tolstoyism. Tolstoyism with its over-emphasis on mere passivity has led by reaction to Nietzschean ethics, with their apotheosis of savagery.** Yet many people seem to take it for granted (1) that war is the worst of human evils; (2) that all war is wrong, and that no Christian approves any given war except through hypocrisy. I do not believe either of these propositions, and I will say why.

The first of these, the notion that war is the supreme evil, rests on a view of the world which is ultimately materialism. **Suffering and death are the worst of calamities only on a voluptuary theory of the universe.** The vogue of Christian Science is another instance of a tendency now widespread. If this life be all, doubtless the achievement of ends at the cost of death is more than foolish in the individual, and barely defensible in the State. War, doubtless, causes more obvious and acute physical pain than any other social institution. If, therefore, we are to avoid pain either for ourselves or others, and to avoid it at all costs, no nation would be justified in making war, unless by so doing it made it less probable for a long future. **Such a doctrine is assumed too readily to be Christian.** So far from being Christian, it is the very opposite of the religion of the Cross, which bids us save our life by losing it. It is also opposed to the doctrine of courage in its most ordinary and human tense; and this doctrine is after all only Christianity in embryo.

https://www.newoxfordreview.org/documents/the-christian-the-epicurean/

But the lines of demarcation are blurred by those numerous nominal Christians who are really Epicureans in the Lamb's clothing. **Liberal Christians use the language of love and compassion to advance the sexual license of the Epicurean. Or they use Christ's words against judging others to advance the cause of abortion.** Or they draw from Christ's suffering the Epicurean lesson that suffering is not redemptive but simply evil, and is to, be avoided by suicide and euthanasia. Furthermore, by making God so merciful that we needn't fear His justice, and by consigning Hell to the realm of myth, they duplicate the effect of Epicurus's position. **These are the Liberal Christians, and though the Christian and the Epicurean inhabit different universes, they may be sitting side by side Sunday morning in the same pew.**

https://www.ellopos.net/politics/kalomoiros-papacy.asp?pg=2

It would be naiveté, therefore, if one were to believe that the pacifist disposition that characterizes humanity today proceeds from love. **These words about love are hypocrisy and self-deception. This desire for peace proceeds from loss of ideals, from fear, and from love of comfort. It is the desire to be left in peace to enjoy the good things of this earth. It is the conventional co-operation for acquisition of goods which each person separately would not be able to acquire.** It is a universal understanding upon something which has become the passion of the whole earth: sensualism and materialism. It is a product of necessity.

The peace of which the world speaks is an unconditional capitulation of everything good and sacred and great, and the dominance of pettiness, mediocrity, and lukewarmness. It is the blotting out of the personality of individuals and of peoples. It is a marmalade of compromises and calculations, a sea of hypocrisy, indifference for truth, betrayal of everything holy and sacred.

http://4umi.com/nietzsche/zarathustra/0

And thus spake Zarathustra unto the people:

It is time for man to fix his goal. It is time for man to plant the germ of his highest hope.

Still is his soil rich enough for it. **But that soil will one day be poor and exhausted, and no lofty tree will any longer be able to grow thereon.**

Alas! there cometh the time when man will no longer launch the arrow of his longing beyond man—and the string of his bow will have unlearned to whizz!

I tell you: **one must still have chaos in one, to give birth to a dancing star.** I tell you: ye have still chaos in you.

Alas! There cometh the time when man will no longer give birth to any star. Alas! **There cometh the time of the most despicable man, who can no longer despise himself.**

Lo! I show you the last man.

“What is love? What is creation? What is longing? What is a star?”—so asketh the last man and blinketh.

The earth hath then become small, and on it there hoppeth the last man who maketh everything small. His species is ineradicable like that of the ground-flea; the last man liveth longest.

“We have discovered happiness”—say the last men, and blink thereby.

They have left the regions where it is hard to live; for they need warmth. One still loveth one's neighbour and rubbeth against him; for one needeth warmth.

Turning ill and being distrustful, they consider sinful: they walk warily. He is a fool who still stumbleth over stones or men!

A little poison now and then: that maketh pleasant dreams. And much poison at last for a pleasant death.

One still worketh, for work is a pastime. But one is careful lest the pastime should hurt one.

One no longer becometh poor or rich; both are too burdensome. Who still wanteth to rule? Who still wanteth to obey? Both are too burdensome.

No shepherd, and one herd! Everyone wanteth the same; everyone is equal: he who hath other sentiments goeth voluntarily into the madhouse.

“Formerly all the world was insane,”—say the subtlest of them, and blink thereby.

They are clever and know all that hath happened: so there is no end to their raillery. People still fall out, but are soon reconciled—otherwise it spoileth their stomachs.

They have their little pleasures for the day, and their little pleasures for the night, but they have a regard for health.

“We have discovered happiness,”—say the last men, and blink thereby.—

And here ended the first discourse of Zarathustra, which is also called ‘The Prologue’, for at this point the shouting and mirth of the multitude interrupted him. **“Give us this last man, O Zarathustra,”—they called out**—“make us into these last men! Then will we make thee a present of the Superman!” And all the people exulted and smacked their lips.

---

https://archive.org/details/in.ernet.dli.2015.55010/page/n387/mode/2up?view=theater

Zeno came to Athens about 450, perhaps with Parmenides, and set the impressionable city astir by his skill in reducing any kind of philosophical theory to absurd consequences. Timon of Phlius described

> The two-edged tongue of mighty Zeno, who,
> Say what one would, would argue it untrue.[8]

This pre-Socratic gadfly was (in the relative sense which our ignorance of the past compels us to give to such phrases) the father of logic, as Parmenides was for Europe the father of metaphysics. Socrates, who denounced Zeno's dialectical method,[9] imitated it so zealously that men had to kill him in order to have peace of mind. **Zeno's influence upon the skeptical Sophists was decisive, and in the end it was his skepticism that triumphed in Pyrrho and Carneades.**

https://en.wikisource.org/wiki/Lives_of_the_Eminent_Philosophers/Book_IX#cite_ref-47

Aristotle says that Zeno was the inventor of dialectic, as Empedocles was of rhetoric.
…

In all other respects Zeno was a gallant man; **and in particular he despised the great no less than Heraclitus.** For example, his native place, the Phocaean colony, once known as Hyele and afterwards as Elea, a city of moderate size, skilled in nothing but to rear brave men, **he preferred before all the splendour of Athens, hardly paying the Athenians a visit, but living all his life at home.**

https://books.google.fi/books?id=Ct9K-x61CH0C&lpg=PP1&hl=fi&pg=PA86#v=onepage&q&f=false

'I know that I know nothing' is not attributed to Socrates by Plato, Xenophon or Aristotle. This non-reflexive sceptical dictum is first known to have been fathered on Socrates by Arcesilaus, i.e. well into the third century BC, in the same breath in which Arcesilaus himself opted for the reflexive alternative.109

> 109. Cic. *Ac.* 1.12: *itaque Arcesilas negabat esse quidquam quod sciri posset, ne illud quidem ipsum quod Socrates sibi reliquisset*. See further, Long (1988b), pp. 157-9, for **Arcesilaus' role in inventing the sceptical Socrates.**

https://en.wikisource.org/wiki/Lives_of_the_Eminent_Philosophers/Book_IV#Crates

21. Crates, whose father was Antigenes, was an Athenian belonging to the deme of Thria. He was a pupil and at the same time a favourite of Polemo, whom he succeeded in the headship of the school. The two were so much attached to each other that they not only shared the same pursuits in life but grew more and more alike to their latest breath, and, dying, shared the same tomb.
…

22. Hence Arcesilaus, who had quitted Theophrastus and gone over to their school, said of them that **they were gods or a remnant of the Golden Age.**
…

According to Antigonus, their common table was in the house of Crantor; and these two and Arcesilaus lived in harmony together. Arcesilaus and Crantor shared the same house, while Polemo and Crates lived with Lysicles, one of the citizens. Crates, as already stated, was the favourite of Polemo and Arcesilaus of Crantor.

23. According to Apollodorus in the third book of his *Chronology*, Crates at his death left behind him works, some of a philosophical kind, others on comedy, others again speeches delivered in the assembly or when he was envoy. **He also left distinguished pupils; among them Arcesilaus, of whom we shall speak presently – for he was also a pupil of Crates; another was Bion of Borysthenes, who was afterwards known as the Theodorean, from the school which he joined;** of him too we shall have occasion to speak next after Arcesilaus.

https://www.academia.edu/6410739/The_fragments_of_Numenius_of_Apamea

'In the time of Speusippus (Plato's nephew) and Xenocrates (who followed him) and Polemo (who took on the school after Xenocrates), the doctrinal character of the school remained pretty constant – **at least to the extent that the much-trumpeted *'suspension of judgement'* and all the rest of it still lay in the future;** for in fact they did drop some beliefs, distorted others, and did not remain with what was originally passed down to them. They started with Plato, but sooner or later diverged from him, whether through deliberate choice or ignorance – or, in some cases, for some other reason (perhaps not untainted by ambition?). I don't want to end up sniping just because of Xenocrates – but I do want to speak up for Plato. **For it pains me that they were not ready to do or suffer anything to maintain complete agreement with Plato in every way in all aspects of doctrine.**
…

Arcesilaus on the other hand took Theophrastus, the Platonist Crantor and Diodorus, with Pyrrho in addition. Crantor made him persuasive, Diodorus made him a sophist, and Pyrrho made him versatile, reckless, and elusive [lit.: nothing]. This is the origin of the insulting parody about him:

> Plato in front and Pyrrho behind, Diodorus between them. [cf. *Iliad* 6.181]

…

While still in the bloom of youth, his beauty led him to become boyfriend of the Academic Crantor. He joined Crantor; but there was a momentum to such natural talent as he had which his ambition made him eager to exploit, so he went to Diodorus, where he got those persuasive and elegant villainies of his, and also spent time with Pyrrho. **(Pyrrho got started on philosophy through Democritus somehow or other.) Having been trained here, he stayed true to the Pyrrhonian way of attacking everything, except he never called it that.** Anyway, Mnaseas and Philomelus and Timon, who were sceptics, called him a sceptic like them, since he too did away with truth and falsehood and plausibility.

'So he might have been called a Pyrrhonian, on the ground of his Pyrrhonian arguments, but out of respect for his lover he submitted to being called an Academic still. But he was a Pyrrhonian, except in name: he was no Academic, beyond being called one.

https://en.wikisource.org/wiki/Lives_of_the_Eminent_Philosophers/Book_IX#Timon

115. Asked once by Arcesilaus why he had come there from Thebes, he replied, **"Why, to laugh when I have you all in full view!"** Yet, while attacking Arcesilaus in his *Silli*, he has praised him in his work entitled the *Funeral Banquet of Arcesilaus*.

https://en.wikisource.org/wiki/Lives_of_the_Eminent_Philosophers/Book_IV#Arcesilaus

Lastly, he crossed over to the Academy and joined Crantor. For while his brother Moereas, who has already been mentioned, wanted to make him a rhetorician, he was himself devoted to philosophy, and Crantor, being enamoured of him, cited the line from the *Andromeda* of Euripides:[27]

> O maiden, if I save thee, wilt thou be grateful to me?

and was answered with the next line:[28]

> Take me, stranger, whether for maidservant or for wife.

30. After that they lived together.
…

On account of this Ariston said of him:

> **Plato the head of him, Pyrrho the tail, midway Diodorus.**[32]

And Timon speaks of him thus:[33]

> Having the lead of Menedemus at his heart, he will run either to that mass of flesh, Pyrrho, or to Diodorus.

And a little farther on he introduces him as saying:

> I shall swim to Pyrrho and to crooked Diodorus.

…

Again, when some one of immodest life denied that one thing seemed to him greater than another, he rejoined, "Then six inches and ten inches are all the same to you?" There was a certain Hemon, a Chian, who, though ugly, fancied himself to be handsome, and always went about in fine clothes. He having propounded as his opinion that the wise man will never fall in love, Arcesilaus replied, "What, not with one so handsome as you and so handsomely dressed?"
…

He spent his time wholly in the Academy, shunning politics.

40. Once indeed, when at Athens, he stopped too long in the Piraeus, discussing themes, out of friendship for Hierocles, and for this he was censured by certain persons.[42] **He was very lavish, in short another Aristippus, and he was fond of dining well, but only with those who shared his**

tastes. He lived openly with Theodete and Phila, the Elean courtesans, and to those who censured him he quoted the maxims of Aristippus. He was also fond of boys and very susceptible. Hence he was accused by Ariston of Chios, the Stoic, and his followers, who called him a corrupter of youth and a shameless teacher of immorality. 41. He is said to have been particularly enamoured of Demetrius who sailed to Cyrene, and of Cleochares of Myrlea; of him the story is told that, when a band of revellers came to the door, he told them that for his part he was willing to admit them but that Cleochares would not let him. This same youth had amongst his admirers Democharesthe son of Laches, and Pythocles the son of Bugelus, and once when Arcesilaus had caught them, with great forbearance he ordered them off. **For all this he was assailed and ridiculed by the critics abovementioned, as a friend of the mob who courted popularity.**
…

43. Another pleasant story told of him is this. Some one had inquired why it was that pupils from all the other schools went over to Epicurus, but converts were never made from the Epicureans: **"Because men may become eunuchs, but a eunuch never becomes a man," was his answer.**

At last, being near his end, he left all his property to his brother Pylades, because, unknown to Moereas, he had taken him to Chios and thence brought him to Athens. **In all his life he never married nor had any children.**

https://en.wikisource.org/wiki/Lives_of_the_Eminent_Philosophers/Book_IV#Carneades

62. Carneades, the son of Epicomus or (according to Alexander in his *Successions of Philosophers*) of Philocomus, was a native of Cyrene. **He studied carefully the writings of the Stoics and particularly those of Chrysippus, and by combating these successfully he became so famous that he would often say:**

> **Without Chrysippus where should I have been?**

https://penelope.uchicago.edu/Thayer/E/Roman/Texts/Plutarch/Moralia/Fortuna_Alexandri*/1.html#ref28

And yet even Pythagoras wrote nothing at all, nor did Socrates, **nor Arcesilaus, nor Carneades,** who were all most notable among philosophers.

https://archive.org/details/in.ernet.dli.2015.55010/page/n689/mode/2up?view=theater

THREE strains merged in Greek philosophy: the physical, the metaphysical, and the ethical. **The physical culminated in Aristotle, the metaphysical in Plato, the ethical in Zeno of Citium.** The physical development ended in the separation of science from philosophy in Archimedes and Hipparchus; the metaphysical ended in the skepticism of Pyrrho and the later Academy; the ethical remained until Epicureanism and Stoicism were conquered or absorbed by Christianity.
…

Every hypothesis had been conceived, aired, and forgotten; the universe had preserved its secret, and men had grown weary of a search in which even the most brilliant minds had failed. Aristotle had agreed with Plato on only one point—the possibility of acquiring ultimate truth.[7] **Pyrrho voiced the suspicions of his time in suggesting that it was above all on this point that they had both been mistaken.**
…

By the irony of time it was the followers of Plato who carried forward this attack upon metaphysics. Arcesilaus, who became head of the "Middle Academy" in 269, transformed Plato's rejection of sense knowledge into a skepticism as complete as Pyrrho's, and probably under Pyrrho's influence.[10] "Nothing is certain," said Arcesilaus, "not even that."[11] When he was told that such a doctrine made life impossible he answered that life had long since learned to manage with probabilities. A century later a still more vigorous skeptic took charge of the "New Academy," and pressed the doctrine of universal doubt to the point of intellectual and moral nihilism. Carneades of Cyrene, coming to Athens like a Greek Abelard about 193, made life bitter for Chrysippus and his other teachers by arguing with galling subtlety against every doctrine that they taught.
…

He undertook to refute the materialistic realism of the Stoics by a **Platonic-Kantian critique of sensation and reason.**

https://archive.org/details/in.ernet.dli.2015.231118/page/n119/mode/2up?view=theater

In 155 Athens sent as ambassadors to Rome the leaders of its three great philosophical schools: Carneades the Academic or Platonist, Critolaus the Peripatetic or Aristotelian, and Diogenes the Stoic of Seleucia. **Their coming was almost as strong a stimulus as Chrysoloras would bring to Italy in 1453.** Carneades spoke on eloquence so eloquently that the younger set came daily to hear him.[25] **He was a complete skeptic,**

doubted the existence of the gods, and argued that as good reasons could be given for doing injustice as for being just—a belated surrender of Plato to Thrasymachus.[26]

http://www.perseus.tufts.edu/hopper/text?doc=Perseus%3Atext%3A1999.01.0168%3Abook%3D2%3Asection%3D358e

“That is excellent,” he said; “and now listen to what I said would be the first topic—the nature and origin of justice. By nature,[1] they say, to commit injustice is a good and to suffer it is an evil, but that the excess of evil in being wronged is greater than the excess of good in doing wrong. So that when men do wrong and are wronged by one another and taste of both, those who lack the power [359a] to avoid the one and take the other determine that it is for their profit to make a compact with one another neither to commit nor to suffer injustice; and that this is the beginning of legislation and covenants between men, and that they name the commandment of the law the lawful and the just, and that **this is the genesis and essential nature of justice—a compromise between the best, which is to do wrong with impunity, and the worst, which is to be wronged and be impotent to get one's revenge.** Justice, they tell us, being mid-way between the two, is accepted and approved, [359b] not as a real good, but as a thing honored in the lack of vigor to do injustice, **since anyone who had the power to do it and was in reality 'a man' would never make a compact with anybody either to wrong nor to be wronged;** for he would be mad. The nature, then, of justice is this and such as this, Socrates, and such are the conditions in which it originates, according to the theory.

https://archive.org/details/cu31924026480370/page/n435/mode/2up?view=theater

And when every man is a guard upon his neighbor, and every class is a guard upon every other class, then because no one trusts in his own strength, **a kind of compact is formed between the great and the little, from whence arises that mixed kind of government which Scipio has been commending. Thus justice, according to these facts, is not the daughter of nature or conscience, but of human imbecility. [non natura nec voluntas sed inbecillitas mater est]** For when it becomes necessary to choose between these three predicaments, either to do wrong without retribution, or to do wrong with retribution, or to do no wrong at all, it is best to do wrong with impunity; next, neither to do wrong nor to suffer for it; but nothing is more wretched than to struggle incessantly between the wrong we inflict and that we receive.

https://books.google.fi/books?id=6wweBQAAQBAJ&lpg=PP1&hl=fi&pg=PT509#v=onepage&q&f=false

Cudworth deliberately bulldozes the complexity out of the argument and gives the crudest possible example of its consequences. His account of the state of nature and the resulting form of government follows the argument in *De Cive*, but with the critical gloss that the theory makes justice and civil sovereignty to be **‘nothing but an *Ignoble* and *Bastardly Brat of Fear*; or else a *Lesser Evil*, submitted to, meerly out of *Necessity*; for the avoiding of a *Greater Evil*, that of War with every one, by reason of mens Natural *Imbecility*.’**76 Hobbes might claim that this theory is no older than his *De Cive*, **but Cudworth cuts him down to size by quoting Glaucon from Plato’s *Republic*, who develops a very similar argument.**

https://archive.org/details/worksralphcudwo02bircgoog/page/204/mode/2up?view=theater

But these their laws of nature are indeed nothing but juggling equivocation, and a mere mockery; themselves again acknowledging them to be no laws, because law is nothing but the word of him who hath command over others; but only conclusions or theorems concerning what conduces to the conservation and defence of themselves, upon the principle of fear; **that is, indeed the laws of their own timorous and cowardly complexion: for they who have courage and generosity in them, according to this hypothesis, would never submit to such sneaking terms of equality and subjection, but venture for dominion; and resolve either to win the saddle, or lose the horse.**

https://www.gutenberg.org/cache/epub/32271/pg32271-images.html

"Admitted. But after he had become King--as he could not fail to do, for a Theodoric could never be the servant of another--the Emperor Anastasius, your uncle Justinus, and, later, you yourself, acknowledged him and his kingdom."

"**That was under the pressure of necessity. Now that they are in need, and I the stronger, I revoke that acknowledgment.**"

https://archive.org/details/completeworksrie033168mbp/page/n307/mode/2up?view=theater

> 355. **"All good people are weak: they are good because they are not strong enough to be evil,"** said the Latuka chieftain Comorro to Baker.

https://www.gutenberg.org/files/2464/2464-h/2464-h.htm#link2H_4_0038

Arms having secured victory, and victory peace, **the buoyant vigor of the martial mind cannot be enfeebled by a more excusable indulgence than that of letters; nor can indolence, with any greater or more dangerous deceit, enter a well regulated community.** Cato was aware of this when the philosophers, Diogenes and Carneades, were sent ambassadors to the senate by the Athenians; for perceiving with what earnest admiration the Roman youth began to follow them, and knowing the evils that might result to his country from this specious idleness, he enacted that no philosopher should be allowed to enter Rome.

>
> In conclusion, al-Fārābi does not exclude the possibility that certain nations might show some compassion for philosophy, **but those nations are overwhelmed by nations who have passed it in silence or prohibit it altogether.**

https://archive.org/details/newscienceofgiam030174mbp/page/n79/mode/2up?view=theater

134 **Things do not settle or endure out of their natural order.**

135 In view of the fact that the human race, as far back as memory of the world goes, has lived and still lives conformably in society, **this axiom alone decides the great dispute still waged by the best philosophers and moral theologians against Carneades the skeptic and Epicurus a dispute to which not even Grotius could put an end namely, whether law exists by nature, or whether man is naturally sociable, which comes to the same thing.**

> https://supervert.com/elibrary/marquis-de-sade/120-days-of-sodom
>
> If one were to raise the objection that, nevertheless, all men possess ideas of the just and the unjust which can only be the product of Nature, since these notions are found in every people and even amongst the uncivilized, the Duc would reply affirmatively, saying that yes, **those ideas have never been anything if not relative, that the stronger has always considered exceedingly just what the weaker regarded as flagrantly unjust, and that it takes no more than the mere reversal of their positions for each to be able to change his way of thinking too;** whence the Duc would conclude that nothing is really just but what makes for pleasure, and what is unjust is the cause of pain; that in taking a hundred louis from a man's pocket, he was doing something very just for himself, although the victim of the robbery might have to regard the action with another eye; **that all these notions therefore being very arbitrary, a fool he who would allow himself to become their thrall.**

https://archive.org/details/in.ernet.dli.2015.189333/page/n209/mode/2up?view=theater

So far [the Newer Academy] stands nearly on a parallel with the older method of the sophists; except that, as may be conceived, the sophists made war more against the popular faith, Carneades and his disciples more against their philosophical colleagues.
...

In fact the very first *début* of philosophy on a great scale in Rome was a formal declaration of war against faith and morals. It was occasioned by the occupation of Oropus by the Athenians, a step which they commissioned three of the most esteemed professors of philosophy, including **Carneades the master of the modern sophistical school,** to justify before the senate (599/155). The selection was so far appropriate, as the utterly scandalous transaction defied any justification in common sense; **whereas it was quite in keeping with the circumstances of the case, when Carneades proved by thesis and counter-thesis that exactly as many and as cogent reasons might be adduced in praise of injustice as in praise of justice, and when he showed in the best logical form that with equal propriety the Athenians might be required to surrender Oropus and the Romans to confine themselves once more to their old straw huts on the Palatine.** The young men who were masters of the Greek language were attracted in crowds by the scandal as well as by the rapid and emphatic delivery of the celebrated man; **but on this occasion at least Cato could not be found fault with,** when he not only bluntly enough compared the dialectic arguments of the philosophers to the tedious dirges of the wailing-women, but also insisted on the senate dismissing **a man who understood the art of making right wrong and wrong right, and whose defence was in fact nothing but a shameless and almost insulting confession of wrong.**

https://archive.org/details/cu31924026480370/page/n429/mode/2up?view=theater

And I wish, as I am about to make use of the antagonist arguments of a foreigner, I might also employ a foreign language. The pleas, therefore, now to be urged by Lucius Furius Philus are those [once employed by] the Greek Carneades, a man who was accustomed to express whatever [served his turn].[336] * * *[336] **Let it be understood, therefore, that I by no means express my own sentiments, but those of Carneades, in order that you may refute this philosopher, who was wont to turn the best causes into joke, through the mere wantonness of wit.**
…

In fact, this justice on which we reason is a civil right, but no natural one; for if it were natural and universal, then justice and injustice would be recognized similarly by all men, just as the heat and cold, sweetness and bitterness.
…

In the next place, **he would see in Greece, as among ourselves, magnificent temples consecrated by images in human form, which the Persians regarded as impious; and it is affirmed that the sole motive of Xerxes for commanding the conflagration of the Athenian temples was the belief that it was a superstitious sacrilege to keep confined within narrow walls the Gods, whose proper home was the entire universe.** But afterward Philip, in his hostile projects against the Persians, and Alexander, who carried them into execution, alleged this plea for war, **that they were desirous to avenge the temples of Greece, which the Greeks had thought proper never to rebuild, that this monument of the impiety of the Persians might always remain before the eyes of their posterity.**

How many—such as the inhabitants of Taurica along the Euxine Sea; as the King of Egypt, Busiris; as the Gauls and the Carthaginians—have thought it exceedingly pious and agreeable to the Gods to sacrifice men! And, besides, the customs of life are so various that the Cretans and Ætolians regard robbery as honorable. And the Lacedæmonians say that their territory extends to all places which they can touch with a lance. The Athenians had a custom of swearing, by a public proclamation, that all the lands which produced olives and corn were their own. **The Gauls consider it a base employment to raise corn by agricultural labor, and go with arms in their hands, and mow down the harvests of neighboring peoples. But we ourselves, the most equitable of all nations, who, in order to raise the value of our vines and olives, do not permit the races beyond the Alps to cultivate either vineyards or oliveyards, are said in this matter to act with prudence, but not with justice.** You see, then, that wisdom and policy are not always the same as equity. And Lycurgus, that famous inventor of a most admirable jurisprudence and most wholesome laws, gave the lands of the rich to be cultivated by the common people, who were reduced to slavery.

X. If I were to describe the diverse kinds of laws, institutions, manners, and customs, not only as they vary in the numerous nations, but as they vary likewise in single cities—in this one of ours, for example—I could prove that they have had a thousand revolutions. **For instance, that eminent expositor of our laws who sits in the present company—I mean Manilius—if you were to consult him relative to the legacies and inheritances of women, he would tell you that the present law is quite different from that he was accustomed to plead in his youth, before the Voconian enactment came into force—an edict which was passed in favor of the interests of the men, but which is evidently full of injustice with regard to women.** For why should a woman be disabled from inheriting property? Why can a vestal virgin become an heir, while her mother cannot? And why, admitting that it is necessary to set some limit to the wealth of women, should Crassus's daughter, if she be his only child, inherit thousands without offending the law, while my daughter can only receive a small share in a bequest.[337] * * *
…

The laws are, therefore, based not on our sense of justice, but on our fear of punishment. There is, therefore, no natural justice; and hence it follows that men cannot be just by nature.

Are men, then, to say that variations indeed do exist in the laws, but that men who are virtuous through natural conscience follow that which is really justice, and not a mere semblance and disguise, and that it is the distinguishing characteristic of the truly just and virtuous man to render every one his due rights? Are we, then, to attribute the first of these characteristics to animals? **For not only men of moderate abilities, but even first-rate sages and philosophers, as Pythagoras and Empedocles, declare that all kinds of living creatures have a right to the same justice.** They declare that inexpiable penalties impend over those who have done violence to any animal whatsoever.
…

But justice commands us to have mercy upon all men, to consult the interests of the whole human race, to give to every one his due, and injure no sacred, public, or foreign rights, and to

forbear touching what does not belong to us. What is the result, then? If you obey the dictates of wisdom, then wealth, power, riches, honors, provinces, and kingdoms, from all classes, peoples, and nations, are to be aimed at.
…

XIII. How far utility is at variance with justice we may learn from the Roman people itself, which, declaring war by means of the fecials, **and committing injustice with all legal formality,** always coveting and laying violent hands on the property of others, acquired the possession of the whole world.
…

XV. **This was the sum of the argument of Carneades: that men had established laws among themselves from considerations of advantage, varying them according to their different customs, and altering them often so as to adapt them to the times; but that there was no such thing as natural law;** that all men and all other animals are led to their own advantage by the guidance of nature; that there is no such thing as justice, or, if there be, that it is extreme folly, since a man would injure himself while consulting the interests of others. **And he added these arguments, <u>that all nations who were flourishing and dominant, and even the Romans themselves, who were the masters of the whole world, if they wished to be just—that is to say, if they restored all that belonged to others—would have to return to their cottages, and to lie down in want and misery.</u>**

4. *“Make the enemy live up to its own book of rules.” If the rule is that every letter gets a reply, send 30,000 letters.* ***You can kill them with this because no one can possibly obey all of their own rules.***

https://books.google.fi/books?id=Bhe3PiGDOv8C&lpg=PP1&hl=fi&pg=PA86#v=onepage&q&f=false

A figure closer to Psellos’ Basil than Nikephoros Phokas is the Emperor Julian (ruled 361-363), a passionate enemy of Christianity, **<u>who also enjoyed making Christians live up to their own impossible principles.</u>** We mention briefly his controversial edict which prohibited Christians from teaching the Greek classics on the grounds that their professed religious beliefs were incompatible with the texts’ explicit polytheism.192 **According to the ecclesiastical historian Socrates (3.13), Julian also forbade Christians from being provincial governors, claiming that they were not allowed by their own faith to inflict capital punishment.** His concern for their salvation is doubtful.

https://www.gutenberg.org/files/17147/17147-h/17147-h.htm#page312

308. **Let us see what M. Bayle himself says elsewhere against the chimerical or absolutely undefined indifference. Cicero had said (in his book *De Fato*) that Carneades had found something more subtle than the deviation of atoms, attributing the cause of a so-called absolutely undefined indifference to the voluntary motions of souls,** because these motions have no need of an external cause, coming as they do from our nature. But M. Bayle (*Dictionary*, art. 'Epicurus', p. 1143) aptly replies that all that which springs from the nature of a thing is determined: thus determination always remains, and Carneades' evasion is of no avail.
…

322. Carneades, not going so far back as to the atoms, claimed to find at once in the soul of man the reason for the so-called vague indifference, assuming as reason for the thing just that for which Epicurus sought a reason. **Carneades gained nothing thereby, except that he more easily deceived careless people, in transferring the absurdity from one subject, where it is somewhat too evident, to another subject where it is easier to confuse matters, that is to say, from the body**

to the soul. For most philosophers had not very distinct notions of the nature of the soul. Epicurus, who composed it of atoms, was at least right in seeking the origin of its determination in that which he believed to be the origin of the soul itself. **That is why Cicero and M. Bayle were wrong to find so much fault with him, and to be indulgent towards, and even praise, Carneades, who is no less irrational.** I do not understand how M. Bayle, who was so clear-sighted, was thus satisfied by a disguised absurdity, even to the extent of calling it the greatest effort the human mind can make on this matter. It is as if the soul, which is the seat of reason, were more capable than the body of acting without being determined by some reason or cause, internal or external; **or as if the great principle which states that nothing comes to pass without cause only related to the body.**

https://www.revilo-oliver.com/rpo/Reflections.html

The New Academy, founded by Carneades (214-128), who revised the radical scepticism of Arcesilaus, was philosophically the finest product of the Greek mind (A7), **and was concerned with elaborating what is now known as the scientific method and establishing a valid epistemology.** Its cold rationality and keen criticism thoroughly demolished the whole system of Stoicism, reducing it to the status of a religion. **Like all true scholars and scientists, the members of the New Academy regarded politics, even political philosophy, as rather vulgar and tedious, an interest in merely contemporary and ephemeral matters that are trivial in comparison with the eternal truths of nature and human history.**

> (A7. We must, however, note that Carneades' most famous disciple, Clitomachus, was a Semite or possibly of mixed Punic and Berber ancestry. He was a Carthaginian and he was a namesake of Hasdrubal, the famous brother of Hannibal.)

>
> 67 **Clitomachus was a Carthaginian, his real name being Hasdrubal, and he taught philosophy at Carthage in his native tongue.** He had reached his fortieth year when he went to Athens and became a pupil of Carneades. And Carneades, recognizing his industry, caused him to be educated and took part in training him. And to such lengths did his diligence go that he composed more than four hundred treatises. **He succeeded Carneades in the headship of the school, and by his writings did much to elucidate his opinions.** He was eminently well acquainted with the three sects – the Academy, the Peripatetics, and the Stoics.

If Philo's perception of Alexandria lacks historical roots, his family vanishes even more into the background. **He mentions only two family members by name.** Lysimachus, a younger member of the extended family, figures as a rather stylized discussion partner in the badly preserved dialogue *On the Rationality of Animals*. **Tiberius Alexander appears in the same dialogue as Philo's nephew, who preferred political involvement to studies** and participated in an embassy to Rome, presumably the same one Philo headed. Alexander is familiar with Roman customs and expresses radical ideas about the rationality of animals. **His view that humans are neither uniquely endowed with reason nor protected by divine providence is deeply shocking to Philo.**7

https://www.academia.edu/23087417/Dialogic_Format_of_Philo_of_Alexandrias_De_animalibus

As a dialogue, *De anim.* is a remarkable exception in the *corpus* of Philo's works: apart from it, we know of only one other text of his in dialogue form, namely the fragmentarily preserved *De providentia* (= *De prov.*), dedicated to the question of divine providence.9 The Armenian translation of *De prov.* consists of two books; only book II is in the form of a dialogue.10 Together with *Quod omnis probus liber sit* (extant in Greek) and *De aeternitate mundi* (partially preserved in Greek), **the two dialogues belong to Philo's philosophical writings, firmly rooted in the Greek philosophical tradition, with little or no references to Judaism and the Bible. In both *De anim.* and *De prov.* II, Philo is an interlocutor and argues against the views of a character called Alexander, who is identified by scholars with Tiberius Julius Alexander, Philo's apostate nephew.**11

https://www.academia.edu/44247192/The_Apostasy_of_Tiberius_Julius_Alexander_An_Intervention

Philo mentioned Alexander twice in his surviving treatises, and both mentions have been understood as showing Alexander taking "anti-Judaic" positions and as further evidence of his apostasy.98 In *De Animalibus*, presented as a text written by "Alexander" and its oral refutation by Philo,99 Alexander maintains that animals are rational and therefore have souls; **Philo denies it, pretty much in an *ipse dixit*.** This is not a matter relevant to the question of Alexander's supposed apostasy,100 since it concerns philosophical disagreements, not matters of religious belief or practice.101 Indeed, this treatise provides the rare positive evidence that Alexander was not an apostate; the third

character in the treatise, Lysimachus (who agrees throughout with Philo and is otherwise assumed to have been a faithful Jew) is engaged to Alexander's daughter. Would Lysimachus have married the daughter of an apostate, whether or not she would follow him in religious matters after the wedding?

In *De Providentia* Alexander is shown denying the existence of divine providence in human affairs on the grounds that the evil prosper and the good suffer. Scholars have doubted that this is the historical Tiberius Julius Alexander.102 In any event, I cannot claim that denial of divine providence does not concern religious beliefs.103 But there is scant evidence here of apostasy, rather than of a view that appears unusual to us. **Was the denial in the first century of providence significantly less "Jewish" than Philo's own views about the intermediate role of the divine Logos and two powers in heaven?**

https://books.google.fi/books?id=nVBDDwAAQBAJ&lpg=PR1&hl=fi&pg=PA71#v=onepage&q&f=false

In a dialogue now extant only in Armenian, Philo addresses the question of whether animals possess the same kind of rationality as human beings. At stake is the status of humans as creatures uniquely endowed with reason and close to God. The dialogue is staged as a discussion between Lysimachus, a younger family member eager to learn, **and Philo, who is deeply disturbed by a treatise of his nephew Tiberius Alexander, who expresses the view that animals are rational and morally equal to humans.** Alexander's text is brought in by a servant, read aloud, and then criticized by Philo. Lysimachus plays only a marginal role, giving Philo the opportunity to expound his ideas on the controversial issue.4

Alexander's argument in favor of animals' rationality is based mainly on observation. **He rejects the common assumption of humanity's superiority, which derives in his view merely from physical considerations, such as the fact that animals crawl on the ground and are thus physically lower than humans. Animals are wrongly denied rationality, he insists, just as women are mistakenly relegated to the margins of society.** Alexander invites his readers to observe the intelligent behavior of animals and appreciate their knowledge, their ability to learn, and even their ability to choose between good and evil. Occasionally, he directly asks, "Have you not observed?" While admitting that their rationality is not perfect, Alexander insists that animals are endowed with both kinds of rationality, namely, the internal Logos of the mind and the external Logos expressed in speech. He moreover stresses that animals acquire technical skills and virtue, while many birds can even speak with a human voice. The bee, for example, is praised as having intelligence that is "hardly distinguishable from that contemplative ability of the human mind." The spider behaves like an artist, protecting its well-designed net, and the swallow raises its young with the "affection of a nurse or a mid-wife."5

Many examples of rational behavior in animals derive from Alexander's experience at animal shows, which he enthusiastically attended. "I saw this very thing," he says with excitement, namely, a fawn dancing and playing with a ball on the stage. "During the performance," he adds, the animal "occasionally stared fearfully at the trainer, I think afraid something may fail." Alexander is especially impressed by the elephants, who behaved in the most domesticated manner, lining up in a row and taking human food and drink on special beds. Some elephants even played the drunkard. Alexander expresses his amazement at the animal performance by stressing that "nowhere else in the world could the appearance of staggering drunks be so demonstrated." **Moreover, Alexander explicitly rejects the biblical idea of humanity's exclusive creation in the image of God and stresses that "we are filled with irrational thoughts, have barren and uncultivated minds," while animals are morally excellent.**6

Philo harshly dismisses these views as unsound, childish, and fashionable, even saying that they are "sacrilege" and an injustice to both nature and the "sacred mind."
…

Philo argues that animals should rather be classified with plants because they do everything by dictate from nature and not as a result of a conscious choice or learning.
…

This urgency is remarkable in light of Philo's far more relaxed discussion in the *Allegorical Commentary*, where he explains the biblical account of humanity's creation in the image of God without relating to any controversy. He even conceives of a similarity between humans and animals in the realm of the irrational. Humans, he suggests, are blessed with additional rationality, while their impulses are as instinctive as those of the animals. **At that point Philo clearly thinks of humans as superior but not fundamentally different from animals.**8
…

Cicero ushers in the discussion in Rome by presenting the belief in humanity's superiority over animals as an important aspect of Stoic theology. Balbus, Cicero's Stoic spokesman, introduces his position by reference to humans' physical nature: they are raised from the ground and stand upright, thus indicating their higher status in the creation. This is precisely the argument that Alexander in Philo's dialogue attacks as a mistaken acceptance of superficial appearances. **Moreover, Balbus polemically dismisses the assumption of equality between humans and animals, suggesting, like Philo, that the man who does not recognize humanity's divine inspiration is "himself devoid of these faculties." In Cicero's dialogue this polemic is directed against the Platonists. Cotta, the Platonic spokesman, responds to**

Balbus's argument by stressing, like Alexander, that a person's mind is neither divinely endowed nor very exceptional.9

The Stoic view of animals became dominant in Rome. Cicero opens his ethical treatise *On Duties* with an emphatic assertion of humanity's superiority. Only human beings are in his view endowed with reason, memory, and speech as well as an ability to search for the truth and plan ahead. Human beings possess the necessary tools for moral behavior, which is denied to animals. Cicero's position is echoed a century later in Seneca's writings, which contain a separate epistle on the question of animal rationality. **Seneca reacts here to the kind of arguments Alexander presented, namely, arguments in favor of animal rationality based on an observation of nature.** Seneca explains why the bee is not as wise as has been claimed and why animals simply act out of a natural impulse rather than learning and conscious choice. The Stoic notion of humanity's exclusive rationality is confirmed by denying animals' intellectual and moral qualifications.10
...

The late Philo embraces a position that became predominant in the Christian West and was forcefully defended by Justin Martyr and Augustine. Pagan Platonists, by contrast, further developed the lenient tradition visible in Philo's early writings and embraced Plato's idea of the soul's transmigration to animals. The Second Sophists Plutarch and Philostratus, for example, show genuine sympathy toward animals and appreciate their humanlike intelligence. Porphyry and Plotinus bring this position to a climax. **Philo thus stands at an important threshold, leaving behind a characteristically Eastern perspective and adopting a view that was to shape the Latin West.**11
...

While Platonists generally followed the *Timaeus* and assumed the demiurge's "fatherly" maintenance of the world, they denied his care for individual humans and the details of nature. On Platonist views, god is too transcendent to be involved in the specifics of the world and humanity. The Stoics, by contrast, adopted a more immanent notion of the deity and identified a divine presence in their very lives and surroundings.12

Alexander challenges Philo's notion of divine providence by pointing to the "vast welter and confusion of things" in the world. **There is no justice, he insists, "or do you alone not realize that good things come in abundance upon the worst and vilest of men?"** In strikingly similar terms Cotta, the Platonic spokesman in Cicero's dialogue, rejects Stoic notions of providence by quoting the following poetic line: "For if they [the gods] cared for men, good men would prosper and bad men come to grief; but this is not so."

Looking back over this body of speculation **we are surprised to see how fully Plato anticipated the philosophy, the theology, and the organization of medieval Christianity, and how much of the modern Fascist state.** The theory of Ideas became the "realism" of the Scholastics—the objective reality of "universals." Plato is not only a *prä-existent Christlich*, as Nietzsche called him, but a pre-Christian Puritan. He distrusts human nature as evil, and thinks of it as an original sin tainting the soul. **He breaks up into an evil body and a divine spirit[139] that unity of body and soul which had been the educated Greek ideal of the sixth and fifth centuries;** like a Christian ascetic he calls the body the tomb of the soul. He takes from Pythagoras and Orphism an Oriental faith in transmigration, karma, sin, purification, and "release"; he adopts, in his last works, the other-worldly tone of a converted and repentant Augustine. **One would almost say that Plato was not Greek if it were not for his perfect prose.**

https://archive.org/details/greeks-romans-germans/page/195/mode/2up?view=theater

The Plato of the 1930s and 1940s was, however, read and interpreted in a very specific political light. The center of gravity of the Platonist oeuvre had already begun to shift under the Weimar Republic,10 but it did so far more sharply after 1933: **the emphasis was no longer on the Athenian philosopher's epistemological or gnoseological texts but on his political writings. The metaphysical Plato, the philosopher of ideas, was an acolyte of disembodied humanism and the *Aufklärung* of metastasized rationalism.** He was shoved aside in favour of the political Plato, the philosopher of the ideal city-state and the regeneration of the community.

In a pamphlet aimed at teachers of Greek, **Hans Bogner bluntly declared that the heart of the Platonic oeuvre was the triptych composed of "*Politeia*, *Politikos*, *Nomos*"**11 – that is, *The Republic*, *The Statesman*, and *Laws* – to which the racial scientist Hans Günther added Plato's *Letters*.12 **The Plato who was important now was the "philosopher of the state" and not the "representative of the theory of ideas."** For Günther, Plato was not simply a thinker; he "was of the lineage of Solon and Cleisthenes. This is the history of Athens: they are the great legislators and and men of the state ... who make up the background of his oeuvre," not "the Ionian φνσικοι" or the "first book of Aristotle's *Metaphysics*."13 His stature was thus due more to his place in the pantheon of lawmakers and statesmen than to his place in that of mere philosophers. As Werner Jaeger forcefully asserted in a 1933 article published in the Nazi journal *Volk im Werden*, in a vigorous attack on the individualist humanism of the eighteenth century, **"The Plato of our generation is a creator of states, a legislator. He is no longer the neo-Kantian systematizer and honourable scholarly**

philosopher, as our predecessors saw him."14 **For Jaeger, Kant was not the saint he was assumed to be in philosophy seminars throughout German universities. Far from being the archetype of German genius, he was a dangerous avatar of a rootless, cosmopolitan Enlightenment.** In contrast, so-called Platonic idealism was actually an unsparingly lucid realism, which "only a superficial reader could argue refers to the inaccessible and celestial Kantian ideal."15

As we have already seen, **the Nazis and their accomplices in the world of pedagogy and the academy resolutely rejected the scrawny, sickly figure of the intellectual, pale and anemic from all his time spent in the dim light of the library within his ivory tower.**16 To them, Plato appeared to be the perfect antithesis of this despicable creature. He was, in contrast, the fullest expression of the "total man," at once a powerful thinker, a respected sportsman, and an accomplished warrior. Nothing surprising when one imagines, as Günther did, that Plato was a Nordic, a product "of the highest Attic nobility ... where the Nordic blood of the original Hellenes was best preserved until a later date."17

And so there is reason to fear that what Plato declares of the philosophers may be inadequate, when he says that they are just because they are busied with the pursuit of truth and because they despise and count as naught that which most men eagerly seek and for which they are prone to do battle against each other to the death. **For they secure one sort of justice, to be sure, in that they do no positive wrong to anyone, but they fall into the opposite injustice; for hampered by their pursuit of learning they leave to their fate those whom they ought to defend. And so, Plato thinks, they will not even assume their civic duties except under compulsion.**

5 **For the art of mechanics, now so celebrated and admired, was first originated by Eudoxus and Archytas, who embellished geometry with its subtleties, and gave to problems incapable of proof by word and diagram, a support derived from mechanical illustrations that were patent to the senses.** For instance, in solving the problem of finding two mean proportional lines, a necessary requisite for many geometrical figures, both mathematicians had recourse to mechanical arrangements, adapting to their purposes certain intermediate portions of curved lines and sections. 6 **But Plato was incensed at this, and inveighed against them as corrupters and destroyers of the pure excellence of geometry, which thus turned her back upon the incorporeal things of abstract thought and descended to the things of sense, making use, moreover, of objects which required much mean and manual labour.** For this reason mechanics was made entirely distinct from geometry, and being for a long time ignored by philosophers, came to be regarded as one of the military arts.

Let us pass to astronomy. This was one of the sciences which Plato exhorted his disciples to learn, but for reasons far removed from common habits of thinking. "Shall we set down astronomy," says Socrates, "among the subjects of study?" [Plato's *Republic*, Book vii.] **"I think so," answers his young friend Glaucon: "to know something about the seasons, the months, and the years is of use for military purposes, as well as for agriculture and navigation." "It amuses me," says Socrates, "to see how afraid you are, lest the common herd of people should accuse you of recommending useless studies."** He then proceeds, in that pure and magnificent diction which, as Cicero said, Jupiter would use if Jupiter spoke Greek, to explain, that the use of astronomy is not to add to the vulgar comforts of life, but to assist in raising the mind to the contemplation of things which are to be perceived by the pure intellect alone. The knowledge of the actual motions of the heavenly bodies Socrates considers as of little value. The appearances which make the sky beautiful at night are, he tells us, like the figures which a geometrician draws on the sand, mere examples, mere helps to feeble minds. We must get beyond them; we must neglect them; **we must attain to an astronomy which is as independent of the actual stars as geometrical truth is independent of the lines of an ill-drawn diagram.**
...

On the greatest and most useful of all human inventions, the invention of alphabetical writing, Plato did not look with much complacency. He seems to have thought that the use of letters had operated on the human mind as the use of the go-cart in learning to walk, or of corks in learning to swim, is said to operate on the human body. It was a support which, in his opinion, soon became indispensable to those who used it, which made vigorous exertion first unnecessary and then impossible. The powers of the intellect would, he conceived, have been more fully developed without this delusive aid. Men would have been compelled to exercise the understanding and the memory, and, by deep and assiduous meditation, to make truth thoroughly their own. Now, on the contrary, much knowledge is traced on paper, but little is engraved in the soul. **A man is certain that he can find information at a moment's notice when he wants it. He therefore suffers it to fade from his mind. Such a man cannot in strictness be said to know anything.** He has the show without the reality of wisdom. These opinions Plato has put into the mouth of an ancient king of Egypt. [Plato's *Phaedrus*.] But it is evident

from the context that they were his own; and so they were understood to be by Quinctilian. [Quinctilian, xi.] Indeed they are in perfect accordance with the whole Platonic system.
…

To Plato, the science of medicine appeared to be of very disputable advantages. [Plato's *Republic*, Book iii.] He did not indeed object to quick cures for acute disorders, or for injuries produced by accidents. But the art which resists the slow sap of a chronic disease, which repairs frames enervated by lust, swollen by gluttony, or inflamed by wine, which encourages sensuality by mitigating the natural punishment of the sensualist, and prolongs existence when the intellect has ceased to retain its entire energy, had no share of his esteem. A life protracted by medical skill he pronounced to be a long death.
…

Plato, considering the moral improvement of the people as the end of legislation, justly inferred that a law which commanded and threatened, but which neither convinced the reason, nor touched the heart, must be a most imperfect law. He was not content with deterring from theft a man who still continued to be a thief at heart, with restraining a son who hated his mother from beating his mother. The only obedience on which he set much value was the obedience which an enlightened understanding yields to reason, and which a virtuous disposition yields to precepts of virtue. He really seems to have believed that, by prefixing to every law an eloquent and pathetic exhortation, he should, to a great extent, render penal enactments superfluous.
…

Our belief is that, among the philosophers themselves, instead of a progressive improvement there was a progressive degeneracy. **An abject superstition which Democritus or Anaxagoras would have rejected with scorn, added the last disgrace to the long dotage of the Stoic and Platonic schools.**

https://www.ccel.org/g/gibbon/decline/volume1/chap13.htm#then

The knowledge that is suited to our situation and powers, the whole compass of moral, natural, and mathematical science, was neglected by the new Platonists; whilst they exhausted their strength in the verbal disputes of metaphysics, attempted to explore the secrets of the invisible world, **and studied to reconcile Aristotle with Plato, on subjects of which both these philosophers were as ignorant as the rest of mankind.** Consuming their reason in these deep but unsubstantial meditations, their minds were exposed to illusions of fancy. They flattered themselves that they possessed the secret of disengaging the soul from its corporeal prison; claimed a familiar intercourse with daemons and spirits; and, by a very singular revolution, converted the study of philosophy into that of magic. **The ancient sages had derided the popular superstition; after disguising its extravagance by the thin pretence of allegory, the disciples of Plotinus and Porphyry became its most zealous defenders.** As they agreed with the Christians in a few mysterious points of faith, they attacked the remainder of their theological system with all the fury of civil war.

https://www.angelfire.com/nb/shestov/ijb/jb33_2.html

One thing is sure: in Plotinus, as also in some important representatives of the Middle Ages, theological truth or the truth of revelation is at irreconcilable enmity with philosophical truth, or science in the usual sense of the word. But another thing is sure also: **in contrast to the thought of the Middle Ages, Plotinus never expresses his thought on the mutual relationship between these two truths with the clarity and decision which would be desirable. He speaks of this as though there were no question, as though no question were possible, or as though this question answered itself.** In the sixth *Ennead* (ix, 3, 4) he writes: "Whenever the soul approaches the Formless (*aneideon*) it fears lest it be confronted with "nothingness" (*eksolisthanei kai phobeîtai, mê ouden echêi*), being unable to grasp it, because it has no definition and no marks of a special type – and it flees. Before such phenomena it becomes uncertain and withdraws into lower spheres... **The main ground of our uncertainty comes from the fact that the comprehension of the One (i.e. the truth of revelation) is not given us through learned knowledge (*epistêmê*) and also not through thinking (*noêsis*)** like the cognition of other ideal things (*ta alla noêta*) but through a communion (*parousia*) which is something higher than knowledge. **When the soul acquires scientific cognition of a matter, it departs from the One (again meaning, from the truth of revelation) and ceases to be One; for every scientific knowledge presupposes a ground, and every ground presupposes a multiplicity (*logos gar hê epistêmê, polla de ho logos*).**

This means that Plotinus is unfaithful to the fundamental command of his divine master, in that he abandons the *logos* (reason) and becomes in Plato's phraseology a *misologos*, a hater of reason – **for Plato taught that to be a misologist is the greatest misfortune that can befall a man.** Plotinus himself has said: In the beginning is reason and all is reason (*archêi oûn logos kai panta logos*: III, ii, 15) – and his disciples and successors have repeated these words again and again.

If, then, reason is the ground of all things and all things are reason, if it is the greatest of misfortunes to renounce reason and to hate it, **then how, one wonders, could Plotinus exalt with such enthusiasm his "One", and deep participation in it. And what has happened to the law of contradiction, which is also an *archê* (beginning, fundamental principle), indeed, a *bebaiôtatê tôn archôn*, the most unshakable of all fundamental principles?** I think that this question can in no wise be evaded; I think, too, that Plotinus's modern commentators are wrong in trying so hard to prove that Plotinus never renounced reason, and that when he thought and wrote down his thoughts he never turned his gaze away from the law of contradiction. **It seems to me that old Zeller saw more clearly and came nearer the truth when he declared fearlessly: "It is in contradiction with the whole trend of classical thought and a decided approach to the spiritual methods of the East when Plotinus, like some Philo, can find the final purpose of philosophy only in a contemplation of the divine in which all decision of thought and all clarity of self-consciousness vanish in mystical ecstasy"** (V, vi, 11). In another passage Zeller expressed himself more sharply still: "The philosopher (viz. Plotinus) has lost absolute confidence in his thought" (V, iv, 82). Zeller is undoubtedly right. The same Plotinus who extolled reason and thought so often and so passionately has lost his trust in reason and become, in spite of the Platonic tradition, a misologist, a hater of reason.

https://archive.org/details/christiantheoryo0000corn/page/144/mode/2up?view=theater

Plotinus wants to be true to the Parmenidean principle of pure logic as determinative of the nature of reality but he does not, in being true to this principle, want to deny the reality of the contingency of the world of sense.

"Intelligence," says Plotinus, “is the first legislator, or rather, it is the very law of existence. **Parmenides therefore was right in saying, ‘Thought is identical with existence.’** The knowledge of immaterial things is therefore identical with those things themselves. That is why I recognize myself as a being, and why I have reminiscences of intelligible entities. Indeed, none of those beings is outside of the Intelligence, nor is contained in any location; all of them subsist in themselves as immutable and indestructible. That is why they really are beings.”1a

Over against this real world as identical with the intelligible world stands the world of pure, unrelated contingency. There is an absolute dualism between these two worlds. Plotinus seeks to overcome this absolute dualism by means of the idea of participation. In this he follows Plato.

The facts of the world of sense, the world of contingency, are unreal except so far as they participate in the world of timeless reality. Time is intelligible only if we think of it as timeless.

It is thus that in the philosophy of Plotinus the Greek *paideia* appears as utterly bankrupt. The principle of pure rationality and the principle of pure irrationality are made correlative to one another and thereby cancel each out each other.

It is thus that the Socratic spirit of Inwardness, i.e., of the concentration of all interpretation upon man as the final point of reference stands against the Christian spirit of Inwardness as expressed in Augustine's theology. In Plotinus and Augustine the Greek and the Christian *paideia* stand squarely over against one another, ready for the final duel.

It might seem that in the philosophy of Plotinus rationalism rather than irrationalism rules. Yet this is not the case. Even though thought and being must be said to be identical, Plotinus argues, no man can ever experience such an identification. The identification is always ideal. It is always above the discursive thought of any man. Discursive reason can only point to a unity that is higher than anything that man can say about it. If unity is to be objective then it must be above all the rational thought of man.

Says Plotinus: “(To attain Unity) we must therefore rise above all science, and never withdraw from what is essentially One; we must therefore renounce science, the objects of science, and every other right (except that of the One); even that of beauty; **for beauty is posterior to unity, and is derived from therefrom, as the day-light comes from the sun. That is why Plato says of (Unity) that it is unspeakable and undescribable.** Nevertheless we speak of it, we write about it, but only to excite our souls by our discussions, and to direct them towards this divine spectacle, just as one might point out the road to somebody who desired to see some object.”2

Again Plotinus says: “**There must indeed be some principle above Intelligence; for Intelligence does indeed to aspire to be one, but it is not one, possessing only the form of unity ... What is above Intelligence is Unity itself, an incomprehensible miracle, of which it cannot be even said that it is essence, lest we make of it an attribute of something else, and to whom no name is suitable.** If however he must be named, we may indeed call him in general Unity, but only on the preliminary understanding that he was not at first something else, and then only later became unity.

That is why the One is so difficult to understand in himself; he is rather known by his offspring; that is, by Being, because Intelligence leads up to being."3

Plotinus gives us here the self-sufficient first principle of his philosophy. This first principle is altogether *beyond* the reach of reasoning. Yet reason says that the ultimate principle *must be* this super-rational sort of being. Nothing can be said of the first principle. Yet is must be the source of all explanation of man and the cosmos.
…

Since the fall of Adam apostate mankind has assumed its own essential divinity. Man is assumed to be participant in deity. When he uses the laws of logic and in particular the law of contradiction, as he must, then he takes for granted this inherent divinity of man. He assumes that his logic is legislative for the nature of reality. Whatever exists, he assumes, must be exhaustively penetrable by the logical powers of man. **As we have seen, Parmenides gave eloquent and terse expression to this assumption when he said that only that which I can think without contradiction, exists.** Plotinus carries this apostate view of logic through even when, in contrast to Parmenides, he seeks to ascribe some measure of reality to temporal things.

In complete contrast to this approach of Plotinus stands that of Augustine. **To be sure, as noted, Augustine makes many a concession to the apostate point of view of logic. But at bottom his commitment is to the idea that man is the creature of God rather than participant in the being of God. In spite of his many concessions to the Greek *paideia* his main principle, as best expressed in his latest works, is that sovereign God gives or withholds his grace to sinners according to his good pleasure.** Therefore if those who operate from a Plotinian point of view charge him with determinism Augustine, following Paul, simply responds: "Who art thou O man that contendest with God." **The judge of the whole earth will do right.**
…

It was not till Plotinus appeared upon the scene that the denial of God as creator and redeemer came to express itself fully in the idea of abstract unity that is beyond all human predication. If Plato and Aristotle still kept up the pretence that it is by the laws of thought that men must come to the idea of a unity that is above the laws of thought, Plotinus maintained that "the principle of identity is derivative from the One and not applicable to it."4 Says Richard Kroner, "Plotinus tried very hard to comprehend the Supreme Being logically and ontologically, but he knew very well that logic finally breaks down; only ecstasy can fill the gap that separates the human intellect from the mystery of the divine."5
…

Following Kant, modern philosophers know with all possible certainty that that God is unknowable. Even though they cannot show how man or the world can be known without God they are certain that man has knowledge and that he has this knowledge without God. Even though they admit that man is a product of chance and that the logical powers of his thought are products of chance yet they know that God cannot be man's creator or redeemer.
…

"The essence of all things is nothing but the knowledge of them in the mind of God. *Nihil enim est aliud omnium essentia, nisi omnium in divina sapientia cognitio.*"23 **The contention of Lovejoy that the rationalism of the principle of plenitude as used by such men as Plotinus and St. Denis is as determinist as is that of Spinoza is manifest with utmost clarity in the thought of Erigena. The final significance of this fact is apparent when we see that according to Erigena the salvation of all men as accomplished by Christ and as shown in his resurrection, takes place in the strength of the power of nature, *naturali virtute*.**24

>
> Critics were especially indignant at [Gundling's] endorsing Bayle's identification of the great Neoplatonist Plotinus (AD 205-79) as a proto-Spinozist and, worse, claiming Platonism itself is, at bottom, monist and Spinozistic.106
> …
>
> His thesis hinges on the claim that Plato's God is the immanent cause pervading the cosmos and the world's *causa efficiens necessaria* [necessary efficient cause] just as fire is of warmth, acting in the world blindly and necessarily: 'est enim Deus Platonis mundus, et mundus Deus' [thus the God of Plato is the world, and the world God].108 **Hence, he concluded, Plato's God does not in fact create or form matter but merely pervades it like the Stoic God which, as Buddeus had already confirmed, closely resembles Spinoza's.**109

…

Early Christian theologians were not alert to this fact. **They all too frequently did not realize that once they agreed that their notion of the incomprehensibility of God was the same, in effect, as the idea of the namelessness of God as held to by the Greeks, the gnostics and Plotinus, that they then could logically be compelled to deny the whole of the significance of the appearance of Christ in history.** The God of Christianity is not nameless. He knows himself exhaustively. His creatures therefore also know him. They cannot help but know him. They do not, to be sure, know him exhaustively. God is not fully comprehensible to them. That is what is meant when in terms of the Christian principle God is said to be incomprehensible to man. **This view of the incomprehensibility of God is the opposite of the notion of the incomprehensibility of God involved in the principle of plenitude. In the latter, God is wholly unknown and and unknowable to himself.** On this basis ultimate reality is utterly meaningless. If man says that the world has meaning for him in terms of such a god, he is merely deceiving himself. **On this view no fact of history can be intelligently related to any other fact of history.** Certainly the whole work of creation and redemption is then one colossal farce, a purely imaginary construction in the clouds on the part of man.

> **Epictetus and the other Stoics, and with them the whole official Greek philosophy whose heirs we have involuntarily become, did not admit the possibility of real miracles.** For Epictetus the law of contradiction was the final and supreme law which binds men and gods equally. It would have seemed madness to him if Pascal had said to him that the law of contradiction is precisely that angel with the flaming sword whom God posted at the gate of Paradise after the Fall of our forefather Adam. For Epictetus the way to achieve the Supreme, both for men and for gods, is complete subjection to the law. The law was "in the beginning" and will also be at the end. **He formed an image from the law which he worshipped like a god, for the law is, like a god, "spirit", an ideal entity which knows neither *genesis* (origin) nor *phthora* (destruction).** The doctrine of Epictetus which has so entranced man – and not only the simple but also philosophers – culminates in instilling into them the conviction that the idol which he has created is God, and that there are no other gods beside it, and that the purpose and destiny of man is to serve this idol. He rejects the carven images which his ancestors made, the images of gold and silver, ivory and marble. But he worships the *ideal* image without seeing that it is an image. **And it came to pass that after him even those men who knew the message brought down from Sinai did not perceive that an image formed of ideas as little resembles God as an image formed of any coarse physical matter.**

…

This mystical principle was already expressed by Socrates in his principle of inwardness. **To be sure, Socrates sought to answer the skeptics in his day by thinking of the individual soul as participant in an objective world of intelligence.** But by the time of Plotinus this objective world of intelligence had shown itself to be something that was utterly beyond the reach of all human intelligence. **If in Plato it is Diotema, the inspired, who must lift up the soul to the world of light, so it is by sheer concentration of its own powers that the soul of Plotinus takes its ecstatic flight into the world of light which is darkness now as well as light.**

…

Plotinus was not modern. He was still desirous of joining his soul with a somehow objectively existing principle of unity. The modern view thinks that this is to follow a mirage.

https://archive.org/details/plotinusethicalt01plotuoft/page/n11/mode/2up?view=theater

I. **Plotinus, the philosopher our contemporary, seemed ashamed of being in the body. So deeply-rooted was this feeling that he could never be induced to tell of his ancestry, his parentage or his birthplace.**

…

At forty, in the reign of Philip, he settled in Rome.

…

Another friend was Zethos, an Arabian by descent, who married a daughter of Ammonius' friend Theodosius. Zethos, too, was a doctor. Plotinus was deeply attached to him and was always trying to divert him from the political career in which he stood high. Plotinus was on the most familiar terms with him, and used to stay with him at his country place, six miles from Minturnae, a property which had formerly belonged to Castricius Firmus.

…

Another Senator, Rogatianus, advanced to such detachment from political ambitions that he gave up all his property, dismissed all his slaves, renounced every dignity, and, on the point

of taking up his praetorship, the lictors already at the door, refused to come out or to have anything to do with the office. He even abandoned his own house, spending his time here and there at this friends' and acquaintances', sleeping and eating with them and taking, at that, only one meal every other day. **He had been a victim of gout, carried in a chair, but this new regime of abstinence and abnegation restored his health: he had been unable to stretch out his hands; he came to use them as freely as men living by manual labour. Plotinus took a great liking to Rogatianus and frequently praised him very highly, holding him up as a model to those aiming at the philosophical life.**

http://www.tertullian.org/fathers/eunapius_02_text.htm#PLOTINUS

PLOTINUS was a philosopher of Egyptian birth. But though I just now called him an Egyptian, I will add his native place also; Lyco they call it. Yet the divine philosopher Porphyry did not record this, though he said that he was his pupil and studied with him during the whole of his life, or the greater part of it.

> https://brill.com/view/journals/mnem/52/3/article-p330_6.xml?language=en
>
> In his bitter opposition to the Christian Empire Eunapius may well have wanted to bring into the open the pagan, Neoplatonic city of Lykopolis as Plotinus' place of origin.
>
> For Proclus in the fifth century through David in the late sixth Plotinus was an Egyptian;27 the Souda duly expanded 'Lyko' to 'Lykopolis,' and so the tradition solidified.

Altars in honour of Plotinus are still warm, and his books are in the hands of educated men, more so than the dialogues of Plato. Nay, even great numbers of the vulgar herd, though they in part fail to understand his doctrines, nevertheless are swayed by them.
…

After Porphyry's early education had thus been carried on and he was looked up to by all, he longed to see Rome, the mistress of the world, so that he might enchain the city by his wisdom. **But directly he arrived there and became intimate with that great man Plotinus, he forgot all else and devoted himself wholly to him.** And since with an insatiable appetite he devoured his teaching and his original and inspired discourses, for some time he was content to be his pupil, as he himself says. **Then overcome by the force of his teachings he conceived a hatred of his own body and of being human,** and sailed to Sicily across the straits and Charybdis, along the route where Odysseus is said to have sailed;[8] and he would not endure either to see a city or to hear the voice of man, thus putting away from himself both pain and pleasure, but kept on to Lilybaeum; this is that one of Sicily's three promontories that stretches out and looks towards Libya. There he lay groaning and mortifying the flesh, and he would take no nourishment and "avoided the path of men."[9]
…

Now Porphyry returned to Rome and continued to study philosophical disputation, so that he even appeared in public to make a display of his powers; **but every forum and every crowd attributed to Plotinus the credit of Porphyry's renown. For Plotinus, because of the celestial quality of his soul and the oblique and enigmatic character of his discourses, seemed austere and hard to listen to. But Porphyry, like a chain of Hermes let down to mortals,[14] by reason of his many-sided culture expounded all subjects so as to be clear and easy of comprehension.**

https://www.iep.utm.edu/plotinus/#H4

According to Plotinus, the soul that has descended too far into matter needs to "merely think on essential being" in order to become reunited with its higher part (IV. 8.4). **This seems to constitute Plotinus' answer to any ethical questions that may have been posed to him. In fact, Plotinus develops a radical stance vis-a-vis ethics, and the problem of human suffering.** In keeping with his doctrine that the higher part of the soul remains wholly unaffected by the disturbances of the sense-realm, Plotinus declares that only the lower part of the soul suffers, is subject to passions, and vices, etc. In order to drive the point home, Plotinus makes use of a striking illustration. Invoking the ancient torture device known as the Bull of Phalaris (a hollow bronze bull in which a victim was placed; the bull was then heated until it became red hot), he tells us that only the lower part of the soul will feel the torture, while the higher part remains in repose, in contemplation (I. 4.13). **Although Plotinus does not explicitly say so, we may assume that the soul that has reunited with its higher part will not feel the torture at all.** Since the higher part of the soul is (1) the source and true state of existence of all souls, (2) cannot be affected in any way by sensible affections, and (3) since the lower soul possesses of itself the ability to free itself from the bonds of matter, all particular questions concerning ethics and morality are subsumed, in Plotinus' system, by the single grand doctrine of the soul's essential imperturbability. **The problems plaguing the lower soul are not, for Plotinus, serious issues for philosophy. His general attitude may be summed up by a remark made in the course of one of his discussions of 'Providence':**

> **“A gang of lads, morally neglected, and in that respect inferior to the intermediate class, but in good physical training, attack and overthrow another set, trained neither physically nor morally, and make off with their food and their dainty clothes. What more is called for than a laugh?”** (III. 2.8, tr. MacKenna).

Of course, Plotinus was no anarchist, nor was he an advocate of violence or lawlessness. Rather, he was so concerned with the welfare and the ultimate salvation of each individual soul, that he elevated philosophy — the highest pursuit of the soul — to the level of a divine act, capable of purifying each and every soul of the tainting accruements of sensual existence. **Plotinus’ last words, recorded by Porphyry, more than adequately summarize the goal of his philosophy: “Strive to bring back the god in yourselves to the God in the All”** (*Life of Plotinus* 2).

https://www.midasword.com.au/julians-new-paganism/

> [13] Bradbury, Scott., ‘Julian’s pagan revival and the decline of blood sacrifice’, *Phoenix* 49 (1995): p-332. “**Although keenly interested in sacrifices in his youth, Porphyry’s years with Plotinus (262-268) brought about a profound reorientation of his spiritual life and led him to call into doubt the utility of conventional cult, including blood sacrifice. In the *Letter to Anebo,* composed between 263 and 268, he rejected in a dismissive, even mocking, tone the elements of “low-brow” religion, the daemonology, occult practices, and sacrifices that had been so conspicuous in his early works,** the *Philosophy from Oracles* and *On the Return of the Soul.*”
> …
>
> [19] Meredith, Anthony. “Porphyry and Julian against the Christians” in *Aufstieg und Niedergang der Romischen Welt: Geschichte und Kultur Roms im Spiegel der Neueren Forschung (Series II)* , Temporini, Hildegard, 1980, 1137. “**This action of Plotinus can be seen as the active counterpart to the total absence of political philosophy in Plotinus, Porphyry or Iamblichus. Under their influence, Platonic philosophy, which under both Plato and later Platonists like Celsus had had a definitely political bias, became apolitical, rigorously spiritualist and individualist.** The Pythagorean tradition, likewise, as represented in the ’De Vita Pythagorica’, by Iamblichus, taught that Pythagoras left Samos for Italy, because he had not enough leisure in his native country adequately to pursue philosophy.”

https://www.tertullian.org/fathers/porphyry_abstinence_04_book4.htm#31

> 1. **Though Porphyry excelled in all philosophical knowledge, whence also he was called κατ᾽ εξοχην, *the philosopher,* yet he was inferior to his auditor Iamblichus, in theological information. On this account, Iamblichus was called by all the Platonists posterior to him, *the divine,* and *the great priest.***

https://en.wikisource.org/wiki/The_Works_of_the_Emperor_Julian/Hymn_to_King_Helios

The Oration is dedicated to his friend and comrade in arms Sallust who is probably identical with the Neo-Platonic philosopher, of the school of Iamblichus, who wrote about 360 the treatise *On the Gods and the World*. Cumont calls this "the official catechism of the Pagan empire," **and Wilamowitz regards it as the positive complement of Julian's pamphlet Against the Christians.**
…

Now for my part I envy the good fortune of any man to whom the god has granted to inherit a body built of the seed of holy and inspired ancestors, so that he can unlock the treasures of wisdom; nor do I despise that lot with which I was myself endowed by the god Helios, that I should be born of a house that rules and governs the world in my time; **but further, I regard this god, if we may believe the wise, as the common father of all mankind.**[9]
…

Now I am aware that the great philosopher Plato,[78] **and after him a man who, though he is later in time, is by no means inferior to him in genius**—I mean Iamblichus[79] of Chalcis, who through his writings initiated me not only into other philosophic doctrines but these also—I am aware, I say, that they employed as a hypothesis the conception of a generated world, and assumed for it, so to speak, a creation in time in order that the magnitude of the works that arise from Helios might be recognised. But apart from the fact that I fall short altogether of their ability, I must by no means be so rash; especially since the glorious hero Iamblichus thought it was not without risk to assume, even as a bare hypothesis, a temporal limit for the creation of the world.
…

And has not Apollo, who is his colleague in empire, set up oracles in every part of the earth, and given to men inspired wisdom, and regulated their cities by means of religious and political ordinances? **And he has civilised the greater part of the world by means of Greek colonies, and so made it easier for the world to be governed by the Romans.** For the Romans themselves not only belong to the Greek race, but also the sacred ordinances and the pious belief in the gods which they have established and maintain are, from beginning to end, Greek. And beside this they have established a constitution not inferior to that of any one of

the best governed states, if indeed it be not superior to all others that have ever been put into practice. **For which reason I myself recognise that our city is Greek, both in descent and as to its constitution.**
…

Aye, but also, through his perpetual generation and the blessings that he bestows from the heavenly bodies, he holds together the region beneath the moon. **For he cares for the whole human race in common, but especially for my own city,**[129] even as also he brought into being my soul from eternity, and made it his follower.
…

This discourse, friend Sallust,[130] I composed in three nights at most, in harmony with the three-fold creative power of the god,[131] as far as possible just as it occurred to my memory: and I have ventured to write it down and to dedicate it to you because you thought my earlier work on the Kronia[132] was not wholly worthless. **But if you wish to meet with a more complete and more mystical treatment of the same theme, then read the writings of the inspired Iamblichus on this subject,**[133] **and you will find there the most consummate wisdom which man can achieve.** And may mighty Helios grant that I too may attain to no less perfect knowledge of himself, and that I may instruct all men, speaking generally, but especially those who are worthy to learn. **And so long as Helios grants let us all in common revere Iamblichus, the beloved of the gods. For he is the source for what I have here set down, a few thoughts from many, as they occurred to my mind.** However I know well that no one can utter anything more perfect than he, nay not though he should labour long at the task and say very much that is new. For he will naturally diverge thereby from the truest knowledge of the god. Therefore it would probably have been a vain undertaking to compose anything after Iamblichus on the same subject if I had written this discourse for the sake of giving instruction.

https://archive.org/details/alexandriaandher00kinguoft/page/120/mode/2up?view=theater

He is about to commence his discourses on **the Parmenides, that book in which we generally now consider that Plato has been most untrue to himself, and fallen from his usual inductive method to the ground of a mere *à priori* theoriser**—and yet of which Proclus is reported to have said, and, I should conceive, said honestly, that if it, the Timæus, and the Orphic fragments were preserved, he did not care whether every other book on earth were destroyed. But how does he commence?

> "I pray to all the gods and goddesses to guide my reason in the speculation which lies before me, and having kindled in me the pure light of truth, to direct my mind upward to the very knowledge of the things which are, and to open the doors of my soul to receive the divine guidance of Plato, and, having directed my knowledge into the very brightness of being, to withdraw me from the various forms of opinion, from the apparent wisdom, from the wandering about things which do not exist, by that purest intellectual exercise about the things which do exist, whereby alone the eye of the soul is nourished and brightened, as Socrates says in the Phædrus; and that the Noetic Gods will give to me the perfect reason, and the Noeric Gods the power which leads up to this, and that the rulers of the Universe above the heaven will impart to me an energy unshaken by material notions and emancipated from them, and those to whom the world is given as their dominion a winged life, and the angelic choirs a true manifestation of divine things, and the good dæmons the fulness of the inspiration which comes from the Gods, and the heroes a grand, and venerable, and lofty fixedness of mind, and the whole divine race together **a perfect preparation for sharing in Plato's most mystical and far-seeing speculations, which he declares to us himself in the Parmenides, with the profundity befitting such topics, but which *he* (*i.e.* his master Syrianus) completed by his most pure and luminous apprehensions,** who did most truly share the Platonic feast, and was the medium for transmitting the divine truth, the guide in our speculations, and the hierophant of these divine words; who, as I think, came down as a type of philosophy, to do good to the souls that are here, in place of idols, sacrifices, and the whole mystery of purification, a leader of salvation to the men who are now and who shall be hereafter. And may the whole band of those who are above us be propitious; and may the whole force which they supply be at hand, kindling before us that light which, proceeding from them, may guide us to them."

Surely this is an interesting document. **The last Pagan Greek prayer, I believe, which we have on record;** the death-wail of the old world—not without a touch of melody.

http://www.tertullian.org/fathers/marinus_01_life_of_proclus.htm

He regularly observed the great festivals of all peoples, so to speak, and the religious ceremonies peculiar to each people or country. Nor did he, like so many others, make this the pretext of a distraction, or of a debauch of food, but on the contrary they were occasions of prayer meetings that lasted all night, without sleep, with songs, hymns and similar devotions. Of this we see the proof in the composition of his hymns, which contain homage and praises not only of the gods adored among the Greeks, but where you also see worship of the god Marnas of Gaza, Asklepius Leontuchus of Ascalon, Thyandrites who is much worshipped among the Arabs, the Isis who has a temple at Philae, and indeed all other divinities. **It was a phrase he much used, and that was very familiar to him, that a philosopher should watch over the salvation of not only a**

city, nor over the national customs of a few people, but that he should be the hierophant of the whole world in common.

http://bmcr.brynmawr.edu/2018/2018-03-32.html

Revealed in all these works, along with a steady stream of articles, is Proclus as the last great consolidator of ancient Platonism and its “face” as philosophy shifted into a Christian, and later Islamic, context. **If, as Proclus himself thought, Plotinus was the greatest expositor of the Platonic revelation, Proclus was the supreme systematizer of that revelation. It was through Proclus and definitely not through Plotinus that the principal philosophical school of antiquity was “received.”** It was Proclus, above all others, whose systematic expression of Platonism was found to be most apt for theological re-purposing.

https://archive.org/details/greeklatinauthor0002unse/page/674/mode/2up?view=theater

(141) **He says that the successor of Proclus, Marinus, came from Neapolis in Palestine, a city situated near the mountain called Argarizon.** Then the impious writer uttered the blasphemy that on this mountain there is a most holy sanctuary of Zeus the Highest, to whom Abraham the father of the old Hebrews consecrated himself, as Marinus himself maintains. **Marinus, though originally a Samaritan, gave up their creed, since it deviated from Abraham’s religion and introduced innovations in it, and fell in love with paganism.** (142) Nevertheless, by working hard, and untiring toil, Marinus surpassed in renown the fame of many abler and elder men.

https://www.academia.edu/10493178/MARINUS_AN_ERETZ-ISRAEL_NEOPLATONST_AT_ATHENS_Eng._version_

Oriental influence on Neoplatonic thought is still a vexed question, but there is no doubt concerning the Syrian and Palestinian origins of many of the thinkers themselves. The tendency among philosophers from this region to study Plato may have reached its apogee under Iamblichus, who had founded a center of his own in Syria, many years previously. Phoenicians and individuals from Palestine had risen to prominence even in the New (Sceptic) Academy.10 Although the latter soon broke up and was not succeeded by any particular institution at any one location,11 Phoenicians and Syrians continued to play an important part in Middle Platonism as well as in early Neoplatonism.12 This is particularly true of the Neoplatonic school that Plutarch of Athens established in his city at the beginning of the fifth century C.E. – and which later included a number of professors and scholars of Syrian and Palestinian origin.13 **Thus, when Marinus rose to prominence in the Neoplatonic school of Athens, he would have found no special difficulties as a result of his Samaritan roots.**14 Yet although he was highly esteemed by his master Proclus, who dedicated one of his famous essays on Plato's *Republic* to “my dear friend, Marinus,”15 the latter was much denigrated by his younger contemporaries and students, Damascius and Isidorus of Alexandria.16

http://bmcr.brynmawr.edu/2000/2000-04-19.html

Considering the format of Thiel's treatise one would expect, within the vast complex of questions which surround these rather fascinating last "Greek" philosophers,2 some elucidation or at least exploration of one or two specific points or issues which have not yet sufficiently been brought into the discussion.

> 2. They are "Greek" or Hellenic insofar as their intellectual background and their philosophizing are Greek, not their origins. **So it seems reasonable to suppose that the first language of at least five of the seven philosophers mentioned in Agathias' report -- Hermias and Diogenes (both from Phoenicia), Isidorus of Gaza, Damascius of Syria and perhaps even Simplicius of Cilicia -- was Syriac (or some other Aramaic dialect close to Syriac). Such a knowledge of Syriac might with some probability also be attributed to Iamblichus of Coele-Syria.**

---

http://www.jewishencyclopedia.com/articles/6448-gabirol-solomon-ibn

Gabirol was the first teacher of Neoplatonism in Europe. He essayed again the part played by Philo. Philo had served as the intermediary between Hellenic, especially Platonic, philosophy and the Oriental world. He had Orientalized European philosophy and prepared the way for its Christianization. A thousand years later Gabirol Occidentalized Greco-Arabic philosophy and restored it to Europe. **Strangely enough, the philosophical teachings of Philo and Gabirol were alike ignored by their fellow Jews;** and the parallel may be extended by adding that Philo and Gabirol alike exercised a very considerable influence in extra-Jewish circles: Philo upon primitive Christianity, and Gabirol upon the scholasticism of medieval Christianity. **Gabirol's service, in common with that of other Arabic and Jewish philosophers, in bringing the philosophy of Greece under the shelter of the Christian Church, was but a return for the service of the earlier Christian scholars, who had translated the chief works of Greek philosophy into Syriac and Arabic.**

https://www.newadvent.org/cathen/04645a.htm

Albert, who was a contemporary of David, says that David merely renewed the heresy of Alexander, "who taught that God and intellect and matter are one substance". It is impossible to determine whom Albert here means by Alexander, "a disciple of Xenophanes"; probably the reference is to some Arabian work that went under the name of a Greek philosopher. There were several works of that kind current in the early part of the thirteenth century. **Some critics, however, put forward the surmise that David's immediate source was Avicebron's "Fons Vitæ",** or the work "De Unitate", written by Archdeacon Gundisalvi of Segovia, who was well versed in Arabian philosophical literature. **Whatever the source, the doctrines were, as all our authorities concur in describing them, the expression of the most thoroughgoing pantheism.** This of itself would justify the drastic measures to which the Council of Paris had recourse. There were, moreover, circumstances which rendered summary condemnation necessary. **On the one hand the University of Paris was being made the scene of an organized attempt to foist the Arabian pantheistic interpretation of Greek philosophy on the schools of Latin Christendom. Texts, translations, and commentaries were introduced every day from Spain, in which doctrines incompatible with Christian dogma were openly taught.** On the other hand, there was the popular movement in the South of France which found its principal expression in the Albigensian heresy, **while in learned and ascetic communities in the North, the anti-hierarchical mysticism of the Calabrian Joachim of Floris was being combined with the more speculative pantheistic mysticism of John Scotus Eriugena.** In view of these conditions the condemnation of the errors of David of Dinant, the complete extirpation of the sect of Amalricians to which he apparently belonged, and the unwonted harshness of St. Thomas's reference to him cannot be judged untimely or intemperate.

https://www.newadvent.org/cathen/01379b.htm

[The Amalricians] held, besides, peculiar views on the Trinity, distinguishing three periods in the Divine economy with regard to man; the reign of the Father, become incarnate in Abraham, which lasted until the coming of Christ; the reign of the Son, become incarnate in Mary, which had endured until their own time; and the reign of the Holy Ghost, **which, taking its beginning from the dawn of the twelfth century, was to last until the end of time. Unlike the Father and the Son, the Holy Ghost was to become incarnate, not merely in one individual of mankind, but in every member of the human race.** Moreover, as the Old Law had lost its efficacy at the coming of Christ, so, in their day, the law of the Gospel was to be supplanted by the interior guidance of the Holy Ghost, indwelling in each human soul. In consequence of this they rejected the sacraments as obsolete and useless. Those in whom the Holy Spirit had already taken up His abode were called "the spiritualized", and were supposed to be already enjoying the life of the Resurrection. The signs of this interior illumination were the rejection of faith and hope, as tending to keep the soul in darkness, and the acceptance, in their place, of the light of positive knowledge. **It followed from this, that in knowledge and the acquisition of new truths consisted their paradise; while ignorance, which meant adherence to the old order of things, was their substitute for hell.**

https://archive.org/details/cu31924029351271/page/186/mode/2up?view=theater

There was already by 1209 a widespread "society" in and about Paris, evidently loosely held together, and yet showing some indications of internal organization. We learn of a specific ministry through "prophets," and we find an important stress placed on ecstasy and inspirational speaking. **The members of the sect rejected, as suited only to the condition of the ignorant and unspiritual, the traditional formulae, rites, and ceremonies of the Church.** They denounced as superstition the worship of saints and the veneration of relics. Goodwill and spiritual insight, they held, are more efficacious than the sacraments.

> "They denied," says the Chronicler Caesar of Heisterbach,1 "the resurrection of the body. They taught that there is neither heaven nor hell, as places, **but *that he who knows God possesses heaven*, and he who commits a mortal sin carries hell within himself just as a man carries a decayed tooth in his mouth.** They treated as idolatry the custom of setting up of statues to saints, and burning incense to images. They laughed at those who kissed the bones of martyrs."

…

If the law is abolished, if the believer holds that God does through him whatever he does, if he has lost all standards of distinction, **so that he asserts that "God spoke through Ovid as much as through Augustine," as one chronicler says they taught,** the step down into an immoral life is very easy. But there is no proof that the disciples of Amaury actually took this step. There is no such charge in the earliest account of the sect, and the charges increase in virulence as the writers are more remote in time from the facts which they record. In the first stage of the movement the lofty, serious purpose of the sect would keep the members from drawing practical consequences, into which a lower type of members might easily fall in the second and third generation.

…

We get a graphic account from a famous inquisitor—Stephen of Borbone—of a sect in Lyons **which looks like a union of the disciples of Amaury with the Waldenses.** The sect exhibits the strict morality of the latter, and the pantheistic metaphysics of the former. Stephen of Borbone made his investigation between 1223 and 1235. He describes the sect as follows:

> "**They absolutely refuse obedience to the Roman Church, which they call the unholy Babylon of the Apocalypse.** They hold that all good persons, according to some, even women, are priests, having received direct ordination from God, while ecclesiastics receive it only from men. All good persons, even women, can pronounce absolution, and can consecrate the bread. They teach that it is sufficient to confess sins to God, and that God alone is able to excommunicate."

Then follows an account of moral and anti-sacerdotal teaching characteristic of the Waldenses,1 and the account continues with a description of an extreme form of mysticism:

> "They pretend that every man is a Son of God in the same manner that Christ was. Christ had God or the Holy Spirit for soul, and they say that other men also have. They believe in the incarnation, the birth, the passion, and the resurrection of Christ, but they mean by it the Spiritual conception, Spiritual birth, Spiritual resurrection of the perfect man. **For them the true passion of Jesus is the martyrdom of a holy man, and the true sacrament is the conversion of a man, for in such a conversion the body of Christ is formed. In the doctrine of the Trinity, the Father is he who converts a stranger to their doctrine. The Son is he who is converted, and the Holy Spirit is the truth by means of which the conversion is accomplished.** This is what they mean when they say that they believe in the Father and the Son and the Holy Ghost. They declare that the soul of all men since Adam is the Holy Spirit. ... **It is because God thus dwells in them that all good men are priests.** It is God who works through them and gives them power to loose and bind."2

Only a few years after the death of Amaury a powerful sect came to light, with mystical and pantheistical ideas which seem like a propagation and expansion of the views of this group we have been studying. **It was called in its earlier stages the "Sect of the New Spirit," though this name was soon superseded by the name Brethren of the Free Spirit.** The sect appears to have sprung up in the city of Strasbourg, and to have owed its origin to a man named Ortlieb, who was almost certainly an Amaurian.

https://archive.org/details/pursuitofmillenn0000norm_i9m3/page/148/mode/2up?view=theater

They were in fact gnostics intent upon their own individual salvation; but the gnosis at which they arrived was a quasi-mystical anarchism – an affirmation of freedom so reckless and unqualified that it amounted to a total denial of every kind of restraint and limitation. **These people could be regarded as remote precursors of Bakunin and of Nietzsche** – or rather of that bohemian intelligensia which during the last half-century has been living from ideas once expressed by Bakunin and Nietzsche in their wilder moments. But extreme individualists of that kind can easily turn into social revolutionaries – and effective ones at that – if a potentially revolutionary situation arises.
...

Accusations of promiscuity were of course often brought by one religious community against another; it was a stock technique of polemic in the medieval as in the early Church. But when they are directed against the adepts of the Free Spirit these accusations take on a different ring. What emerges then is an entirely convincing picture of an eroticism which, **far from springing from a carefree sensuality, possessed above all a symbolic value as a sign of spiritual emancipation** which incidentally is the value which 'free love' has often possessed in our own times.
...

Towards the close of the twelfth century various Spanish cities, and notably Seville, witnessed the activities of mystical brotherhoods of Moslems. These people, who were known as Sufis, were 'holy beggars' who wandered in groups through the streets and squares, dressed in patched and parti-coloured robes. The novices amongst them were schooled in humiliation and self-abnegation: they had to dress in rags, to keep their eyes fixed on the ground, to eat revolting foodstuffs; and they owed blind obedience to the master of the group. **But once they emerged from their noviciate, these Sufis entered a realm of total freedom.** Disclaiming book-learning and theological subtleties, they rejoiced in direct knowledge of God – indeed, they felt themselves united with the divine essence in a most intimate union. And this in turn liberated them from all restraints. Every impulse was experienced as a divine command; now they could surround themselves with worldly possessions, **now they could live in luxury – and now, too, they could lie or steal or fornicate without qualms of conscience.**

> https://iranicaonline.org/articles/korramis

> The idea that women and property could be freely taken also reappears, both in Sufism and elsewhere (e.g. Malaṭi, p. 73f; Nasafi, p. 359; *Haftād o seh mellat*, nos. 27, 72). Evaluating such reports is notoriously problematic, **but we do at least know from Ḥorufi sources that some Ḥorufis held themselves entitled to take everything in existence, believing that they were already in a Paradisical state and thus freed from the constraints of the law:** the *ʿāref* could take whatever was within reach and should endeavor to obtain what was in the hands of others (Browne, pp. 75 f.). This is close to Moqannaʿ's preaching in that the concern is with taking the property (and women?) of others, not with sharing within the community. **All in all, the legacy of Ḵorramism and other pan-psychist forms of Iranian religion in Islam seems to be much greater than that of Zoroastrianism as known from the Pahlavi books.**

…

Certainly every one of the features that characterized Sufiism in twelfth-century Spain – even to such details as the particoloured robes – were to be noted as typical of the adepts of the Free Spirit a century or two later.

…

Early in the thirteenth century the doctrine of the Free Spirit was elaborated into an all-embracing theological and philosophical system. This was the work of a most interesting group, consisting of men who had been trained at the greatest school of orthodox theology in Western Christendom, the University of Paris. The fullest account has been given by a German chronicler, the prior of the abbey of Heisterbach. **'In the city of Paris,' he writes, 'that fount of all knowledge and well of the divine writings, the Devil by persuasion instilled a perverse understanding into several learned men.'** They were fourteen in number and all of them clerics – parish priests, chaplains, deacons and acolytes from Paris and its environs and from such towns as Poitiers, Lorris near Orleans, Troyes. 'Men great in knowledge and understanding,' laments the same chronicler, and in the main the description seems justified: nine of the fourteen had studied theology in Paris and two are mentioned as being sexagenarians.

…

The philosophical master of these sectarians had been Amaury of Bène, a brilliant lecturer in logic and theology at the University of Paris. This man had at one time enjoyed great prestige and the patronage of the royal court; a number of eminent persons, including the Dauphin, had been his friends and had been impressed by his ideas. But in the end, denounced for teaching erroneous doctrine, he was condemned by the Pope and forced to make a public recantation. This experience broke Amaury's spirit: he took to his bed and shortly afterwards – in 1206 or 1207 – he died. When some two of three years later the heretical sect was unearthed the clergy at once proclaimed Amaury's responsibility and labelled the heretics 'Almaricans' or 'Amaurians.'

…

When the Amaurians claimed that 'each one of them was Christ and Holy Spirit,' they meant all that Tanchelm had meant. **They were convinced that what Christian theology regards as the unique miracle of the Incarnation was now being repeated in each one of them.**

…

Through them the Holy Spirit would speak to the world; but as a result of its utterances the Incarnation would become ever more general, until soon it would be universal. Under the guidance of the 'Spirituals' the world was entering on its supreme epoch, in which every man would be, and know himself to be, divine. 'Within five years,' they foretold, '**all men will be Spirituals, so that each will be able to say: "I am the Holy Spirit" and "Before Abraham was, I am";** just as Christ was able to say: "I am the Son of God" and "Before Abraham was, I am."'

…

Moreover amongst the Amaurians the phantasy of the Age of the Spirit did not, any more than it did amongst the German Joachites, oust the older phantasies centred on the Last Emperor. The five years of tribulation were to culminate in the overthrow of Antichrist and his hosts, who were no other than the Pope and the Church of Rome. **Thereafter all kingdoms would be under the domination of the King of France – the reigning king, Philip Augustus, at first, but later Amaury's friend and patron the Dauphin, who would never die but would rule for ever in the Age of the Spirit.** And 'to the King of the French twelve loaves shall be given' – meaning (one may suppose) that Louis VIII was to be a second Christ who – just like Tanchelm and the 'Master of Hungary' – would preside over a privy council or sacred college of twelve, modeled on the twelve Disciples.

…

In southern Europe various hyper-ascetic groups split off from the main body of Franciscans and turned against the Church; the north of Italy and the south of France, where formerly the Cathars had flourished, became the homes of the Franciscan 'Spirituals' and the *Fraticelli*. Northern Europe, on the other hand, saw a great revival of the Free Spirit.

The heresy of the Free Spirit, after being held in check for half a century, began to spread rapidly again towards the close of the thirteenth century. From the onwards until the close of the Middle Ages it was disseminated by men who were commonly called Beghards and who formed an unofficial lay counterpart to the Mendicant Orders. They too were mendicants – **indeed it is probably from their name that the English words 'beg' and 'beggar' derive.**

…

If we hear of Brethren of the Free Spirit who were artisans by origin, we hear of others who came from prosperous and well-established families and of others still – as in all messianic movements – who came from the less privileged strata of the intelligentsia: former monks and priests and clerks in minor orders. But all alike seem to have been literate and articulate: again and again we find the clergy who had to combat these people dismayed by the subtlety and eloquence of their training and by the skill with which they handled abstruse theological concepts.

Like any other *propheta*, **an adept of the Free Spirit owed his ascendancy to his reputation for asceticism – regarded as a guarantee of miracle-working powers** – and partly to personal qualities of eloquence and bearing. **But the following which he sought was different from that of other *prophetae*. He appealed not to the uprooted and disoriented poor but to people who had other but less compelling reasons to feel disoriented and frustrated – to women, and particularly to unmarried women and widows in the upper strata of urban society.** Owing partly to the perpetual wars and feuds and partly to the celibacy of that very large section of the male population which made up the regular and secular clergy, the number of women always far exceeded the number of possible husbands. In the peasant and artisan classes spinsters and widows were absorbed by industry and agriculture, in the aristocracy they could always become nuns. To women born into the families of prosperous merchants, on the other hand, medieval society offered no recognized role save marriage.

https://archive.org/details/pursuitofmillenn0000norm_i9m3/page/172/mode/2up?view=theater

It is in the fourteenth century that this doctrine first emerges into full view; and the features which it showed then were to remain almost unmodified throughout the history of the movement.

The metaphysical framework was provided by Neo-Platonism; but all the efforts which had been made, from Pseudo-Dionysius and Erigena onwards, to adapt Neo-Platonism to Christian beliefs were discounted. The pantheism of Plotinus, so far from being slurred over, was emphasized. The Brethren of the Free Spirit did not hesitate to say: 'God is all that is,' 'God is in every stone and in each limb of the human body as surely as in the Eucharistic bread,' 'Every created thing is divine.' **At the same time they took over Plotinus' own interpretation of this pantheism. It was the eternal essence of things, not their existence in time, that was truly God; whatever had a separate, transitory existence had emanated from God, but no longer was God.** On the other hand whatever existed was bound to yearn for its Divine Origin and to strive to find its way back into that Origin; and at the end of time everything would in fact be reabsorbed into God. No emanation would remain, nothing would exist in separateness, there would no longer be anything capable of knowing, wishing, acting. All that would be left would be one single Essence, changeless, inactive: one all-embracing 'Blessedness.' **Even the Persons of the Trinity, the Brethren of the Free Spirit insisted, would be submerged in that undifferentiated One.** At the end of time, God really would be all.

Even now reabsorption was the fate of the human soul as soon as the body was dead. On the death of the body the soul disappeared into its Divine Origin like a drop of water which has been taken from a jug and then dropped back into it again, or like a drop of wine in the sea. **This doctrine amounted of course to an assurance of a universal, though impersonal, salvation; and the more consistent of the Brethren of the Free Spirit did in fact hold that heaven and hell were merely states of the soul in this world and that there was no afterlife of punishment or reward.** To have the Holy Spirit incarnated in oneself and to receive the revelation which that brought – that was to rise from the dead and to possess heaven. A man who had knowledge of the God within himself carried his own heaven about with him. **One had only to recognize one's own divinity and one was resurrected as a Spiritual, a denizen of heaven on earth. To be ignorant of one's own divinity, on the other hand, was mortal sin, indeed it was the only sin. That was the meaning of hell;** and that too was something which one carried with one in this life.

Plotinus had held that human beings could even experience something of this reabsorption before the death of the body. It was possible for the soul to escape from its sensual bonds and from its awareness of itself and to sink for a moment, motionless and unconscious, into the One. This was the aspect of Neo-Platonism which appealed to the Brethren of the Free Spirit. **Although the Free Spirit has been traditionally known as 'the pantheistic heresy,' many of the heretics showed little interest in or understanding of pantheist metaphysics.** What they all had in common was a certain attitude to the human soul. 'The soul,' said one woman, 'is so vast that all the saints and angels would not fill it, so beautiful that the beauty of the saints and angels cannot approach it. It fills all things.' For the Brethren of the Free Spirit the soul was not merely destined to be reabsorbed into God on the death of the body; in its essence it had itself been divine from all eternity and was still potentially divine even whilst inhabiting a human body. **In the words of the heretical treatise which was found in the hermit's cell near the Rhine: 'The divine essence is my essence and my essence is the divine essence. ... From eternity man was God in God. ... From eternity the soul of man was in God and is God. ... Man was not begotten, but was from eternity wholly unbegettable; and as he could not be begotten, so he is wholly immortal.'**
...

The heart of the heresy was in fact not a philosophical idea at all but an aspiration; **it was a passionate desire of certain human beings to surpass the condition of humanity and to become God.** The clergy who observed the heretics had no doubts on the matter. These men and women, they complained, set themselves above the saints, the angels, the Virgin and even Christ Himself. **'They say they are God by**

nature, without any distinction,' commented the Bishop of Strasbourg, 'they believe that all divine perfections are in them, that they are eternal and in eternity.' Ruusbroek makes his heretical opponent voice the highest possible claims:

> It is the same with me as with Christ in every way and without any exception. Just like him, I am eternal life and wisdom, born of the Father in my divine nature; just like him, too, I am born in time and after the way of human beings; and so I am one with him, God and man. All that God has given him he has given me too, and to the same extent. ... **Christ was sent into the active life to serve me, so that he could live and die for me; whereas I am sent into the contemplative life, which is far higher.** ... If Christ had lived longer he would have attained the contemplative life which I have attained. **All the honour which is given to Christ is really given to me and to all those who have attained this higher life.** ... When his body is elevated at the altar during the sacrament, it is I who am lifted up; where his body is borne I am borne; for I am one flesh and blood with him, a single Person whom none can divide.

...

'The Spirit of Freedom or the Free Spirit,' said one adept, 'is attained when one is wholly transformed into God. This union is so complete that neither the Virgin Mary nor the angels are able to distinguish between man and God. **In it one is restored to one's original state, before one flowed out of the Deity.** One is illumined by that essential light beside which all created light is darkness and obfuscation. **One can be, according to one's wish, Father or Son or Holy Spirit.**'

...

But it is the heretical tract known as *Schwester Katrei* that gives the fullest account of all. After a whole series of ecstasies in which her soul 'soared up' but after a time fell back again, Sister Catherine experiences one great ecstasy which releases her altogether from the limitations of human existence. **She calls out to her confessor – himself clearly a Brother of the Free Spirit: 'Rejoice with me, I have become God!' 'Praise be to God!' he answers. 'Now leave all people, withdraw again into your state of oneness, for so you shall remain God.'** The woman falls into a deep trance, from which she emerges with the assurance: 'I am made eternal in my eternal blessedness. Christ has made me his equal and I can never lose that condition.'

...

And even this is an understatement, for often an adept would claim to have surpassed God. The women of Schweidnitz claimed that their souls had by their own efforts attained a perfection greater than they had possessed when they first emanated from God, **and greater than God ever intended them to possess.** They claimed to have such command over the Holy Trinity that they could 'ride it as in a saddle.' The Swabian heretics of 1270 said that they had mounted up above God and, reaching the very pinnacle of divinity, abandoned God. **Often the adept would affirm that he or she 'had no longer any need of God.'**

...

In a sketch written about 1330 in the chief stronghold of the heresy, Cologne, the Catholic mystic Suso evokes with admirable terseness those qualities in the Free Spirit which made it essentially anarchic. He describes how on a bright Sunday, as he was sitting lost in meditation, an incorporeal image appeared to his spirit. Suso addresses the image: 'Whence have you come?' The image answers: 'I come from nowhere.' – 'Tell me, what are you?' – 'I am not.' – 'What do you wish?' – 'I do not wish.' – 'This is a miracle! Tell me, what is your name?' – **'I am called Nameless Wildness.' – 'Where does your insight lead to?' – 'Into untrammeled freedom.' – 'Tell me, what do you call untrammeled freedom?' – 'When a man lives according to all his caprices without distinguishing between God and himself, and without looking before or after…'**

What distinguished the adepts of the Free Spirit from all other medieval sectarians was, precisely, their total amoralism. For them the proof of salvation was to know nothing of conscience or remorse. Innumerable pronouncements of theirs bear witness to this attitude: **'He who attributes to himself anything that he does, and does not attribute it all to God, is in ignorance, which is hell. … Nothing in a man's works is his own.'**

...

'They have no uniform,' complains one cleric. 'Sometimes they dress in a costly and dissolute fashion, sometimes most miserably, all according to the time and place. **Believing themselves to be impeccable, they really think that for them every kind of dress is permissible.**' By adopting noble robes in place of the beggar's rags a heretic symbolized his transformation from the 'lowest of mortals' into a member of an elite which believed itself entitled to dominate the world.

...

From the Swabian heretics in the thirteenth century down to the Ranters in the seventeenth the same view is expressed again and again: for the 'subtle in spirit' sexual intercourse cannot under any circumstances be sinful. **And it was held that one of the surest marks of the 'subtle in spirit' was, precisely, the ability to indulge in promiscuity without fear of God or qualms of conscience.**

...

That acute commentator Charlier de Gerson saw the connection perfectly clearly. **He noted that the 'Turlupins' were often naked together, saying that one ought not to blush at anything that was**

natural. To be naked and unashamed, like Adam and Eve, they regarded as an essential part of the state of perfection on earth; and they called this 'the state of innocence.' Similarly the leader of the *Homines intelligentiae* claimed to have a special way of performing the sexual act which was that practised by Adam and Eve in the Garden of Eden. The same man set himself up as the Saviour whose mission it was to inaugurate the Third and Last Age; and he was certainly not the only adept to fuse these originally disparate phantasies. In 1381 an adept at Eichstätt proclaimed himself as a Second Adam who, replacing Christ, was establishing the Third and Last Age in the form of an earthly Paradise which would last until it was bodily lifted up to heaven. **The Spiritual Libertines whom Calvin denounced declared that they had found the way back to the state enjoyed by Adam before he had tasted of the knowledge of good and evil – and also that they were living in the Last Days, in which the Christian dispensation was to be replaced by a newer and higher one.**
…

Indeed, the deified soul has no need even of God himself. **Once the absolute stillness of the divine Oneness has been reached, neither knowledge nor praise nor even the love of God exist any more. 'At the highest point of being, God himself is abandoned by himself in himself'; meaning that the God of Christianity is left behind, in favour of the God of pantheistic ecstasy.**

And towards terrestrial matters, too, the deified soul feels only profound indifference. 'This soul feels no pain for any sin it may ever have committed, nor for the suffering which God suffered for that soul, nor for the sin and pain in which its neighbours still remain.' 'The thoughts of such souls are so divine that they never concern themselves with past things or things that have been created.' At the same time, such souls are free to use all created things for their own purposes: 'Why should such souls have qualms about taking what they need, when necessity demands it? That would be a lack of innocence and a hindrance to that peace in which the soul rests from all things. ... Such souls use all things that are made and created, and which nature requires, with such peace of mind as they use the earth they walk on.'

All in all, then, Marguerite Porete's book confirms our view of the Free Spirit; an interpretation which originally had to be constructed step by step from a variety of more or less defective sources is shown to have been substantially correct. **As Marguerite repeatedly stresses, she is addressing an elite only – those whom she calls 'the great Church,' as distinct from 'the little Church' which is the institutionalized Church of Rome.** But to this elite she does indeed preach a doctrine of self-deification and of mystical anarchism.

Only on two points does Marguerite's teaching differ from that attributed to, say, Johann Hartmann or John of Brünn or Calvin's Spiritual Libertines. Marguerite nowhere suggests that **the deified soul – or as we would say, the adept of the Free Spirit** – would or should indulge in what were commonly regarded as sins, such as theft or sexual promiscuity; and save by implication she says nothing, either, about community of goods. There is nothing surprising about this. If one examines the Ranter material in the Appendix to the present book one finds that **while all these writers shared much the same mystical doctrine, they differed in the practical conclusions which they drew from it.**

> https://theamericansun.com/2021/10/19/failed-egoists-the-irrelevance-of-right-nietzscheanism/
>
> What could I say about Mad Max to the uninitiated? **He completed the system of German idealism, or rather wrecked it.** At the center of his philosophy is the Unique One [Der Einzige], or the "creative nothing," which is his term for the irreducible and undefinable substance of the individual. The *egoist*. **All ideas, essences, forms and thoughts exist purely for the gratification, play and struggle of the individual egoist, and the moment he starts to reify any ideas as a "higher cause" that he must be subject to, he at that point becomes a pawn of these fixed ideas, these "spooks" as he famously calls them. Now if this sounds like the most solipsistic individualism, one must keep in mind that from the perspective of an atheist or secularist, his reasoning is virtually irrefutable, and indeed Stirner's refutation of all secular ethical systems is absolutely devastating.**
> …
>
> **What made Stirner so aggravating to Marx and Engels (besides his fierce attack on communism) was his decidedly anti-political stance.** The whole notion of an ideal form of society is completely antithetical to his thought. It is also not necessarily true that the Stirnerite egoist should be some hedonistic slave to his passions, and his entire teaching does exhort to a certain self-mastery. **In fact, what is characteristic of egoism is that it does not have to lead to any exterior change in behavior whatsoever.** A man's outward behavior and praxis can remain identical before and after becoming an egoist, as the only necessary change is the internal consciousness of the fact that all thoughts and ideas are tools to be used by himself, the Unique, for his own ends, and not for those ideas to set his ends for him in advance. There is absolutely no way of telling if your neighbor is an egoist or not unless you can read mental states.

---

https://en.wikipedia.org/wiki/Gemistus_Pletho

Georgius Gemistus Pletho (c. 1355/1360-1452/1454) was a Greek scholar[4] and one of the most renowned philosophers of the late Byzantine era.[5] **He was a chief pioneer of the revival of Greek scholarship in Western Europe.**[6] As revealed in his last literary work, the *Nomoi* or *Book of Laws*, which he only circulated among close friends, he rejected Christianity in favour of a return to the worship of the classical Hellenic Gods, mixed with ancient wisdom based on Zoroaster and the *Magi*.[7]
...

Plethon has also formulated his political vision in several speeches throughout his life. The phrase that boasted in one of the speeches *"We are Hellenes by race and culture"*, and also, the proposition of a reborn Byzantine Empire following a utopian Hellenic system of government centered in Mystras has generated a lively and fruitful discussion about Byzantine and modern Greek identity.[9] In this regard, **Plethon has been labelled both "the last Hellene"[10] and "the first modern Greek".**[11]
...

Believing that the Peloponnesians were direct descendants of the ancient Hellenes, Plethon rejected Justinian's idea of a universal Empire in favour of recreating the Hellenistic civilization, the zenith of Greek influence.[23] In his 1415 and 1418 pamphlets he urged Manuel II and his son Theodore Palaiologos to turn the peninsula into a cultural island with a new constitution of strongly centralised monarchy advised by a small body of middle-class educated men.
...

Plethon derides Aristotle for discussing unimportant matters such as shellfish and embryos while failing to credit God with creating the universe,[18] for believing the heavens are composed of a fifth element, **and for his view that contemplation was the greatest pleasure; the latter aligned him with Epicurus, Plethon argued, and he attributed this same pleasure-seeking to monks, whom he accused of laziness.**[12]
...

> **I myself heard him at Florence ... asserting that in a few more years the whole world would accept one and the same religion with one mind, one intelligence, one teaching. And when I asked him "Christ's or Muhammad's?," he said, "Neither; but it will not differ much from paganism."** I was so shocked by these words that I hated him ever after and feared him like a poisonous viper, and I could no longer bear to see or hear him. **I heard, too, from a number of Greeks who escaped here from the Peloponnese that he openly said before he died ... that not many years after his death Muhammad and Christ would collapse and the true truth would shine through every region of the globe.**—*George of Trebizond, Comparatio Platonis et Aristotelis, fol. v63*[24]
>
> https://archive.org/details/LeoStraussThoughtsOnMachiavelli_201411/page/n169/mode/2up?view=theater
>
> At any rate, Machiavelli saw two ways in which the ancient modes and orders might be destroyed. One was the irruption of barbarians, especially of the peoples of the North, such as the Scythians, who are at present held back by the Germans, the Hungarians, and the Poles. **The other would be the rejuvenation of the West.** It is the purpose of the *Discourses* to prepare this rebirth through awakening primarily the Italian-reading youth.188
>
> > 188. I pr. (90), 12 (129-130), 13 (133), 17 (141), 19 (147), 20, 55 (211-212), II 5, 8 (252, 254), III 1 (327, 330) and 17 end. Cf. *Florentine Histories* I 1.—C. Alexandre quotes the following statement by George of Trebizond (*Comparatio Platonis et Aristotelis*) in his introduction to his edition of Gemistus Plethon's *Traité des Lois* (Paris 1858, p. xvi): ***Audivi ego ipsum [Plethonem] Florentiae, venit enim ad concilium cum Graecis, asserentem unam eandemque religionem uno animo, una mente, una praedicatione, universum orbem paucis post amis suscepturum. Cumque rogassem, Christine an Mahumeti? Neutram, inquit, sed non a gentilitate differentem—. Percepi etiam a nonnullis Graecis qui ex Peloponneso hue profugerunt, palam dixisse ipsum, anteaquam mortem obiiset iam fere triennio, non multis annis post mortem suam et Machumetum et Christum lapsum iri. ...***—Cf. also Alfarabius, *Compendium legum Platonis*, liber 3, beginning; Roger Bacon, *Moralis Philosophia* (ed. Massa), 193, 215 and 219; and Pico della Mirandola, *Disputationes adversus astrologiam divinatricem* II 5.

...

Gennadius burnt it in 1460; however, in a letter to the Exarch Joseph (which still survives) he details the book, providing chapter headings and brief summaries of the contents.[18] **It seemed to represent a merging of Stoic philosophy and Zoroastrian mysticism,** and discussed astrology, daemons and the migration of the soul. He recommended religious rites and hymns to petition the classical gods, such as Zeus, whom he saw as universal principles and planetary powers. Man, as relative of the gods, should strive towards good. Plethon believed the universe has no beginning or end in time, and being created perfect, nothing may be added to it. **He rejected the concept of a brief reign of evil followed by perpetual happiness, and held that the human soul is reincarnated, directed by the gods into successive bodies to fulfill divine order.** This

same divine order, he believed, governed the organisation of bees, the foresight of ants and the dexterity of spiders, as well as the growth of plants, magnetic attraction, and the amalgamation of mercury and gold.[12]
...

Ezra Pound included Plethon in his poem *The Cantos*. References to Plethon and Sigismondo Malatesta can be found in canto 8. Plethon is also mentioned in canto 23 and 26. Pound was fascinated by the role that Plethon's conversation must have had on Cosimo de Medici and his decision to acquire Greek manuscripts of Plato and Neoplatonic philosophers. By having manuscripts brought from Greece and becoming the patron of "the young boy, Ficino," Cosimo facilitated the preservation and transmission of Greek cultural patrimony into the modern world after the fall of Constantinople in 1453. **Plethon thus played a key but hidden role in the Italian Renaissance.**

http://www.bu.edu/wcp/Papers/Medi/MediDebo.htm

Cosimo later founded the *Accademia Platonica* in Florence. The first director of the Academy was Marsilio Ficino. Ficino recorded the following about the founding of the Academy:

> **At the time when the Council was in progress between the Greeks and the Latins in Florence under Pope Eugenius, the great Cosimo, whom a decree of the Senate (*Signoria*) designated *Pater patriae*, often listened to the Greek philosopher Gemistos (with the cognomen Plethon, as it were a second Plato) while he expounded the mysteries of Platonism.** And he was so immediately inspired, so moved by Gemistos' fervent tongue, that as a result he conceived in his noble mind a kind of Academy, which he was to bring to birth at the first opportune moment. Later, when the great Medici brought his great idea into being, he destined me, the son of his favorite doctor, while I was still a boy, for the great task.(5)

...

Plethon treats of God in the first three substantive paragraphs of *De Differentiis*. His first claim is that **"...Plato's view is that God, the supreme sovereign, is the creator of every kind of intelligible and separate substance, and hence of our entire universe. Aristotle, on the other hand, never calls God the creator of anything whatever, but only the motive force of the universe."**(8) In this paragraph, Plethon's support for his position is garnered from allusions to texts in Plato and Aristotle. For example, his interpretation of Aristotle's position is supported by reference to *Metaphysics* 1072b10 and *Physics* 258b11. Plethon continues his complaint by noting "...that Aristotle does make God the end and the final cause; but even this must be regarded as a not very exalted claim and not one worthy of God, if he makes God the end not of the existence or essence of particular things but only of movement and change."(9) Plethon's characterization of Aristotle's position, as far as it goes, is accurate.
...

Plethon then marshals more arguments to show that Aristotle did not believe that God was the creator of the universe. **His first is that Aristotle never articulates such a doctrine yet "...he goes on at unnecessary length about such things as embryos and shellfish."**(11)
...

In the text of *De Differentiis* itself, it is not clearly evident that Plethon considers the Platonic conception of God closer to that of the Christian conception than that of Aristotle. However, the subsequent dispute between Plethon and Scholarios does. George Scholarios's *Defence of Aristotle* was written in about 1443. Plethon's *Reply* was written shortly thereafter. **In his *Reply*, Plethon often stresses his belief that Plato is more consistent with Christian doctrine than is Aristotle.** (23) This can best be explained, perhaps, because Scholarios already suspected Plethon of heterodoxy and Plethon's *Reply* provided an opportunity to deflect such suspicions.(24) Let us now turn to Plethon's actual beliefs.
...

During his long lifetime, Plethon had published a fairly large number of works on a wide variety of topics. However, during much of his adult life, Plethon had also been compiling an extensive work on his esoteric doctrines. This work, the *Book of Laws*, was not discovered until after his death. The work contained that which shocked many and confirmed the suspicions of more than a few.

The only copy came into the possession of Princess Theodora, the wife of Demetrios, Despot of Morea. **In the meantime, George Scholarios had been enthroned as Gennadios II, Patriarch of Constantinople, at the insistence of Sultan Mehmet II.** Theodora was not certain how to deal with the manuscript and so she sent it to Gennadios and asked for his advice. After he read it, he sent it back to Theodora with the advice to destroy it. **Meanwhile Mehmet captured Mistras, the capitol of Morea and Theodora escaped to Constantinople with Demetrios and the manuscript. Theodora, reluctant to destroy the only copy of a work by such a distinguished scholar, turned it over to Gennadios. He burnt the work in 1460.** Fortunately, Gennadios wrote a letter to the Exarch Joseph detailing the whole affair. In the letter, he lists all the chapter headings of the *Book of Laws* and gives a short description of the contents.

...

Plethon's arguments in *De Differentiis* against Aristotle's conception of God appear to be consistent with an Orthodox Christian conception of the divinity. A closer examination of Plethon's position in *De Differentiis* when compared to his position in his *Summary* reveals that those two positions are, in fact, consistent with one another and not with any Christian conception whatever. **Plethon may have seen his lectures in Florence as a way to lay a foundation for the spread of his esoteric doctrines.**
...

> (16) **Woodhouse claims that Plethon "... shared the very heresy which he had condemned in Aristotle (and of which he had acquitted Plato), namely the belief that the universe was eternal and had no beginning in time."** *Plethon*, 320. Woodhouse appears to miss the distinction that Plethon is very careful to make, i.e., the distinction between temporal generation and atemporal generation. **Plethon claims that Aristotle recognizes only temporal generation, whereas Plato recognizes both temporal and atemporal generation.** Thus, Aristotle insists on an eternal ungenerated universe, whereas, Plethon thinks, Plato believes that the universe was generated but also eternal. This claim, as we shall see, is consistent with Plethon's position in the *Summary*.

http://nauplion.net/cp-plethon-peritore.pdf

Plethon's contributions to Western learning were so well remembered that Sigismundo Malatesta had his remains reinterred at Rimini in 1465, his epitaph reading in part "prince among the philosophers of his time."2

His influence on the West would, however, have been even greater had not most of his posthumous *Treatise on the Laws* been burnt by the Patriarch Scholarios in an unfortunate act of censorship. The portions which remain show Plethon to have been an advocate of a Platonic-Spartan theocracy which resurrected the pagan Hellenic pantheon.
...

Like Plato in the *Republic* or *Laws*, Plethon was concerned to begin radical restructuring of the polity on a *tabula rasa*. He therefore proposed royal confiscation and redistribution of land to the working peasantry.

> The judgment should be added to what has already been said that by nature all the land is equal and common to those dwelling on it; **no one should lay claim to any part of the land as private but whoever wishes to plant should go where he will, build a house and plow as much land as he is willing and able,** and each shall be master of this much land on condition that he occupies it and does not neglect to work it. No one will pay rent nor be troubled or annoyed by anyone other than those who have previously taken the land through work according to the law of common property which fits the case. Then if he should be of the Helot class, a third of his produce is taken for the common fund as we said and he is to be troubled no further, having once and for all discharged his debt. But if he is a soldier or some other among those serving the state through their acts, he shall pay no taxes but rather do the service to which he was appointed.29

Given Manuel's recent victory over the Peloponnesian *Dynatoi*, or landlords, Plethon optimistically concluded that this necessary condition for the creation of a Platonic system of classes could immediately be realized.

There are historical antecedents other than the Platonic for this proposal. For example, it closely paralleled the revolutionary program of the Hellenistic Spartan kings Agis (264-241 B.C.) and Kleomenes (263-219 B.C.) which Plethon, who lived only a few miles from medieval Sparta, examined in his histories. **The Spartan Kings' redistribution of land and debt cancellation resembled Plethon's homesteading of "nationalized" land by peasants freed from feudal duties and bonds.** The Spartan expansion of the army and citizenship rolls was approximated in his "pairing" of farmers and soldiers and their rotation of functions. The Spartan restoration of the "Lycurgan" lifestyle, considered by Plethon to be unrealistically harsh, found an echo in his advocacy of simplified living and sumptuary laws to restrain the extravagances of the wealthy.30
...

As a bureaucrat, jurist, and philosophical royalist, Plethon was hostile to the landed aristocracy and suggested confiscation of their estates. Because the land therein lay fallow while many peasants remained unemployed, he maintained, labor alone should give title to land, and the largely idle landlords should be forced to "accede to the common good."34 It is likely that through these means **Plethon intended to fuse the highly diverse peoples of the Peloponnese into a unified fighting peasantry on the basis of population mixing, homesteading, and the development of a correspondence between the private interest in land and the common interest in survival of**

Empire. To this end he proposed the "introduction of the opinion" that the land is equal and common to all dwelling on it according to nature.35
...

It must be noted that Plethon recognized the non-monastic clergy as civil servants worthy of modest public support. His hostility extended to the professed quietism of the monasteries rather than to the hierarchy of the Orthodox church, which would later serve as the vehicle of popular national sentiment during the three hundred years of Turkish domination.39

> 39. Hertz, *Nationality*, pp. 109-114. Kohn, Idea, pp. 534-543, 535. Roman Jakobson, "The Beginnings of National Self-Determination in Europe," *Review of Politics* 7 (1945): 29-42 for the Czech case. Plethon argued for a civil religion in his address to Theodore, sounding a theme which would prove central to his later *Laws*. He argued that public and private accord on at least three religious tenets is necessary for public morality and, it would seem, national unity. The first tenet is that God exists, the second that he is concerned with human affairs and governs even minor conduct, and the third that his governance is absolutely just and unaffected by rites or sacrifices. Lampros, *PP*, pp. 125.3-126.7. **In the *Laws* Plethon drops his Christian mask and reveals himself to be a pagan determinist. The *Laws* is a draft of a theocratic state based on mixed Platonic-Stoic institutions, a detailed code of moral regulations, and a complex and richly developed state cult geared to a luni-solar calendar.** His Neoplatonic "Hellenic" theology is designed to provide the religious unity needed for national regeneration, and is composed of a hierarchy of four decads of gods and titans (including "demons") which serve as anthropomorphic representations of the Forms which govern the cosmos. See remains of the text in Alexandre, *Lois*. **Plethon's political use of religion antedates More, Campanella, and Machiavelli** (*Discourses*, i: chap. 11-15) and makes the loss of the political portions of his ms. all the more lamentable.

Nor did Plato come to the age unaccompanied. Only a pace behind, in his very shadow, and not always distinguished from him, came Plotinus and the religious cult of Neo-Platonism which had developed through Plotinus.4 Here was Platonism presented as a religion, where communion with the divine through ecstasy, for which lifelong asceticism prepared the soul, was presented as the supreme achievement of life. It was a "religion" where there was no place for real freedom, nor for personal responsibility, nor prayer, and where sin had no meaning. The world for the Neo-Platonist was not created by the free act of a loving creator, but was the necessary expression of the nature of the first principle of all. **Providence was but the kind of universal sympathy that links all things together in a fixed necessitated movement, all being moved by the single soul of the world. Here, in ultimate logic, is Pantheism and all its horrors; religion without a personal God, without any possibility of the Incarnation,** mystical life without any need of grace and—since there is no such distinction as between creator and created—communion without subordination, and the idea that mystical experience is the basis and the test of truth.

Many things in Platonism and in Neo-Platonism can no doubt be given a Christian interpretation, but of themselves they are not Christian; for Christians with intelligences less than very well trained in Christian teaching, they are obviously dangerous.

https://www.google.fi/books/edition/Spinoza_Life_and_Legacy/4snKEAAAQBAJ?hl=en&gbpv=1&pg=PA1123&printsec=frontcover

Henry More boxed himself into a corner. Spirit remained the essential adjunct to his philosophy of “reason”; yet it was far from clear, as Baxter objected, whether his motley of good and bad spirits possessing extension but diffusing in various ways, like light, were or were not separable from the bodies they pervaded. All considered, **More’s dichotomy of body and spirit seemed more of a quasi-monism than a genuine duality, and his pretended basic distinction resting on penetrability versus inpenetrability, lifeless matter versus extended diffusing spirit activating all life and motion, highly problematic. What stood out most was More’s fury at Spinoza’s disdain for Platonists and Platonism including his appropriation of the Platonic term *natura naturans*. Spinoza was perverting this term into precisely that Cartesian mechanistic materialism he and Cudworth held responsible for the rising tide of “debauchery, skepticism and infidelity” polluting their age.** Avid to repel Spinoza using his Platonic concept of the all-pervasive divine agency of the supreme good infusing, but at the same standing far above, all created things, More’s approach left some suspecting this only rendered his system more susceptible to Spinoza’s dismissing Neoplatonist speculation as worthless “speculation.”

https://archive.org/details/radicalenlighten0000isra/page/672/mode/2up?view=theater

Deriding Spinelli's two-substance doctrine, Doria offers his Neoplatonic philosophy underpinned with arguments which, however, **were bound to strengthen suspicions of disturbing affinities between his Neoplatonism and Spinozism. If Doria is a loyal Catholic who believes Christ's coming is the decisive event in history, why continually claim that in most of the virtues and general culture Europe had lamentably retrogressed since classical Greece?**51 Doria claimed to have rescued the Providence, intelligence, and Will of God from the *Spinosisti*, but it was far from evident that Plato's and Doria's God was distinct from the totality of the universe. When Doria (and for that matter Vico) affirms that the 'Providenza di Dio' is the same as the infinitely perfect order of things, one could hardly fail to suspect that both thinkers were subsuming Providence into the unalterable laws of Nature.52

https://archive.org/details/BarruelMemoirsIllustratingTheHistoryOfJacobinism/page/n363/mode/2up?view=theater

The Hermetic Masonry, or the Scotch degrees, who work in chymistry, have adopted *Pantheism or the true Spinosism*. With them *every thing is God, and God is every thing*. That is their grand mystery, engraved in one word *Jehovah* on the stone brought by the Knights Templars from the Holy Land.

Let the reader refer to the preface of the zealous Knight of St. Andrew, who has given us such a circumstantial account of these degrees. **He will there see our Knight reducing the result of his whole doctrine to this famous text of Hermes Trismegistus,** "All is part of God; if all is part, the whole must be God. Therefore every thing that is made made itself, and will never cease to act, for this agent cannot repose. And as God has no end, so can his works have neither beginning nor end." **After having recited this passage, our Pantheistical adept tells us, "Such is the summary though expressive belief of the whole Hermetic System;"** in a word the whole religious system of the Scotch degrees with the discovery of which he is so much pleased.

Let not the reader suppose that he attempts to explain away the expression *all is God*. In his opinion nothing but the grossest ignorance and prejudice can disapprove of the assertion. It is in vain to object, that, making the grain of sand, the Heavens, the Earth, the animal, or man, *a part of God*, is rendering the Deity divisible; **for he will answer, that it is only the grossest ignorance which hides from us, that *those millions of millions of parts are so united together and so essentially constitute a God* WHOLE, *that to separate a single particle would be to annihilate the* WHOLE *itself, or the Great* JEHOVAH.** But, lest the Knight of the Craft should be vain on finding himself a part of God, our Hierophant informs us, that *as the little finger is always less than the whole body; so is man, though a small particle of God, infinitely smaller than* JEHOVAH. Our adept may nevertheless rejoice, however small a particle he may be of the Deity, **as the day will come when he is to be reunited to *the great* WHOLE, the day when, every thing being reunited to the great Jehovah, harmony will be complete, *and true Pantheism will be established for ever*.**1

It is to be hoped that the reader does not expect us to trouble ourselves with the refutation of so monstrous a system. The preface however is not the only part of that work which lays down this system as the tenets of these degrees; for, after the description of them, we find what are called *Solomon's Thesis*; also the *Archetype world*; and these are productions all tending to strengthen them in their impiety.2 We shall not therefore be accused of calumniating this branch of Masonry by attributing to it a system which makes the villain, like the just man, a constituent part of the Deity, and represents vice and virtue as the very action of the Deity; **a system which promises the same destiny to the good and to the wicked, of being *reunited to the Deity*; and thus, after having ceased to be man, of being God to all eternity.**

Largely, no doubt, because of the general exhaustion and decline of the *pólis*, but partly, perhaps, as a result of Plato's efforts and those of the other Socratics, by the late fourth century, the general atmosphere in Athens and elsewhere seems to have changed somewhat, and it became possible – and perhaps even advisable – for the philosopher to pursue an alternative rhetorical strategy.174 **If, in *The Politics*, Aristotle virtually ignores religion's vital contribution to constituting the life of the *pólis* and if, in the *Poetics*, he gives hardly a hint of the central role the gods played in Greek tragedy, it is not a consequence of negligence, blindness, or folly on his part.**175 **In similar fashion, without even a cursory attempt at explanation, he omits piety when he lists the moral virtues in his *Nicomachean Ethics*, *Eudemean Ethics*, and *Rhetoric*.**176 The peripatetic appears to have thought the gods more necessary and better suited to prepolitical, village life than to the good life made possible by the Greek *pólis*.177 Moreover, as a philosopher mindful of the fate of Socrates and devoted above all else to fostering and protecting what he considered the best way of life,178 **Aristotle seems to have been less concerned with providing the well-to-do young gentlemen who attended his lectures with an historically accurate account of Greek politics and poetry than with discouraging and therefore downplaying the one feature of ancient civic life most**

likely to fuel the city's intolerance of free inquiry. In his work, as in that of many another great writer, what passes as description is often prescription as well.

[1074b] [1] **A tradition has been handed down by the ancient thinkers of very early times, and bequeathed to posterity in the form of a myth, to the effect that these heavenly bodies are gods,[1] and that the Divine pervades the whole of nature. The rest of their tradition has been added later in a mythological form to influence the vulgar and as a constitutional [νόμους] and utilitarian expedient;[2]** they say that these gods are human in shape or are like certain other animals,[3] and make other statements consequent upon and similar to those which we have mentioned. **Now if we separate these statements and accept only the first, that they supposed the primary substances to be gods, we must regard it as an inspired saying and reflect that whereas every art and philosophy has probably been repeatedly developed to the utmost and has perished again, these beliefs of theirs have been preserved as a relic of former knowledge. To this extent only, then, are the views of our forefathers and of the earliest thinkers intelligible to us.**

https://christian.net/pub/resources/text/wittenberg/luther/web/nblty-07.html

What else are the universities, if their present condition remains unchanged, than as the book of Maccabees says, 2 Macc. 4:9, 12: *Gymnasia Epheborum et Graecae gloriae,*[1] in which loose living prevails, the Holy Scriptures and the Christian faith are little taught, **and the blind, heathen master Aristotle**[2] **rules alone, even more than Christ.**
…

It grieves me to the heart that this damned, conceited, rascally heathen has with his false words deluded and made fools of so many of the best Christians. God has sent him as a plague upon us for our sins.

Why, this wretched man, in his best book, *On the Soul*, teaches that the soul dies with the body, although many have tried with vain words to save his reputation. As though we had not the Holy Scriptures, in which we are abundantly instructed about all things, and of them Aristotle had not the faintest inkling! **And yet this dead heathen has conquered and obstructed and almost suppressed the books of the living God,** so that when I think of this miserable business I can believe nothing else than that the evil spirit has introduced the study of Aristotle.

https://books.google.fi/books?id=LT5WAAAAYAAJ&hl=fi&pg=PA60#v=onepage&q&f=false

And indeed, Religion has no Share in the System of *Aristotle*. f Besides that 'tis not yet a settled Point, g whether he believ'd the Immortality of the Soul; he makes no Mention of Providence but by the By; and in such a Manner too, as shews him not to be thoroughly persuaded of it.

> f. **Aristotle *was the least of any made use of by the Greek Fathers. They found, that he spoke slightly of Providence, and of the Nature of the Soul; that his Logick was too intricate, and his Morality too humane:*** *For this is the Judgment St.* Gregory *of* Nazianze *makes of him*, (Orat. 33, P 535, D.) *Fleury, des Etudes*, &c. p.18. Ed. *Brussels*.

https://www.gutenberg.org/files/44795/44795-h/44795-h.htm#Page_195

> [103] It has in its consequences proved no trifling evil to the Christian world, that Aristotle's Definitions of Nature are all grounded on the petty and rather rhetorical than philosophical Antithesis of Nature to Art—a conception inadequate to the demands even of *his* philosophy. **Hence in the progress of his reasoning, he confounds the *natura naturata***
> **(that is, the sum total of the facts and phænomena of the Senses) with an hypothetical *natura naturans*, a**
> ***Goddess* Nature, that has no better claim to a place in any sober system of Natural Philosophy than the Goddess *Multitudo*; yet to which Aristotle not rarely gives the name and attributes of the Supreme Being.** The result was, that the idea of God thus identified with this hypothetical *Nature* becomes itself but an *hypothesis*, or at best but a precarious inference from incommensurate premises and on disputable principles: **while in other passages, God is confounded with (and every where, in Aristotle's *genuine* works, *included in*) the Universe: which most grievous error it is the great and characteristic merit of Plato to have avoided and denounced.**

http://www.perseus.tufts.edu/hopper/text?doc=Perseus%3Atext%3A2008.01.0404%3Abook%3D2%3Achapter%3D3

DEMOCRITUS, Epicurus, and those philosophers who introduced atoms and a vacuum, affirm that the world is not an animal, nor governed by any wise Providence, but that it is managed by a nature which is void of reason. **All the other philosophers affirm that the world is informed with a soul, and governed by reason and Providence. Aristotle is excepted, who is somewhat different; he is of opinion, that the whole world is not acted by a soul in every part of it, nor hath it any sensitive, rational, or intellectual faculties, nor is it guided by reason and Providence in every part of it;** of all which the heavenly bodies are made partakers, for the circumambient spheres are animated and are living beings; but those things which are about the earth are void of those endowments; **and though those terrestrial bodies are of an orderly disposition, yet that is casual and not primogenial.**

https://en.wikisource.org/wiki/Dictionary_of_Greek_and_Roman_Biography_and_Mythology/Theophrastus

The conceivableness of a spirit entirely independent of organic activity, must therefore have appeared to him very doubtful; yet he appears to have contented himself with developing his doubts and difficulties on the point, without positively rejecting it (Themist. in Arist. de An. 89, b. 91, b; Schneid. 215. 15). **Other Peripatetics, as Dicaearchus, Aristoxenus, and especially Straton, more unreservedly and unconditionally gave a sensualistic turn to the Aristotelic doctrine.** Theophrastus seems, generally speaking, where the investigation overstepped the limits of experience, to have shown more acuteness in the development of difficulties than in the solution of them, as is especially apparent in the fragment of his metaphysics. In a penetrating and unbiased conception of phenomena, in acuteness of reflection and combination respecting them and within their limits, in compass and certainty of experimental knowledge, he may have stood near Aristotle, if he did not come quite up to him: **the incessant endeavour of his great master to refer phenomena to their ultimate grounds, his profundity in unfolding the internal connections between the latter, and between them and phenomena, were not possessed by Theophrastus. Hence even in antiquity it was a subject of complaint that Theophrastus had not expressed himself with precision and consistency respecting the Deity, and had understood thereby at one time Heaven, at another an (enlivening) breath** (*pneuma*, Clem. Alex. Protrept. p. 44. b; Cic. de Nat. Deor. i. 13); that he had not been able to comprehend a happiness resting merely upon virtue (Cic. Acad. i. 10, Tusc. V. 9), or, consequently, to hold fast by the unconditional value of morality, and, although blameless in his life, had subordinated moral requirements to the advantage at least of a friend. (A. Gell. N. A. i. 3. § 23), and had admitted in prosperity the existence of an influence injurious to them. (In particular, fault was found with his expression in the *Callisthenes*, *vitam regit fortuna non sapientia*, Cic. Tusc. iii. 10; comp. Alex. Aphrod. de Anima. ii. extr.) That in the definition of pleasure, likewise, he did not coincide with Aristotle, seems to be indicated by the titles of two of his writings, one of which treated of pleasure generally, the other of pleasure, as Aristotle had defined it (Diog. Laert. v. 44, Περὶ ἡδονῆς ὡς Ἀριστοτέλης); **and although, like his teacher, he preferred contemplative (theoretic), to active (practical) life** (Cic. ad Att. ii. 16), **he was at the same time disposed to set the latter free from the fetters of family life, &c. in a manner of which the former would not have approved** (Hieron. adv. Jovinian. i, 189, Bened.)

https://en.wikisource.org/wiki/Lives_of_the_Eminent_Philosophers/Book_V#Theophrastus

Casander certainly granted him audience and Ptolemy made overtures to him. **And so highly was he valued at Athens that, when Agnonides ventured to prosecute him for impiety, the prosecutor himself narrowly escaped punishment.**
…

38. Although his reputation stood so high, **nevertheless for a short time he had to leave the country with all the other philosophers, when Sophocles the son of Amphiclides proposed a law that no philosopher should preside over a school except by permission of the Senate and the people, under penalty of death.** The next year, however, the philosophers returned, as Philo had prosecuted Sophocles for making an illegal proposal. Whereupon the Athenians repealed the law, fined Sophocles five talents, and voted the recall of the philosophers, in order that Theophrastus also might return and live there as before. He bore the name of Tyrtamus, and it was Aristotle who re-named him Theophrastus on account of his graceful style. 39. **And Aristippus, in his fourth book *On the Luxury of the Ancients*, asserts that he was enamoured of Aristotle's son Nicomachus, although he was his teacher.**
…

He is said to have become the owner of a garden of his own after Aristotle's death, through the intervention of his friend Demetrius of Phalerum.

https://archive.org/details/greeklifeandtho03mahagoog/page/144/mode/2up?view=theater

We hear that a direct accusation for impiety was made by Agnonides against Theophrastus, which also failed,3 **and so we seem to hear an echo of the last struggle of the old traditions against the new schools of thought. From henceforth all opinion is free at Athens;** even Epicurus, with his hardly-veiled atheism; Zeno, with his monotheism; the sceptics with their disturbing logic—all are not only tolerated, but enjoy high position and social respect at Athens.

> 3. If we may trust Bernays's reconstruction of the *Tract on Piety* (*περι εὐσεβειας*) from the quotations of Porphyry, **Theophrastus was indeed a dangerous opponent of orthodoxy. For he there argued that the whole system of sacrificing animals was both offensive in itself and inconsistent with true piety.** It violated the obligation of general benevolence towards other living things, it substituted occasional and costly acts of religious service for the daily duty of worshipping the gods, and replaced the pure and natural gifts (of the fruits of the earth) by a gross and bloody gift, merely invented to cloak the gluttony of the sacrificers, who invariably feasted upon the victim, and therefore selected not the cleanest but the most palatable beasts. Theophrastus appears as a vegetarian, allowing no slaughter of animals unless they be harmful to men. **How this attack on sacrifices must have offended the orthodox, I need hardly insist; it is notable as evidence of the Rationalism or *Aufklärung* which had taken place in religion, for it seems to have made no great stir in the world.**

https://archive.org/details/cicerostusculand00ciceuoft/page/42/mode/2up?view=theater

There are crowds of arguers who contradict this; and those not only Epicureans, whom I regard very little, but, somehow or other, almost every man of letters; **and, above all, my favorite Dicæarchus is very strenuous in opposing the immortality of the soul:** for he has written three books, which are entitled Lesbiacs, because the discourse was held at Mitylene, in which he seeks to prove that souls are mortal. The Stoics, on the other hand, allow us as long a time for enjoyment as the life of a raven; **they allow the soul to exist a great while, but are against its eternity.**

https://archive.org/details/academicquestio00cicegoog/page/80/mode/2up?view=theater

You say that nothing can have any power without God. Exactly opposite is the doctrine of Strato of Lampsacus, who gives that God of his exemption from all important business. But as the priests of the gods have a holiday, how much more reasonable is it that the gods should have one themselves? He then asserts that he has no need of the aid of the gods to account for the making of the world. Everything that exists, he says, was made by Nature: not agreeing with that other philosopher who teaches, that the universe is a concrete mass of rough and smooth, and hooked and crooked bodies, with the addition of a vacuum: this he calls a dream of Democritus, and says that he is here not teaching, but wishing;—but he himself, examining each separate part of the world, teaches that whatever exists, and whatever is done, is caused, or has been caused, by natural weights and motions.

https://www.encyclopedia.com/people/philosophy-and-religion/philosophy-biographies/strato-lampsacus

Modern historians generally have represented Strato as an eclectic trying to combine elements from the systems of Aristotle and Democritus. Nothing could be further from the truth. In reality his thought was a one-sided but legitimate, consistent, and often brilliant development of Aristotle's views, along lines that to a large extent had been marked out by Theophrastus. The occasional resemblances between Strato's doctrine and that of the atomists are fortuitous. **What Strato did was to strip the Aristotelian world picture of its transcendental elements – or, to put it another way, he refused to acknowledge the reality of anything not subject to the natural laws seen to apply in the sublunary world. In doing this he was carrying to its logical conclusion a process begun by Aristotle himself.**

Aristotle had criticized Plato's conception of a world of Forms above and behind the sensible world on the ground that he had failed to show how these two systems were related. **Nevertheless, he continued to teach the existence of an Unmoved Mover outside the physical world and above its laws;** and within the physical world he distinguished two systems subject to different laws, one extending from the center of the universe to the sphere of the moon's revolution, the other embracing the heavenly bodies. The difficulties entailed by the second division can be seen by studying Aristotle's *Meterologica;* those involved by the first were stated by Aristotle's pupil **Theophrastus in his *Metaphysica*, in which the Unmoved Mover and the teleological view of the world are subjected to a critique that in many ways is a continuation of Aristotle's critique of the Platonic Forms.**

It was left to Strato, however, to construct a new cosmology in which the world was explained as the product of immanent forces only. The ancient authorities tried to express this by saying that "everything that exists is the result of natural weights and movements" (fr. 32, from Cicero): that "all divine power is contained in nature, which contains in itself the causes of coming-into-being, growth and decay, but has no consciousness or shape" (fr. 33, from Cicero): that"natural processes are governed by 'what happens spontaneously' (τὸ αὐματον)" (fr. 35, from Plutarch); **and even that Strato regarded heaven and earth as gods (frs. 37 and 39, both derived from Seneca).** The preference for an explanation of the world that does not depend on transcendent causes was shared by Strato with the other chief philosophical schools of his day, the Stoics and the Epicureans; but their teaching was in some ways more naïve and less radical.

Strato differed from the Stoics in denying that nature is conscious and provident, and from the atomists in positing a regulating principle to which all the processes that constitute the world are somehow subordinated.
…

Strato's psychology is consistent with his cosmology. **He denied the existence of an immaterial or immortal soul – he argued at considerable length against the doctrine of Plato's *Phaedo* (frs. 118, 122–127) – or even of a transcendent element in the soul such as Aristotle's "Active Reason";** he insisted, rather, that mental activity is not essentially different from any other kind of movement (fr. 74).
…

Nevertheless, Strato's influence was limited. The centrifugal tendency among the sciences could not be arrested, and philosophical cosmology came to be dominated increasingly by religious considerations. Signs of a reaction against Strato in his own school appear in the last chapter of the pseudo-Aristotelian *De spiritu*, perhaps written within thirty years of his death.

https://en.wikipedia.org/wiki/Peripatetic_school#History_of_the_school

After the time of Strato, the Peripatetic school fell into a decline. Lyco was famous more for his oratory than his philosophical skills, and Aristo is perhaps best known for his biographical studies;[19] **although Critolaus was more philosophically active, none of the Peripatetic philosophers in this period seem to have contributed anything original to philosophy.**[20]

https://en.wikisource.org/wiki/Lives_of_the_Eminent_Philosophers/Book_V#cite_ref-43

Strato himself, however, was, as stated above, a man entitled to full approbation,[44] since he excelled in every branch of learning, and most of all in that which is styled "physics," a branch of philosophy more ancient and important than the others.

> 44. πολλῆς τῆς ἀποδοχῆς ἄξιος. **This phrase might be taken as Diogenes Laertius's defence for his inclusion of the Life of Strato. According to the scheme of i. 14, 15, the Peripatetics ended with Theophrastus, whose successors were often held to be vastly inferior, and unworthy to rank beside him;** see Cicero, *De Fin.* v. §§ 12, 13; Strabo xiii. 609. The latter alleges as the reason for this decline the well-known story that the school was deprived of Aristotle's library, which had been carried away to Scepsis.

https://books.google.fi/books?id=GulESADToWsC&lpg=PA1&hl=fi&pg=PA138#v=onepage&q&f=false

This kind of atheism, in Cudworth's words,

> **being too modest and shamefaced to fetch all things from the fortuitous motion of atoms, would therefore allow to the several parts of matter a certain kind of natural (though not animal) perception, such as is devoid of reflexive consciousness, together with a plastic power, whereby they may be able artificially and methodically to form and frame themselves to the best advantage of their respective capabilities; something like to Aristotle's nature, but that it hath no dependence at all upon any higher Mind or Deity.** And these Atheists may be also called hylozoic (as the other atomic,) because they derive all things in the whole universe, not only sensitive, but also rational souls, together with the artificial frame of animals, from the life of matter.48

Hylozoistic atheism was a doctrine, Cudworth noted, that began with the Peripatetic scholarch Strato of Lampsacus, then 'slept in perfect silence and oblivion,' but that had 'of late [been] awakened and revived by some.' Spinoza's work, Passmore judged, Cudworth 'knew only imperfectly but interpreted as reviving a tradition which was worth opposing in detail.'49 **'Cosmoplastic' or 'Pseudo-Stoical' atheism was clearly a variation on this hylozoic theme.**

https://www.gutenberg.org/files/17147/17147-h/17147-h.htm#page67

And Spinoza insists more or less (like an ancient Peripatetic philosopher named Strato) that all has come from the first cause or from primitive Nature by a blind and geometrical necessity, with complete absence of capacity for choice, for goodness and for understanding in this first source of things.

https://www.gutenberg.org/files/17147/17147-h/17147-h.htm#page332

I discovered at the same time that the laws of motion actually existing in Nature, and confirmed by experiments, are not in reality absolutely demonstrable, as a geometrical proposition would be; but neither is it necessary that they be so. They do not spring entirely from the

principle of necessity, but rather from the principle of perfection and order; they are an effect of the choice and the wisdom of God. I can demonstrate these laws in divers ways, but must always assume something that is not of an absolutely geometrical necessity. **Thus these admirable laws are wonderful evidence of an intelligent and free being, as opposed to the system of absolute and brute necessity, advocated by Strato or Spinoza.**

https://archive.org/details/enlightenmentcon0000isra/page/444/mode/2up?view=theater

Still more often tied to Spinoza during the Early Enlightenment than Xenophanes was the third-century BC philosopher Strato of Lampsacus. Indeed, the question of Strato, **successor of Theophrastus and third head of the Athenian Lyceum which he headed for nearly two decades from 287 BC until his death around *c.* 269 BC,** highlighted by both Bayle and Leibniz, played a not inconsiderable role in the evolution of eighteenth-century materialism.75 All the writings of Strato were lost during late antiquity; and while there survive a few reports by other classical authors, these – as has often been pointed out – are too few and disparate to provide a coherent picture or even a definite outline of his philosophy.
…

His name meant little or nothing to the Middle Ages or the Renaissance humanists. Thomas Stanley in the mid seventeenth century provided a brief entry on Strato in his *History*, but beyond saying 'he prescribed all divine power to Nature' tells us nothing about his ideas.78 Then, in the late seventeenth century, interest in the 'Naturalist' strongly revived and for one particular reason: contemporaries were greatly struck by the affinities between his supposed system and that of Spinoza. **Almost overnight the parallel drawn between Stratonism and Spinozism rendered Strato one of the most intensely debated of all ancient Greek thinkers.**

Though Gerardus Vossius, in his great work on pagan religion *De theologia gentili* and his posthumously published *De philosophorum sectis liber* (1657), already states, relying in Cicero and early Christian accounts,79 that Strato identified God with nature but conceived nature as acting blindly, without intelligence or design, spontaneously generating all living things,80 the real debate began with Cudworth's *True Intellectual System of the Universe* (1678), a masterpiece aimed against all forms of predestination and necessitarianism.81 Master of Christ's College, Cambridge, since 1654, **and reckoned 'un des plus habiles hommes du XVIIe siècle' by Bayle, Ralph Cudworth (1617-88) was the first to investigate 'a certain form of atheism, never before taken notice of, by any modern writers, which we call the Hylozoick:** which nonwithstanding, though it were long since started by Strato, in way of opposition to the Democritick and Epicurean hypothesis; **yet because it afterwards slept in perfect silence and oblivion, should have been here by us passed by silently;** had we not certain knowledge of its being of late awakened and revived, **by some, who were so sagacious, as plainly to perceive, that the atomick form could never doe their business,** nor prove defensible: and therefore would attempt to carry this cause of atheism, in quite a different way, by the life and preception of matter.'82
…

Cudworth ingeniously differentiates the corpus of ancient Greek philosophical 'atheism' into four main categories or types – a procedure later emulated in numerous early eighteenth-century discussions of ancient philosophy.92 His typology comprised **'first the Hylopathian or Anaximandrian, that derives all things from dead and stupid matter in the way of qualities and forms, generable and corruptible'; secondly, 'the atomical or Democritical' where the creative force in nature is 'fortuitous mechanism' of atomic movement;** thirdly, 'the Stoical or Cosmoplastick' supposing 'one plastick and methodical but senseless nature, to preside over the whole corporeal universe'; and finally, and least understood and discussed by previous modern writers, the 'Hylozoick or Stratonical.'93
…

Whereas the second most dangerous category, the 'Atomick Atheism' of Democritus and Epicurus, 'supposes the Notion or idea of Body to be nothing but extended resisting bulk, and consequently to include no manner of life and cogitation in it; Hylozoism on the contrary makes all body, as such, and therefore every smallest atom of it, to have life essentially belonging to it (natural perception and appetite) though without any animal sense or reflexive knowledge, as if life, and matter or extended bulk, were but two incomplete and inadequate conceptions, of one and the same substance, called body.'96 These second and fourth varieties of Greek atheism, the former well known but the latter almost entirely unheard of, represented **'two schemes of atheism, very different from one another; that which fetches the original of all things from the mere fortuitous and unguided motion of matter, without any vital or directive principle; and that which derives it from a certain mixture of chance and the life of matter both together, it supposing a plastick life, not in the whole universe, as one thing, but in all the several parts of matter by themselves; the first of which is the atomick and Democritick atheism, the second the Hylozoick and Stratonick.'**97

This ‘Stratonick and Hylozoick atheism which attributes to all matter as such the only substance and first principle of all things,’ **buried in oblivion since Justinian’s time,**98 struck Cudworth as ‘an hypothesis so prodigiously paradoxical, and so outrageously wild, as that very few men ever could have atheistick faith enough, to swallow it down and digest it.’99 That was why, he thought, it had remained so obscure and ‘found so few fautors and abettors, that it hath look’d like a forlorn and deserted thing.’ Indeed **‘we should not have taken any notice of it at this time as a particular form of atheism, nor have conjured it up out of its grave, had we not understood, that Strato’s ghost had begun to walk of late, and that among some well-wishers to atheism, despairing in a manner of the atomick form, this hylozoick hypothesis, began already to be look’d upon, as the rising sun of atheism – et tanquam spes altera Trojae, it seeming to smile upon them, and flatter them at a distance, with some fairer hopes of supporting that ruinous and desperate cause.’**100

This was an astounding insight on Cudworth’s part. For not only did hylozoism, just as he conceived, reappear in Spinoza’s one-substance monism but then it took the lead in Early Enlightenment philosophical atheism and materialism, **emerging, finally, in the refined drawing-room *hylozoïsme* of Diderot, with its most detailed and consummate reworking in that author’s *La Rêve d’Alembert*, of 1769.**101 ‘Now the first and chief assertour of this hylozoick atheism,’ explains Cudworth, ‘was, as we conceive, Strato Lampsacenus, commonly called also *physicus*, that had been once an auditor of Theophrastus and a famous Peripatetick, but afterwards degenerated from a genuine Peripatetick, into a new-formed kind of atheist.’102
…

Having previously cited Strato only in passing, in the *Dictionnaire* where Stoicism and Epicureanism function as the main ancient equivalents of Spinozism, in the *Continuation* Bayle judges Stratonism the most cogent Greek system and that which the Aristotelians and other Hellenistic schools found hardest to refute.112
…

If Epicurean atomism renders the world a product of chance, Strato’s, held Bayle, makes everything follow an eternally fixed order of necessity, inherent in matter itself; moreover, Strato did not teach that the cosmos is something recent **or, like the atomists, that it is ‘produit par le hasard,’** but rather, says Bayle, ‘comme font les Spinozistes,’ that Nature had fashioned it ‘nécessairement et de toute éternité.’120 **Strato allows no First Mover distinct from Nature,** holding that everything that happens occurs necessarily and that there is no innate ‘good’ or ‘bad’ in the cosmos.121 Like Vossius, Bayle stressed Strato’s denial that the cosmos is a living being with intention, intelligence, or sensibility,122 claiming he saw Nature as containing within itself the origin of all conception, growth, and decline, vested in spontaneous movement innate in matter itself. Bayle’s Strato acknowledges no other divine power than that of nature, ‘et il soutint que la nature étoit toute corporelle.’123

While nothing in the surviving sources proves Strato really did thus conceive of Nature’s overall rational coherence, something of the sort can perhaps be legitimately inferred from the fact that **no ancient commentator suggests he advocated, like Epicurus, any doctrine of chaos or random contingency.**124
…

Buddeus and Gundling in fact largely agreed with Bayle about Strato, the first in his *De Spinozismo ante Spinozam* (Halle, 1701) **stating that while Strato differs from Spinoza in some not inconsiderable points, he was nevertheless the first genuine precursor of Spinoza.**140 **Bayle was right, says Buddeus, to say Strato approaches much closer to Spinozism than Epicurus, and anticipated Spinoza in many things, especially concerning motion and sensibility being inherent in the material world where Stratonism and Spinozism contrast sharply with Epicurus’ atomistic universe in which matter in inert and lifeless and the origin of life problematic.**141

Toland thought likewise, as did the rest of the Radical Enlightenment. Collins expressly sanctions Bayle’s interpretation of Strato in his early tract *An Answer to Mr Clark’s Third Defence of his Letter to Mr Dodwell* (London, 1708), where he defends both Spinoza and Bayle against Clarke.142 ‘As far as I can judge of the opinions of Strato, Xenophanes and some other ancient atheists from a few sentences of theirs that yet remain, and of that sect call’d the *Literati* in China,’ he maintains, **‘they seem all to me to agree with Spinoza (who in his *Opera Posthuma* has endeavour’d to reduce atheism into a system) that there is no other substance in the universe but matter, which Spinoza calls God, and Strato Nature.’**143
…

Hence, Strato was widely deemed – at least until Brucker intervened to defend him against the charges of ‘atheism’ and affinity to Spinoza144 – the most consistent atheist, materialist, and naturalist among the ancients. This was despite there being no real evidence that his ‘hylozoism’ did actually entail his denying the existence of the lesser gods and despite the fact that he himself would presumably have

been horrified by any suggestion that he was, as the Hellenistic Greeks understood the term, an 'atheist.'145

That movement in Strato's system generates not only animate from inanimate matter but equally mind is confirmed by the well-informed sixth-century AD pagan Alexandrine scholar Simplikios, one of the defiant last seven philosophers who sought refuge at the court of the Persian king Chosroës during the final suppression of non-Christian philosophy under the Emperor Justinian. **Strato's conception of mind, reports Simplikios, was directly linked to his naturalistic cosmology and physics and entailed the complete dissolution of Aristotle's hierarchical structure of sense, soul, and mind.**146
…

Strato, then, abolishes Aristotle's distinction between physical movement and mental activity, reducing all actions of the mind to forms of sense and perception, which means he also eliminates, as both More and Cudworth scornfully remark, all conceivable basis for the immortality of the soul.148 Vossius had already noted that, for Strato, mind if a function of sense.149 Bayle and his contemporaries relied in part on Sextus Empiricus' clear (but perhaps oversimplified) remark that among Greek thinkers there were two rival views regarding the origin of mind, those who distinguished thinking from the sensations, as most did, and those who derived thought from sense perception, as a stretching out, like the tones of a flute. **'This dissenting view,' says Sextus, 'began with Strato the Naturalist and also Aenesidemus.'**150
…

Rather, the role of the historical Strato both as a successor to Theophrastus and as a resolute critic of Aristotelianism seems to have been important to Bayle.154 **The real Strato, attacking the Peripatetics, as it were, from within, argued his way out of an Aristotelian context just like the modern critical philosophy to which Bayle (who had once taught Aristotelianism professionally, at Sedan) devoted his life while simultaneously combating Epicureanism and the Stoic concept of God.**155
…

Jean Meslier, the most systematic and emphatic French materialist writer before Diderot, did not hesitate to rank Strato, with Leucippus, Democritus, and Epicurus, among the first rank of those Greek philosophers who tried not only to integrate everything which is real but, as he saw it, heroically strove to strip away the veil of prejudice and save philosophy from the theologians, someone whose precious teaching – his message (like Meslier's own) being too devoid of marvels for 'des imaginations amoureuses des chimères' – **being subsequently brutally stifled amid the 'conjectures fabuleuses des Platon, Socrate, des Zenon.'**158

https://books.google.fi/books?id=LT5WAAAAYAAJ&hl=fi&pg=PA78#v=onepage&q&f=false

***Aristotle* had hitherto, had but very few Followers: He was scarce known in the Western Parts of the World, till towards the Beginning of the sixth Century. The celebrated *Boetius*, by translating some of that Philosopher's Writings, laid the first Foundations of that prodigious, and truly despotick Authority,** which the Peripatetick Philosophy became afterwards possess'd of; and which, even to this Day, in many Places, it still maintains. The *Arabians*, in the eleventh Century, grew fond of it; and introduc'd it into *Spain*. From thence sprung the *Scholastick Philosophy*; which spread itself all over *Europe*, and with its barbarous Cant became even more prejudicial to Religion and Morality, than to the speculative Sciences.

https://www.sacred-texts.com/cla/fsgr/fsgr05.htm

The successors of Aristotle produced rather a school of progressive science, those of Plato a school of refined scepticism. **The religious side of Plato's thought was not revealed in its full power till the time of Plotinus in the third century A.D.; that of Aristotle, one might say without undue paradox, not till its exposition by Aquinas in the thirteenth.**

https://books.google.fi/books?id=INcgAwAAQBAJ&lpg=PP1&hl=fi&pg=PA177#v=onepage&q&f=false

So Aristotle resists the pre-Socratics ontology of origination while at the same time he resists the opposite extreme of making nature synonymous with the rationally constructed. **This latter point is perhaps less obvious because of the influence of Christian Aristotelians led by Thomas Aquinas, who, in Aristotle's name but in a fundamental distortion of his philosophy, erroneously assimilated final and formal cause to the efficient cause of God, the master artificer,**15 **an assimilation of classical teleology to a fabricating act of divine will that, as I have earlier suggested, is then transferred by Machiavelli to the secular prince's conquest of nature and by Hobbes to the artificer of the social contract who remedies the defects of human nature.** Although Aristotle likens the nature to art in some respects in order to refute the pre-Socratics'

emphasis on becoming, his analogy for nature in all respects, as I observed earlier, is that of a “doctor who heals himself” – an irreducible equipoise of generational substratum (the patient’s sick body with its potential for health) and art (the doctor’s medical expertise; [*Physics* 199b27-35]).

https://books.google.fi/books?id=INcgAwAAQBAJ&lpg=PP1&hl=fi&pg=PA282#v=onepage&q&f=false

> 6. Compare St. Thomas, who represents Aristotelian causality not in its original sense as perspectives on a thing but as successive stages of the divine artisan’s operations on material reality. **Whereas Aristotle treats natural causality as *analogous* to art – in other words, like art in some respects, unlike it in others – Thomas is confident in his commentary on Aristotle’s *Physics* that “nature is *nothing but* a certain kind of art, that is, the divine art, impressed upon things, by which these things are moved to a determinate end.”** Thomas (1963) p. 124; my emphasis.

https://books.google.fi/books?id=6qHLEAAAQBAJ&lpg=PP1&hl=fi&pg=PT275#v=onepage&q&f=false

> In the *Korte Verhandeling* Spinoza likewise first introduces, indeed makes his fullest use of, **his famous distinction between *natura naturans* and *natura naturata*, meaning God (or the laws of nature) determining all created things, a coupling often associated with Spinoza but actually Averroist and medieval scholastic in origin** that seemingly held rather less significance for him later than at this early stage. Spinoza indicates his awareness that Thomists first introduced these terms into Western thought.38 “The Thomists have also understood God by this phrase, but their *natura naturans* was a being, as they call it, beyond all substances,” whereas, for Spinoza, *natura naturans* is God and the sole existing substance.39 **His adopting the twin terms, active and passive, despite only marginally figuring in the *Ethics*, has been aptly called, a “hostile takeover,” as these inherited categories would subsequently never revert to their medieval sense.**40

https://books.google.fi/books?id=Zymp_kM33ZcC&lpg=PP1&hl=fi&pg=PA345#v=onepage&q&f=false

> **There is an obvious connection between the politic philosophy Synesius seems to have been taught in Alexandria and what, in Europe, later came to be called Averroism.** Alfarabi, the actual founder of that school of thought, tells us that Muslim Arabs first learned philosophy from Monophysite Christian instructors whose predecessors had abandoned Alexandria for Antioch after the Arab conquest and then moved on later to Harran and ultimately Baghdad – where, in due course, he was a student himself.
> …
>
> In this light, **one should note the close, if not exact, correspondence between the Christian doctrines which Synesius could not accept and the Muslim doctrines which Al-Ghazali accused Alfarabi and Avicenna of denying:** *MPP* 171-74: Averroës, *The Decisive Treatise* 9-12; *Averroes’ Tahafut al-tahafut* 587.1-6. In this connection, see Muhsin Mahdi, “Alfarabi against Philoponus,” *JNES* 26 (1967): 233-60.

https://archive.org/details/enlightenmentcon0000isra/page/636/mode/2up?view=theater

The insurrectionary creed of Abu Muslim’s movement, scholars agree, was actually built out of an explosive mix of Shi’ite, Zoroastrian, and Manichaean ingredients,146 **so that while there is no concrete evidence of any Greek strand, Bayle was probably not stretching the truth far in postulating a resurgence of religious impulses of late antiquity, Persian, and Greek, clandestinely opposed to all three revealed religions.**

While it might be objected that Bayle was resorting to pure fantasy in thinking Abu Muslim’s movement adhered to the fundamental unity of all substance, and was proto-Spinozist, **the fact that it was against this background that the freethinking tradition, culminating in Ibn al-Rawandi and Al-Razi, arose means that his construct was perhaps, taking all forms of dissent in the Abbasid era into account, not so remote from the actual historical circumstances after all.** For the philosophical freethinking of Al-Warraq, Al-Rawandi, and Al-Razi was an intellectual revolt against belief in the miraculous, revelation, prophecy, and the supremacy of theology over human life, **and did arise against a backdrop of endemic spiritual revolt, heretical sects, and armed political insurrection simultaneously aimed against the Abbasid caliphate and orthodox religion.**

https://books.google.fi/books?id=Zymp_kM33ZcC&lpg=PP1&hl=fi&pg=PA340#v=onepage&q&f=false

> To indicate that he is fully conscious of what he is doing, **Alfarabi initially lays out an Aristotelian account of the status and character of political science in his *Enumeration of the Sciences* and then silently replaces it with a Platonic account.**
> …

For a popular presentation of this public teaching, see Alfarabi, *Opinions*. **As a consequence of the political strategy adopted by the early *falāsifa*, Aristotle's *Politics* received comparatively little attention within the House of Islam; and, in Averroës' time, it was unavailable in the Muslim West in any form:** *Averroes on Plato's Republic* 22.3-5. In this connection, note Avicenna's contention that Plato's *Laws* is a book about prophecy and the holy law: *MPP* 97: *On the Divisions of the Rational Sciences* 108. **It may not be fortuitous that Alfarabi appears in Raphael's School of Athens as a musician.** Direct divine inspiration is strikingly absent from the prophetology of the *falāsifa* – even in Alfarabi's most popular tract. **In fact, religion is treated as nothing more than a poetic or imaginative approximation to philosophical truth useful for directing the multitude:** see Alfarabi, *Opinions* 4.14.1-11 (esp. 7-9), which should be read with Richard Walzer's commentary (413-23, 471-81) and with Walzer, "Al-Fārabī's Theory of Prophecy and Divination," *Greek into Arabic: Essays in Islamic Philosophy* (Cambridge, Mass., 1962), 206-19.
...

As Strauss emphasizes in the essays cited above, Maimonides' prophetology owes much to Alfarabi: see *Guide of the Perplexed* II 32-48.

http://www.jewishencyclopedia.com/articles/2164-averroism

While Maimonides, with all his admiration for Aristotle, dared to contradict his theories, or at least sought to attenuate them when they were in direct opposition to religion, Averroes indorsed them to their utmost extent, and seemed even to take pleasure in emphasizing them. "God," says Averroes, "has declared a truth for all men that requires for understanding no intellectual superiority; in a language that can be interpreted by every human soul according to its capability and temper. The expositors of religious metaphysics are therefore the enemies of true religion, because they made it a matter of syllogism" (J. Müller, "Philosophie und Theologie," including the Arabic text, pp. 104 *et seq*.). In expounding what he thought to be the doctrines of Aristotle, it made no difference to Averroes whether they were or were not in harmony with those taught by the Koran. **Thus Averroes asserts again and again the eternity of the universe; although, as Maimonides demonstrated in his "Guide"** (ii. 28, 121-127), **Aristotle himself is not very decisive on this point.** Averroes goes still further and declares that not only is matter eternal, but that form even is potentially existent, otherwise there would be creation *ex nihilo* ("De Cœlo et Mundo," p. 197).
...

However, it was due to Maimonides that the philosophy of Averroes found admirers during four centuries among the Jews, who by their translations and commentaries preserved his writings from destruction and transmitted them to the Christian world.
...

The fifteenth century, though still rich in productions of Averroism, gave signs of decadence. Boldness had vanished from the world of letters, and every author felt himself constrained to break a lance for religion.
...

In the sixteenth century Averroism gave place to theology. People read and studied Averroes, but very evidently only to hunt out his weak points and disprove him. Isaac Abravanel, largely indebted as he was in his commentary on the "Guide" to Averroes, does not scruple to attack him frequently in his "Shamayim Ḥadashim" and other works. Abraham Bibago, who commented on Aristotle's "Analytica Posteriora," abuses Averroism in his "Derek Emuna." Moses Almosnino, about 1538, comments on Al-Gazzali's "Happalat-ha-Filosofim" (Destruction of the Philosophers), and uses it as a weapon against the Peripatetic philosophy. **Many other, but more insignificant, writers essayed to drag the colossus to the ground, but the traces stamped by Averroes on Jewish literature are irremovable.**

https://archive.org/details/dli.ernet.25058/page/413/mode/2up?view=theater

Spinoza, with perhaps some lack of historical understanding, criticized Maimonides' allegorical interpretation of the Scriptures as a disingenuous attempt to preserve the authority of the Bible; **but he hailed the great rabbi as "the first who openly declared that Scripture must be accommodated to reason";**[75] and he took from Maimonides some ideas on prophecy, miracles, and the attributes of God.[76]

In Judaism itself Maimonides' influence was revolutionary. His own posterity carried on his work as scholars and Jews: his son Abraham ben Moses succeeded him as *Nagid* and court physician in 1205; **his grandson David ben Abraham and his great-grandson Solomon ben Abraham also succeeded to the leadership of the Egyptian Jews;** and all three continued the Maimonidean tradition in philosophy. **For a while it became fashionable to Aristotelize the Bible through allegorical legerdemain, and to reject the historicity of its narratives;** Abraham and Sarah, for example, were merely a legend representing matter and form; and Jewish ritual laws had only a symbolical purpose and truth.[77]

https://archive.org/details/enlightenmentcon0000isra/page/624/mode/2up?view=theater

Christian and Ibero-Jewish Averroism may have become to an extent detached from the real system of Ibn Rushd, and eventually even more radically heretical; nevertheless, this strain was

still perceived as being rooted in Ibn Rushd's philosophy and hence in an authentically Arabic intellectual tradion.69 A submerged Averroism survived, if after a certain point no longer within Islamic culture, in France, Italy, and not least among the Jews and New Christians in early modern Spain;70 **for in the universities (which the Islamic world lacked) this subterranean growth proved ineradicable while reaction against Averroism within late medieval Spanish and Provençal Judaism, though real, was less than within Islam and Christianity.**71

Spanish clandestine academic Averroism became in fact the prime source of the underground Deism rife among the crypto-Jews in the Iberian world from at least as far back as fifteenth century, a current of thought which persisted uninterrupted through the sixteenth and seventeenth centuries. **Isaac Orobio de Castro encountered several such 'Deistas' among the university-trained New Christians in early seventeenth-century Castile.**72 Among the most active proselytizers of this sort was a certain Dr Juan Pinheiro who studied with both Orobio and Prado at Alcalà de Henares and later moved to Seville where he died around 1662.73 It was reportedly Pinheiro who converted to philosophical Deism none other than Juan de Prado, Spinoza's closest companion and ally during the last year or so of his membership of the Sephardic Jewish community of Amsterdam (1655-6).

>
> Spinoza did not indicate what he owed to Maimonides, to whom he refers more frequently than to ibn Ezra, although in a much less friendly tone. But when saying that Moses "believed or at least wished to teach" that God is zealous or angry, **he merely makes explicit what Maimonides had implied when intimating that the belief in God's anger is required, not for man's ultimate perfection, but for the good ordering of civil society.**74
>
> https://www.jewishencyclopedia.com/articles/1574-anthropomorphism#anchor10
>
> **Maimonides was the first Rabbinite Jew to set up the incorporeality of God as a dogma,** and to place any person who denied this doctrine upon a level with an idolater. While his predecessors had contented themselves with rejecting Anthropomorphism as contrary to reason—treating it as a purely theoretic matter—**Maimonides declared it a heresy that would deprive any one holding the doctrine of a share in the world to come** ("Yad ha-Ḥazaḳah, Hilkot Teshubah," iii. 7). The first part of his religio-philosophical work (the "Moreh Nebukim") practically constitutes a treatise on Hebrew synonyms, the object of which is to explain away the anthropomorphisms in the Bible. **But Maimonides was not content to restrict himself to opposing Anthropomorphism. Philosophy being to him not the handmaid, but the mistress, of theology, he pursued his thought until he arrived at the concept of God as a metaphysical being, withdrawn in cold sublimity and isolation from His creatures—with whose weal or wo He could no longer concern Himself—and void of a free will; a being, in short, to whom no attributes could be ascribed except those of a negative character.** Thus Maimonides was confronted with a difficulty similar to that which Philo encountered when he propounded his doctrine of the "Logos": the question, namely, how to establish a communication between a God devoid of attributes and the material universe. **In fact, his lack of success was as complete as that of Philo, at least as far as Judaism is concerned.**
>
> Despite the high esteem enjoyed by Maimonides among the great body of Jews, he was unable to achieve any success with his "intellectualization" of the notion of God. **Only one of his teachings—that of the incorporeality of God—found favor in the eyes of his coreligionists, was accepted in all sincerity, and was even adopted in the ritual of the Synagogue;** a proof that in this doctrine he had caught the true spirit of Judaism.
> …
>
> **Mention must also be made of Ḥasdai Crescas—the greatest Jewish philosopher after Maimonides—**not only because he opposed the latter's doctrine of negative attributes, by asserting that it is possible to ascribe many attributes to Deity without injury to the idea of His unity, **but because he exerted influence upon Spinoza, the greatest of all opponents of Anthropomorphism.**

>
> Both the Khurramīs and the Persian Zoroastrians associated God with light, but the former did not give him a name or a personality: he was simply the great light or the highest light, the source of all the light there was. **In Muslim parlance the Khurramīs were guilty of *taʿṭīl*, avoidance of anthropomorphism to the point of making God disappear as a person. It was a sin of which the Ismailis were later to be accused.**

https://www.marxists.org/reference/archive/lazare-bernard/1894/antisemitism/ch13.htm

In the second place, they were the means of disseminating the Arabian philosophy, and were its expounders at a time, twelfth century, to be precise, **when Al Farabi and Ibn Sina were being anathematized in the mosques, and orthodox Muslims were feeding the fires with the writings of the Arabian Aristotelians.** The Jews of this period translated the writings of Aristotle and of the Arabian philosophers into Hebrew, and these, retranslated into Latin, afforded the scholastics an opportunity for becoming acquainted with Greek thought. The most famous of the scholastics, "men like Albertus Magnus and St. Thomas Aquinas, studied the works of Aristotle in Latin versions made from the Hebrew."[226]
...

At the Court of the Emperor Frederick II, "that hotbed of irreligion," they were received with favour and respect. **It was they, as Renan has shown,[228] that created Averroism;** it was they who established the fame of that Ibn-Roshd, that Averroes whose influence was destined to become so great. Without doubt they had their share, too, in the dissemination of the "blasphemies" of the impious Arabians; blasphemies which an Emperor, fond of science and of philosophy, encouraged. These find their type in the so-called "Blasphemy of the Three Impostors," Moses, Jesus and Mohammed, invented by the theologians, **and their spirit is tersely summed up in the saying of the Arabian *soufis,* "What care I for the Kaaba of the Mohammedan, the synagogue of the Jew, or the convent of the Christian!"**

https://archive.org/details/enlightenmentcon0000isra/page/632/mode/2up?view=theater

> Bayle's *Dictionnaire,* like the first European *encyclopedia* – the *Algemeen Historisch Geographisch en Genealogisch Woordenboek* (The Hague, 1724) – and subsequent eighteenth-century compendia, including Prosper Marchand's *Dictionnaire* (1758) and the great French *Encyclopédie,* all narrate the tale of Ibn Rushd devising the notion of the 'Three Impostors' simultaneously to negate and equate the three great revealed religions. **Ibn Rushd, in all these compendia, is cited as denouncing the revealed faiths in highly offensive terms: 'quod Lex Moysi, est lex puerorum; Lex Christi, lex impossibilitum; lex Mahumeti, lex porcorum'** [that the Law of Moses is a law for children; the Law of Christ an impossible law, and the Law of Muhammad a law of pigs].119

> **Moreover, in the darkest times of the Middle Ages, when Asiatic clouds had gathered darkly over Europe, it was Jewish free-thinkers, scholars, and physicians who upheld the banner of enlightenment and of intellectual independence under the severest personal sufferings, and defended Europe against Asia;** we owe it not least to their efforts that a more natural, more reasonable, at all events un-mythical, explanation of the world was finally able to get the upper hand once more, and that the link of culture which now unites us with the enlightenment of Greco-Roman antiquity has remained unbroken. **If Christianity has done everything to orientalise the Occident, Judaism has assisted essentially in occidentalising it anew; which, in a certain sense, is equivalent to making Europe's mission and history a *continuation of that of Greece*.**

https://www.newadvent.org/cathen/13784a.htm

Siger in fact supported all the beliefs of the Averroist philosophy—the monism of the human intellect; one intellectual spirit for all men, separate from the body, is temporarily united with each human organism to accomplish the process of thought. Man is mortal, but the race is immortal. Hence the question of a future life is without meaning; immortality cannot be personal. **The world is produced by a series of intermediary agencies;** hence there is no providence in the government of men and of earthly things. All these productions are necessary, coeternal with God. All is ruled by cosmic and psychical determinism. **Celestial phenomena and the conjunction of the planets control the succession of events on our globe, and the destinies of the human race.** Man is not a free agent. There is an eternal reversibility of civilizations and religions, the Christian religion included, which is governed by the reversibility of the stellar cycles. Siger wished to remain a professing Catholic, and to safeguard his faith he had recourse to the celebrated theory of the two truths: what is true in philosophy may be false in religion, and vice versa. **It is hard to tell whether such a mental attitude indicates buffoonery or sincerity.**

https://www.muslimphilosophy.com/ip/tud.htm

> Averroës was most famous, or rather infamous, for his understanding of the human soul, worked out in terms ultimately derived from Aristotle, the Possible and the Active Intellects. **This subject is extremely complicated and obscure,[24] deliberately so because of its dangerously unorthodox implications.**
> ...

An anecdote from an early book on Aquinas shows that as abstruse as Averroës's doctrine of the Possible Intellect appears to be, somehow it filtered down to the level of the common man in the European Middle Ages. **William of Tocco reports the case of a French soldier "who was unwilling to atone for his sins because, as he put it: 'If the soul of the blessed Peter is saved, I shall also be saved; for if we know by one intellect, we shall share the same destiny.'"**[26]
…

It was in fact one of the principal reasons why **Pope John XXII had *De Monarchia* burned in 1329 in Bologna and the Catholic Church officially placed it on its Index of Forbidden Books in 1554 (it was not removed until the nineteenth century, when the Averroist scare apparently had blown over).**[31] Dante employs the idea of the Possible Intellect precisely in Averroës's sense, suggesting that philosophers form a community of thought over the centuries, that the gradual perfection of human thought grows out of a conversation among philosophers over time. We see now how profoundly appropriate it is that Averroës be placed in Dante's Limbo. **Limbo is precisely an allegorical representation of Averroës's idea of the Possible Intellect. The eternal conversation of the philosophers in Dante's Limbo is a metaphor for what Averroës meant by the immortality of human thought. How far this metaphorical conception of immortality can be extended throughout the *Divine Comedy* is a profound question for the interpretation of Dante.**

https://archive.org/details/translationsrepr03univiala/page/10/mode/2up?view=theater

How are we to deal with another monstrous kind of pedant who wears a religious garb, but is most profane in heart and conduct, he who would have us believe that Ambrose, Augustine and Jerome were ignoramuses, for all their wordy treatises? I do not know the origin of these new theologians, who do not spare the great teachers and will soon cease to respect the Apostles and the Gospel itself. They will soon turn their impudent tongues even against Christ, unless He whose cause is at stake interferes to curb the raging beasts. For it has already become a well established habit with these fellows to express their scorn by a mute gesture or by some impious observation whenever revered names or sacred subjects are mentioned. "Augustine," they will say for example, "saw much, but understood little." Nor do they speak less insultingly of other great men.

Recently one of these philosophers of the modern stamp happened to be in my library. He did not, it is true, wear the habit of a churchman, but as we know, the real Christian is known by his belief. **He was one of those who think that they live in vain unless they are constantly snarling at Christ or his divine teachings. When I cited some passage or other from the Holy Scriptures, he exploded with wrath, and with his face, naturally ugly, still further disfigured by anger and contempt, he exclaimed, "You are welcome to your two-penny church fathers; as for me, I know the man for me to follow, for *I know him whom I have believed*."* "But," I replied, "you use the words of the Apostle; would that you would take them to heart!"** "Your Apostle," he answered, "was a sower of words and a lunatic." "You reply like a good philosopher," I said. "The first accusation was brought against him by other philosophers and the second to his face, by Festus, governor of Syria. He did indeed sow the word with such success that, cultivated by the beneficent plow of his successors, and watered by the holy blood of the martyrs, it has borne such an abundant harvest of faith as all may behold." At this he burst forth into a sickening roar of laughter. **"Well, be a good Christian! as for me I put no faith in all that stuff. Your Paul and your Augustine and all the rest of the crowd you preach about, were a set of babblers. If you could but digest Averroes you would quickly see how far superior he was to these empty-headed fellows."** I was very angry, I must confess, and could scarcely keep from striking his filthy, blasphemous mouth. "It is the old feud between me and the heretics of your class. You may go," I cried, "—you and your heresy, never to return." With this I plucked him by the gown and, with a want of ceremony less in consonance with my habits than his own, hurried him out of the house.

There are thousands of instances of this kind where nothing will prevail—neither the majesty of the Christian name, nor the reverence for Christ himself, whom the angels fall down and worship, though weak and depraved mortals may insult Him; not even the fear of punishment or the armed inquisitors of heresy. **Prison and stake are alike impotent to restrain the impudence of ignorance and the audacity of heresy.**

Such are the times, my friend, upon which we have fallen; such is the period in which we live and are already growing old. Such are the judges against whom I have so often inveighed, who are innocent of knowledge or virtue, and yet harbor the most exalted opinion of themselves. Not content with losing the works of the ancients, they must attack their ability and their ashes.

After about 1300, Arabic-Latin translation activities ceased almost entirely, to resume again after 1480. The Renaissance translations were mostly produced by Italian Jews from Hebrew versions of Arabic texts, an exception being Andrea Alpago's Avicenna translations from Arabic, which were produced in Damascus (Tamani 1992; Burnett 1999). **The social context of these translations was the vibrant philosophical culture of Italian universities and especially of Padua, and the patronage of Italian scholars belonging to the Italian nobility, who had been educated in these**

universities (Hasse 2006). **The impact of these Renaissance translations, which is weaker than that of the medieval translations, remains largely unexplored.**

https://plato.stanford.edu/archives/fall2014/entries/arabic-islamic-influence/#AveUniThe

But that much is clear: there existed at least four groups of authors who explicitly adopted the unicity thesis in one of their writings: Siger of Brabant and possibly other masters of arts in later thirteenth-century Paris; a second Parisian group in the early fourteenth century around Thomas Wilton, John of Jandun and John Baconthorpe; several Italian masters of arts at Bologna university in the fourteenth century; and a larger group of authors in Renaissance Italy and especially in Padua.

When the medievals used the Latin term *averroista*, they referred to authors belonging to these groups. The term *averroista*
came into use in the later thirteenth century, but on rare occasions. The first appearance, as we can see today, is in Thomas Aquinas' treatise *On the Unicity of the Intellect* (*De unitate intellectus*). The additional title phrase *contra averroistas* appears only in the later manuscript tradition and is unlikely to be authentic. **It was in the decades around 1500 that the term was used most frequently.**

https://books.google.fi/books?id=wrx9BgAAQBAJ&lpg=PP1&hl=fi&pg=PA62#v=onepage&q&f=false

The act which started the whole movement was the transference of the center of learning from the monastery to the urban university. This one incident, apparently so harmless, transformed the whole condition of knowledge and created a situation in which lay learning began to compete with theology. The changeover was especially successful in the municipal universities of Italy, where a greater freedom obtained than in the more theologically-oriented universities of France and England. Bologna and, especially, Padua early became typical centers of this kind of activity. **Indeed, it is hardly an exaggeration to state that from Padua sprang the whole liberal movement in ideas which has swept over western Europe and America during the last five centuries.**

The movement really began very early. The initial steps in transforming Padua into a modern center of learning came with the introduction of Averroes (1126-1198), when Padua espoused Arabic medicine and the psychological explanation of phenomena. **The ideas of Averroes, as Renan has shown, have a strangely modern ring.** Semi-mystic, semi-rational, semi-scientific, he taught that God eternally produces the Intelligences by a process of emanation, that matter is an eternal potency, that the active intellect is one for all men, that there is no freedom or personal immortality, and that there may be contradictions between religious and philosophical truths. These ideas are fundamental to Italian naturalism, where such doctrines as the universal soul, the eternity of matter, determinism, the eternal power of nature, and the “double truth,” become increasingly significant. Averroes made other important contributions too. With the introduction of Arabic science and Arabic medicine, a new interpretation of Aristotle became necessary, where the two paramount problems involved the nature of matter, the nature of mind and the relationship between the two. Indeed, it was the reinterpretation of Aristotle which led to the reorganization of the whole corpus of learning and gave added significance to the mathematical and physical sciences. **Moreover, with Pietro d’Abano (1250-1316) who had introduced Averroes, the Paduans had already made a definite effort to clarify the notion of matter.** This attempt, coupled with interest in psychological phenomena, particularly abnormal manifestations, encourage the formation of a corps of knowledge around the rational and experimental sciences, which in time became an area of learning distinct from theology. Thus medicine led to physics, astrology to cosmology, and both medicine and cosmology to natural philosophy. **By the end of the thirteenth century, the new approach was solidly established, though the full development was not attained until two centuries later.** The outstanding Paduan of the Renaissance was Pomponazzi.
…

Doctor of medicine in 1487, Professor of medicine in 1488, Professor of philosophy in 1495, and later Professor at Bologna and Ferrara, **Pomponazzi produced a series of treatises which at one and the same time coordinated the natural and moral philosophy of the ancients with a whole new set of original ideas.**

https://en.wikipedia.org/wiki/Alexandrists

The Alexandrists were a school of Renaissance philosophers who, in the great controversy on the subject of personal immortality, adopted the explanation of the *De Anima* given by Alexander of Aphrodisias.[1]

According to the orthodox Thomism of the Catholic Church, Aristotle rightly regarded reason as a facility of the individual soul. **Against this, the Averroists, led by Agostino Nifo, introduced the modifying theory that universal reason in a sense individualizes itself in each soul and then absorbs the active**

reason into itself again. These two theories respectively evolved the doctrine of individual and universal immortality, or the absorption of the individual into the eternal One.[1]

The Alexandrists, led by Pietro Pomponazzi, assailed these beliefs and denied that either was rightly attributed to Aristotle. They held that Aristotle considered the soul as a material and therefore a mortal entity which operates during life only under the authority of universal reason.

https://books.google.fi/books?id=dwdZEAAAQBAJ&lpg=PP1&hl=fi&pg=PA330#v=onepage&q&f=false

Renaissance readers could find this line of thought being followed through by another great commentator on Aristotle, namely Alexander of Aphrodisias, who lived in the second century AD. **In the fifteenth century, he was still valued as the most competent guide to Aristotle alongside Averroes, and was standardly interpreted as having held that the soul is indeed mortal, since it is only the form of a mortal body.**

So devotees of Aristotelianism were caught between a rock and a hard place: the materialist theory of Alexander on the one hand, Averroes' hard-to-believe theory of the unity of the immaterial intellect on the other. **Marsilio Ficino thus complained, "Almost the entire world is occupied and divided between two sects of Peripatetics, the Alexandrians and the Averroists. The one sect think our intellect is mortal, the other contend that it is one. Both schools alike are wholly destructive of religion … and in both cases they seem to have been failed by their Aristotle."**8 Ficino responded to the challenge with his massive work *The Platonic Theology*, which devoted hundreds upon hundreds of pages to proving the immortality of individual human souls. Surely at least one of those arguments must be right? The pope evidently thought so, and as we saw Ficino's work has been credited with helping inspire the church's declaration that immortality can be rationally proven.
…

Against this backdrop, it becomes clear that Pomponazzi's treatise was a little less shocking than we might suppose. **He differed from the Renaissance Averroists simply in his choice of which false theory of the soul should be ascribed to Aristotle: Alexander's reading was broadly correct, Averroes' completely wrong.**11
…

Less obviously, **Averroes depicted human thinking as being just like the pure, separate thinking that belongs to God and the celestial intellects of Aristotle's cosmology.** The very fact that we need to use our imaginations to think is a clear sign that our intellects work quite differently than those exalted minds (317). **In fact, Pomponazzi thinks that in comparison to them, we can claim to have only a "shadow of intellect"** (322).
…

Pomponazzi agrees with Thomas in rejecting Averroism: we all have our own single, individual souls. With the emphasis on *single*: we do not have two souls, a mortal one for sensation, and a second, immortal soul for intellection. On this view "soul and body would have no greater unity than oxen and plow" (298).16 But if the single soul is immortal and immaterial, as Aquinas claims, then why would intellectual thought, the signature activity of the immaterial soul, depend on the body for its functioning, as we have seen that it does (305)? **Aquinas' view might be true in the end, as testified by religion, but it cannot be established by reason** (302-3).

https://archive.org/details/enlightenmentcon0000isra/page/n523/mode/2up?view=theater

Within this wider context **one of Bayle's major contributions to Early Enlightenment discourse was his introducing, first in his *Dictionnaire*, a powerful new construct which may usefully be termed 'Radical Renaissance.'** The term 'Italian Renaissance' itself had, of course, not yet been coined and neither Bayle nor his contemporaries took much interest in many of the features of the Renaissance which later came to be make it appear so significant an epoch. **Least of all did the Early Enlightenment muster any enthusiasm for Italian humanism or its Platonism or Aristotelianism. But the Italian Renaissance naturalist, libertine tradition culminating in Pomponazzi, Bruno, Vanini, and that key anonymous clandestine text the *Theophrastus Redivivus* (1659), was a different matter** and its study, by Bayle and the German Eclectics especially, lent a wholly new significance to late Renaissance philosophical naturalism which, though Aristotelian, looked also subversive and atheistic in orientation.58 At the same time, the potential impact of this remarkable initiative of Bayle's was then, in turn, largely neutralized by **a marked anti-Italian bias running through much of particularly the French Early Enlightenment, from Boulainvilliers to Diderot and d'Alembert and the *Encyclopédie*'s consequent tendency to de-emphasize the roles of the Italian thinkers and scientists, even Galileo.**59

Bayle includes numerous figures from the Italian Renaissance, including Savonarola and Machiavelli, in his *Dictionnaire*. Among articles of specifically philosophical significance, **it is striking that he takes little interest in the Platonism and syncretism of Ficino and Pico.**60
…

Bayle, in constructing his ‘Radical Renaissance,’ focused on a group of sixteenth-century figures and their early seventeenth-century followers **who seemed to have actively sought to undermine the traditional relationship between Aristotelian scholasticism and theology.** He considers, in particular, Pietro Pomponazzi (1462-1525), Girolamo Cardano (1501-76) whom he deems one of the wisest of philosophers, Andrea Cesalpino (1524-1603), Jacopo Zabarella (1533-89), Giordano Bruno (1548-1600), Cesare Cremonini (1550-1631), and Giulio Cesare Vanini (1584-1619), all figures whom, in one way or another, he explicitly links with Spinoza.
…

Since the late fifteenth century, study of Aristotelianism at Padua had shifted to an investigation of original Greek texts, terminology, and commentators, and Pomponazzi was a major exponent of this return ‘to the original Greek,’ a devotee, in particular, like other whom Bayle identifies as denying the immortality of the soul, of the third-century AD Anatolian Peripatetic Alexander of Aphrodisias.78 In the case of Pomponazzi, Bayle had merely renewed an old controversy, defending him against charges of ‘atheism’ but yet supporting him, on fideist grounds, in his naturalistic arguments, claiming that Creation and the immortality of the soul cannot be proved and detaching philosophy from theology.79 A naturalist in the Renaissance more than the anti-magical Early Enlightenment sense, **Pomponazzi believed in a causal nexus between the super and sublunary spheres and the validity of astrology. Nevertheless, he also lent the new, non-scholastic Aristotelianism a marked tendency to screen divine providence, prophecy, demonic and angelic intervention, and miracles out of the discussion, replacing these with superlunary astral influences.** The stars, according to Pomponazzi, rule not only nature but also history and even the rise and fall of religions.80
…

Regarded by Campanella and others as the philosophical counterpart of Machiavelli’s moral and political naturalism, Pomponazzi’s demystifying arguments doubtless did help prepare the way for the Enlightenment materialism of the future.84 The controversy about him and his writings in any case gained fresh vitality during the Early Enlightenment, thanks to Bayle, in the first place. **Regarding angels and demons,** according to the English version of Bayle’s *Dictionnaire*, **Pomponazzi held ‘they were only particles of God united to a very subtil matter: nay, he pretended that the souls of men and of beasts, were part of the substance of God.’**85
…

Heumann, like Morhof before him, argued that, for Pomponazzi, nature alone moves all worldly occurrence, so that not only is the soul’s immortality denied but miracles are eradicated and exclusively natural causes given to explain biblical wonders, including Christ’s cures: ‘da haben wir also,’ held Heumann, ‘den *Spinozismus* ante *Spinozam*’ [there we have then Spinozism before Spinoza].92
…

Where Pomponazzi, held Heumann, ‘introduces a horrible doubt about the existence of angels and demons,’ Zimmermann, trimming the definition of ‘atheism’ to cover strictly only denial of God’s existence, deemed this objection irrelevant too.
…

Zimmermann’s objections, however, were then countered by Brucker who emphatically confirmed Pomponazzi’s naturalism, impiety, and opposition to Christianity.95

Heumann’s and Brucker’s notion of Pomponazzi as a giant of sixteenth-century thought at war with theology and a proto-Spinoza became, through Boureau-Deslandes and especially Diderot, the view of the *Encyclopédie*. There, in the first volume, published in 1751, Pomponazzi appears as an ‘atheist’ and enemy of religion, notably in the long article on Aristotelianism by the Abbé Claude Yvon. **Yvon claims Pomponazzi denied miracles, divine providence, and human liberty as well as magic and the immortality of the soul while simultaneously deriding the fideist doctrine of double truth, adding that he cannot comprehend how Pomponazzi’s defenders could seriously maintain that he held his libertine views only intellectually, ‘en philosophe,’ while, as a Christian, unquestioningly believing all the ‘dogmas of our religion.’**96
…

For if [Zimmermann] was right to hold Pomponazzi was not an ‘atheist’ *stricto sensu*, recent scholarship also shows that Bayle was closer to the mark then he in portraying Pomponazzi as a Naturalist, denier of miracles and immortality of the soul, and, by insinuation, someone attacking the premisses of revealed religion and church authority.101

https://www.gutenberg.org/files/44795/44795-h/44795-h.htm#Page_158

I would have the sceptic, while yet a sceptic only, seriously consider whether a doctrine, of the truth of which a Socrates could obtain no other assurance than what he derived from his strong *wish* that it should

be true; **and which Plato found a mystery hard to discover, and when discovered, communicable only to the fewest of men; can, consonantly with history or common sense, be classed among the articles, the belief of which is ensured to all men by their mere common sense?** Whether, without gross outrage to fact, they can be said to constitute a Religion of Nature, or a Natural Theology antecedent to Revelation, or superseding its necessity? Yes! in prevention (for there is little chance, I fear, of a *cure*) of the pugnacious dogmatism of *partial* reflection, I would prescribe to every man, who feels a commencing alienation from the Catholic Faith, and whose studies and attainments authorise him to argue on the subject at all, a patient and thoughtful perusal of the arguments and representations which Bayle supposes to have passed through the mind of Simonides. **Or I should be fully satisfied if I could induce these eschewers of mystery to give a patient, manly, and impartial perusal to the single Treatise of Pomponatius, *De Fato*.[98]**

> [98] The philosopher, whom the Inquisition would have burnt alive as an atheist**, had not Leo X. and Cardinal Bembo decided that the work might be formidable to those semi-pagan Christians who regarded Revelation as a mere make-weight to their boasted Religion of Nature; but contained nothing dangerous to the Catholic Church or offensive to a true believer.** [He was born in 1462, and died in 1525.—H. N. C.]

When they have fairly and satisfactorily overthrown the objections and cleared away the difficulties urged by this sharp-witted Italian against the doctrines which they profess to retain, then let them commence their attack on those which they reject. As far as the supposed irrationality of the latter is the ground of argument, I am much deceived if, on reviewing their forces, they would not find the ranks woefully thinned by the success of their own fire in the preceding engagement—unless, indeed, by pure heat of controversy, and to storm the lines of their antagonists, they can bring to life again the arguments which they had themselves killed off in the defence of their own positions. **In vain shall we seek for any other mode of meeting the broad facts of the scientific Epicurean, or the requisitions and queries of the all-analysing Pyrrhonist, than by challenging the tribunal to which they appeal, as incompetent to try the question. In order to *non-suit* the infidel plaintiff, we must remove the cause from the faculty,** that judges according to sense, and whose judgments, therefore, are valid only on objects of sense, to the Superior Courts of Conscience and intuitive Reason!

https://archive.org/details/historyofchurch0003hugh/page/464/mode/2up?view=theater

The *Prince* is, evidently, in every line and turn of phrase a Renaissance product, and the worst feature of the book, the final pessimism about human nature,2 is no doubt the effect upon a well-placed observer of the sight of such universal cynical indifference to the elements of morality in the conduct of public affairs. Even the popes, as rulers, had now descended to the level of the condottieri princes. **But there is another, and more enduring reason, for the pessimism. It is a reflection in the political writer of the contemporary revival of Aristotle according to Averroes, of the movement which at Padua, under the influence of Pietro Pomponazzi, was now carrying all before it with the youth of the university. Here, rooted in stern and compelling logic, was the old curse of the theory that man is wholly at the mercy of an impersonal world force, held in the grip of a fixed, unchanging, eternal cosmos. Everything has always been the same; it will always be so.** Since this is the truth about life, and man's destiny, it is best to arrange life accordingly, and to crush out all talk of ideals and betterment and what we should call "progress," for beliefs of this kind can only cause activities in the state that are futile, fated to futility indeed, and a necessary cause of mischievous instability. **Averroism, indeed, had never died despite St. Albert and St. Thomas, and Duns Scotus. And now, in the general disintegration, it was again in the forefront of life, threatening as always the very fundamentals of Christian belief.** Its most evident assault was against the belief that the human soul is destined for a separate, personal immortality.1

https://archive.org/details/LeoStraussThoughtsOnMachiavelli_201411/page/n173/mode/2up?view=theater

Many writers have called Machiavelli a pagan.2 Most of them mean by this that, **“loving his fatherland more than his soul,”** he forgot or denied the other world, and being enamored of the worldly glory of pagan Rome, he forgot or rejected the imitation of Christ. They mean that he forgot to think about everything which is not political in the narrow sense or that he was so self-complacent as to rest satisfied with rebelling passionately and blindly against Christian morality without giving dispassionate thought to the theological premises of that morality. They imagine that he was another Cosimo de’ Medici who said among other things that states cannot be kept with paternosters and was therefore slandered as a man who loved this world more than the other world.3 A man of this sort is not properly called a pagan. Paganism is a kind of piety and one does not find a trace of pagan piety in Machiavelli's work. He had not reverted from the worship of Christ to the worship of Apollo. On the other hand, it is not misleading to count Machiavelli among “the wise of the world.” **He informs us that Savonarola's sermons are full of accusations of “the wise of the world” and of invectives against them.** According to

Savonarola, “the wise of the world” do in fact say that a state cannot be ruled with paternosters. But they also say that they do not wish to believe anything except what rational discourse proves; **they therefore regard the Biblical prophecies as “things for women”; Savonarola has heard them say in their disputations that, speaking philosophically and disregarding the supernatural, the world is eternal, God is the final and not the efficient cause of this world and there is only one soul in all men; they say that faith is nothing but opinion.**4 Those “wise of the world” who transcend the limits of political cleverness reject not only the myths of the pagans but above all revelation and the characteristic teachings of revelation on the ground indicated. They are *falāsifa* or “Averroists.”

https://www.gutenberg.org/cache/epub/2333/pg2333-images.html#link2H_4_0008

Other causes might be mentioned. **But it is chiefly to the great reformation of religion that we owe the great reformation of philosophy.** The alliance between the Schools and the Vatican had for ages been so close that those who threw off the dominion of the Vatican could not continue to recognise the authority of the Schools. **Most of the great reformers treated the Peripatetic philosophy with contempt, and spoke of Aristotle as if Aristotle had been answerable for all the dogmas of Thomas Aquinas. “Nullo apud Lutheranos philosophiam esse in pretio,”* was a reproach which the defenders of the Church of Rome loudly repeated, and which many of the Protestant leaders considered as a compliment. Scarcely any text was more frequently cited by the reformers than that in which St. Paul cautions the Colossians not to let any man spoil them by philosophy.** Luther, almost at the outset of his career, went so far as to declare that no man could be at once a proficient in the school of Aristotle and in that of Christ. Zwingle, Bucer, Peter Martyr, Calvin, held similar language.

> * We quote, on the authority of Bayle, from Melchior Cano, a scholastic divine of great reputation.

…

The part which Bacon played in this great change was the part, not of Robespierre, but of Bonaparte. The ancient order of things had been subverted. Some bigots still cherished with devoted loyalty the remembrance of the fallen monarchy, and exerted themselves to effect a restoration. But the majority had no such feeling. Freed, yet not knowing how to use their freedom, they pursued no determinate course, and had found no leader capable of conducting them.

That leader at length arose. The philosophy which he taught was essentially new. **It differed from that of the celebrated ancient teachers, not merely in method, but also in object. Its object was the good of mankind, in the sense in which the mass of mankind always have understood and always will understand the word *good*.**

https://iep.utm.edu/panpsych/#SH2b

The end of Hellenism and the Stoic philosophy coincided with the beginnings of the monotheistic religious worldview. Monotheism and the Christian worldview were fundamentally opposed to panpsychism, and thus it is perhaps not surprising that we find relatively little articulation of panpsychist ideas for several centuries.

The next major advance did not occur until the Italian Renaissance. Five of the most important philosophers of that era—Cardano, Telesio, Patrizi, Bruno, and Campanella—were panpsychists. Cardano was the first notable philosopher in over a millennium to put forth an unambiguous panpsychist philosophy.

> https://iep.utm.edu/panpsych/#SH2d
>
> In contrast to Whitehead, Charles Hartshorne articulated a clear and explicit form of process panpsychism. **Beginning with his *Beyond Humanism* (1937), he laid out the unambiguous position that all true individuals possess a kind of psyche: “Molecules, atoms, and electrons all show more analogy of behavior to animals than do sticks and stones. The constitutions of inorganic masses may then after all belong on the scale of organic being…”** (pp. 111-112). Elaborating on this notion over four decades, through such articles as “Panpsychism” (1950), “Physics and Psychics” (1977), and “The Rights of the Subhuman World” (1979), his panpsychism (or, “psychicalism”) is a clear and consistent theme. **He combined the insights of Leibniz with Whitehead’s process view into a system which, he claimed, resolved many long-standing philosophical problems: most notably that it serves as a third way between dualism and materialism. Ultimately, panpsychism/psychicalism is, he says, the most viable ontology available to us—certainly preferable to an utterly unintelligible materialism: “the concept of ‘mere dead insentient matter’ is an appeal to invincible ignorance. At no time will this expression ever constitute knowledge”** (1977: 95).
> …

> **Panpsychism, with its long list of advocates and sympathizers, is a robust and respectable approach to mind. It offers a naturalistic escape from Cartesian dualism and Christian theology.**

https://onlinelibrary.wiley.com/doi/epdf/10.1111/zygo.12679

In his fourth Boyle lecture entitled, *A Confutation of Atheism from the Structure and Origin of Humane Bodies, Part II*, Bentley attacked Girolamo Cardano and Andrea Cesalpino by calling them "Astrological undertakers" whose putative cosmological theories, **especially concerning human origins spoke of raising "Men like Vegetables out of some fat and slimy soil well digested by the kindly heat of the Sun, and impregnated with the influence of the Stars upon some remarkable and periodical conjunctions"** (Bentley 1693a, 3-4).

> In a zealous endeavor to gather all the strands of sixteenth-century Italian utopian thought, one scholar has even drawn in the paradoxical *Encomium Neronis* by the Milanese genius and libertine Girolamo Cardano. **In this work, which followed his son's condemnation for murder by the Senate of Milan, Cardano advocated a powerful monarchy, with Nero, the archenemy of the senators, portrayed as the protector of poor wretches from the exactions of aristocrats and the merciless verdicts of their justice.**7

I was privately carried at Pisa to see a very honest man, but so great an Aristotelian, that his most usual thesis was: "That the touchstone and square of all solid imagination, and of all truth, was an absolute conformity to Aristotle's doctrine; and that all besides was nothing but inanity and chimera; for that he had seen all, and said all." A position, that for having been a little too injuriously and broadly interpreted, brought him once and long kept him in great danger of the Inquisition at Rome.

Let him make him examine and thoroughly sift everything he reads, and lodge nothing in his fancy upon simple authority and upon trust. **Aristotle's principles will then be no more principles to him, than those of Epicurus and the Stoics:** let this diversity of opinions be propounded to, and laid before him; he will himself choose, if he be able; if not, he will remain in doubt.

https://books.google.fi/books?id=P_zMW3EHnTEC&lpg=PP1&hl=fi&pg=PA319#v=onepage&q&f=false

A follower of the materialist doctrine of the Roman philosopher Epicurus, Campanella did not believe in miracles, or in heaven and hell. The Church had promoted such superstitions, he wrote, to control the common folk by keeping them in fear. Such ideas verged on atheism, and Campanella expressed them incautiously. In 1593 the Inquisition threw him into prison for his heretical beliefs. Six years later, as a form of partial release, he was confined to a monastery in Naples.

Southern Italy was controlled by Spain at the time, and in Naples Campanella became involved in a plot to fight and throw out these invaders. **His hope was to establish an independent republic based on his own ideas of utopia.** The leaders of the Italian Inquisition, working with their Spanish counterparts, had him imprisoned again.
...

To save his life, Campanella feigned madness. He let his inquisitors imagine that his beliefs stemmed from an incontrollable unsoundness of mind. For a while the tortures continued, to see if his insanity was faked, but in 1603 his sentence was commuted to life in prison. **The first four years of this he spent chained to a wall in an underground dungeon. Despite such conditions, he continued to write—although no longer would he be so foolish as to express his ideas directly.**

One book of Campanella's, *The Hispanic Monarchy*, promoted the idea that Spain had a divine mission to expand its powers around the world, and offered the Spanish king practical, Machiavelli-type advice for achieving this. Despite his own interest in Machiavelli, the book in general presented ideas completely the opposite to his own. *The Hispanic Monarchy* was in fact a ploy, an attempt to show his conversion to orthodoxy in the boldest manner possible. It worked: In 1626, six years after its publication, the pope finally let Campanella out of prison.

Shortly after gaining his freedom, Campanella wrote *Atheism Conquered*, a book attacking free-thinkers, Machiavellians, Calvinists, and heretics of all stripes. The book is written in the form of debates in which heretics express their beliefs and are countered by arguments for the superiority of Catholicism. Campanella had obviously reformed—his book made that clear. Or did it?

The arguments in the mouths of the heretics had never before been expressed with such verve and freshness. **Pretending to present their side only to knock it down, Campanella actually summarized the case against Catholicism with striking passion. When he argued the other side, supposedly *his* side, on the other hand, he resorted to stale clichés and convoluted rationales.** Brief and eloquent, the heretics' arguments seemed bold and sincere. The lengthy arguments for Catholicism seemed tiresome and unconvincing.
...

Yet in the years to come, *Atheism Conquered* became a bible for atheists, Machiavellians and libertines who used the arguments Campanella had put in their mouths to defend their dangerous ideas.

> **Father Marin Mersenne was a worldly cleric** – intent on recasting scholastic philosophy in such a fashion as to make Christianity more receptive to the new science,18 **and given to defending the faith against the atheists, deists, and libertines of the age in a manner that seems to have been deliberately contrived to give his opponents' arguments a wider circulation than they would otherwise have had.**19 When the old priest died, a friend wrote to the director of the academy at Breda to report the event and remarked, "You are well aware that he did not believe all his religion, ... that he was of the sort well pleased to have the church service done, and that he dared not recite his Breviary often for fear of spoiling his good Latin."20

https://www.exclassics.com/anatomy/anat158.htm

Thus they mutter and object **(see the rest of their arguments in Mercennus in Genesin, and in Campanella, amply confuted),** with many such vain cavils, well known, not worthy the recapitulation or answering: whatsoever they pretend, they are *interim* of little or no religion.

Cousin-germans to these men are many of our great philosophers and deists, who, though they be more temperate in this life, give many good moral precepts, honest, upright, and sober in their conversation, yet in effect they are the same (accounting no man a good scholar that is not an atheist), *nimis altum sapiunt*, too much learning makes them mad. Whilst they attribute all to natural causes, contingence of all things, as Melancthon calls them, *Pertinax hominum genus*, a peevish generation of men, that misled by philosophy, and the devil's suggestion, their own innate blindness, deny God as much as the rest, hold all religion a fiction, opposite to reason and philosophy, **though for fear of magistrates, saith Vaninus, they durst not publicly profess it.** Ask one of them of what religion he is, he scoffingly replies, a philosopher, a Galenist, an Averroist, and with Rabelais a physician, a peripatetic, an epicure. In spiritual things God must demonstrate all to sense, leave a pawn with them, or else seek some other creditor. They will acknowledge Nature and Fortune, yet not God: though in effect they grant both: for as Scaliger defines, Nature signifies God's ordinary power; or, as Calvin writes, Nature is God's order, and so things extraordinary may be called unnatural: Fortune his unrevealed will; and so we call things changeable that are beside reason and expectation. **To this purpose Minutius in *Octavio*, and Seneca well discourseth with them,** *lib. 4. de beneficiis, cap. 5, 6, 7.* "They do not understand what they say; what is Nature but God? call him what thou wilt, Nature, Jupiter, he hath as many names as offices: it comes all to one pass, God is the fountain of all, the first

Giver and Preserver, from whom all things depend," *a quo, et per quem omnia, Nam quocunque vides Deus est, quocunque moveris*, "God is all in all, God is everywhere, in every place." **And yet this Seneca, that could confute and blame them, is all out as much to be blamed and confuted himself, as mad himself;** for he holds *fatum Stoicum*, that inevitable Necessity in the other extreme, as those Chaldean astrologers of old did, against whom the prophet Jeremiah so often thunders, and those heathen mathematicians, Nigidius Figulus, magicians, and Priscilianists, whom St. Austin so eagerly confutes, those Arabian questionaries, Novem Judices, Albumazer, Dorotheus, &c., and our countryman Estuidus, that take upon them to define out of those great conjunction of stars, with Ptolomeus, the periods of kingdoms, or religions, of all future accidents, wars, plagues, schisms, heresies, and what not? all from stars, and such things, saith Maginus, *Quæ sibi et intelligentiis suis reservavit Deus*, which God hath reserved to himself and his angels, they will take upon them to foretell, as if stars were immediate, inevitable causes of all future accidents. Cæsar Vaninus, in his book *de admirandis naturæ Arcanis, dial. 52. de oraculis*, **is more free, copious, and open, in this explication of this astrological tenet of Ptolemy, than any of our modern writers, Cardan excepted, a true disciple of his master Pomponatius;** according to the doctrine of Peripatetics, he refers all apparitions, prodigies, miracles, oracles, accidents, alterations of religions, kingdoms, &c. (for which he is soundly lashed by Marinus Mercennus, as well he deserves), to natural causes (for spirits he will not acknowledge), to that light, motion, influences of heavens and stars, and to the intelligences that move the orbs. *Intelligentia quæ, movet orbem mediante cœlo*, &c. Intelligences do all: and after a long discourse of miracles done of old, *si hæc dæmones possint, cur non et intelligentiæ, cœlorum motrices*? And as these great conjunctions, aspects of planets, begin or end, vary, are vertical and predominant, so have religions, rites, ceremonies, and kingdoms their beginning, progress, periods, *in urbibus, regibus, religionibus, ac in particularibus hominibus, hæc vera ac manifesta, sunt, ut Aristoteles innuere videtur, et quotidiana docet experientia, ut historias perlegens videbit;* ***quid olim in Gentili lege Jove sanctius et illustrius? quid nunc vile magis et execrandum?*** *Ita cœlestia corpora pro mortalium beneficio religiones ædificant, et cum cessat influxus, cessat lex*, ("In cities, kings, religions, and in individual men, these things are true and obvious, as Aristotle appears to imply, and daily experience teaches to the reader of history: **for what was more sacred and illustrious, by Gentile law, than Jupiter? what now more vile and execrable?** In this way celestial objects suggest religions for worldly motives, and when the influx ceases, so does the law,") &c. And because, according to their tenets, the world is eternal, intelligences eternal, influences of stars eternal, kingdoms, religions, alterations shall be likewise eternal, and run round after many ages; *Atque iterum ad Troiam magnus mittetur Achilles;* ***renascentur religiones, et ceremoniæ,*** *res humanæ in idem recident, nihil nunc quod non olim fuit, et post sæculorum revolutiones alias est, erit,* ("And again a great Achilles shall be sent against Troy: **religions and their ceremonies shall be born again;** however affairs relapse into the same track, there is nothing now that was not formerly and Will not be again,") &c*. idem specie*, saith Vaninus, *non individuo quod Plato significavit.* These (saith mine author), these are the decrees of Peripatetics, which though I recite, *in obsequium Christianæ fidei detestor*, as I am a Christian I detest and hate.
...

Aristotle is hardly censured of some, both divines and philosophers. St. Justin *in Perænetica ad Gentes*, Greg. Nazianzen. *in disput. adversus Eun.*, Theodoret, *lib. 5. de curat. græc. affec.*, Origen. *lib. de principiis*. Pomponatius justifies in his Tract (so styled at least) *De immortalitate Animæ*, **Scaliger (who would forswear himself at any time, saith Patritius, in defence of his great master Aristotle),** and Dandinus, *lib. 3. de anima*, acknowledge as much. **Averroes oppugns all spirits and supreme powers; of late Brunus (*infelix Brunus*, Kepler calls him), Machiavel, Cæsar Vaninus lately burned at Toulouse in France, and Pet. Aretine, have publicly maintained such atheistical paradoxes,** with that Italian Boccaccio with his fable of three rings, &c., *ex quo infert haud posse internosci, quæ sit verior religio, Judaica, Mahometana, an Christiana, quoniam eadem signa*, &c., "from which he infers, that it cannot be distinguished which is the true religion, Judaism, Mahommedanism, or Christianity," &c. **Marinus Mercennus suspects Cardan for his subtleties, Campanella, and Charron's Book of Wisdom, with some other Tracts, to savour of atheism:** but amongst the rest that pestilent book *de tribus mundi impostoribus*, *quem sine horrore (inquit) non legas, et mundi Cymbalum dialogis quatuor contentum, anno 1538, auctore Peresio, Parisiis excusum*, &c. And as there have been in all ages such blasphemous spirits, so there have not been wanting their patrons, protectors, disciples and adherents. Never so many atheists in Italy and Germany, saith Colerus, as in this age: **the like complaint Mercennus makes in France, 50,000 in that one city of Paris.**
...

But *instar omnium*, the most copious confuter of atheists is Marinus Mercennus in his Commentaries on Genesis: with Campanella's Atheismus Triumphatus. He sets down at large the causes of this brutish passion, (seventeen in number I take it) answers all their arguments and sophisms, which he reduceth to twenty-six heads, proving withal his own assertion; "There is a God, such a God, the true and sole God," by thirty-five reasons. His Colophon is how to resist and repress atheism, and to that purpose he adds four especial means or ways, which who so will may profitably peruse.

https://books.google.fi/books?id=wrx9BgAAQBAJ&lpg=PP1&hl=fi&pg=PA187#v=onepage&q&f=false

The third member of the group was G. Naudé,3 intimate friend of Guy Patin and Gassendi, sometime doctor of Louis XIII, and librarian of Cardinal Mazarin. Like La Mothe and Charron, he had a reputation for erudition. G. Patin (Lettre XLIII) confessed to being overwhelmed by his learning. **Busson likens him to Diderot "style Louis XIII."** This erudition had been acquired, at least in its early stages, at Padua, where Naudé had studied on two occasions, in 1627 and 1633. Although he was a student of medicine, much of his attention was directed to philosophy. **His fullest admiration was accorded to Cremonini, who represented for the seventeenth-century French what Pomponazzi had**

represented in the sixteenth. Naudé gave a glowing account of his master: “Ce Crémonin étoit grand personnage, un esprit vif et capable de tout, un homme desniaisé et guéri du sot, qui sçavoit bien la vérité, mais qu’on n’ose pas dire en Italie.” **Naudé added that all the professors of Italy, but principally those of Padua, were “desniaisés.” The Italy which he adored was, as he said in the *Naudeana*, “pleine de libertins et d’athées.”**

Naudé became the faithful interpreter of the Paduans in France. Time and again, he vaunted Aristotle, the Aristotle of Averroes and Pomponazzi. What he admired most in Aristotle, as well as in Pomponazzi, was clarity of reasoning. **When in 1625 he wrote *Apologie pour les grands hommes accusés de magie*, he applied the same critical method to miracles, possessions, and demonology in general which Pomponazzi had utilized in the *De incantationibus*.**

https://books.google.fi/books?id=FM0VBoVW8nEC&lpg=PP1&hl=fi&pg=PA54#v=onepage&q&f=false

> David Lloyd, who wrote an orthodox reply to Stubbe’s tract, traced the origin of interpretations like Stubbe’s to *De Incantationibus* by Pietro Pomponazzi.85 This early sixteenth-century heretical Aristotelian sought to give naturalistic explanations for events that were conventionally attributed to supernatural interventions in nature by angels and demons.86 In *De Incantationibus* Pomponazzi argued that ‘certain gifted men, **drawing on their own occult powers, can cure by the sheer power of will and imagination.**’87 Among the cures that could be explained in such terms Pomponazzi included the royal touch for the king’s evil.88 Here then is a very likely source for Stubbe’s interpretation of Greatrakes’s cures, made even likelier by the fact that Stubbe possessed copies of Pomponazzi’s works, including *De Immortalitate Animae* (1534).89 Pomponazzi, incidentally, had argued that Galen believed in the eternity of the world and the mortality of the soul.90 **Stubbe then stood in a long line of radical Galenists and Aristotelian humanists.**

…

Naudé’s attitude toward this trickery was ambiguous; in a cynical way he approved the phenomenon, chiefly because he believed the public is so stupid that it wants to be fooled. His cynicism extended further, however. **Living in a regime which held Machiavelli in equal authority with the Catholic breviary, he could not refrain from stating that a good prince will claim all the prerogatives of religion and will say that he is inspired by God. He will produce false miracles, revelation, and prophecies, and will enlist the cooperation of the clergy. They will support each other as “deux coupeurs de bourse,” to quote Meslier,** who was not at all favorably disposed to the practice.
…

He began his career by condemning the Rosicrucians, declaring himself opposed not only to this particular sect, but to all occult sciences, superstitions, ignorance of “chymistes, astrologues, magiciens et charlatans.” He attacked the legends and fables surrounding Zoroaster, Orpheus, and Pythagoras, denying every manifestation of supernaturalism. He made sport of Numa Pompilius and his nymph Egeria, **and called Numa “un politique admirable.”** Thus utilizing the same approach as Pomponazzi a century earlier, Pietro d’Abano two centuries before that, and Cardano his contemporary, he rejected every interpretation based on miracles, when one can always interpret “les expériences inouïes par les principes de la philosophie naturelle.” **All fables are impostures, good when the world was young, ridiculous now that humanity is “déniaisée.”**
…

Nevertheless, in the *Apologie*, he reaffirmed his belief in God and in the devil, and struck out boldly against atheism. When the circumstances required it, he separated the truths of faith from those of reason, as all good Paduans did. It was a way of proceeding which he had learned among the “déniaisés.” Further, as happened at Padua, he had a tendency to deny providence and replace it with a natural chain of causes. **Giordano Bruno had burned for less, but he had not been blessed with an Italian cardinal as his patron.**

https://books.google.fi/books?id=OymeBQAAQBAJ&lpg=PR1&hl=fi&pg=PA649#v=onepage&q&f=false

> **There were those in Rome and especially in Paris who still thought it was worth while trying to win Grotius for the Roman Catholic Church. In that year he was put under pressure from a small committee in Paris, which comprised the Jesuit Denys Petau, the erudite libertine Gabriel Naudé and the nuncio Girolamo Grimaldi,** Ranuccio Scotti’s successor. The committee sought to tempt Grotius by offering material advantages. Naudé paid him several visits in his residence on the rue des Saints-Pères, which can be dated to April, 3 September and December 1642. Petau applied for subsidies from the Congregatio de propaganda fide in Rome, while Naudé used his efforts to secure better positions for Grotius’ sons, two of whom were ambitious for a brilliant military career.

https://archive.org/details/radicalenlighten0000isra/page/120/mode/2up?view=theater

The first prominent *érudit* fully to express the ideal of the post-confessional, Early Enlightenment library was Gabriel Naudé (1600-53), one of the century's most renowned intellectual 'libertines.'3 Having organized several large libraries in France and, for cardinals, in Rome, Naudé's ideas on bibliography and librarianship were largely shaped by his own experience. While briefly, late in life, he also tended Queen Christina's books in Stockholm, the real summit of his career was as keeper of Mazarin's library, which, in the 1640s under his care, became the largest and most impressive in France. The Bibliothèque Mazarine, open to *érudits* for research from 1643, was indeed the first of the *grandes bibliothèques* of the new era. **The guiding conception behind the Mazarine, however, was rooted in Naudé's libertine philosophical vision. Steeped in the Italian philosophical heretics of the Renaissance – Pomponazzi, Campanella, Cardano, and Vanini – and a confirmed Pyrrhonist as well as an admirer of Montaigne and a friend of Gassendi, Naudé was unrivalled for his breadth of erudition and bibliographical grasp.**

Naudé's treatise on libraries and librarianship, the *Advis pour dresser une bibliothèque*, first published in 1644 (and published in an English translation by John Evelyn in 1661), **advocates, in line with his libertine principles, the ideal of the non-polemical, non-confessional, 'universal' library. He insists on 'universality' rather than theological specificity as the true guiding principle for a library of stature.**4
…

In theology, it is no extravagance, he insists, to include heretical writers because Protestant texts have to be refuted and Catholics have always been permitted to own the Talmud and Koran, works which 'vomit a thousand blasphemies against Jesus Christ and our faith and are more dangerous than those of the Protestants.'6

https://www.academia.edu/3758118/Against_Throne_and_Altar

In Italy, Machiavelli and Sarpi were no doubt the odd men out, but they can hardly have been unique. That there were others, that they were tolerably numerous, and that in an age of fierce religious persecution, when the Inquisition was especially active and alert,45 they thought it prudent to practice dissimulation – of this Giulio Cesare Vanini and Tommaso Campanella were no less fully persuaded than were the apologists Garasse and Mersenne.46 **Moreover, the same conviction was held by the as-yet-unidentifed, exceptionally well-read Parisian author who, in the late 1650s, espoused atheism in the widely circulated clandestine tract *Theophrastus redivivus*.**47

> 47. Consider *Theophrastus redivivus*, ed. Guido Canziani and Gianni Paganini (Florence: La Nuova Italia, 1981), in light of the analysis by Gregory, *Theophrastus redivivus*, passim. **Had he paid more attention to this document and to what its existence demonstrates with regard to the subterranean intellectual currents operative in Paris in the 1650s, Jonathan I. Israel,** *Radical Enlightenment: Philosophy and the Making of Modernity 1650-1750* (Oxford, UK: Oxford University Press, 2001), **would not have attributed to Spinoza the influence that he did.**

https://en.wikipedia.org/wiki/Theophrastus_redivivus

Theophrastus redivivus is famous for proclaiming that all the great philosophers, including the eponymous Theophrastus (ancient Greek philosopher c. 371-c. 287 BCE, successor of Aristotle), have been atheists;[3][1] religions are contrived works of men; there is no valid proof for the existence of gods, and those who claim experience of a god are either disingenuous or ill.[3] **However, unlike the *Treatise of the Three Impostors*, another anti-religious work published around the same time, *Theophrastus redivivus* was never mentioned by the Age of Enlightenment philosophers and thinkers of the next century, despite being one of the first explicitly anti-religious works ever published in modern Europe.**[6]

https://books.google.fi/books?id=0bdRDQAAQBAJ&lpg=PP1&hl=fi&pg=PA7#v=onepage&q&f=false

Some of them even went beyond attacking Christianity or disputing the authority of the Bible by overtly denying the existence of God, among them the anonymous author of **the notorious *Theophrastus redivivus*, the first known atheistic text.** The person who wrote this book 1659 is unknown. But he or she was French and a member of (or an intellectual close to) the *libertinage érudit* circles. Particularly illuminating is a comparison with Koerbagh's *Een ligt schijnende in dyustere plaatsen*. Some parallels between these two texts are conspicuous. Both authors reject the authority of the bible, central Christian dogmas (salvation, trinity etc.), and the very idea of a personal God. More importantly, however, by placing the *Theophrastus redivivus* (as a specimen of the *libertinage érudit*) and Koerbagh's book side by side, an essential difference comes to light: **the *libertins érudits* made no attempt to enlighten the public. They did not address it and, what is more, they emphatically recommended the control and moral guidance of the common people through religion.**
…

In stark contrast to the elitist *libertinage érudit*, Koerbagh and the other three Dutchmen [De la Court, Van den Enden, Meyer] attached great value to addressing themselves to the broader, non-academic public who did not master Latin.

>
> There is however an exception often made by Voltaire, which might have left to Christ some few worshippers among the rabble. He seems little jealous of that conquest when he writes to D'Alembert, **"Both you and Damilaville must be well pleased to see the contempt into which *the wretch* is fallen among the better sort of people throughout Europe; *they are all we wished for* or that were necessary; we never pretended to enlighten *house-maids and shoemakers*; we leave them to the apostles."**23 **Again, he writes to Diderot, "Whatever you do, have your eye *on the wretch. It* must be destroyed among the better sort; but we may *leave it to the rabble* for whom *it* was made;"**24 or when, in fine, he writes to Damilaville, "I can assure you, that in a short time none but the rabble will follow the standard of our enemies; and that rabble we equally despise whether for or against us."25 **Voltaire, despairing of more enlarged success, would sometimes except *the clergy and the great chamber of Parliament.***

https://www.eoht.info/page/Theophrastus%20Redivivus

"Conversely, all the subversive writings of the seventeenth-century *libertins*, and a good many subsequent ones, too, have the ring of familiarity to the student of such matters in the Renaissance: the topoi are the same, illustrating the same themes, turning around the same antinomies—only the tone is slightly more strident, the disguise more transparent. The most exemplary of texts in this regard is certainly the ***Theophrastus Redivivus***, which may fairly be described as an explicit radicalization of many, indeed most of the ideas which the men of a previous century and earlier had **shrouded in the veils of indirection and allegory, had hinted, winked, and nodded at**, had allowed themselves to think—and write—in guarded private moments more or less strictly controlled, in lives of apparently unimpeachable orthodoxy ... and had exchanged in conversation and pleasantry, in convivial table-talk, safely among friends. All these forbidden avenues of thought are followed **openly and relentlessly, with cold logic and devastating coherence**, by the author of the *Theophrastus*, and in his book, we may see clearly just where they lead. Until recently this has been the reverse of easy; indeed, few enough scholars took the trouble to read it, understandably put off by the length and difficulty of the Latin manuscript. In any case, it was not readily available. Tullio Gregory [1979] has made it easy for us, and much of what follows is indebted to his work."—Max Gauna (1992), *Upwellings: First Expressions of Unbelief in the Printed Literature of the French Renaissance* [5]
...

"I use the teachings of the philosophers and thinkers of antiquity to show that god does not exist, that the world is eternal, that the soul is mortal, that hell is nothing but a fairy tale, and that religion is a political artifice. A cunning deception is that death is detestable, because nothing stifles him [it?]. Thus, I have divided the work, as Theophrastus of Eresus did it, into six books: the first on the gods, the second on the world, the third on religion, the fourth on the soul and on hell, the fifth on the contempt of death, the sixth on the natural life. All this belongs to the argument with the gods. If it has been proved that the gods do not exist, the rest understands itself."—Anon Theophrastus (c. 1659), *Theophrastus Redivivus* (pg. 8)[1]

https://books.google.fi/books?id=Mau9wgEACAAJ&lpg=PP1&hl=fi&pg=PA90#v=onepage&q&f=false

That profound divergences between Renaissance anti-Christian philosophical underground and post-1650 Radical Enlightenment were no less crucial historically than the affinities is well illustrated by the *Theophrastus Redivivus*, among the most important mid-seventeenth century Western clandestine manuscripts. Dating from 1659 and composed seemingly in France, this clandestine text offered a non-Spinozist Neo-Epicurean subversive outlook, rooted in a pre-Spinozist "philosophical atheism" encompassing some elements of the subsequent radical tradition but not others.60 It comprehensively denies all the dogmas of religious faith, a process it terms "throwing off the yoke" [*iugum excutere*].61 **Although the ancient philosopher Theophrastus (*c.* 371-*c.* 287 BCE), Aristotle's successor as the director of the Peripatetic Schools in Athens, was not actually an Epicurean, he influenced Epicurus' views on cosmology and was a professed atheist.**62 What is radical, or rather "radical Aristotelian," in *Theophrastus Redivivus* is the strict

separation of morality from belief in God and religion, elimination of divine providence, and rejection of all religious authority. **But the text is patently Epicurean rather than quasi-Spinozist in evincing little interest in scientific inquiry (unlike the real Theophrastus)** so that here the text is *not* radical. Where the real Theophrastus was a true Aristotelian scientific researcher, seeking the causes of natural phenomena by examining evidence, Epicurus and Lucretius – despite being strict naturalists, viewing thunder, lightning, meteors, and all potentially frightening natural phenomena as of purely natural origin, and not the work of gods, and providing lists of all possible natural explanations – showed scant interest in discovering which plausible explanation actually pertained in each case. What mattered to them was alleviating anxiety and fear, not investigating the specific cause.63 **Unlike the real Theophrastus and the *cercle*, *Theophrastus Redivivus* adheres to a skeptical approach not just to belief and theology but also scholarship and science. Far from presenting nature's laws as revealed by science as our chief verifying principle, *Theophrastus Redivivus*, like William Temple afterwards, sought to downplay, even discredit pursuit of science and "philosophy."**64

https://books.google.fi/books?id=FM0VBoVW8nEC&lpg=PP1&hl=fi&pg=PA102#v=onepage&q&f=false

The only remedy lay in a proper understanding of Aristotle, the historical Aristotle rather than the corrupt Catholic version. **This proper understanding would support pure Christianity, which was an Arian civil religion shorn of 'uncouth and phantastical' doctrines, shorn too of a separate clergy claiming independent spiritual power.**147 The recovery of the true philosophy, the real Aristotle, would point the way to this true Arian faith.
…

To the extent that popery meant the latter, and could lead to the former, **Stubbe's defense of Aristotle represented an attack on the established church because his Aristotle, the true Aristotle, was consonant with an Arian view of the Godhead.** But this could not be made clear in print; it could, however, be read between the lines. So, by defending Aristotle, Stubbe could conceal his real convictions, while not being untrue to them, indeed – better than that for his purposes – he could feign orthodoxy, while insinuating heresy.

https://www.gutenberg.org/files/17147/17147-h/17147-h.htm#page80 **[1710]**

Andreas Cisalpinus, a physician (and an author of merit who came nearest after Michael Servetus to the discovery of the circulation of the blood), was accused by Nicolas Taurel (in a book entitled *Alpes Caesae*) of belonging to these **anti-religious Peripatetics.** Traces of this doctrine are found also in the *Circulus Pisanus Claudii Berigardi*, an author of French nationality who migrated to Italy and taught philosophy at Pisa: but especially the writings and the letters of Gabriel Naudé, as well as the *Naudaeana*, show that Averroism still lived on when this learned physician was in Italy. **Corpuscular philosophy, introduced shortly after, appears to have extinguished this excessively Peripatetic sect, or perhaps to have been intermixed with its teaching. It may be indeed that there have been Atomists who would be inclined to teach dogmas like those of the Averroists, if circumstances so permitted: but this abuse cannot harm such good as there is in Corpuscular philosophy, which can very well be combined with all that is sound in Plato and in Aristotle, and bring them both into harmony with true theology.**

https://archive.org/details/heine-on-the-history-of-religion-and-philosophy-in-germany/page/43/mode/2up?view=theater

The scholastics were a secret philosophical opposition to the Church. But publicly they feigned the greatest obsequiousness and even fought in some cases for the Church. In processions, they paraded among the followers of the Church, something like the French opposition deputies during the ceremonies of the Restoration.67 **This comedy lasted more than six centuries and became ever more conventional. By destroying scholasticism, Descartes also destroyed the outdated opposition of the Middle Ages.** The old brooms were worn out after such long sweeping, and there was just too much dust. The new times demanded new brooms. After every revolution, the previous opposition has to abdicate; otherwise great idiocies occur, as we ourselves have seen.

https://www.marxists.org/archive/plekhanov/1911/boutroux.htm

Really, has the 'cultured' Mr V Bazarov never heard of the so-called '*dual truth*'? This doctrine first saw the light of day in the Middle Ages and reached maturity in the Renaissance period. The whole meaning of it is that the truths of science 'revolve' in quite a different plane from that of the truths of religion. Thus, if 'cultured' people assure us *at the present time* that there is essentially no room for conflict between science and religion they are only warming up something very much of 'the past'.[1]

1. GH Lewes in his *History of Philosophy* alleges that Francis Bacon was one of the first to enunciate the 'doctrine of dual truth'. That is inaccurate. **[The founder of the theory of the 'dual truth' was Averroes.**

> **Later this theory was widespread in other countries including England, where Bacon became Averroes' follower – Editor.]**

…

An impartial observer will readily discern the obvious social causes prompting the present-day 'philosophers' of a certain type to warm up the *old* doctrine of 'dual truth' and serve it with a *new* sauce.[2] E Boutroux is one of those warmers-up whose works constitute what might justifiably be called *twentieth-century scholasticism.*

https://www.sacred-texts.com/cla/fsgr/fsgr07.htm#an_fr_113_4

Aristotle is always surprising us not merely by the immense volume of clear thinking and co-ordinated knowledge of which he was master, but by the steady *Sôphrosynê* of his temper. Son of the court physician of Philip, tutor for some years to Alexander the Great, **he never throughout his extant writings utters one syllable of flattery to his royal and world-conquering employers; nor yet one syllable which suggests a grievance. He saw, at close quarters and from the winning side, the conquest of the Greek city states by the Macedonian *ethnos* or nation; but he judges dispassionately that the city is the higher social form.**

It seems characteristic that in his will, which is extant, after providing a dowry for his widow, Herpyllis, to facilitate her getting a second husband, and thanking her for her goodness to him, he directs that his bones are to be laid in the same grave with those of his first wife, Pythias, whom he had rescued from robbers more than twenty years before.116_1

> 116_1 **Pythias was the niece, or ward, of Aristotle's friend, Hermias, an extraordinary man who rose from slavery to be first a free man and a philosopher, and later Prince or 'Dynast' of Assos and Atarneus.** In the end he was treacherously entrapped by the Persian General, Mentor, and crucified by the king. Aristotle's 'Ode to Virtue' is addressed to him. To his second wife, Herpyllis, Aristotle was only united by a civil marriage like the Roman *usus*.

Other philosophers disliked him because he wore no long beard, dressed neatly and had good normal manners, and they despised his philosophy for very similar reasons. It was a school which took the existing world and tried to understand it instead of inventing some intense ecstatic doctrine which should transform it or reduce it to nothingness.

It possessed no Open Sesame to unlock the prison of mankind; **yet it is not haunted by that *Oimôgê* of Kynoskephalai. While armies sweep Greece this way and that, while the old gods are vanquished and the cities lose their freedom and their meaning, the Peripatetics instead of passionately saving souls diligently pursued knowledge,** and in generation after generation produced scientific results which put all their rivals into the shade.116_2

https://en.wikisource.org/wiki/Lives_of_the_Eminent_Philosophers/Book_V#Aristotle

Afterwards, however, he departed to Hermias the eunuch, who was tyrant of Atarneus, and there is one story that he was on very affectionate terms with Hermias; according to another, Hermias bound him by ties of kinship, giving him his daughter or his niece in marriage, and so Demetrius of Magnesia narrates in his work on *Poets and Writers of the Same Name*. The same author tells us that Hermias had been the slave of Eubulus, and that he was of Bithynian origin and had murdered his master. **Aristippus in his first book *On the Luxury of the Ancients* says that Aristotle fell in love with a concubine of Hermias,** 4. **and married her with his consent, and in an excess of delight sacrificed to a weak woman as the Athenians did to Demeter of Eleusis;**[4] and that he composed a paean in honour of Hermias, which is given below; next that he stayed in Macedonia at Philip's court and received from him his son Alexander as his pupil; that he petitioned Alexander to restore his native city which had been destroyed by Philip and obtained his request; and that he also drew up a code of laws for the inhabitants.

…

When he thought that he had stayed long enough with Alexander, he departed to Athens, having first presented to Alexander his kinsman Callisthenes of Olynthus. 5. **But when Callisthenes talked with too much freedom to the king and disregarded his own advice, Aristotle is said to have rebuked him by citing the line:**[5]

> **Short-lived, I ween, wilt thou be, my child, by what thou sayest.**

And so indeed it fell out. For he, being suspected of complicity in the plot of Hermolaus against the life of Alexander, was confined in an iron cage and carried about until he became infested with vermin through lack of proper attention; and finally he was thrown to a lion and so met his end.

> http://attalus.org/translate/valerius7.html#c2
>
> [2e.11] **Aristotle, when he sent his pupil Callisthenes to Alexander, advised him either to say nothing to the king, or else to speak pleasantly,** evidently so that in the hearing of the king he would be either safer by his silence or more acceptable by what he said. But Callisthenes, when he reproved Alexander, because he prided himself to have the Macedonians salute him after the manner of the Persian flattery, and sought to reclaim him against his will to the ancient customs of his forefathers, was ordered to be put to death, and too late repented his neglect of the wholesome advice that had been given him.

To return to Aristotle: he came to Athens, was head of his school for thirteen years, and then withdrew to Chalcis because he was indicted for impiety by Eurymedon the hierophant, or, according to Favorinus[6] in his *Miscellaneous History*, by Demophilus, **the ground of the charge being the hymn he composed to the aforesaid Hermias,** 6. **as well as the following inscription for his statue at Delphi:**[7]

> This man in violation of the hallowed law of the immortals was unrighteously slain by the king of the bow-bearing Persians, who overcame him, not openly with a spear in murderous combat, but by treachery with the aid of one in whom he trusted.

…

The hymn in question runs as follows:

> 7. O virtue, toilsome for the generation of mortals to achieve, the fairest prize that life can win, for thy beauty, O virgin, it were a doom glorious in Hellas even to die and to endure fierce, untiring labours. Such courage dost thou implant in the mind, imperishable, better than gold, dearer than parents or soft-eyed sleep. **For thy sake Heracles, son of Zeus, and the sons of Leda endured much in the tasks whereby they pursued thy might.** 8. **And yearning after thee came Achilles and Ajax to the house of Hades, and for the sake of thy dear form the nursling of Atarneus too was bereft of the light of the sun.** Therefore shall his deeds be sung, and the Muses, the daughters of Memory, shall make him immortal, exalting the majesty of **Zeus, guardian of strangers,** and the grace of lasting friendship.

…

He attached himself to Plato and resided with him twenty years, having become his pupil at the age of seventeen. He went to Mitylene in the archonship of Eubulus in the fourth year of the 108th Olympiad.[12] When Plato died in the first year of that Olympiad,[13] during the archonship of Theophilus, he went to Hermias and stayed with him three years. 10. In the archonship of Pythodotus, in the second year of the 109th Olympiad,[14] **he went to the court of Philip, Alexander being then in his fifteenth year.** His arrival at Athens was in the second year of the 111th Olympiad,[15] and he lectured in the Lyceum for thirteen years; then he retired to Chalcis in the third year of the 114th Olympiad[16] and died a natural death, at the age of about sixty-three, in the archonship of Philocles, in the same year in which Demosthenes died at Calauria.

It is said that he incurred the king's displeasure because he had introduced Callisthenes to him, and that Alexander, in order to cause him annoyance, honoured Anaximenes[17] and sent presents to Xenocrates.

11. Theocritus of Chios, according to Ambryon in his book *On Theocritus*, ridiculed him in an epigram which runs as follows:[18]

> To Hermias the eunuch, the slave withal of Eubulus, an empty monument was raised by empty-witted Aristotle, **who by constraint of a lawless appetite chose to dwell at the mouth of the Borborus [muddy stream] rather than in the Academy.**

https://en.wikipedia.org/wiki/Hermias_of_Atarneus#Early_life

Hermias of Atarneus had surprisingly humble origins given the amount of political prestige and recognition he would gain in the later years of his life.[3] Although his date of birth remains unknown, he is first mentioned as a Bithynian slave to Eubulus, a wealthy banker and despotic tyrant of the lands surrounding Assos and Atarneus, two commercial towns on the Troad coastline of Asia Minor.[3] While several ancient historians, such as Theopompus, claimed that Hermias was a eunuch, modern historians discredit these claims as nothing more than attempts to blacken his reputation.[4]

https://archive.org/details/in.ernet.dli.2015.55010/page/n575/mode/2up?view=theater

A sharp rivalry developed between the Lyceum, whose students were mostly of the middle class, the Academy, which drew its membership largely from the aristocracy, and the school of Isocrates, which was frequented chiefly by colonial Greeks. The rivalry was eased in time by **the emphasis of Isocrates on rhetoric, of the Academy on mathematics, metaphysics, and politics, and of the Lyceum on natural science.**

https://books.google.fi/books?id=SMVgCgAAQBAJ&lpg=PP1&hl=fi&pg=PA148#v=onepage&q&f=false

To the vast majority of the Athenians, it must be borne in mind, Aristotle was always an unwanted and suspected 'resident alien' (*metic*) living in Athens, a city which had become increasingly intolerant and deplorably anti-intellectual – indeed, xenophobic, especially as regards Macedonians. *VM* 12 (and *VM* 42) as well as *VL* 12 go out of their way to stress the fact that he was a mere *ξένος* or *extraneus* (an 'alien'), and they emphatically contrast him, the powerless alien who had but a few friends and no influential connections in Athens, with Plato, the Athenian citizen, who had many powerful friends and relatives as well as many personal, social and political connections in Athens. In short, Aristotle lived in Athens more by sufferance than by right, always subject to arbitrary persecution, wanton prosecution and sudden expulsion.27 **The Lyceum was never his own personal 'school,' but rather a 'communal' building accessible to all sorts of people. The Academy or Museum, on the other hand, was the personal property of Plato who could leave, bequeath, or transfer this personal property – the grounds, buildings, the library, the inventory etc., of the Academy – to any person of his choice, provided the latter was a male agnate.** The notion that, between 335-34 and 323 B.C., Aristotle owned as well as taught in his 'own school' and that this school consisted of grounds and buildings (*κῆπος*) belonging to Aristotle where the latter also kept his library and other personal belongings, is wholly erroneous.28 **Thanks to the co-operation of Demetrius of Phaleron, the Peripatetics acquired a *κῆπος* only during the scholarchate of Theophrastus.**29 **Hence, it is perhaps not entirely correct to call Aristotle the founder of the Peripatus or, perhaps, the first scholarch of the Peripatus,** although he was unquestionably the founder of Peripatetic philosophy.
…

Moreover, **many of Aristotle's relatives, friends and family connection were in foreign lands and, as has already been shown, he probably had very few close personal friends and acquaintances among the Athenians.** Apparently he had, however, a great many enemies, especially political enemies, not to mention people who simply disliked and distrusted his intellectual outlook and who disagreed with his philosophic views. This widespread and apparently deep-rooted attitude is clearly indicated, for instance, in Democharesʼ utterly prejudiced *Oration Against the Philosophers*, delivered in 306 B.C.30 Among other matters, Democharesgave formal expression to these anti-intellectual and xenophobic views in general. At the same time, he seems to have singled out Aristotle as a particularly untrustworthy, treacherous and dangerous person.
…

Matters were certainly not improved when Aristotle married Pythias, the niece or adopted daughter (or sister?) of Hermias, the 'Bithynian.' **To the average Athenian, who gloried in his prejudices, Hermias was a 'lowly' native of Asia Minor, a former slave of the disreputable Eubulus, a despicable eunuch and an 'inferior barbarian'** who had betrayed and murdered Eubulus, his former master and benefactor. It was also rumoured that Pythias had been the concubine of Hermias, the petty tyrant and friend or ally of Macedonia, who had been credited by Theopompus and Theocritus with every vile deed imaginable.
…

How bad this situation actually was may be surmised from Democharesʼ (a nephew of Demosthenes) and his vicious, but without doubt widely acclaimed and widely accepted, *Oration Against the Philosophers*, which was an eloquent but nasty speech in support of Sophoclesʼ motion (in 306 B.C.) to have all foreign 'subversives' or pro-Macedonian philosophers expelled from Athens.33

http://www.jewishencyclopedia.com/articles/1774-aristotle-in-jewish-legend

Of Aristotle himself Josephus has preserved ("Contra Apionem," i. 22) a very interesting passage from the writings of Clearchus, the pupil of Aristotle, the authenticity of which is maintained by such authorities as Lobeck, Bernays, von Gutschmid ("Kleine Schriften," iv. 578), and Theo. Reinach ("Textes d'Auteurs Grecs et Romains Relatifs au Judaisme," 1895, pp. 10-12). This passage, prefaced by the remark of Josephus, is as follows:

Fragment of Clearchus.

> "In his first book on Sleep he relates of Aristotle, his master, that he had a discourse with a Jew; and his own account was that what this Jew said merited admiration and showed philosophical erudition. To speak of the race first, the man was a Jew by birth and came from Cœlesyria [Palestine]. **These Jews are derived from the philosophers of India. In India the philosophers call themselves Kalani,**

> **and in Syria Jews, taking their name from the country they inhabit, which is Judea; the name of their capital is rather difficult to pronounce: they call it Jerusalem.** Now this man, who had been the guest of many people, had come down from the highland to the seashore [Pergamus]. **He was a Greek not only in language, but in soul;** so much so that, when we happened to be in Asia in about the same places whither he came, he conversed with us and with other persons of learning in order to test our wisdom. And as he had had intercourse with a large number of sages, he imparted to us more knowledge of his own."

This is Aristotle's own account as recorded by Clearchus, and he adds more specific observations regarding his great and wonderful fortitude in diet and continent mode of living. Obviously it was the Jew's strict observance of the dietary laws that struck Aristotle. **Gutschmid** (pp. 579-585) **thinks that the Jew here spoken of is the same wonder-working magician** (exorcist; see Josephus, "Ant." viii. 2, § 5) **who, by some sort of hypnotism, drew the soul out of the body of a sleeping child and brought it back again with his rod in the presence of Aristotle** (Proclus, Commentary on Plato's Republic, x.), **which part of the narrative Josephus intentionally omitted.**

https://petrarch.petersadlon.com/submissions/Ogilvie.pdf

Petrarch's notion of the purpose of moral philosophy, as expressed in the *Familiari*, drew heavily from his study of Aristotle's ethics. Nonetheless, he could not recommend Aristotle unequivocally, **for Aristotle did not fulfill his own purpose when he stated that ethics was studied not to learn but to become better.** The Philosopher left Petrarch cold; he may have known what was better—after all, he admitted to having learned something—but it did not make him better. Aristotle's text taught what virtue was but lacked the "verbal torches" that would inflame the soul with a love of virtue and a hatred of vice.15

Those torches, Petrarch insisted, should be sought among three Latins: Cicero, Seneca, and Horace.16 Their words will drive the reader to love virtue and hate vice. How, if they are pagan? Petrarch temporizes by distinguishing virtue from salvation. Virtue, taught by the pagans, is not the end to which we aspire, but it is the right road to that end—so long as "virtues are not only known but loved."17

> These are then the true moral philosophers, useful teachers of virtue, whose first and final intention is to make the listener and reader a good person, and who do not just teach what virtue and vice are, and yell the famous name of the first and the dark name of the second in the ears, but also introduce love and devotion of the best thing, and hatred and revulsion for the worst, in the heart. ... **It is better to want what is good than to know what is true.**18

Knowledge was only useful when it was combined with volition—the desire to employ that knowledge. **Cold Aristotle and contentious schoolmen did not inflame that desire; if anything, they quenched it.**

> https://archive.org/details/in.ernet.dli.2015.55010/page/n575/mode/2up?view=theater
>
> For the layman he wrote some twenty-seven popular dialogues, which Cicero and Quintilian considered equal to Plato's; it was chiefly by these that he was known in antiquity.[148] **These dialogues were among the casualties of the barbarian conquest of Rome. What remains to us is a mass of technical, highly abstract, and inimitably dull works rarely referred to by ancient scholars, and apparently composed, in the last twelve years of his life, of notes made for his lectures by himself, or from his lectures by his pupils.** These technical compendiums were not known outside the Lyceum until they were published by Andronicus of Rhodes in the first century B.C.[149] Forty of them survive, but Diogenes Laertius mentions 360 more—probably brief monographs. In these ashes of scholarship we must seek the once living thought that in later ages won for Aristotle the title of The Philosopher. **We must approach him expecting no brilliance like Plato's and no wit like Diogenes', but only a rich argosy of knowledge, and such conservative wisdom as befits the friend and pensioner of kings.***

https://archive.org/details/in.ernet.dli.2015.55010/page/n583/mode/2up?view=theater

Having collected and studied, with his students, 158 Greek constitutions,* Aristotle divided them into three types: monarchy, aristocracy, and timocracy—government respectively by power, by birth, and by excellence. Any one of these forms may be good according to time, place, and circumstance. **"Though one form of government may be better than others," reads a sentence which every American should memorize, "yet there is no reason to prevent another from being preferable to it under particular conditions."**[208]

...

And yet a wise conservative will not let people starve. **"The true patriot in a democracy ought to take care that the majority are not too poor ... he should endeavor that they may enjoy perpetual plenty; and as this is also advantageous to the rich, what can be saved out of the public money should be divided among the poor in such quantity as may enable each of them to buy a little field."**[218]

Having thus given back almost as much as he took away, **Aristotle offers some modest recommendations, not for a utopia but for a moderately better society.**

…

To avoid these illiberal dictatorships from above or below, **Aristotle proposes a "mixed constitution" or "timocracy"**—a combination of aristocracy and democracy, in which the suffrage will be restricted to landowners, and a strong middle class will be the balance wheel and pivot of power. "The land ought to be divided into two parts, one of which should belong to the community in general, the other to the individuals separately."[224] All the citizens will own land; they "are to eat at public tables in certain companies"; and only they shall vote or bear arms. They will constitute a small minority—ten thousand at most—of the population. "None of them should be permitted to exercise any mechanic employment or live by trade, for these are ignoble, and destroy excellence."[225] But "neither should they be husbandmen; ... the husbandmen should be a separate order of people"—presumably slaves. **The citizens will elect the public officials, and hold each to account at the end of his term.**

https://books.google.fi/books?id=Rq5hg4d54m4C&lpg=PA2&hl=fi&pg=PA5#v=onepage&q&f=false

Usually when one hears about the "Aristotelian roots" of natural law, reference is made to Aristotle's *Rhetoric*, where Aristotle refers to an unchanging, universal law. But is assessing the references in this text, we should keep in mind the fundamental point of view of the *Rhetoric*: it is like a handbook in the art of persuasion – the sort of things a lawyer *or* a prosecutor might study, in learning how best to make his case.
…

Then Aristotle discusses "universal" law, in a passage which is often cited as recognition and advocacy of natural law:

> Universal law is the law of Nature. For there really is, as every one to some extent divines, a natural justice and injustice that is binding on all men, even on those who have no association or covenant with each other. **It is this that Sophocles' Antigone clearly means when she says that the burial of Polyneices was a just act in spite of the prohibition: she means that it was just by nature.**
>
> > *Not of to-day or yesterday it is,*
> > *But lives eternal: none can date its birth.*
>
> And so Empedocles, when he bids us kill no living creature, says that doing this is not just for some people while unjust for others,
>
> > *Nay, but, an all-embracing law, through the realms of the sky*
> > *Unbroken it stretcheth, and over the earth's immensity.*
>
> **And Alcidamas says in his Messeniac Oration**
>
> > **[*"God has left all men free; Nature has made no man slave"*]**14
> >
> > 14. Aristotle, *Rhetorica*, W. Rhys Roberts, trans., in McKeon, *Basic Works of Aristotle*, I, 13, 1373b, 6-17. The speech of Antigone is found in Sophocles, *Antigone* 456:7. The speech from Empedocles in the Wheelwright translation reads, **"What is lawful is not binding only on some and not binding on others. Lawfulness extends everywhere, through the wide-ruling air and the boundless light of the sky"** (Philip Wheelwright, *The Presocratics* [New York: Odyssey Press, 1966], 142).
>
> http://www.perseus.tufts.edu/hopper/text?doc=Perseus%3Atext%3A1999.01.0060%3Abekker%20page%3D1373b
>
> Alcidamas[150] also speaks of this precept in his *Messeniacus*. ... [3]
>
> > 150. Of Elis, pupil of Gorgias. **The oration is not extant, but the scholiast supplies his words: ἐλευθέρους ἀφῆκε πάντας θεός: οὐδένα δοῦλον ἡ φύσις πεποίηκεν ("God has left all men free; Nature has made none a slave").** The Messenians had revolted from Sparta.

When Aristotle refers to a law which is "binding on all men" he seems to be going significantly beyond the concept of what in the Western tradition of political philosophy is called the "social contract." His citation of Sophocles, Empedocles, and Alcidamas could be taken as appeals to recognized authorities, to buttress his arguments asserting the existence of natural law. **The reference to Sophocles's protagonist, Antigone, disobeying King Creon's prohibition of burial for her brother because of a higher law which commands reverence for kinfolk, seems *prima facie* to amount to a defense of natural law.** But the reference to Empedocles is not so clear-cut.

Empedocles was a mystic and sage who preached vegetarianism, and even prohibited the eating of certain types of vegetables – for example, beans, in which reincarnated souls were thought to exist. Is Aristotle seriously arguing here, along with Empedocles, that we should be vegetarians? If so, is it strange that he intimates nothing like this in his ethical writings. Moreover, would Aristotle, who emphasized the unique relationship of the individual soul to a specific body,15 give indirect support to Empedocles's theory of reincarnation? The doubts about Aristotle's intention in these passages become even more pronounced with regard to the citation of Alcidamas. **Alcidamas's notion of freedom as the natural state runs directly counter to Aristotle's theory in the *Politics*16 that there are "natural slaves" in the human race, and that it is best for such people to be under the control of a slave master.**

In *Rhetoric* I, 15, 1375a, 26-31, it becomes clear that, although Aristotle himself may have believed in the existence of natural law, this is not the thrust of his arguments. **Aristotle is *not* citing the example of Antigone and the other instances to argue for the existence or the validity of natural law, but rather as advice to a defense lawyer on how to win his case.** He starts off with the viewpoint of the defense, in an adversary system:

> **If the written law tells against our case, clearly we must appeal to the universal law, and insist on its greater equity and justice.** We must argue that the juror's oath "I will give my verdict according to honest opinion" means that one will not simply follow the letter of the written law.

http://www.perseus.tufts.edu/hopper/text?doc=Perseus%3Atext%3A1999.01.0060%3Abook%3D1%3Achapter%3D15

> [4] For it is evident that, **if the written law is counter to our case, we must have recourse to the general law and equity, as more in accordance with justice;** [5] and we must argue that, when the dicast takes an oath to decide to the best of his judgement, he means that he will not abide rigorously by the written laws; [6] **that equity is ever constant and never changes, even as the general law, which is based on nature, whereas the written laws often vary** (this is why Antigone in Sophocles justifies herself for having buried Polynices contrary to the law of Creon, but not contrary to the unwritten law: "For this law is not of now or yesterday, but is eternal ... this I was not likely [to infringe through fear of the pride] of any man)[2];" [7] and further, that justice is real and expedient, but not that which only appears just; nor the written law either, because it does not do the work of the law[3]; that the judge is like an assayer of silver, whose duty is to distinguish spurious from genuine justice; [8] **that it is the part of a better man to make use of and abide by the unwritten rather than the written law.**[4]

Aristotle goes on to cite the passage from Sophocles's *Antigone* again, along with other ways of appealing to a universal law. *But then he follows up with advice for the prosecutor*:

> If however the written law supports our case, we must urge that the oath "to give my verdict according to my honest opinion" is not meant to make the judges give a verdict that is contrary to the law, but to save them from the guilt of perjury if they misunderstand what the law really means. Or that no one chooses what is absolutely good, but every one what is good for himself. Or that not to use the laws is as bad as to have no laws at all. Or that, as in the other arts, it does not pay to try to be cleverer than the doctor: for less harm come from the doctor's mistakes than from the growing habit of disobeying authority. Or that trying to be cleverer than he laws is just what is forbidden by those codes of law that are accounted best.

Here Aristotle is offering pointers particularly to prosecutors or judges who are faced with arguments appealing to "eternal laws" or exceptional cases which may invite "equity" decisions or "judicial reviews" which reinterpret or modify the laws. He would have to be a cynic or extreme relativist to make such statements in a strictly normative manner.

> Homer has a court scene represented on the shield of Achilles (*Iliad*, xviii. 497 ff.), Plato's largest works are on politics and the theory of law (the *Republic* and the *Laws*), **Aristotle's *Rhetoric* is in parts simply a handbook for advocates beginning their profession;** notice, for example, how in chap. xv. of the first book he expounds a detailed theory of deceptive sophistry for hedge-lawyers, gives them hints how to twist the law to the advantage of their clients, **and advises them to let their clients swear false oaths in court, whenever it is to their advantage.***
> ...
>
> The great authorities on law, a Mucius Scaevola, a Servius Sulpicius, have a thorough knowledge of Hellenic legal enactments; Cicero, and all that this name stands for, derives his obscure remarks on divine justice, natural law, &c, from Greek philosophers: in the pseudo-Platonic *Minos* he might have read that law is the discovery of an objective thing, not a human invention, **and from Aristotle he quotes the words, "The universal law, because it is the natural law, never changes, but the written law, on the other hand, often does."†**
>
> > † Up to the present day one finds this passage quoted in juristical works, but with little justification, **as Aristotle is here giving merely a rhetorical trick for use in court and on the next page teaches the use of the opposite assertion.** Still less to the point is the passage from the *Nicomachean Ethics*, v. 7, which culminates in the sentence, **"Law is the mean between a certain advantage and a certain disadvantage." How great does Democritus show himself here as always when he says, with that clear insight characteristic of him, that "laws are the fruits of human thinking in contrast to the things of nature"** (Diogenes Laertius, ix. 45).

In his *Nicomachean Ethics* V, 7, 1134b18-1135a4, however, **Aristotle does make observations about "natural justice" which approximate to the concept of natural law, but should not be confused with natural-law theory in the strict sense:**

> http://www.perseus.tufts.edu/hopper/text?doc=Perseus%3Atext%3A1999.01.0054%3Abekker%20page%3D1134b%3Abekker%20line%3D20
>
> Political Justice is of two kinds, one natural, the other conventional. **A rule of justice is natural that has the same validity everywhere, and does not depend on our accepting it or not.** A rule is conventional that in the first instance may be settled in one way or the other indifferently, though having once been settled it is not indifferent: for example, that the ransom for a prisoner shall be a mina, that a sacrifice shall consist of a goat and not of two sheep; and any regulations enacted for particular cases, for instance the sacrifice in honor of Brasidas,[1] and ordinances in the nature of special decrees. [2] **Some people think that all rules of justice are merely conventional, because whereas a law of nature is immutable and has the same validity everywhere, as fire burns both here and in Persia, rules of justice are seen to vary.** [3] **That rules of justice vary is not absolutely true, but only with qualifications. Among the gods indeed it is perhaps not true at all; but in our world,[2] although there is such a thing as Natural Justice, all rules of justice are variable.**
>
> https://www.revilo-oliver.com/rpo/Reflections.html
>
> **Reporting the anecdote that an impressionable Greek, who had attended lectures by the Aristotelians and then heard the Stoics, said that his experience was like turning from men to gods,** Murray remarks: "It was really turning from Greeks to Semites, from philosophy to religion."

...

Conspicuously absent from this analysis of natural justice are norms such as those mentioned above from the *Rhetoric* – duties to kinfolk, as exemplified by Antigone, respect for life, as inculcated by Empedocles, or the natural human freedom theorized by Alcidamas.

...

Finally it is conceivable that natural human sociability itself constitutes a significant element of a latent natural-law theory in Aristotle. For example, his emphasis in the *Politics* on the fact that humans are essentially political animals, and that the state is thus a creation of nature itself, might be arguably interpreted as a natural law forming and participating in cities and states. **But explicitly Aristotle neither enunciates no expands on any natural-law theory in the traditional sense.**18

>
> In his 1962 lecture course in natural right, Strauss argued:
>
> > **Aristotle teaches that exposure of infants and birth control are legitimate.** Thomas Aquinas denies that, and the reason is the dignity of man as created in the image of God, and there is, of course, no such creation according to Aristotle. This question of the dignity of man in the Biblical or non-Biblical understanding is of the greatest importance up to the present day. I mean, for example, in penal law. The second massive substantive difference concerns slavery. **From Aristotle's point of view legal slavery, i.e., the enslavement of men who are not by nature slaves, is simply unjust. Thomas Aquinas, following the Roman law, asserts that legal slavery is just** and has been introduced as a benefit of the so-called *jus gentium*, of the law of nations, and namely it's a benefit because the victor could very well have killed them – the prisoners – and he does them a favor by only enslaving them.27

https://www.perseus.tufts.edu/hopper/text?doc=Perseus%3Atext%3A1999.01.0058%3Abook%3D2%3Asection%3D1268b

And the matter leads to another problem and a different inquiry: some persons raise the question whether to alter the ancestral laws, supposing another law is better, is harmful or advantageous to states. Hence it is not easy to give a speedy agreement to the above proposal to honor reformers, if really it is disadvantageous to alter the laws; yet it is possible that persons may bring forward the repeal of laws or of the constitution as a benefit to the community. And since we have made mention of this question, it will be better if we set out a few further observations about it, for, as we said, it involves difficulty. And it might be thought that it would be better for alteration to take place; at all events in the other fields of knowledge this has proved beneficial—for example, medicine has been improved by being altered from the ancestral system, and gymnastic training, and in general all the arts and faculties so that since statesmanship also is to be counted as one of these, it is clear that the same thing necessarily holds good in regard to it as well. And it might be said that a sign of this has occurred in the actual events of history, for (one might argue) the laws of ancient times were too simple and uncivilized: **the**

Hellenes, for instance, used both to carry arms and to purchase their wives from one another, and all the survivals of the customs of antiquity existing anywhere are utterly foolish, [1269a] [1] as for example at Cyme there is a law relating to trials for murder, that if the prosecutor on the charge of murder produces a certain number of his own relatives as witnesses, the defendant is guilty of the murder. **And in general all men really seek what is good, not what was customary with their forefathers; and it is probable that primitive mankind, whether sprung from the earth[1] or the survivors of some destructive cataclysm,[2] were just like ordinary foolish people, as indeed is actually said of the earth-born race, so that it is odd that we should abide by their notions.** Moreover even written codes of law may with advantage not be left unaltered. For just as in the other arts as well, so with the structure of the state it is impossible that it should have been framed aright in all its details; for it must of necessity be couched in general terms, but our actions deal with particular things. These considerations therefore make it clear that it is proper for some laws sometimes to be altered. But if we consider the matter in another way, it would seem to be a thing that needs much caution. **For when it is the case that the improvement would be small, but it is a bad thing to accustom men to repeal the laws lightly, it is clear that some mistakes both of the legislator and of the magistrate should be passed over; for the people will not be as much benefited by making an alteration as they will be harmed by becoming accustomed to distrust their rulers.** Also, the example from the case of the arts is a mistake, [20] as to change the practice of an art is a different thing from altering a law; **for the law has no power to compel obedience beside the force of custom, and custom only grows up in long lapse of time, so that lightly to change from the existing laws to other new laws is to weaken the power of the law.** Again, even if alteration of the laws is proper, are all the laws to be open to alteration, and in every form of constitution, or not? and is any chance person to be competent to introduce alterations or only certain people? for there is a great difference between these alternatives.

https://books.google.fi/books?id=LT5WAAAAYAAJ&hl=fi&pg=PA64#v=onepage&q&f=false

In short, this Chapter alone is sufficient, to shew, **that *Aristotle*'s Morality runs wholly upon the Duties of a Subject; and that it does not take in the Duties of Man in general, consider'd as such. Nor is there one single Word to be found concerning the Law of Nature, as it takes place among the Subjects of different States; or such as are not Members of any Civil Community: And, by his Silence at least, this Philosopher seems to favour that inhumane Opinion of the *Greeks*, with respect to those, they were pleas'd to call *Barbarians*. But he seems plainly enough to declare, in his *Politicks*; * all those Nations, that have not enter'd into Treaties of Alliance, to be in a State of War with one another.** And if we may take *Plutarch*'s Word † for it, he advised *Alexander* to behave himself as a legal Prince towards the *Greeks*; and as a despotick Master towards the *Barbarians*; to regard the former, as his Friends, and Domesticks; but *to treat the latter as so many Beasts or Vegetables*.
...

This Philosopher, as well as his Master, seems to have had too much in View, the *Grecian* Forms of Government. Nor does he seem to have just Ideas of the natural Equality of Mankind; and by some of his 7 Expressions, he gives Occasion to believe, that he thought some Men to be by Nature design'd for Slaves. He 8 is against bringing up Children that happen to be born with any bodily Infirmity; and thinks, should the Laws forbid the exposing Infants; **Women should be made to miscarry, when they find themselves with Child, after having had a certain Number of Children, answerable to what the Interest of the State requires;** for, adds he, when we say that such a Thing is lawful, or unlawful, it ought to be understood with respect to Beings, that have Life and Sense. **Thus this vast Genius of Nature, this Philosopher, for whom such Numbers have so great a Veneration; proves to be grosly ignorant of, and without any Scruple treads under Foot, one of the most evident Principles of the Law of Nature.**

https://en.wikipedia.org/wiki/Tabula_rasa#Ancient_Greek_philosophy

In Western philosophy, the concept of *tabula rasa* can be traced back to the writings of Aristotle who writes in his treatise *De Anima* (Περί Ψυχῆς, '*On the Soul*') of the "unscribed tablet." In one of the more well-known passages of this treatise, he writes that:[2]

> Haven't we already disposed of the difficulty about interaction involving a common element, when we said that mind is in a sense potentially whatever is thinkable, though actually it is nothing until it has thought? **What it thinks must be in it just as characters may be said to be on a writing-tablet on which as yet nothing stands written: this is exactly what happens with mind.**
>

>
> **He is right also in asserting that our simple ideas at least are innate, and in rejecting the *Tabula rasa* of Aristotle and of Mr. Locke.**

https://archive.org/details/cicerostusculand00ciceuoft/page/172/mode/2up?view=theater

IX. **This is the point which Theophrastus was unable to maintain; for after he had once laid down the position that stripes, torments, tortures, the ruin of one's country, banishment, the loss of children, had great influence on men's living miserably and unhappily, he durst not any longer use any high and lofty expressions when he was so low and abject in his opinion. How right he was is not the question; he certainly was consistent.** Therefore, I am not for objecting to consequences where the premises are admitted. But this most elegant and learned of all the philosophers is not taken to task very severely when he asserts his three kinds of good; but he is attacked by every one for that book which he wrote on a happy life, in which book he has many arguments why one who is tortured and racked cannot be happy. **For in that book he is supposed to say that a man who is placed on the wheel (that is a kind of torture in use among the Greeks) cannot attain to a completely happy life.** He nowhere, indeed, says so absolutely; but what he says amounts to the same thing. Can I, then, find fault with him, after having allowed that pains of the body are evils, that the ruin of a man's fortunes is an evil, if he should say that every good man is not happy, when all those things which he reckons as evils may befall a good man? **The same Theophrastus is found fault with by all the books and schools of the philosophers for commending that sentence in his *Callisthenes*,**

> **Fortune, not wisdom, rules the life of man.**

They say never did philosopher assert anything so languid. They are right, indeed, in that; but I do not apprehend anything could be more consistent, for if there are so many good things that depend on the body, and so many foreign to it that depend on chance and fortune, is it inconsistent to say that fortune, which governs everything, both what is foreign and what belongs to the body, has greater power than counsel.

https://archive.org/details/cicerostusculand00ciceuoft/page/194/mode/2up?view=theater

Now let us see what weight these men have in them, excepting the Stoics, whose opinion I think I have sufficiently defended; **and indeed I have explained what the Peripatetics have to say; excepting that Theophrastus, and those who followed him, dread and abhor pain in too weak a manner.**

> https://penelope.uchicago.edu/Thayer/E/Roman/Texts/Plutarch/Lives/Pericles*.html#ref64
>
> 38 1 At this time, it would seem, the plague laid hold of Pericles, not with a violent attack, as in the case of others, nor acute, but one which, **with a kind of sluggish distemper that prolonged itself through varying changes, used up his body slowly and undermined the loftiness of his spirit.** 2 **Certain it is that Theophrastus, in his "Ethics," querying whether one's character follows the bent of one's fortunes and is forced by bodily sufferings to abandon its high excellence,** records this fact, that Pericles, as he lay sick, showed one of his friends who was come to see him an amulet that the women had hung round his neck, as much as to say that he was very badly off to put up with such folly as that.

http://www.perseus.tufts.edu/hopper/text?doc=Perseus%3Atext%3A2007.01.0048%3Abook%3D2%3Asection%3D55

16. There are, in general, two classes of those who give largely: the one class is the lavish, the other the generous. The lavish are those who squander their money on public banquets, doles of meat among the people, gladiatorial shows, magnificent games, and wild-beast fights—vanities of which but a brief recollection will remain, or none at all. [56] The generous, on the other hand, are those who employ their own means to ransom captives from brigands, or who assume their friends' debts or help in providing dowries for their daughters, or assist them in acquiring property or increasing what they have. **And so I wonder what Theophrastus could have been thinking about when he wrote his book on "Wealth." It contains much that is fine; but his position is absurd, when he praises at great length the magnificent appointments of the popular games, and it is in the means for indulging in such expenditures that he finds the highest privilege of wealth.** But to me the privilege it gives for the exercise of generosity, of which I have given a few illustrations, seems far higher and far more certain.

How much more true and pertinent are Aristotle's words, as he rebukes us for not being amazed at this extravagant waste of money, all to win the favour of the populace.
…

[57] His conclusion, too, is excellent: "This sort of amusement pleases children, silly women, slaves, and the servile free; but a serious-minded man who weighs such matters with sound judgment cannot possibly approve of them."

https://ccel.org/ccel/schaff/npnf206/npnf206.vi.vi.I.html

Seeing they despise the fidelity which Christian purity dictates, let them at least learn chastity from the heathen. A book *On Marriage*, worth its weight in gold, passes under the name of[4610]

Theophrastus. In it the author asks whether a wise man marries. And after laying down the conditions—that the wife must be fair, of good character, and honest parentage, the husband in good health and of ample means, and after saying that under these circumstances a wise man sometimes enters the state of matrimony, he immediately proceeds thus: “But all these conditions are seldom satisfied in marriage. **A wise man therefore must not take a wife.** For in the first place his study of philosophy will be hindered, and it is impossible for anyone to attend to his books and his wife.
…

Then again, to marry for the sake of children, so that our name may not perish, or that we may have support in old age, and leave our property without dispute, is the height of stupidity. **For what is it to us when we are leaving the world if another bears our name, when even a son does not all at once take his father’s title,** and there are countless others who are called by the same name. Or what support in old age is he whom you bring up, and who may die before you, or turn out a reprobate? Or at all events when he reaches mature age, you may seem to him long in dying. **Friends and relatives whom you can judiciously love are better and safer heirs than those whom you must make your heirs whether you like it or not.** Indeed, the surest way of having a good heir is to ruin your fortune in a good cause while you live, not to leave the fruit of your labour to be used you know not how.”

48. **When Theophrastus thus discourses, are there any of us, Christians, whose conversation is in heaven and who daily say[4612] “I long to be dissolved, and to be with Christ,” whom he does not put to the blush? Shall a joint-heir of Christ really long for human heirs?**

https://books.google.fi/books?id=OirJPP6mOkEC&lpg=PP1&hl=fi&pg=PA142#v=onepage&q&f=false

After Aristotle, the school became bitterly antagonistic towards Alexander because of the execution of Aristotle’s nephew, Callisthenes; and **Theophrastus’s book *On Grief* began a long-lasting Peripatetic tradition belittling Alexander’s achievements as mere fruits of fortune.**
…

Embedded in Porphyry’s *De Abstinentia* are extracts from Theophrastus, head of the Lyceum from 323 till 288 B.C. or later, which include two passages concerned with the unity of man. The first occurs in a section certainly taken from a book *On Piety*, in which Theophrastus evidently argues against the sacrifice of animals:

> The following point must also be considered. **In spite of the kinship that we have with human beings, we regard it as necessary to punish and put to death all wrongdoers whose individual criminal impulses drive them to harm those they encounter.** Similarly among unreasoning creatures it is perhaps right to kill those that are naturally wild and destructive and impelled by nature to harm those who come near them. **But if animals do no ill to their fellow-creatures and have no natural disposition to do harm, it is presumably no less wrong to slaughter them and put them out of the way, than to kill men of such harmless character.** This seems to show that there is no general principle of justice governing the relations between men and the other living creatures, since among them, as among men, some are harmful and destructive by nature and others not. (II.22)

The second passage probably, but less certainly, also comes from the work *On Piety*. It gives a striking account of the various degrees of kinship, spreading outwards as if in concentric circles from the family to the whole of mankind, and beyond that to the rest of the animal world:

> Theophrastus also used this argument. We describe as naturally akin to each other those who are born of the same father and mother, and we further regard as kin those descended from the same ancestors, and moreover those who are fellow-citizens, because they are partners in a single country and society. This relationship that we find between citizens is not due to common ancestry, except in so far as some of their first forebears may have been the same, being the originators of their stock or descended from them. **So in my opinion there are two grounds for saying that there is kinship or a common relationship between Greek and Greek, and barbarian and barbarian, and indeed between all men: either because they spring from the same ancestors, or because they share the same upbringing and ways and the same stock. Hence we regard all men as akin and related to each other; and indeed for all animals the beginnings from which their bodies have developed are the same.** (III.25)

The passage goes on to give grounds for the kinship of all living creatures, attributing to them not only the same physical constituents but also the same psychological faculties – desire and anger, sense-perception, and even reasoning (*logismoi*). It is doubtful how far actual quotation from Theophrastus continues here, but noteworthy that presently the same line of argument reappears as in the first passage, whether in Theophrastus’ own words or paraphrased and adapted by Porphyry, and this time there is a definite reference to kinship (*oikeiotēs*) between man and beast.2

> https://books.google.fi/books?id=bsXawgEACAAJ&lpg=PA64&hl=fi&pg=PA251#v=onepage&q&f=false
>
> The late Platonists developed an elaborate account of our ethical duties to animals, and the *De Abstinentia ad esu animalium* (On abstaining from animal flesh) of Porphyry and the vegetarian works of Plutarch still offer very rich guidance in this area. Another type of guidance is offered by Aristotle, who does not have an account of our ethical duties to animals, but who was one of

history's greatest biologists, and who does position humans as a type of animal alongside animals, sharing with other end-directed creatures a "common explanation" of motion through desire and cognition.11 His instruction to his students to react with wonder to the complex ordering of all animal lives is the start of my ethical project in the CA.12 **Another fruitful source is the Epicurean tradition, which sees the locus of value as the sentient body, and emphasizes the kinship of all bodies. This tradition did not have an ethics of vegetarianism or good animal treatment, but it did ultimately inspire the first modern advocate of animal rights in the Western tradition, Utilitarian philosopher Jeremy Bentham.**

And once again the eclectic philosopher Cicero stands out for his insight and good sense: for he strenuously objected to gladiatorial games employing elephants, approving of and joining a popular protest on the grounds that elephants have a communality (*societas*) with the human species.13 **Here as elsewhere, Cicero's Stoic affiliations did not stop him from grasping something true; perhaps his allegiance to the Platonic academy, rather than the Stoic school, gave him the requisite freedom of ethical judgment.**

https://books.google.fi/books?id=OirJPP6mOkEC&lpg=PP1&hl=fi&pg=PA146#v=onepage&q&f=false

It is Porphyry again who preserves the account given in Dicaearchus' *Life of Hellas* of the first state of man – a rationalised version of the primeval Age of Kronos described by Hesiod, and later in Plato's *Statesman* and elsewhere. After expounding the other blessings of those early days, Porphyry's version goes on: 'They experienced no wars or conflicts with each other, for there lay before them no prize of sufficient value to become the cause of such violent strife. Consequently their life was characterised by leisure, easy fulfilment of their essential needs, good health, peace, and friendship.'9 It was only when possessions worth fighting for emerged, that 'war came upon the scene as well.' **The thought, of course, is not new; what is remarkable is the re-statement of it by a follower of Aristotle, underlining the Peripatetic belief in the natural kinship and affection between all members of the human race.**

https://en.wikipedia.org/wiki/Dicaearchus

Dicaearchus apparently attempted to write a biography of the Greek nation from earliest times to the reign of Philip II. The most famous passages are those cited by Varro[16] and Porphyry[17] on early history, **which suggest a dualistic view of progress. His anthropological theory combined elements from the Hesiodic tradition of decay with progressivist theories. From Hesiod, he adopted the concept of a "golden race", which led a life of bliss but ultimately degenerated because humans became greedy, which led to war. This is combined with progressivist ideas, such as the harsh life of early man and the gradual invention of the arts.** In his reconstruction, Dicaearchus distinguished three stages: the golden race, in which man lived off the spontaneously grown fruits of the earth, the pastoral life, in which man started domesticating and hunting animals, and the agricultural life, in which agriculture was introduced.[18]

https://www.tertullian.org/fathers/porphyry_abstinence_04_book4.htm

Among those, therefore, that have concisely, and at the same time accurately collected an account of the affairs of the Greeks, is the Peripatetic Dicaearchus,[1] who, in narrating the pristine life of the Greeks, says, the ancients, being generated with an alliance to the Gods, were naturally most excellent, and led the best life; so that, when compared to us of the present day, who consist of an adulterated and most vile matter, they were thought to be a golden race; and they slew no animal whatever. **The truth of this, he also says, is testified by the poets, who denominate these ancients the golden race, and assert that every good was present with them.**

The fertile earth for them spontaneous bore
Of fruits a copious and unenvy'd store;
In blissful quiet then, unknown to strife,
The worthy with the worthy passed their life.[2]

Which assertions, indeed Dicaearchus explaining, says, that a life of this kind was under Saturn; if it is proper to consider it as a thing that once existed, and that it is a life which has not been celebrated in vain, and if, laying aside what is extremely fabulous, we may refer it to a physical narration. All things, therefore, are very properly said to have been then spontaneously produced; for men did not procure any thing by labour, because they were unacquainted with the agricultural art, and, in short, had no knowledge of any other art. This very thing, likewise, was the cause of their leading a life of leisure, free from labours and care; and if it is proper to assent to the decision of the most skilful and elegant of physicians, it was also the cause of their being liberated from disease. *For there is not any precept of physicians which more contributes to health, than that which exhorts us not to make an abundance of excrement,* from which those pristine Greeks always preserved their bodies pure. For they neither assumed such food as was stronger than the nature of the body could bear, but such as could be vanquished by the corporeal nature, nor more than was moderate, on account of the facility of procuring it, but for the most part less than was sufficient, on account of its paucity.

Moreover, there were neither any wars among them, nor seditions with each other. For no reward of contention worth mentioning was proposed as an incentive, for the sake of which some one might be induced to engage in such dissensions. So that the principal thing in that life was leisure and rest from necessary occupations, together with health, peace, and friendship. But to those in after times, who, through aspiring after things which greatly exceeded mediocrity, fell into many evils, this pristine life became, as it was reasonable to suppose it would, desirable. The slender and extemporaneous food, however, of these first men, is manifested by the saying which was afterwards proverbially used, *enough of the oak;* this adage being probably introduced by him who first changed the ancient mode of living. **A pastoral life succeeded to this, in which men procured for themselves superfluous possessions, and meddled with animals. For, perceiving that some of them were innoxious, but others malefic and savage, they tamed the former, but attacked the latter. At the same time, together with this life, war was introduced. And these things, says Dicaearchus, are not asserted by us, but by those who have historically discussed a multitude of particulars.** For, as possessions were now of such a magnitude as to merit attention, some ambitiously endeavoured to obtain them, by collecting them [for their own use], and calling on others to do the same, but others directed their attention to the preservation of them when collected. Time, therefore, thus gradually proceeding, and men always directing their attention to what appeared to be useful, they at length became conversant with the third, and agricultural form of life. And this is what is said by Dicaearchus, in his narration of the manners of the ancient Greeks, and the blessed life which they then led, to which abstinence from animal food contributed, no less than other things. Hence, at that period there was no war, because injustice was exterminated. But afterwards, together with injustice towards animals, war was introduced among men, and the endeavour to surpass each other in amplitude of possessions. On which account also, **the audacity of those is wonderful, who say that abstinence from animals is the mother of injustice, since both history and experience testify, that together with the slaughter of animals, war and injustice were introduced.**

https://books.google.fi/books?id=6HqgC01HJhUC&lpg=PP1&hl=fi&pg=PA43#v=onepage&q&f=false

So Aristotle was the first to weaken those Forms which I spoke of a short while ago, which Plato had embraced in a marvellous way, so that he said that there was something divine in them. Theophrastus, a man who was both pleasant in his oratory and so moral that he displayed a certain honesty and nobility [of spirit], in a certain way shattered the authority of the old teaching even more violently: for he robbed virtue of her glory and made her weak, when he denied that living happily depended on her alone.

For Strato his pupil, although he had a keen intellect, should be completely set apart from this school; when he abandoned the most necessary part of philosophy, which involves virtue and ethics, and devoted himself entirely to the investigation of nature he disagreed with his own [school] very greatly even in this.

https://archive.org/details/academicquestio00cice/page/246/mode/2up?view=theater

And this point is the especial subject of the book of Theophrastus, on a Happy Life; in which a great deal is attributed to fortune: and if that theory is correct, then wisdom cannot make life happy. **Now, this seems to me rather too tender (if I may say so) and delicate a doctrine, more so than the power and importance of virtue can sanction.** Wherefore let us rather hold with Aristotle, and his son Nicomachus,—whose admirably written books on Morals are said, indeed, to be Aristotle's; but I do not see why the son may not have been like his father; **but, in most cases, let us apply to Theophrastus, as long as we attribute a little more firmness and strength to virtue than he did.**

Let us, then, be content with these guides; for their successors are wiser men, indeed, in my opinion, than the philosophers of other schools: but still they degenerate so from these great men, that they seem to me rather to have arisen from themselves than from them. In the first place, Strato, the pupil of Theophrastus, called himself a natural philosopher: and though, in truth, he is an eminent man in that line, still most of what he said was novel; and he said very little about morals. His pupil Lyco was rich in eloquence, but very meagre in matter. Then his pupil Aristo was a neat and elegant writer, but still he had not that dignity which we look for in a great philosopher: he wrote a great deal, certainly, and in a polished style; but, somehow or other, his writings do not carry any weight.

---

Among the ideal systems which have varied with the fashion of the times, **the Arabians adopted the philosophy of the Stagirite, alike intelligible or alike obscure for the readers of every age. Plato wrote for the Athenians, and his allegorical genius is too closely blended with the language and religion of Greece. After the fall of that religion, the Peripatetics, emerging from**

their obscurity, prevailed in the controversies of the Oriental sects, and their founder was long afterwards restored by the Mahometans of Spain to the Latin schools. (58)

https://en.wikipedia.org/wiki/Franciscus_Patricius#Antiaristotelian_writings

In the *Discussiones peripateticae* Patricius does not consistently go from a Platonic alternative system to Aristotelianism but also takes advantage of arguments based on nonplatonic, rather nominalistic and empirical ideas.[50] In terms of philosophy, he sees a fateful development: **the first pupils of Aristotle still thought independently and also contradicted their teacher; later, however, Alexander of Aphrodisias surrendered unconditionally to the school founder and thus renounced free thinking. The first medieval Arabic-language interpreters, Avicenna, Avempace and Alfarabi, were still relatively unbiased, but then Averroes had the absolute authority of Aristotle proclaimed and thus pointed the way to sterile, scholastic Aristotelism.**[51]

https://books.google.fi/books?id=NPA0DwAAQBAJ&lpg=PP1&hl=fi&pg=PA22#v=onepage&q&f=false

In the Arab world, as has been remarked, the ninth century was indeed the great century of translations.11 The importance of this is clear; **one part of the Greek heritage, the sciences, including medicine, and philosophy (with Porphyry's *Isagoge* and Aristotle's *Organon*), was thus transmitted by the Abbasid caliphate to large sections of the medieval world.**12

> 12. **And, as is known, transmitted as far as the West:** see the useful article by R. MENÉNDEZ-PIDAL, L'Espagne et l'introduction de la science arabe en Occident, *La Table ronde*, no. 144, December 1959, pp. 41-61. This "Arab" science is Greek: it is a case of Greek works translated into Arabic, sometimes augmented by Arabic commentaries, which arrived in great numbers in Toledo and were re-translated into Spanish or Latin.

…

From our point of view, however, **it must be said that, though we may speak of a movement which carried ancient Hellenism in part into the Islamic world, we have no proof, not even a hint, of any movement in the opposite direction, from Islam to Greek-speaking lands, to Byzantium.** Baghdad had, within the caliphate, numerous Syriac manuscripts and some Greek ones, and perhaps still procured certain texts from Byzantium, though it seems to me that the evidence which is cited for this is often exaggerated or even legendary.15 We have no examples of manuscripts coming from the caliphate into the Byzantine Empire. In other words, **at this period we have ancient Hellenism clearly influencing Islamic culture, but no sign of any indirect transmission of ancient Hellenism to the medieval Hellenism of Byzantium by way of Islam.**

> 15. An example of these legendary contacts which are themselves not lacking in significance: **Aristotle appeared in a dream to Mamun, who immediately got in touch with the Greek emperor and asked him to send all the works of the ancients which survived;** having obtained, with difficulty, a favourable answer, he sent three people to Byzantium to choose the manuscripts, which were immediately handed over to the translators; see L. LECLERC, *op. cit.*, I, p. 126

Moreover, this hypothesis, in itself rather improbable, seems to me to be conclusively destroyed by one simple fact. **While the renaissance of Hellenism in Byzantium extended progressively and more or less rapidly to all spheres of ancient literature including poetry, theatre, rhetoric, history etc., Islam took an interest only in the sciences on the one hand,**16 **and philosophy on the other, but not all philosophy, just Aristotelian logic and certain aspects, more or less distorted, of Neoplatonism.**17 Thus Islam remained outside the intellectual and aesthetic world of the Greeks.

…

> 16. M. MEYERHOF (La fin de l'Ecole d'Alexandrie…, *op. cit.*, p. 14, note 39) **cited the recommendation, made by an imam, not to destroy the Greek manuscripts which the armies of Islam found in the spoils from a town they had captured, *if they dealt with sciences*.**
>
> 17. Good exposition by T.J. de BOER, *The History of philosophy in Islam*, trans. E.R. Jones, London, 1903, and by G.E. von GRUNEBAUM, *Medieval Islam. A study in cultural orientation*, Chicago, 1946. **In the final analysis, Islam knew and retained essentially those parts of Hellenism which the Syrians had known and retained. This confirms the impression that Arabic translations were normally made from Syriac, and that the translators themselves were most often Syrians, whether converted to Islam or not.**

As for Greek manuscripts, they certainly had been numerous in Nestorian or Jacobite establishments and in some private libraries. However, and this is a not uncommon phenomenon, they disappeared gradually through carelessness or neglect once they had been translated into Syriac in the course of the fifth to eighth centuries and, in a sense, were replaced by the Syriac versions. Those, and I believe they were very few, which were able to survive to the period when Arabic versions were

being made, disappeared in their turn through the very fact of the success and diffusion of these Arabic versions and also because of the progressive neglect of Greek.18
...

And what Islam appropriated – via Syriac (and sometimes Pehlevi) and much more rarely through Greek manuscripts – was a more limited part than has been admitted. The two worlds were strangers to each other and the two phenomena differed not only in the scale and form they took but in their very nature.

> The Western Hellenic trunk line whose way stations read: Ennius, Vergil, Horace, Quintilian, Cassiodorus, Alcuin, John of Salisbury, Dante, Petrarch, Scaliger, Bentley, Jowett, and Jebb has an Eastern counterpart, a shorter line to be sure, and bearing less traffic, but not without its interesting stops: Clement, Origen, Basil, Nemesius, John Philoponus, Sergius of Rish'ayna, Ibn al-Bitriq, al-Kindi, Hunyan ibn Ishaq, al-Farabi, Ibn Sina, Ibn Rushd. Behind the obvious exoticisms of language the two lists are quite different. **The Western series is composed of humanists; the Eastern knows only philosophers and theologians.** Names could be added to either, but the truth of each series remains. **Western Hellenism is a variegated inheritance: philosophy, law, science, with a heavy insistence upon the humanities: humanitas, indeed, is a Roman word. Eastern Hellenism is constructed upon a much narrower base; its pillars are mathematics, geography, medicine, and philosophy; supporting them are Euclid, Ptolemy, Galen, and Aristotle. But for all this the East knows not Homer or Sophocles,** and its Thucydides is a graceless Arab chronicler whose felicity is to collect endless chains of shaykhish transmitters.1

The heathen Greeks, before the rise of Christianity, held much the same opinions as the Hindus; their educated classes thought much the same as those of because of the Hindus; their common people held the same idolatrous views as those of the Hindus. Therefore I like to confront the theories of the one nation with those of the other simply on account of their close relationship, not in order to correct them. For that which is not *the truth* (*i.e.* the true belief or monotheism) does not admit of any correction, and all heathenism, whether Greek or Indian, is in its pith and marrow one and the same belief, because it is only a deviation *from the truth*. **The Greeks, however, had philosophers who, living in their country, discovered and worked out for them the elements of science, not of popular superstition, for it is the object of the upper classes to be guided by the results of science, whilst the common crowd will always be inclined to plunge into wrong-headed wrangling, as long as they are not kept down by fear of punishment. Think of Socrates when he opposed the crowd of his nation as to their idolatry and did not want to call the stars gods!** At once eleven of the twelve judges of the Athenians agreed on a sentence of death, and Socrates died faithful to the truth.

The Hindus had no men of this stamp both capable and willing to bring sciences to a classical perfection. Therefore you mostly find that even the so-called scientific theorems of the Hindus are in a state of utter confusion, devoid of any logical order, and in the last instance always mixed up with the silly notions of the crowd, *e.g.* immense numbers, enormous spaces of time, and all kinds of religious dogmas, which the vulgar belief does not admit of being called into question. **Therefore it is a prevailing practice among the Hindus *jurare in verba magistri*; and I can only compare their mathematical and astronomical literature, as far as I know it, to a mixture of pearl shells and sour dates, or of pearls and dung, or of costly crystals and common pebbles.** Both kinds of things are equal in their eyes, since they cannot raise themselves to the methods of a strictly scientific deduction.

https://books.google.fi/books?id=H-k9oc9xsuAC&lpg=PA349&hl=fi&pg=PA349#v=onepage&q&f=false

Perhaps the most notorious freethinker of medieval Islam, Ibn al-Rawandi was born in Khurasan around 815 CE. He started out as a respected Mu'tazilite theologian but later became estranged from his former colleagues, perhaps due to the association with his mentor, the Manichaean Abu 'Isa al-Warraq. **From that point on Ibn al-Rawandi is depicted by most (though not all) of our sources as a heretic who maliciously scoffs at all religions, particularly Islam.** He left Baghdad, apparently to escape persecution by the authorities, and died in 860 (or, accoding to other sources, in 912).

Although one can see this image as a distorted picture composed by his opponents (as suggested by Josef van Ess), the accumulated information provided by the texts suggests that the image had a firm base in reality, and that Ibn al-Rawandi had indeed out-stepped the boundaries of Islam. He is said to have written numerous books, none of which are extant. Extensive quotations in later Muslim sources, however, allow us to reconstruct many of his arguments. **In his *Book of the Emerald* he argued that the human intellect makes revelation superfluous. God has provided humanity with the intellect. This intellect, which is part of the definition of humanity, is given equally to all human beings and is sufficient to guide them.** The pretenders to prophecy are thus nothing but impostors and charlatans who exploit their knowledge of natural phenomena in order to manipulate and delude simple people. **In this book, those who serve as Ibn al-Rawandi's mouthpiece and who present his antiprophetic lore are the so-called Brahmans: Indian polemicists who uphold the intellectual and spiritual equality of all humans.** This literary device may reflect actual contacts with Indian philosophy, but it may also have been conceived to ward off accusations of heresy, and as a protective device against persecution.

https://en.wikipedia.org/wiki/Abu_Bakr_al-Razi

According to al-Biruni's *Bibliography of al-Razı* (*Risāla fī Fihrist Kutub al-Rāzi*), **al-Razi wrote two "heretical books": "*Fī al-Nubuwwāt* (*On Prophecies*) and "*Fī Ḥiyal al-Mutanabbīn* (*On the Tricks of False Prophets*).** According to Biruni, the first "was claimed to be against religions" and the second "was claimed as attacking the necessity of the prophets."[54] However, Biruni also listed some other works of al-Razi on religion, including *Fi Wujub Da'wat al-Nabi 'Ala Man Nakara bi al-Nubuwwat* (*Obligation to Propagate the Teachings of the Prophet Against Those who Denied Prophecies*) and *Fi anna li al-Insan Khaliqan Mutqinan Hakiman* (*That Man has a Wise and Perfect Creator*), listed under his works on the "divine sciences".[54] None of his works on religion are now extant in full.

> 52. Groff, Peter (2007). *Islamic Philosophy A-Z*. Edinburgh: Edinburgh University Press. pp. 180-181. **Elsewhere, he argues that all human beings have the same fundamental capacity for reason and that the apparent inequality of people in this respect is ultimately a function of opportunity, interest and effort. Accordingly, al-Razi takes a rather dim view of prophecy, which in his view is both unnecessary and delusional, and indeed he criticizes all revealed religions as provincial and divisive. No one individual or group can legitimately claim a monopoly on the truth;** each succeeding generation has the ability to improve upon and even transcend its predecessor's insights through rational argumentation and empirical inquiry.

https://books.google.fi/books?id=9b8uQfmQM8kC&lpg=PP1&hl=fi&pg=PA111#v=onepage&q&f=false

Walker argued that "in fact, the ways in which al-Rāzī goes about questioning the foundation of apostolic miracles in general, looks remarkably similar, and probably belongs, to the attitude of a number of Mu'tazilite theologians of the third/ninth and early fourth/tenth centuries."

Although it is certainly true that some of the notions used by Rāzī have an important place in Mu'tazilite vocabulary, the striking differences in their respective use of these notions reflect, I believe, the abyss separating the believer from the apostate.

Foremost among these notions is the intellect (*'aql*). Rāzī argued that since the intellect is part of the definition of a human being, all human beings share its possession. Since they are equal in this respect, no human being can claim to be naturally endowed with a superior intellectual quality which will grant him superior knowledge. According to Rāzī, therefore, the notion of prophecy is not only superfluous, but also biologically and logically false.

http://www.jewishencyclopedia.com/articles/2164-averroism

> "God," says Averroes, "has declared a truth for all men that requires for understanding no intellectual superiority; in a language that can be interpreted by every human soul according to its capability and temper. **The expositors of religious metaphysics are therefore the enemies of true religion, because they made it a matter of syllogism**" (J. Müller, "Philosophie und Theologie," including the Arabic text, pp. 104 *et seq.*).

The Mu'tazilites likewise accepted the claim that human beings are endowed with intellect, which in principle should suffice to instruct them with whatever they need for their salvation. But they realized that the intellect is not the sole governing principle in human life. Rather, its governance is modified by various other traits of human nature: psychology, which distracts the individual from the better advice of the intellect; the individual characteristics of each person, and the conditions of like which obsctruct the achievement of human goals. According to the Mu'tazila, these additional traits render the prophets indispensable. Divine goodness, which ordained the gift of intellect to humanity, also ordained the accomplishment of God's providence by sending apostles.146 Both the Mu'tazilites and Rāzī thus start from the basic recognition of the sufficiency and universality of the intellect. **But whereas the former found a way to justify the additional necessity of prophets, the latter clung to the initial argument. For him, the sufficiency of the human intellect was final and unconditional.** Rāzī's observations on human nature, and his appreciation of the effects of human psychology and of historical circumstances, strengthened rather than modified his opposition to the so-called prophets. **According to Rāzī, the prophets, driven by their own passion for power, exploited the weaknesses of their fellow-humans, thus increasing humanity's misery.**147

In addition to proclaiming the divine origin of the intellect and its sufficiency, Rāzī also argued for the equality of human intellects: all human beings were born with equal intellectual capacity. **The universality of the intellect and the equality of human beings are often presented (by Rāzī, and therefore by students of his thought) as two aspects of the same doctrine. But in fact, in Rāzī's thought these two ideas are quite distinguishable. He is totally committed to former, but his position on the latter varies.**

In the debate, Rāzī's opponent pointed out that, **notwithstanding his declared egalitarianism, Rāzī claimed for himself superiority to other men in philosophical wisdom.** To this, Rāzī answered by attributing his superiority to practice and motivation rather than to inborn advantage:

> – I [i.e., Abū Ḥātim al-Rāzī] said: **You yourself claim that you are singled out in possessing the philosophical sciences which you claim to have.**148 You say that other people are deprived of it, and they depend on you. You thus oblige them to learn from you, and to follow your lead!
>
> – He [i.e., Rāzī] said: I was not singled out from all other [human beings] to possess these sciences, as opposed to others. **But I have sought these sciences, whereas they have neglected them. They are deprived of them only because they fail to reflect, not because of some [inborn] deficiency.** … If [any one of them] had applied himself with resolution to the same things to which I have applied myself, if he had sought what I did, then surely he would have achieved the same [level] as I did.149

Abū Ḥātim al-Rāzī tried to corner Rāzī and to extract from him a simple, unequivocal declaration of his egalitarian belief:

> – I said: Are [all] people equal in their intellect, their resolution, their sagacity, or are they not?

Rāzī's answer sems, at first sight, to be in the affirmative:

> – He said: **Had they made an effort**150 **and busied themselves with what would serve them,**151 **they would have been equal in intellect and in resolution.**152

On one level, Rāzī indeed believed in the ability of all human beings to strive for wisdom and thus to make intellectual progress. He thus says:

> No soul can be purged from the turbidity of this world and escape to the next, except by contemplating philosophy. If a person contemplates philosophy and comprehends anything, be it ever so small, his soul is purged from this turbidity and is saved.153

In his philosophical *Apology* (*al-Sīra al-falsafiyya*), however, Rāzī presented exactly the opposite argument. As everyone knows, he argued, human beings are unequal by nature. Some are stronger or more gifted than others. Consequently, even the considerations given to people's life should not be the same for everyone:

> If two men chance to be in a waterless plain, and one of them has water just sufficient to save his life but not his companion's in such a case it is right that the water should go to *the one who is of greater benefit* to his fellows.154

The implication of the fundamental inequality of humans was that the philosopher must not behave like the common people, nor should he share their pleasures and aspirations.

Which one of these two contradictory views did Rāzī believe in, the one he expressed in the debate one the one formulated so crudely in his *Sīra?* Is it of course possible that Rāzī had changed his views over the course of the years.155 If so, and since we do not know the relative dates of these respective works (scil. the *Mahārīq al-anbiyā* and the debate that quotes it, and the *Sīra*), we have no way of knowing Rāzī's final position. **It seems to me, however, that rather than reflecting a change of position, the difference between these statements should be explained by the different contexts in which they were made and the different audiences to which they were addressed. Whereas the egalitarian position suited Rāzī's polemical purpose, elitism was his innermost conviction. He was capable of moderating this position or camouflaging it to suit the needs of the hour. But his equation of intellectual universality with intellectual equality was only a polemical stance.**

>
> > 35. **Duplicity was such an accepted feature of seventeenth and eighteenth-century social and intellectual life** that one or two notable examples will suffice. **All the *philosophes*, even though they proclaimed egalitarian principles were élitists at heart.** Fontenelle, so often hailed as a popularizer of science, wrote in the "sixième soir" of his *Entretiens sur la pluralité des mondes*: "Contentons-nous d'être une petite troupe choisie, et ne divulguons pas nos mystères dans le peuple."

https://archive.org/details/enlightenmentcon0000isra/page/622/mode/2up?view=theater

Not unlike Spinoza and Bayle in this respect, Ibn Rushd stressed the risks – both intellectual and practical – of mixing theology and philosophy: 'for if you do so you will be neither a rationalist no a traditionalist.'61

---

https://oll.libertyfund.org/title/acton-the-history-of-freedom-and-other-essays#lf0030_label_022

Gregory VII. had begun the disparagement of civil authorities by saying that they are the work of the devil; and already in his time both parties were driven to acknowledge the sovereignty of the people, and appealed to it as the immediate source of power.

Two centuries later this political theory had gained both in definiteness and in force among the Guelphs, who were the Church party, and among the Ghibellines, or Imperialists. **Here are the sentiments of the most celebrated of all the Guelphic writers:** "A king who is unfaithful to his duty forfeits his claim to obedience. It is not rebellion to depose him, for he is himself a rebel whom the nation has a right to put down. But it is better to abridge his power, that he may be unable to abuse it. For this purpose, the whole nation ought to have a share in governing itself; **the Constitution ought to combine a limited and elective monarchy, with an aristocracy of merit, and such an admixture of democracy as shall admit all classes to office, by popular election.** No government has a right to levy taxes beyond the limit determined by the people. All political authority is derived from popular suffrage, and all laws must be made by the people or their representatives. There is no security for us as long as we depend on the will of another man." **This language, which contains the earliest exposition of the Whig theory of the revolution, is taken from the works of St. Thomas Aquinas, of whom Lord Bacon says that he had the largest heart of the school divines.** And it is worth while to observe that he wrote at the very moment when Simon de Montfort summoned the Commons; and that the politics of the Neapolitan friar are centuries in advance of the English statesman's.

The ablest writer of the Ghibelline party was Marsilius of Padua. "Laws," he said, "derive their authority from the nation, and are invalid without its assent. As the whole is greater than any part, it is wrong that any part should legislate for the whole; and as men are equal, it is wrong that one should be bound by laws made by another. But in obeying laws to which all men have agreed, all men, in reality, govern themselves. **The monarch, who is instituted by the legislature to execute its will, ought to be armed with a force sufficient to coerce individuals, but not sufficient to control the majority of the people.** He is responsible to the nation, and subject to the law; and the nation that appoints him, and assigns him his duties, has to see that he obeys the Constitution, and has to dismiss him if he breaks it. **The rights of citizens are independent of the faith they profess; and no man may be punished for his religion.**" This writer, who saw in some respects farther than Locke or Montesquieu, who, in regard to the sovereignty of the nation, representative government, the superiority of the legislature over the executive, and the liberty of conscience, had so firm a grasp of the principles that were to sway the modern world, lived in the reign of Edward II., five hundred and fifty years ago.

It is significant that these two writers should agree on so many of the fundamental points which have been, ever since, the topic of controversy; for they belonged to hostile schools, and one of them would have thought the other worthy of death. **St. Thomas would have made the papacy control all Christian governments. Marsilius would have had the clergy submit to the law of the land; and would have put them under restrictions both as to property and numbers.**

https://en.wikipedia.org/wiki/John_of_Jandun

Jandun identified closely with Marsilius of Padua, another Latin Averroist who was rector at the university in Paris from 1312-1313. **Marsilius presented Jandun with a copy of Pietro d'Abano's commentary on the problems of Aristotle.**
...

Jandun tended toward the views of Aristotle, but was not afraid to follow an idea to its logical conclusion. Many of his views were uncommon and controversial, and were not received well by the Catholic Church. **Manuscripts and printed editions influenced the Latin Averroist movement until the time of Galileo.**

http://www.newadvent.org/cathen/09719c.htm

Contrary to the assertion of several authors, he was only a layman and neither a religious nor the legitimate Archbishop of Milan, though he was a canon of his native city. He served at first in the army of the emperor, and after wards, on the advice of Mussato, began the study of medicine at the University of Padua. To complete his medical studies he proceeded to Paris, and before 25 December, 1312, became rector of the university there.
...

The emperor was looking for help, and Marsilius, who had now begun the study of theology, joined with Jean de Jandun, canon of Senlis, in offering him his assistance. Together they composed the "Defensor pacis" at Paris, and, about 1326, setting out for Germany, presented their work to the emperor. They became his intimate friends, and on several occasions expounded their teaching to him. **What were the doctrines of these two Parisian doctors, the very audacity of which at first startled Louis of Bavaria?** They recalled the wildest theories of the legists of Philippe le Bel, and Cæsarian theologians like Guilaume Durand and the Dominican John of Paris. The teachings of these last mentioned had been proposed with hesitation, restrictions, and moderation of language which met with no favour before the rigorous logic of Marsilius of Padua. **He completely abandoned the olden theocratic conception of society. God, it is true, remained the ultimate source of all power, but it sprang immediately from the people, who had in addition the power to legislate. Law was the expression, not of the will of the prince, as John of Paris taught, but of the will of the people, who, by the voice of the majority, could enact, interpret, modify, suspend, and abrogate it at will. The elected head of the nation was possessed only of a secondary, instrumental, and executive authority. We thus arrive at the theory of the "Contrat Social".** In the Church, according to the "Defensor Pacis", the faithful have these two great powers—the elective and the legislative. They nominate the bishops and select those who are to be ordained. The legislative power is, in the Church, the right to decide the meaning of the old Scriptures; that is the work for a general council, in which the right of discussion and voting belongs to the faithful or their delegates. The ecclesiastical power, the priesthood, comes directly from God and consists essentially in the power to consecrate the Body and Blood of Jesus Christ and remit sins, or, rather, to declare them remitted. **It is equal in all priests, each of whom can communicate it by ordination to a subject legitimately proposed by the community.** Luther would have recognized his theories in these heretical assertions, and the Gallicans of later times would willingly have subscribed to such revolutionary declarations. The two writers are just as audacious in their exposition of the respective roles of the Empire and the Church in Christian society and of the relations of the two powers.

According to the idea of the State propounded by Marsilius all ecclesiastical power proceeded from the community and from the emperor, its principal representative, there being no limit to the rights of the lay State (cf. Franck, "Journal des savants" March, 1883; Noël Valois, "Histoire littéraire de la France", XXXIII). As to the Church it has no visible head. **St. Peter he goes on, received no more power or authority than the other Apostles, and it is uncertain that he ever came to Rome.** The pope has only the power of convoking an ecumenical council which is superior to him. His decrees are not binding; he can impose on the people only what the general council has decided and interpreted. **The community elects the parish priest and supervises and controls the clergy in the performance of their duties; in a word—the community or the state is everything, the Church playing an entirely subsidiary part. It cannot legislate, adjudicate, possess goods, sell, or purchase without authorization; it is a perpetual minor. As is clear, we have here the civil constitution of the clergy.** Marsilius, moreover shows himself a severe and often unjust censor of the abuses of the Roman curia. Regarding the relations between the emperor and the pope, it is maintained in the "Defensor Pacis", that the sovereign pontiff has no power over any man, except with the permission of the emperor; while the emperor has power over the pope and the general council. **The pontiff can act only as the authorized agent of the Roman people; all the goods of the Church belong by right to Cæsar. This is clearly the crudest concept of the pagan empire, an heretical assault on the Church's constitution, and a shameless denial of the rights of the sovereign pontiff to the profit of Cæsar.** Dante, the Ghibelline theorist, is surpassed. Arnold of Brescia is equalled. William Occam could never have proposed anything more revolutionary.

The pope was stirred by these heretical doctrines. In the Bull of 3 April, 1327, John XXII reproached Louis of Bavaria with having welcomed *duos perditionis filios et maledictionis alumnos* (Denifle, "Chart", II, 301). On 9 April he suspended and excommunicated them ("Thesaurus novus anecdotorum", ii, 692). A commission, appointed by the pope at Avignon, condemned on 23 October five of the propositions of Marsilius in the following terms:

> "1) These reprobates do not hesitate to affirm in what is related of Christ in the Gospel of St. Matthew, to wit **that He paid tribute ... that he did so, not through condescension and liberality, but of necessity**—an assertion that runs counter to the teaching of the Gospel and the words of our Saviour. **If one were to believe these men, it would follow that all the property of the Church belongs to the emperor, and that he may take possession of it again as his own;** 2) These sons of Belial are so audacious as to affirm that the Blessed Apostle St. Peter received no more authority than the other Apostles, that he was not appointed their chief and further that Christ gave no head to His Church, and appointed no one as His vicar here below—all which is contrary to the Apostolic and evangelic truth; 3) **These children of Belial do not fear to assert that the emperor has the right to appoint, to dethrone, and even to punish the pope**—which is undoubtedly repugnant to all right; 4) These frivolous and lying men say that **all priests, be they popes, archbishops, or simple priests, are possessed of equal authority and equal jurisdiction, by the institution of Christ; that whatever one possesses beyond another is a concession of the Emperor, who can moreover revoke what he has granted,**—which assertions are certainly contrary to sacred teaching and savour of heresy; 5) these blasphemers say that **the universal Church may not inflict a coactive penalty on any person unless with the emperor's permission.**"

...

As this condemnation was falling on the head of Marsilius, **the culprit was coming to Italy in the emperor's train and he saw his revolutionary ideas being put into practice.** Louis of Bavaria had himself crowned by Colonna syndic of the Roman people; he dethroned John XXII, replacing him by the Friar Minor, Peter of Corbara, whom he invested with temporal power. **At the same time he bestowed the title of imperial vicar on Marsilius and permitted him to persecute the Roman clergy.** The pope of Avignon protested twice against the sacrilegious conduct of both. The triumph of Marsilius was, however, of short duration. Abandoned by the emperor in October, 1336, he died towards the end of 1342.

The *Defensor pacis*, as its name implies, is a work intended to restore peace, as the most indispensable benefit of human society. **The author of the law is the people, *i.e.* the whole body, or at least the most important part (*valentior*) of the citizens;** the people should themselves elect, or at least appoint, the head of the government, who, lest he should be tempted to put himself above the scope of the laws, should have at his disposal only a limited armed force. This chief is responsible to the people for his breaches of the law, and in serious cases they can condemn him to death. The real cause of the trouble which prevails among men is the papacy, a “fictitious” power, the development of which is the result of a series of usurpations. **Marsilius denies, not only to the pope, but to the bishops and clergy, any coercive jurisdiction or any right to pronounce on their own authority excommunications and interdicts, or in any way to impose the observation of the divine law. He is not opposed to penalties against heretics, but he would have them pronounced only by civil tribunals. Desiring to see the clergy practise a holy poverty, he proposes the suppression of tithes and the seizure by the secular power of the greater part of the property of the church.** The clergy, thus deprived of its wealth, privileges and jurisdiction, is further to be deprived of independence, for the civil power is to have the right of appointing to benefices, &c. The supreme authority in the church is to be the council, but a council summoned by the emperor. The pope, no longer possessing any more power than other bishops (though Marsilius recognizes that the supremacy of the Church of Rome goes back to the earliest times of Christianity), is to content himself with a pre-eminence mainly of an honorary kind, without claiming to interpret the Holy Scriptures, define dogmas or distribute benefices; **moreover, he is to be elected by the Christian people, or by the delegates of the people, *i.e.* the princes, or by the council, and these are also to have the power to punish, suspend or depose him.**

Such is this famous work, full of obscurities, redundancies and contradictions, in which the thread of the argument is sometimes lost in a labyrinth of reasonings and citations, both sacred and profane, **but which nevertheless expresses, both in religion and politics, such audacious and novel ideas that it has been possible to trace in it, as it were, a rough sketch of the doctrines developed during the periods of the Reformation and of the French Revolution. The theory was purely democratic, but was all ready to be transformed, by means of a series of fictions and implications, into an imperialist doctrine; and in like manner it contained a visionary plan of reformation which ended, not in the separation of the church from the state, but in the subjection of the church to the state.** To overthrow the ecclesiastical hierarchy, to deprive the clergy of all their privileges, to reduce the pope to the rank of a kind of president of a Christian republic, which governs itself, or rather submits to the government of Caesar—such is the dream formed in 1324 by two masters of the university of Paris.

When in 1326 Louis of Bavaria saw the arrival in Nuremberg of the two authors of the book dedicated to him, startled by the boldness of their political and religious theories, he was at first inclined to treat them as heretics. He soon changed his mind, however, and, admitting them to the circle of his intimates, loaded them with favours. Having become one of the chief inspirers of the imperial policy, **Marsilius accompanied Louis of Bavaria to Italy, where he preached or circulated written attacks against the pope, especially at Milan, and where he came within the sight of the realization of his wildest utopias. To see a king of the Romans crowned emperor at Rome, not by the pope, but by those who claimed to be the delegates of the people (Jan. 17, 1328), to see John XXII. deposed by the head of the Empire (April 18), and a mendicant friar, Pietro de Corbara, raised by an imperial decree to the throne of St Peter (as Nicholas V.) after a sham of a popular election (May 12), all this was merely the application of principles laid down in the *Defensor pacis*.** The two authors of this book played a most active part in the Roman Revolution. Marsilius, appointed imperial vicar, abused his power to persecute the clergy who had remained faithful to John XXII. In recompense for his services, he seems to have been appointed archbishop of Milan, while his collaborator, John of Jandun, obtained from Louis of Bavaria the bishopric of Ferrara.

Marsilius of Padua also composed a treatise *De translatione imperii romani*, which is merely a rearrangement of a work of Landolfo Colonna, *De jurisdictione imperatoris in causa matrimoniali*, **intended to prove the exclusive jurisdiction of the emperor in matrimonial affairs, or rather, to justify the intervention of Louis of Bavaria, who, in the interests of his policy, had just annulled the marriage of the son of the king of Bohemia and the countess of Tirol.** But, above all, in an unpublished work preserved at Oxford, the *Defensor minor*, Marsilius completed and elaborated in a curious manner certain points in the doctrine laid down in the *Defensor pacis*. In it he deals with ecclesiastical jurisdiction, penances, indulgences, crusades and pilgrimages, vows, excommunication, the pope and the council, marriage and divorce. **Here his democratic theory still more clearly leads up to a proclamation of the imperial omnipotence.**

https://www.libertarianism.org/columns/marsilius-radical-medieval-thinker

Marsilius was born between the years of 1275 and 1280. His family had served in the civic administration of his hometown of Padua, in northern Italy. **His father was a notary, and some of his relatives were lawyers.** However, Marsilius did not follow in his family's footsteps. Instead, he chose to study medicine, firstly in his hometown then in the university of Paris. **While studying in Paris, Marsilius encountered the works of Aristotle and Cicero, which would profoundly shape his later political thought.**
...

In arguing that the church should not meddle in secular affairs, **Marsilius pointed to the fact Jesus possessed no political power nor did he wish for his church to exercise political power.** Marsilius based this claim on two pieces of evidence. Firstly, when Jesus was asked by Jewish Pharisees whether or not they should pay taxes to Rome, he replied: "Render unto Caesar the things that are Caesar's, and unto God the things that are God's." Secondly, Jesus' acknowledgement of the judgement of Pontius Pilate proved for Marsilius that secular authority, at least in this world, has the upper hand on spiritual authority. **Furthermore, Marsilius argues that church authority is derived from "the whole body of the faithful."** The people of each community appoint their priests and bishops. No position is divinely ordained by God.
...

Marsilius writes, "Everyone is prone to pursue one's own advantage." Marsilius believes that, by their nature, all people are self-interested; this is the unavoidable condition of humanity. This was a radical position at the time. During the medieval ages pursuing one's own private advantage was often viewed as a vice which was indicative of man's fallen nature. The bible was invoked when condemning self-interested behaviour, like the verse stating that it was "easier for a camel to go through the eye of a needle than for a rich man to enter the kingdom of God." **Marsilius did not agree with this view and instead believed that as long as we are not harming others, we are free to pursue our own advantage as much as we like.**
...

Marsilius explicitly says he is not a democrat. However, this does not disqualify him as being a democrat. Democracy until the late 18th century was synonymous with anarchy, chaos, and factional strife. For example, **even four hundred years after Marsilius, the Founding Father James Madison explicitly denied that his ideas were democratic, yet today the Federalist Papers are one of the most revered texts arguing for representative democracy.**

> https://www.bopsecrets.org/rexroth/essays/lamennais.htm
>
> **Sometimes, and as his life went on, increasingly, [Lamennais] is sort of an epistemological Averroist and "common sense" becomes a universal intellectual soul, and since *le peuple,* the working class, are more universal than anybody else, they become, for the last half of his career, the source of authority.**

https://books.google.fi/books?id=TTYAGD7aKBkC&lpg=PP1&hl=fi&pg=PA40#v=onepage&q&f=false

But Aristotle's naturalism is a dangerous, double-edged sword. Its use in a different manner by Marsilius of Padua yilded a profoundly original contribution to social theory. Writing in support of imperial claims during the struggle for supremacy between Ludwig of Bavaria and Pope John XXII, **Marsilius wrenched Aristotelian naturalism free from the supernatural framework in which Thomas had hoped to contain it and used it to build a surprisingly modern theory of society. Marsilius also departed from Aristotelian thought, for in attacking the papal view that subordinated society to religious and theological ends, he also rejected Aristotle's attempt to cap social analysis with rationally derived ethical ends.** In effect, what Marsilius did was to merge the four causes of Aristotle and to think only of efficient causation.

Along with this methodological change came a revolutionary change in the concept of human nature. For Marsilius, human beings had no propensities toward ethical or religious ends. They are not rational actors, but willful, appetitive creatures whose conduct came from biological needs and not from teleological tendencies toward absolute moral and ethical values. Given the excesses of human biological desires and appetites, the problem of social peace and survival was almost exclusively the problem of channeling and controlling human biological nature. Social analysis, for Marsilius, can concern itself only with the means of establishing peaceful social concourse; it cannot prescribe the goals of society, which come almost entirely from biological needs. **Accordingly, society is primarily a structure for the satisfaction and augmentation of biological-economic needs, and its institutions and whatever knowledge they create should be evaluated only in terms of how well they served these needs.**

Marsilius's view of human nature and society was far more radical than one might at first suspect. **What he effected was nothing less than a closely reasoned transformation of Aristotelian naturalism into a theory that allowed reason no capacity for establishing moral and ethical ends and that confined religion and the priesthood to a narrowly defined and socially irrelevant spiritual function. By turning reason into a means, and religion into a purely spiritual exercise containing no consequences for the organization of social life, Marsilius revived the primary presupposition of Aristotelian naturalism that society is a self-sufficient structure capable of providing all its moral and material needs.** Further, he reduced social theory to a functional discussion of means and ends in which political and social requirements were determined independent of absolute moral and religious values. His was a secular, dynamic, pragmatic, and "democratic" view that echoed ever more loudly in succeeding centuries.12

Leo Strauss's Indictment of Christain Philosophy on JSTOR

Machiavelli was driven to reinvent political philosophy by what Strauss called, in one place, an "anti-theological ire," and, in another, "an antitheological passion."54

> **When antitheological passion induced a thinker to take the extreme step of questioning the supremacy of contemplation, political philosophy broke with the classical tradition, and especially with Aristotle, and took on an entirely new character.** The thinker in question was Machiavelli.55

These are the concluding lines from an essay on the Christian Averroist, Marsilius of Padua. In opposition to Aquinas, Marsilius employed the pagan political philosophy of Aristotle to condemn the political pretensions of the Church. **But in attacking the Church, Marsilius's Averroism ultimately constituted an attack against the idea that law is rooted in revelation, an idea which Averroes himself had been at great pains to accommodate.**

A proven, valuable historiographical concept, the "Radical Enlightenment," most contributors to it (myself included) were unaware, prior to Frederik Stjernfelt's May 2013 Brussels lecture on the usage of the term, reaches back much earlier than Margaret Jacob's *The Radical Enlightenment* of 1981. **First introduced into scholarly debate in an innovative and comprehensive fashion by the conservative German Jewish philosopher Leo Strauss (1899-1973) in the 1920s,**68 **his "Radical Enlightenment" rightly viewed the phenomenon as emerging from an older, more variegated social and cultural underground, especially Epicureanism and late medieval Averroism.**

Radikale Aufklärung [Radical Enlightenment] in his view amounted basically to "atheism," an intellectual tendency that by the commencement of the early Enlightenment era had already existed in rudimentary form for many centuries. **Strauss envisaged *Radikale Aufklärung* as not just a rival to, but also as preceding the "Moderate Enlightenment" chronologically and outlasting it.** For him, there was a less profound divide between Radical Renaissance and *Radikale Aufklärung* than is argued for in this volume. Contending that the Enlightenment possessed two main and in part contrary strands, moderate and radical, with only the latter being anti-religious and genuinely secular,69 Strauss presented a philosophical bifurcation of the Enlightenment subsequently further developed by Strauss himself and then Günter Mühlpfordt,70 Henry May, Giuseppe Ricuperati, Margaret Jacob, Silvia Berti, and Wim Klever.

> 69. Strauss, *Spinoza's Critique of Religion*, 35; Smith, *Spinoza's Book of Life*, 191; **Nicolas Dubos noted, in 2009, that when writing my earlier Enlightenment columes I was, as yet, unaware that the radical-moderate dichotomy first originates with Strauss in the 1920s;** see Dubos, "Hobbes et les Lumières radicales," 38-41.

Strauss introduced the category *Radikale Aufklärung* as part of a general reinterpretation of the Enlightenment on which he embarked while researching Spinoza's Bible criticism.71 To him *Radikale Aufklärung* was the Enlightenment's veritable core; but because his label signified above all "atheism," he chiefly identified what by 1928 he already termed "moderate Enlightenment" in terms of the latter's theistic premises and willingness to compromise with ecclesiastical authority.72 **From the late seventeenth century, "Moderate Enlightenment" may have been the principal reforming project in the eyes of governments, churches, and educators, and have remained so in the minds of most philosophers and historians ever since, but beneath the surface, in terms of effective arguments, contended Strauss, the radical impulse proved sturdier philosophically and culturally,** and in the long run, despite its long clandestine and inconspicuous beginnings, emerged as the "real" or principal Enlightenment, not least in shaping the Enlightenment's troubled legacy, the intellectual paradoxes and dilemmas of post-1800 modernity.73 As well as essentially "atheistic," Strauss unhesitatingly pronounced *Radikale Aufklärung* the "true Enlightenment" while casting Locke, Leibniz, Voltaire, Montesquieu, Moses Mendelssohn, and other committed "moderates" as cautious compromisers who ultimately, with their unworkable philosophical "fixes," weakened rather than strengthened their to many hard-to-defend dualist philosophical contrivances harmonizing reason with faith – and philosophical critique with kings and courts. Strauss also laid particular emphasis on Radical Enlightenment's embracing an exclusively naturalistic conception of science, philosophy, and knowledge, **a naturalism radicals, not unlike Nietzsche later, in his middle period, deployed to ruthlessly strip out all *supernaturalia*.**
…

But although eliminating religious authority must necessarily have far-reaching political and social consequences, Strauss hardly broaches this dimension at all. He did not attach any specific political character to *Radikale Aufklärung*.

https://oll.libertyfund.org/title/filmer-patriarcha-or-the-natural-power-of-kings#lf0140_label_025

Because the Scripture is not favourable to the Liberty of the People; therefore many fly to Natural Reason, and to the Authority of *Aristotle.* I must crave Liberty to examine or explain the Opinion of this great Philosopher; but briefly, I find this Sentence in the Third of his Politiques. *Cap.* 16. δοκεῖ δέ τιοιν φύσιν ἐι τὸ κύ ον ἕνα πάν ων ἐι πολιτῶν, ὅπϐ συνέςηκεν ξ ὁμίων ἡ πόλις. **It seems to some not to be natural for one man to be Lord of all the Citizens, since a City consists of Equals.** D. *Lambine* in his *Latine* Interpretation of this Text, hath omitted the Translation of this word [τὶσιν] by this means he maketh that to be the Opinion of *Aristotle,* which *Aristotle* alleadgeth to be the Opinion but of some. **This Negligence, or Wilful Escape of *Lambine,* in not translating a word so Material, hath been an occasion to deceive many, who looking no farther than this *Latins* Translation, have concluded, and made the World now of late believe, that *Aristotle* here maintains a *Natural Equality* of Men;** and not only our *English* Translator of *Aristotle's Politiques* is in this place misled by following *Lambine;* but even the Learned *Monsieur Duvall* in his *Synopsis* bears them company: **and yet this Version of *Lambine*'s is esteemed the best,** and Printed at *Paris* with *Causabon*'s corrected *Greek*
Copy, though in the rendring of this place, the Elder Translations have been more faithful; and he that shall compare the *Greek* Text with the *Latine,* shall find that ***Casaubon* had just cause in his Preface to *Aristotle*'s Works, to complain that the best Translations of *Aristotle* did need Correction: To prove that in these words which seem to favour the Equality of Mankind, *Aristotle* doth not speak according to his own Judgment, but recites only the Opinion of others; we find him clearly deliver his own Opinion, that the Power of Government did originally arise from the Right of Fatherhood, which cannot possibly consist with that *Natural Equality* which Men dream of: for in the First of his**

Politiques **he agrees exactly with the Scripture, and lays this Foundation of Government, The first *Society***
(saith he) made of Many Houses is a Village, which seems most naturally to be a Colony of Families or foster-Brethren of Children and Childrens Children. And therefore at the beginning, Cities were under the Government of Kings, for the eldest in every house is King: And so for Kindred-sake it is in Colonies. And in the fourth of his Politiques, *cap.* 2. **He gives the Title of the first and Divinest sort of Government to the Institution of Kings, by Defining *Tyranny* to be a Digression from the First and *Divinest.***

Whosoever weighs advisedly these passages, will find little hope of *Natural Reason* in *Aristotle* to prove the *Natural Liberty* of the *Multitude.* **Also before him the Divine *Plato* concludes a Commonweal to be nothing else but a large Family. I know for this Position *Aristotle* quarrels with his Master, but most unjustly; for therein he contradicts his own Principles for they both agree to fetch the Original of Civil Government from the prime Government.** No doubt but *Moses*'s History of the Creation guided these two Philosophers in finding out of this *Lineal Subjections* deduced from the *Laws* of the *First Parents,* **according to that Rule of St. *Chrysostom, God made all Mankind of One Man, that he might teach the World to be Governed by a King, and not by a Multitude.***

The Ignorance of the Creation, occasioned several Errors amongst the *Heathen* Philosophers. *Polybius,* though otherwise a most profound Philosopher, and Judicious Historian, yet here he stumbles; for in searching out the Original of Civil Societies, he conceited, *That Multitudes of Men after a Deluge, a Famine, or a Pestilence, met together like Herds of Cattel without any Dependency, until the strongest Bodies and boldest Minds got the Mastery of their Fellows;* even as it is (saith he) among *Bulls, Bears and Cocks.*

And *Aristotle* himself, forgetting his first Doctrine, tells us, the first *Heroical Kings* were chosen by the People for their deserving well of the Multitude; either by teaching them some New Arts, or by Warring for them, or by Gathering them together, or by Dividing Land amongst them; also *Aristotle* had another Fancy, that those Men who prove wise of Mind, were by Nature intended to be Lords, and Govern; and those which were Strong of Body were ordained to obey, and to be Servants. **But this is a dangerous and uncertain Rule, and not without some Folly; for if a Man prove both *Wise* and *Strong,* what will *Aristotle* have done with him? as he was *Wise,* he could be no Servant, and as he had *Strength,* he could not be a Master; besides, to speak like a Philosopher, *Nature* intends all things to be perfect both in Wit and Strength. The Folly or Imbecillity proceeds from some Errour in Generation or Education; for Nature aims at *Perfection* in all her Works.**

https://www.gutenberg.org/files/55902/55902-h/55902-h.htm#link2H_4_0002

Mr. Mill is exactly the writer to please people of this description. **His arguments are stated with the utmost affectation of precision; his divisions are awfully formal; and his style is generally as dry as that of Euclid's Elements.**
...

The style which the Utilitarians admire suits only those subjects on which it is possible to reason *a priori*. It grew up with the verbal sophistry which flourished during the dark ages. With that sophistry it fell before the Baconian philosophy in the day of the great deliverance of the human mind. The inductive method not only endured but required greater freedom of diction. It was impossible to reason from phenomena up to principles, to mark slight shades of difference in quality, or to estimate the comparative effect of two opposite considerations between which there was no common measure, by means of the naked and meagre jargon of the schoolmen. **Of those schoolmen Mr. Mill has inherited both the spirit and the style. He is an Aristotelian of the fifteenth century, born out of due season. We have here an elaborate treatise on Government, from which, but for two or three passing allusions, it would not appear that the author was aware that any governments actually existed among men. Certain propensities of human nature are assumed; and from these premises the whole science of politics is synthetically deduced!** We can scarcely persuade ourselves that we are not reading a book written before the time of Bacon and Galileo,—a book written in those days in which physicians reasoned from the nature of heat to the treatment of fever, and astronomers proved syllogistically that the planets could have no independent motion,—because the heavens were incorruptible, and nature abhorred a vacuum!

https://www.gutenberg.org/files/55902/55902-h/55902-h.htm#link2H_4_0004

Mr. Mill's error is exactly of the same kind. He reasons syllogistically about power, pleasure, and pain, without attaching any definite notion to any one of those words. There is no more resemblance, says the Westminster Reviewer, between pain and substantia than between pain and a line or an angle. **By his permission, in the very point to which Lord Bacon's observation applies, Mr. Mill's subjects do resemble the *substantia* and *elementum* of the schoolmen and differ from the lines and magnitudes of Euclid. We can reason *a priori* on mathematics, because we can define with an exactitude which precludes all possibility of confusion.** If a mathematician were to admit the least laxity into his notions, if he were to allow himself to be deluded by the vague sense which words bear in popular use, or by the aspect of an ill-drawn diagram, if he were to forget in his reasonings that a point was indivisible, or that the definition of a line excluded breadth, there would be no end to his blunders. **The schoolmen tried to reason mathematically about things which had not been, and perhaps could not be, defined with mathematical accuracy.** We know the result. Mr. Mill has in our time attempted to do the same. He talks of power, for example, as if the meaning of the word power were as determinate as the meaning of the word circle. **But, when we analyse his speculations, we find that his notion of power is, in the words of Bacon, "*phantastica et male terminata.*"**

https://archive.org/details/greeks-romans-germans/page/205/mode/2up?view=theater

The volume of Platonic studies far exceeded the number of books and articles devoted to Aristotle, who, from a quantitative perspective, sank into virtual oblivion and, in qualitative terms, was as derided as Plato was exalted.
...

The fact that Bäumler, a man intimately acquainted with Greek philosophy and letters, mentioned Aristotle's name only once while appropriating his most basic ideas is revealing of the poor esteem in which the Stagirite was held by Nazi intellectuals.
...

Ernst Krieck carried this dismissal of Aristotle even further, making him responsible for the entire decline of traditional Greek education. **Aristotle had encouraged the emergence of a dry, disembodied rationalism, overly literary and abstract, which had lost all sense of proportion between body and spirit.**
...

Aristotle was interesting only, Krieck suggested, as a preserver of the Greek wisdom that he had patiently accumulated in his scrupulous encyclopedias. He revealed himself there, as in other places, to be a simple "curator," in contrast to a true Nordic creator like Plato, **and in any case, he remained a pure "rationalist"**90 **and complete foreigner throughout his life.**

Positive remarks about Aristotle were brief and rare. A few could be found in the work of Ludwig Schemann, who deemed the disowning of Aristotle, as a theoretician of slavery and racial hierarchy, to be "incomprehensible."91

https://books.google.fi/books?id=6mxvEAAAQBAJ&lpg=PR1&hl=fi&pg=PA128#v=onepage&q&f=false

In this essay I distinguish between "intelligence" and "intellect" **using the latter term to indicate the mental scaffolding men erect to deal with what they don't understand.** Belief is from intelligence.

From the crying "Ligo" in Lithuania (to a sun freed of its winter imprisonment),3 down to the Greek archipelago, certain things are believed. **Book instruction obscures them.**
...

The religious element [of Christianity] is to a great extent pagan, but mere paganism is not enough. **The intellectual elements are admittedly Plato and Aristotle, the latter largely destructive of faith, of belief in the sense I have used the word in my opening paragraph.**

---

https://www.gutenberg.org/cache/epub/52263/pg52263-images.html#THINGS_I_OWE_TO_THE_ANCIENTS

Fancy judging the Greeks in the German style, from their philosophers; fancy using **the suburban respectability [Biedermännerei]** of the Socratic schools as a key to what is fundamentally Hellenic!... **The philosophers are of course the decadents of Hellas, the counter-movement directed against the old and noble taste (—against the agonal instinct, against the *Polis,* against the value of the race, against the authority of tradition).**

http://www.perseus.tufts.edu/hopper/text?doc=Perseus%3Atext%3A1999.01.0172%3Atext%3DStat.%3Apage%3D262

Stranger: It was very much as if, in undertaking to divide the human race into two parts, [262d] one should make the division as most people in this country do; **they separate the Hellenic race from all the rest as one, and to all the other races, which are countless in number and have no relation in blood or language to one another, they give the single name "barbarian";** then, because of this single name, they think it is a single species. Or it was as if a man should think he was dividing number into two classes by cutting off a myriad from all the other numbers, with the notion that he was making one separate class, [262e] and then should give one name to all the rest, and because of that name should think that this also formed one class distinct from the other. **A better division, more truly classified and more equal, would be made by dividing number into odd and even, and the human race into male and female;** as for the Lydians and Phrygians and various others they could be opposed to the rest and split off from them when it was impossible to find and separate two parts, [263a] each of which formed a class.

http://www.perseus.tufts.edu/hopper/text?doc=Perseus%3Atext%3A1999.01.0172%3Atext%3DTheaet.%3Asection%3D173c

Socrates: Very well, that is quite appropriate, since it is your wish; and let us speak of the leaders; for why should anyone talk about the inferior philosophers? The leaders, in the first place, from their youth up, remain ignorant of the way to the agora, [173d] do not even know where the court-room is, or the senate-house, or any other public place of assembly; as for laws and decrees, they neither hear the debates upon them nor see them when they are published; and the strivings of political clubs after public offices, and meetings, and banquets, and revellings with chorus girls—it never occurs to them even in their dreams to indulge in such things. **And whether anyone in the city is of high or low birth, or what evil has been inherited by anyone from his ancestors, male or female, are matters to which they pay no more attention than to the number of pints in the sea, as the saying is.** [173e] **And all these things the philosopher does not even know that he does not know; for he does not keep aloof from them for the sake of gaining reputation, but really it is only his body that has its place and home in the city; his mind, considering all these things petty and of no account, disdains them and is borne in all directions,** as Pindar[14] says, "both below the earth," and measuring the surface of the earth, and "above the sky," studying the stars, and investigating the universal nature [174a] of every thing that is, each in its entirety, never lowering itself to anything close at hand.
...

Socrates: Why, take the case of Thales, Theodorus. While he was studying the stars and looking upwards, he fell into a pit, **and a neat, witty Thracian servant girl jeered at him, they say, because he was so eager to know the things in the sky that he could not see what was there before him at his very feet.** The same jest applies to all who pass their lives in philosophy.
...

Socrates: Hence it is, my friend, such a man, both in private, when he meets with individuals, and in public, as I said in the beginning, [174c] when he is obliged to speak in court or elsewhere about the things at his feet and before his eyes, is a laughing-stock not only to Thracian girls but to the multitude in general, for he falls into pits and all sorts of perplexities through inexperience, and his awkwardness is terrible, making him seem a fool; for when it comes to abusing people he has no personal abuse to offer against anyone, because he knows no evil of any man, never having cared for such things; so his perplexity makes him appear ridiculous; and as to laudatory speeches [174d] and the boastings of others, it becomes manifest that he is laughing at them—not pretending to

laugh, but really laughing—and so he is thought to be a fool. **When he hears a panegyric of a despot or a king he fancies he is listening to the praises of some herdsman**—a swineherd, a shepherd, or a neatherd, for instance—who gets much milk from his beasts; but he thinks that the ruler tends and milks a more perverse and treacherous creature than the herdsmen, and that he must grow coarse and uncivilized, [174e] no less than they, for he has no leisure and lives surrounded by a wall, as the herdsmen live in their mountain pens. **And when he hears that someone is amazingly rich, because he owns ten thousand acres of land or more, to him, accustomed as he is to think of the whole earth, this seems very little. And when people sing the praises of lineage and say someone is of noble birth, because he can show seven wealthy ancestors, he thinks that such praises betray an altogether dull and narrow vision on the part of those who utter them;** [175a] **because of lack of education they cannot keep their eyes fixed upon the whole and are unable to calculate that every man has had countless thousands of ancestors and progenitors, among whom have been in any instance rich and poor, kings and slaves, barbarians and Greeks.** And when people pride themselves on a list of twenty-five ancestors and trace their pedigree back to Heracles, the son of Amphitryon, the pettiness of their ideas seems absurd to him; he laughs at them because they cannot free their silly minds of vanity by calculating that [175b] Amphitryon's twenty-fifth ancestor was such as fortune happened to make him, and the fiftieth for that matter. In all these cases the philosopher is derided by the common herd, partly because he seems to be contemptuous, partly because he is ignorant of common things and is always in perplexity.

The *Republic* itself contains the seed of the destruction of any kind of neighborly city-state once its contradictions are exposed to the full glare of the universality of reason. For the division of labor on which the tripartite division of the soul and the city is based – that each nature best performs one job – is inherently universalistic. That is to say, **an architectonic meritocracy could not possibly be confined within the boundaries of a single *polis*.** For, very simply, the best people for the best jobs are universally distributed, requiring some kind of cosmopolitan regime. **In this respect, one could say that what is "noble" about the "noble lie" is that it takes a universalistic principle of meritocracy based on the division of labor and grafts it onto a single, autochthonous *polis*,** embedding its natural hierarchy in the earth of a single city's most ancient past (the "myth of the metals" according to which each class springs from the earth their souls mixed, in ascending order, with iron, silver, and gold [415a-d]). **To clarify the lie would mean the doom of the *polis*.**

>
> Muller's blueprint, he explained in his 1936 Letter to Stalin, "represents quite the *antithesis* of the 'Race Purification' and so-called 'Eugenics' of the Nazis and their Kin ..." **Communist eugenics "works for a surplus [population] reproduction that *combines the highest endowments of every race*, as found in a classless society."** (Emphases added.)

Leo Strauss's Indictment of Christain Philosophy on JSTOR

> Christianity proclaims a suprapolitical truth: the brotherhood of all men.35 **The irony is that this Christian teaching actually reproduces a conclusion to which our reason also leads but which it must prudently deny in practice. In fact, the "fraternity of all men" is the natural truth that Plato's noble lie intentionally obscures.** "The particular or closed political society conflicts with the natural fraternity of all men. Political society in one way or another draws an arbitrary line between man and man."36 Arbitrary deliniations are necessary for political life because speech or rational persuasion is severely limited in its capacity to govern men: gentlemen may be amenable to speeches that appeal to their spiritedness; the base must be made to fear punishment, eternal as well as temporal; neither will be satisfied or converted by the love of rational inquiry.
>
> > 36. Strauss, "The Problem of Socrates," in *Rebirth of Classical Political Rationalism*, pp. 158-59. **Strauss specifically states that the deliberate cultivation of patriotism (love of the *patria*) is part of the noble lie.** Strauss, *The City and Man*, p. 102.

…

In other words, the very notion of a city ruled by philosophy is arguably a way station to some kind of cosmopolitan order.

>
> What we have treated hitherto as the mortal weakness of the Olympians, **the fact that they have no roots in any particular soil, little hold on any definite primeval cult,** has turned out to be their peculiar strength.
> …
>
> Yet when the religious imagination of Greece deepens it twines itself still around these gracious and ever-moving shapes; **the Zeus of Aeschylus moves on into the Zeus of Plato or of Cleanthes or of Marcus Aurelius.** Hermes, Athena, Apollo, all have their long spiritual history. They are but little impeded by the echoes of the old frivolous mythology; still less by any local roots or sectional prejudices or compulsory details of ritual. **As the more highly educated mind of Greece emerged from a particular, local, tribal, conception of religion, the old denationalized Olympians were ready to receive her.**
> …
>
> **By the fourth century the average Athenian must have recognized what philosophers had recognized long before,** that a religion, to be true, must be universal and not the privilege of a particular people. As soon as the Stoics had proclaimed the world to be 'one great City of gods and men', the only Gods with which Greece could satisfactorily people that City were the idealized band of the old Olympians.

…

That Plato's Socrates tries to conceal the inevitable universality of the division of labor within the confines of a harmonious and autochthonous *polis* likely stems from two sources – **a disinclination for philosophy to be distracted from its truest concern, the love of wisdom, by a real-world project for a more rational politics through benevolent despotism, along with the Socratic philosopher's own preference for a neighborly *polis*** in which freewheeling and spontaneous conversations about virtue provide his eros with the psychological loam for the art of midwifery that he practices on his mostly younger fellow conversationalists.6
…

Indeed, as Hegel argues, the very emergence of Socratic philosophy may have sounded the death knell of the *polis*, for however much the universality of reason may have been sheathed in the preference for the aristocratic republic, its dynamism was bound to bore through the confines of the neighborly *polis* and lead to the great cosmopolitan empires of Alexander and Rome.8

https://archive.org/details/in.ernet.dli.2015.85694/page/n479/mode/2up?view=theater

Plato still yielded, in certain points, to the empire of old ideas. **The state which he imagines is still the ancient city: it is small; it must not contain more than five thousand members.** Its government is still regulated on ancient principles: liberty is unknown in it; the object which the legislator proposes to himself is less the perfection of man than the security and grandeur of the association. The family, even, is almost suppressed, that it may not come into competition with the city: the state is the only proprietor; it alone is free: the state alone has a will; only the state has a religion and a belief, and whoever does not believe with it must perish. And yet in the midst of all this the new ideas appear. Plato proclaims, with Socrates and the Sophists, that the moral and political guide is in ourselves; that tradition is nothing, that reason must be consulted, and that laws are just only when they conform to human nature.

These ideas are still more precise in Aristotle. "The law," he says, "is reason." He teaches that we are to seek, not what conforms to the customs of ancestors, but what is good in itself. He adds that, as time progresses, institutions should be modified. He puts aside respect for ancestors. **"Our first ancestors, whether they came from the bosom of the earth, or survived some deluge, resembled, in all probability, those who to-day are the most degraded and the most ignorant among men. It would be an evident absurdity to cling to the opinions of those men." Aristotle, like all the philosophers, absolutely disregards the religious origin of human society: he does not speak of the prytaneum; he does not admit that these local worships were the foundation of the state. "The state," he says, "is nothing else but an association of equal beings seeking in common a happy and comfortable existence."**
…

Socrates had fulfilled the duties of a citizen; and Plato had attempted to work for the state by reforming it. **Aristotle, still more indifferent, confined himself to the part of an observer, and made the state an object of scientific study.** The Epicureans paid no attention to public affairs. "Do not meddle with them," said Epicurus, "unless some higher power compels you to." The Cynics did not wish even to be citizens.

https://www.poetryfoundation.org/poems/43290/the-second-coming

The best lack all conviction, while the worst
Are full of passionate intensity.
Surely some revelation is at hand;
Surely the Second Coming is at hand.

The Stoics returned to politics. Zeno, Cleanthes, and Chrysippus wrote numerous treatises on the government of states. But their principles were far removed from the old municipal politics. These are the terms in which one of the ancients speaks of the doctrines which their writings contained: "Zeno, in his treatise on government, has undertaken to show us that we are not the inhabitants of such a deme, or such a city, separated from each other by a particular code, or exclusive laws, but that we should see citizens in all men, as if we all belonged to the same deme and the same city."1 **We see from this how far ideas had advanced since the age of Socrates, who thought himself bound to adore, as far as he was able, the gods of the state. Even Plato did not plan any other government than that of a city. Zeno passed beyond these narrow limits of human associations.** He disdained the divisions which the religion of ancient ages had established. As he believed in a God of the universe, so he had also the idea of a State into which the whole human race should enter.2

https://www.sacred-texts.com/cla/fsgr/fsgr07.htm#an_fr_84_1

Xenophon, an exile from his country, a brilliant soldier and adventurer as well as a man of letters, is perhaps the first Greek on record who openly lost interest in the city. He thought less about cities and constitutions than about great men and nations, or generals and armies. To him it was idle to spin cobweb formations of ideal laws and communities. Society is right enough if you have a really fine man to lead it.

https://archive.org/details/LeoStraussThoughtsOnMachiavelli_201411/page/n289/mode/2up?view=theater

Xenophon's *Hiero* is the classic defense of tyranny by a wise man, and the *Education of Cyrus* describes how an aristocracy can be transformed by the lowering of the moral standards into an absolute monarchy ruling a large empire. We add the observation that Xenophon's *Oeconomicus*, which starts from the view that the management rather than the increase of one's landed estate, to say nothing of the pursuit of crafts and trade, befits the gentleman, leads up to the proposal of such a compromise between the noble and the profitable as consists in a certain kind of trading in landed estates; **Xenophon appears to be much more tolerant of that "natural and ordinary desire to acquire" than any other classic.** But Machiavelli refers only to the *Hiero* and the *Education of Cyrus*, not to the *Oeconomicus* or to any other of Xenophon's Socratic writings. **Xenophon's thought and work has two foci, Cyrus and Socrates. While Machiavelli is greatly concerned with Cyrus, he forgets Socrates.**

https://books.google.fi/books?id=INcgAwAAQBAJ&lpg=PP1&hl=fi&pg=PA160#v=onepage&q&f=false

According to Aristotle, **Socrates' demand for the total unity of the city turns it into an *oikos*, a household ruled by its "owner," the philosopher-king. The *polis* is entirely swallowed by the "economy." Perfect unity, Aristotle maintains, is not appropriate for the plural, composite nature of the city.** The more the city tends toward complete unity, the more it moves in the direction of household management and royal rule with its architectonic division of labor. Human nature is a composite of intellect and appetite. These can be well arranged but not made unitary, nor can classes be sorted out on the basis of only one character trait or the other (as Plato does with the Guardians and Auxiliaries). The division of labor is not practicable in political communities, where freezing the ruling element permanently in place will cause "outrage," especially among the spirited Achillean kind of men whom the *Republic* is meant most particularly to assuage (1264b6-10).

This outrage is precisely what does lead in the *Republic* itself to the overthrow of the Guardians by the honor-loving Auxiliaries, a revolution which, as we discussed in the last chapter, might just as plausibly take the form of an individual tyrant coming to power as a timocratic class. As we will see in the next chapter, something roughly akin to this happens in Xenophon's *Education of Cyrus*, where the young Cyrus leads a revolution of the other young aristocrats of military age in the Persian Republic (a self-governing regime partly patterned on Platonic prescriptions) against the gerontocracy that rules the republic and its unchanging laws and institutions, including its avoidance of foreign conflict as a source of internal disorder through overweening military ambition and its concentration on purely inward-looking self-government. In one of his many interesting variations on Plato and Aristotle, **whereas Plato believes wisdom should rule and Aristotle believes that this will be intolerable to the nonphilosophic honor-loving citizenry,** Xenophon's Cyrus is motivated by his love of honor to lead a revolution of the honor-loving citizenry issuing in a world-state based on the Xenophontic Socrates' art of *oikonomia*.

https://books.google.fi/books?id=INcgAwAAQBAJ&lpg=PP1&hl=fi&pg=PA186#v=onepage&q&f=false

Whereas, as we have seen in the previous chapters, this monarchical claim is muted by Plato and Aristotle for the sake of the political community, Xenophon goes much further than either of them in jettisoning the claims of republican self-government in favor of an open endorsement of rational, benevolent absolutism. Hence, Xenophon's *Education of Cyrus* can be regarded as his monarchical utopia, a direct riposte (as noted by later Hellenistic, Roman, and Renaissance commentators) to Plato's republican utopia, the *Republic*.2
…

The Platonic Socrates rather starchily refuses to concede that the great Pericles knew the art of ruling as well as Socrates himself – a seeming absurdity that has his interlocutor Callicles spluttering with incredulous indignation – while praise for Athens is conspicuously absent from Aristotle's *Politics* when it comes to discussing even relatively virtuous regimes (as opposed to a segment devoted to Sparta).3
…

The Greeks were also aware of a far more imposing and successful example of large-scale political authority, however, one that was no mere trade association but had apparently worked out complex institutional arrangements for every aspect of human association. This was the Persian Empire, an

enormous regime embracing millions of people from dozens of different nationalities. The Greeks had fought off the Persian kings' attempts to add them to that empire, and this victory began the Greeks' own rise to the greatness of the classical era, **but the thoughtful among them were far from despising the Persian alternative.** On the contrary, they had frequent occasion to rue the comparison between their own fractious, small, and unstable regimes and what struck them as the awesome power and efficiency of the great multinational monarchy to the east.
…

As presented by Xenophon, Cyrus takes the principle of the *oikos* – the household with its private and economic concerns – and expands it until it becomes the basis of the regime itself, swallowing up the polis.
…

Cyrus blasts the virtuous [Persian] republic apart by throwing open the opportunity to rise in life to all its inhabitants, **eventually even including the large mass of toiling commoners hitherto excluded from any kind of civic education or citizen participation (rather as if the Auxiliaries in Plato's *Republic* invited the Artisans to join them as comrades in the common cause of empire).** In this way, Xenophon explores the possibility that an imperial monarchy could democratize opportunity and allow individual merit to override any injunctions to prefer the common good to one's own. The lesson Cyrus has learned in Media is that the individualism characteristic of the Median king and his privatized subjects can, by employing the skill and courage of the Persian education, acquire for each Persian of all classes "great wealth, happiness, and honor" that they would otherwise never experience (1.5.8-12).

>
> (8) I have long felt sure that our forefathers were in their time as good men as we. **For their lives were one long effort towards the self-same deeds of valour as are held in honour now; and still, for all their worth, I fail to see what good they gained either for the state or for themselves.** (9) Yet I cannot bring myself to believe that there is a single virtue practised among mankind merely in order that the brave and good should fare no better than the base ones of the earth. **Men do not forego the pleasures of the moment to say good-bye to all joy for evermore—no, this self-control is a training, so that we may reap the fruits of a larger joy in the time to come.** A man will toil day and night to make himself an orator, yet oratory is not the one aim of his existence: his hope is to influence men by his eloquence and thus achieve some noble end. So too with us, and those like us, who are drilled in the arts of war: **we do not give our labours in order to fight for ever, endlessly and hopelessly, we hope that we too one day, when we have proved our mettle, may win and wear for ourselves and for our city the threefold ornament of wealth, of happiness, of honour.** (10) And if there should be some who have worked hard all their lives and suddenly old-age, they find, has stolen on them unawares, and taken away their powers before they have gathered in the fruit of all their toil, such men seem to me like those who desire to be thrifty husbandmen, and who sow well and plant wisely, but when the time of harvest comes let the fruit drop back ungarnered into the soil whence it sprang. **Or as if an athlete should train himself and reach the heights where victory may be won and at the last forbear to enter the lists—such an one, I take it, would but meet his deserts if all men cried out upon him for a fool.**

We can already anticipate Machiavelli's partiality toward Xenophon among the ancients: **an alliance between a prince and the common people based on material self-interest, a project for turning republican virtue outward as the fuel for imperial expansion and prosperity** – these as we will see, are hallmarks of *The Prince* and the *Discourses*, and references to "Xenophon's Cyrus" are woven by Machiavelli throughout his exploration of them.
…

We recall from Chapter 3 that at just the point where he fully and explicitly defines true monarchy as the multinational empire of a man of supreme prudence governing according to the architectonic art, Aristotle draws back from this claim so as to endorse instead a self-governing aristocratic republic. Xenophon's *Education of Cyrus* fills that lacuna, taking off from precisely where Aristotle ends, tracing what would happen if a man of Alcibiadean ambition but properly trained in civic virtue were to burst the boundaries of the aristocratic republic precisely by acting on its claim to favor meritocracy. **If Hegel is correct that the universalism of Socratic philosophy spelled the death of the polis by making a cosmopolitan state inevitable, the *Education of Cyrus* would seem to provide the speculative blueprint.** With Xenophon's opening lament of the Greek city-states' ills and his idealization of Cyrus's world state, political philosophy and history come close to touching. **For what begins as a monarchical utopia in the *Education of Cyrus* becomes reality as Alexander of Macedon leads his fellow youths out of their backward polis to conquer Persia, assuming the Cyrean role of universal monarch, just as Julius Caesar and Augustus Caesar will do later in subverting the Roman polis** – charismatic imperialists and populists who, like Xenophon's Cyrus, clad themselves in the outward form of republican legitimacy as its restorer and rejuvenator.

To reiterate: **the Cyrean revolution encourages the “career open to talent” (to use Napoleon’s famous phrase) that the old republican education had always claimed to be based on because it claimed to breed the rule of the best.** First as imperial commanders and later as heads of splendid households encompassing the provinces and fiefs of the empire, Cyrus’s comrades excel at the noble and good in ways that were not possible under the republican rule of law with its restrictions on outstanding personal achievement.

>
> (45) Thus it came about that their descendants are to this day faithful subjects of the king, and Cyrus gave them cities, some in the interior, which are still called the cities of the Egyptians, beside Larissa and Kyllene and Kyme on the coast, still held by their descendants.

…

It is hard not to see in Xenophon’s re-creation of the young Cyrus a version of what Alcibiades might have become if a philosophically grounded education had taken hold of his character from early on, converting him, not into the citizen of a republic friendly to philosophy envisioned by Plato and Aristotle, but into a benign, efficient, moderate, and self-controlled universal ruler extending the pattern of the Good to all peoples under his sway while at the same time gratifying his eros for limitless prestige. In other words, **instead of, as the Platonic Socrates does, leading Alcibiades to the universality of thought by way of his universal ambition so as to deliver him back to his city better equipped to govern it, Xenophon in effect takes him from the universality of thought to the actualization of a universalistic government.** Whereas Plato and Aristotle try to resolve the contradiction between democracy and empire by excluding empire and extolling the reform of republican self-government in accordance with reason, Xenophon resolves it (at least speculatively) by forsaking the *polis* and extolling the reform of empire in accordance with reason.
…

That is to say, a crude and minimalist version of Plato’s and Aristotle’s republican prescription, of their preference for the neighborly and austere small polis over empire and even over the feverish polis Athens, yields at length the Xenophontic *pambasileus* in historical reality. As we see in the chapters to come, this derivation of successful imperialism from republican virtue is precisely Machiavelli’s understanding of the success of the greatest empire ever known in reality, that vastly more stable and long-lived successor to the Alexandrian empire, “the Senate and People of Rome.” **Although in almost all respects Machiavelli must forsake the Platonic and Aristotelian accounts of virtue and the art of ruling, in Xenophon he finds a common stalk.**

https://books.google.fi/books?id=INcgAwAAQBAJ&lpg=PP1&hl=fi&pg=PA385#v=onepage&q&f=false

Machiavelli, by contrast, does not believe that the clash between hostile parties implies any such supervening discursive unity or common good to be actualized through reasoned deliberation. The goal of politics is to maximize security and well-being for both princes and peoples. Even the survival of the constitutional order is secondary to this goal. **So much is this the case that he can even recommend that a republic perpetually racked by partisan strife might be better off by becoming “subject after a while to some neighboring state that is better organized than**

itself.” Aristotle, much as he is against a political community becoming imperialistic, would never argue that it could actually benefit by being absorbed by a more powerful foe itself, which is in any case an endorsement of imperialism from another perspective. The only exception to the prohibition against waging a war that is not in self-defense is a just war aimed at freeing an unjustly oppressed people. But that would preclude absorbing it into one’s own domain (*Politics* 1333a30-35, 133b37-1334a11; *Nicomachean Ethics* 1177b9-11). **Among the classics, only Xenophon in the *Education of Cyrus* comes close to Machiavelli’s position, when he has the young Cyrus wax indignant at the follies of neighboring countries and their governments and claim that conquering and absorbing them would improve them**. For Aristotle, only a small and neighborly polis, independent of foreign domination, eschewing empire, and self-sufficient enough to look inward, can approximate the wholeness that orders the cosmos. A multinational state, however, prosperous and powerful it may become, cannot do this. Its size, diversity, and the absence of civic deliberation shared among a self-governing citizenry prevent it from being a whole within the whole.
…

By contrast, Machiavelli is concerned above all with how political “bodies” can survive, regenerate, and expand their power. If this is better achieved by a multinational empire that, like Rome, absorbs its former foes and adds them to the forces it turns outward on the next enemy, that is all to the good. To be the secure and prosperous ally or even province of such an empire might be preferable to an impoverished and constantly imperiled independence.
…

Machiavelli gives his qualified endorsement to Lycurgus’s constitution for exactly the same reasons on which Aristotle based his critique of it: instead of attempting to mix the three powers of government in the service of the common good, according to Aristotle, Lycurgus let them clash, each retarding the other precisely through the vigor of its ambition, but forced to cooperate to the degree necessary to keep their helot population under control and to stave off their external enemies. Aristotle concedes that this clash and check of powers held Sparta together. But in the case of each of its institutions, he criticizes Lycurgus for allowing its partisans to pursue their own ambition and self-interest and thereby abandoning from the outset any hope that these contending factions could be educated to transcend their passions so that they could deliberate in common according to *logos* about the meaning of the just and unjust, thus fulfilling their natures as political animals:

> **And because the [ephorate] was too powerful, and equal to tyranny, the kings were also compelled to cultivate popular favor, so that in this way too the constitution was jointly injured, for out of an aristocracy came to be evolved a democracy.** (1270b6-17)

One fine morning this Achilles became Asiatic, and turned his back to Homer and Greece. Babylon, the great mistress in monarchical prostitutions, accomplished in one day upon Alexander those effects which it required a hundred years to produce on the Persians. Shameful and unforeseen spectacle! The conquered found themselves to be the vanquishers. Asia, that

was at that moment worn out, stained, and in the cadaverous condition of Chaldean rottenness,—old Asia obtained her master for her lover. **A gilded sepulchre, the sink of love, through which the world had passed, such was the passion of Alexander the Great. Modern writers, when they see in all this an admirable political sagacity, are insane. If the Greeks had to contract a little of the Asiatic manners and thinking, this certainly was not the way to do it.** Asiatic customs and ideas ought to have been controlled by the lofty Greek spirit. It would have been necessary, above all, to proceed in this business with a very slow prudence, and with wise considerations.
...

He relied solely on the conquered people, and blindly, without shame or precaution, armed them. He was training thirty thousand Persians for fighting against the Greeks, or to drive them away. He wished that the latter, transformed in a moment, and becoming Persians, should worship him in the Eastern manner, abjuring their good sense.

It was not, as some make us believe, a childish thing, and a mere vanity. It was a perverse and calculated thing. Adoration was the touch-stone for the abdication of good sense and human dignity. The magians, his teachers, felt that this would be the limit of Greek obedience, and that if he were resisted, he would hate Greece, and become entirely a Persian.
...

But, more than any other man, **Alexander has been the founder of all monarchical folly,** not only on account of the unmeasurable influence of his glory, but because from him began in our Europe the royal machinery, preserved and servilely imitated. **The conception of the modern king, the court, and the etiquette have come to us taken precisely from him.**

http://nietzsche.holtof.com/Nietzsche_various/homers_competition.htm

Sparta and Athens surrender to Persia, as Themistocles and Alcibiades have done; they betray Hellenism after they have given up the noblest Hellenic fundamental thought, the competition, **and Alexander, the coarsened copy and abbreviation of Greek history, now invents the cosmopolitan Hellene, [Allerwelts-Hellenen] and the so-called "Hellenism."** (Completed on December 29, 1872)

https://en.wikisource.org/wiki/Richard_Wagner_in_Bayreuth#Chapter_IV.

The history of the development of culture since the time of the Greeks is short enough, when we take into consideration the actual ground it covers, and ignore the periods during which man stood still, went backwards, hesitated or strayed. **The Hellenising of the world—and to make this possible, the Orientalising of Hellenism—that double mission of Alexander the Great, still remains the most important event: the old question whether a foreign civilisation may be transplanted is still the problem that the peoples of modern times are vainly endeavouring to solve. The rhythmic play of those two factors against each other is the force that has determined the course of history heretofore.**

>
> **Having lived fourteen impressionable years in Rome, [Antiochus IV Epiphanes] had imbibed a taste for republican institutions; and as if to foreshadow Augustus, it pleased his humor and policy to clothe his monarchical power in the forms of republican freedom.** The chief effect of his passion for things Roman was the introduction of gladiatorial games in Antioch, his capital. The people resented the brutal sport, but Antiochus won them over by lavish and spectacular displays; when they became accustomed to the butchery he considered their degeneration a personal victory. **It was characteristic of him that he began as an ardent follower of the Stoics, and ended as an easy convert to the Epicureans.**

Thus Christianity appears, for instance, as a product of Oriental antiquity, which was thought out and pursued to its ultimate conclusions by men, with almost intemperate thoroughness. As its influence began to decay, the power of Hellenic culture was revived, and we are now experiencing phenomena so strange that they would hang in the air as unsolved problems, if it were not possible, by spanning an enormous gulf of time, to show their relation to analogous phenomena in Hellenistic culture. **Thus, between Kant and the Eleatics, Schopenhauer and Empedocles, Aeschylus and Wagner, there is so much relationship, so many things in common, that one is vividly impressed with the very relative nature of all notions of time.**

…

The earth which, up to the present, has been more than adequately Orientalised, begins to yearn once more for Hellenism. He who wishes to help her in this respect will certainly need to be gifted for speedy action and to have wings on his heels, in order to synthetise the multitudinous and still undiscovered facts of science and the many conflicting divisions of talent so as to reconnoitre and rule the whole enormous field. **It is now necessary that a generation of anti-Alexanders should arise, endowed with the supreme strength necessary for gathering up, binding together, and joining the individual threads of the fabric, so as to prevent their being scattered to the four winds. The object is not to cut the Gordian knot of Greek culture after the manner adopted by Alexander,** and then to leave its frayed ends fluttering in all directions; it is rather to bind it after it has been loosed. That is our task to-day. **In the person of Wagner I recognise one of these anti-Alexanders:** he rivets and locks together all that is isolated, weak, or in any way defective; if I may be allowed to use a medical expression, he has an astringent power.

Everything in this essay is a prophecy: the proximity of the resurrection of the Greek spirit, **the need of men who will be counter-Alexanders, who will once more tie the Gordian knot of Greek culture, after it has been cut.**

https://www.gutenberg.org/files/14240/14240-h/14240-h.htm **[November 9, 1887]**

In literature, also, Mr. Mahaffy is loud in his lamentations over what he considers to be the shallow society tendencies of the new comedy, and misses the fine freedom of Aristophanes, with his intense patriotism, his vital interest in politics, his large issues and his delight in vigorous national life. He confesses the decay of oratory under the blighting influences of imperialism, and the sterility of those pedantic disquisitions upon style which are the inevitable consequence of the lack of healthy subject-matter. **Indeed, on the last page of his history Mr. Mahaffy makes a formal recantation of most of his political prejudices. He is still of opinion that Demosthenes should have been put to death for resisting the Macedonian invasion, but admits that the imperialism of Rome, which followed the imperialism of Alexander, produced incalculable mischief, beginning with intellectual decay, and ending with financial ruin. 'The touch of Rome,' he says, 'numbed Greece and Egypt, Syria and Asia Minor, and if there are great buildings attesting the splendour of the Empire, where are the signs of intellectual and moral vigour, if we except that stronghold of nationality, the little land of Palestine?'** This palinode is, no doubt, intended to give a plausible air of fairness to the book, but such a death-bed repentance comes too late, and makes the whole preceding history seem not fair but foolish.

https://archive.org/details/in.ernet.dli.2015.69382/page/n287/mode/2up?view=theater

It has been truly said that in the religious sphere the only vital things in Hellenism were philosophy and the Oriental religions. Twilight was indeed falling on the Olympians, in spite of external show—new epiphanies, new festivals, the attempted religious revival in Greece after 146 (p. 36). The great temples that were built and completed were generally to some alien deity, the Serapis of Alexandria or the Fair-browed goddess of Magnesia; the chief exception was that of Athene Polias at Pergamum, built by the Attalid kings for political reasons, for their real god, ancestor of their line, was Dionysus. What was happening can be seen in the one great temple a Greek city planned to a Greek god: **Apollo's temple at Didyma was still unfinished four centuries later, not for lack of money at Miletus, but for lack of that living faith which had formerly enabled cities to complete their temples in a generation.**
…

But perhaps what settled the matter was the conquest of Asia and Egypt; for it was a conquest by the sword alone, not the spirit. Greece was ready to adopt the gods of the foreigner, but the foreigner rarely reciprocated; **Greek Doura freely admitted the gods of Babylon, but no Greek god entered Babylonian Uruk.** Foreign gods might take Greek names; they took little else. They were the stronger, and the conquest of Asia was bound to fail as soon as the East, in the religious sphere, had gauged its own strength and Greek weakness; for what Greece could give to Asia, science and philosophy, only a chosen few could take; these things were never for the mass. Had Ptolemy I enthroned Zeus in Alexandria and persecuted Osiris, Egypt would have fought but would have understood; **that the Ptolemies instead built temples to Egyptian deities meant to Egyptians not toleration but weakness—the invader had no faith in his own gods. From the second century Hellenism was between the hammer and the anvil, the sword of Rome and the spirit of Egypt and Babylon. One man saw it—Antiochus Epiphanes—and has been called a madman ever since. But his**

attempt to unify his realm on a basis of Greek religion and culture failed; and Greek religion got no second chance.

https://archive.org/details/in.ernet.dli.2015.55010/page/n615/mode/2up?view=theater

The failure of the city-state accelerated the decay of the orthodox religion; the gods of the city had proved helpless to defend it, and had forfeited belief. The population was intermingled with foreign merchants who had no share in the city's civic or religious life, and whose amused skepticism spread among the citizens. **The mythology of the ancient local gods survived among the peasantry and the simple townsfolk, and in the official rites; the educated used it for poetry and art, the half-liberated attacked it bitterly, the upper classes supported it as an aid to order, and discountenanced open atheism as bad taste.**
…

Only an act of persistent imagination, or a gift for observation, can enable us to realize what it means to a nation to have its traditional religion die. Classic Greek civilization had been built upon a patriotic devotion to the city-state, and classic morality, though rooted in folkways rather than in faith, had been powerfully reinforced by supernatural belief. **But now neither faith nor patriotism survived in the educated Greek;** civic frontiers had been erased by empires; and the growth of knowledge had secularized morals, marriage, parentage, and law.

>
> *Our task,* ***the mission of the National Socialist movement, is to bring our own people to such political insight that they will not see their goal for the future in the breath-taking sensation of a new Alexander's conquest,*** *but in the industrious work of the German plow, to which the sword need only give soil.*

https://archive.org/details/greeks-romans-germans/page/347/mode/2up?view=theater

But his project of universal rule through the fusion of races proved to be "dangerous for the race."124 **He made the creation of a world empire his ultimate goal, when it should have been but a means to defend and strengthen his race: "World empire represented in his eyes a cardinal value; everything was subordinate to it."** This was the classic error of the Nordic conqueror, given over to hubris and lured by the ideal of unifying the known world under a single power. He thus forgot about the dignity and preeminent importance of his Nordic blood, which was reduced to the same rank of all other blood types, as a mere building block for the creation of an empire: **"For him it was all just pliable material,"**125 leading him to treat the Greeks, the Persians, and all other peoples as though they were of the same rank and level. Since "the idea of race" had "ceased to represent a positive value" in his eyes, Alexander resorted to the "fusion of peoples"; as Schachermeyr wrote, **"It was the *raison d'état* of world empire that dictated his idea for interbreeding."**126 Taeger commented that it was hubris, in wresting him from his native land and setting him off on the route to world conquest, that had caused Alexander to forget his duties to his blood: "**The conqueror uprooted himself from the soil that nourished him and gave him victory.** He became the successor to the Achaemenids, a great Asiatic king, a master of the world who sought to don the royal costume of the Medo-Persians and who tried to introduce the custom of *proskynesis* [prostration before superiors], which caused the otherwise penitent Spartans sent to greet him to object."127

Beyond the Alexandrine example, it was the very notion of a world empire neglectful of racial hierarchy that seemed deleterious. **Schachermeyr reproached Caesar just as he did Alexander; the Roman, who was also a Nordic, had had a similar leveling project for world empire** – but fortunately he had been stopped in his tracks, also like Alexander, by his premature death.128
…

The same contrast between Philip and Alexander appeared in one of Schachermeyr's essays on the figure of the leader in Greek antiquity.131 **Philip of Macedon resuscitated the ideal of the Nordic führer after a period of democratic egalitarianism caused by the racial decline of Athens.** The Macedonian king was rehabilitated and exalted, particularly in comparison to Demosthenes; Philip was "a soldier-king of the purest type, in every respect the true offspring of the Nordic Macedonian people."132

His son, however, although endowed with "personal potential beyond [that of] the ordinary human," **had betrayed the "Nordic *Führerprinzip*," or cult of the leader, for he had "removed himself from his own people." Alexander had become "the representative of the idea of world domination," which "was foreign to the Nordic race and came primarily from the Asiatic East."**133

https://counter-currents.com/2019/07/the-saxon-savior/

Aristotle was adamant, in fact, that whatever we call a collection of people who happen to live in the same place and interact merely for the purpose of making money off each other, we cannot call it a *polis*. Upon closer inspection, then, any of the Germanic tribes described by Tacitus meet Aristotle's definition of a *polis*, and this would apply even later, during the period of the great *Völkerwanderung* that hastened Rome's demise. **But the *polis* had long since died out in Aristotle's homeland, which had much to do with his most famous pupil.**

Alexander the Great & globalism

The seminal event in the ancient world was not the birth or crucifixion of Christ but the career of another man who preached universal brotherhood, Alexander the Great. His conquest of Greece, and the subsequent centuries of rule by his successors over various kingdoms, proved disastrous for Greece politically, economically, ethnically, and culturally. Politically, it put an end to the last vestiges of self-rule that marked the Greek *polis*, as once-proud cities like Athens and Corinth had to get used to being ruled by potentates in distant capitals. Mercenary armies did their fighting, or rather fought over them, and patriotism all but disappeared. Economically, foreign gold flooded the market, leading to spiraling inflation, which crushed the farmers. The availability of goods from places with cheap labor eroded the ability of local producers to compete in the suddenly "global" economy Alexander's conquests had produced.

Ethnically, **Greeks themselves numbered no more than fifteen percent of the population of Alexander's empire,** vastly outnumbered by Middle Easterners. Today, less than half of Greek Y-chromosomes are of European origin, but with due credit to the Turks, this process began much earlier than people suppose, when Alexander the Great inaugurated mass weddings of thousands of his troops to non-Europeans (setting the example himself, as always).
…

Flooded by foreign influences and foreigners themselves, with no power to change their situation, the Greeks grew indifferent, forsaking their old ways and their old Gods for fashionable escapes from society like Cynicism, Epicureanism, or foreign cults. **With the death of the *polis*, Greek culture itself essentially came to an end. What remained were merely second-rate thinkers and dime-novel writers warming themselves over the embers of Plato and Homer.**
…

Before passing on to the religious ramifications of this titanic change in the ancient world, we should note that Rome, though it was originally a *polis*, adopted the Alexandrian globalist model. According to this view, the community can expand indefinitely, ethnic and cultural borders are meaningless, and a civilization can survive the gradual disappearance of its original ethnic stock.
…

In the east, Greek was the *lingua franca* – so much so, that Jews living in Alexandria did not even understand Hebrew anymore, making it necessary to translate the Old Testament into Greek. **A thin veneer of debased Greek culture and language lay atop this simmering racial stewpot, the final fruit of Alexander's dream.**

"But, he says, the Persians, whom we have conquered, are in high honour with me! In my opinion at least, the surest indication of my moderation is that I do not rule even the vanquished tyrannically. **For I came into Asia, not in order to overthrow nations and make a desert of a half part of the world, but in order that those whom I had subdued in war might not regret my victory.** Therefore those are serving in the army with you and are shedding blood in defence of your empire, who, if they had been treated tyrannically would have rebelled. **That possession is not lasting of which we are made owners*b* by the sword; the gratitude for acts of kindness is everlasting. If we wish to hold Asia, not merely to pass through it, our*c* clemency must be shared with its people; their faith in us will make a stable and lasting empire.** And it is certainly true that we have more than we can carry. But it is the way of insatiable avarice to

wish to fill still fuller a vessel which is already overflowing. Yet I am accused of transferring the customs of the vanquished to the Macedonians! **True, for I see in many nations things which we should not blush to imitate; and so great an empire cannot fitly be ruled without contributing some things to the vanquished and learning from them.**

http://www.gutenberg.org/files/4557/4557-h/4557-h.htm#link2H_INTR

Another feature of the medieval theory, pertinent to our inquiry, was an idea which Christianity took over from Greek and Roman thinkers. In the later period of Greek history, which began with the conquests of Alexander the Great, there had emerged the conception of the whole inhabited world as a unity and totality, the idea of the whole human race as one. We may conveniently call it the ecumenical idea—**the principle of the *ecumene* or inhabited world, as opposed to the principle of the *polis* or city.** Promoted by the vast extension of the geographical limits of the Greek world resulting from Alexander's conquests, and by his policy of breaking down the barriers between Greek and barbarian, the idea was reflected in the Stoic doctrine that all men are brothers, and that a man's true country is not his own particular city, but the *ecumene*. [Plutarch long ago saw the connection between the policy of Alexander and the cosmopolitan teaching of Zeno. *De Alexandri Magni virtute*, i. Sec. 6.] **It soon became familiar, popularised by the most popular of the later philosophies of Greece; and just as it had been implied in the imperial aspiration and polity of Alexander, so it was implied, still more clearly, in the imperial theory of Rome.** The idea of the Roman Empire, its theoretical justification, might be described as the realisation of the unity of the world by the establishment of a common order, the unification of mankind in a single world-embracing political organism. **The term "world," *orbis* (*terrarum*), which imperial poets use freely in speaking of the Empire, is more than a mere poetical or patriotic exaggeration; it expresses the idea, the unrealised ideal of the Empire. There is a stone from Halicarnassus in the British Museum, on which the idea is formally expressed from another point of view. The inscription is of the time of Augustus, and the Emperor is designated as "saviour of the community of mankind."** There we have the notion of the human race apprehended as a whole, the ecumenical idea, imposing upon Rome the task described by Virgil as *regere imperio populos*, and more humanely by Pliny as the creation of a single fatherland for all the peoples of the world. [Pliny, *Nat. Hist.* iii. 6.39.]

This idea, which in the Roman Empire and in the Middle Ages took the form of a universal State and a universal Church, passed afterwards into the conception of the intercohesion of peoples as contributors to a common pool of civilisation—**a principle which, when the idea of Progress at last made its appearance in the world, was to be one of the elements in its growth.**

https://archive.org/details/enlightenmentint0000unse_i6k5/page/162/mode/2up?view=theater

The ancients had experienced this sort of society as early as Alexander. **The Macedonian triumph over the Greek city-states was a forceful, unanswerable critique of political parochialism,** and Alexander's vastly ambitious project to marry East and West (literally and figuratively), partially realized by his succession states, envisaged peaceful rule over a diversified population. **Aristotelian distinctions between natural masters and natural slaves could have been maintained only by a totalitarian regime far beyond the technical means, and wholly alien to the basic convictions, of ancient statesmen.**

>
> I assert that it is incumbent upon you to work for the good of the Hellenes, to reign as king over the Macedonians,[145] **and to extend your power over the greatest possible number of the barbarians.** For if you do these things, all men will be grateful to you: the Hellenes for your kindness to them; the Macedonians if you reign over them, not like a tyrant, but like a king; **and the rest of the nations, if by your hands they are delivered from barbaric despotism and are brought under the protection of Hellas.**

Instead, **the creation of empires brought in its train the cosmopolitan conception of man as such, equal, in fact identical, in essential nature and different only in the accidents of wealth, looks, or education.** The Hellenistic states, and later the Roman Empire, destroyed traditional loyalties and social structures; they encouraged the migration of administrators and professors, gave opportunities to freed slaves, and evolved an antique version of what came to be known in modern times as the career open to talents, a doctrine at once the result, and the cause, of a relativist cast of mind. Literary men preached cosmopolitanism in two languages, and their very origins underscored the process of cultural fusion: Seneca, Quintilian, and Martial came from Spain; Cicero, Vergil, Livy, Horace, and Ovid, though all Italians, were all provincials; Apuleius was an African; Plutarch, a Greek; and Lucian, a Syrian.
...

Juvenal's famous diatribe against Eastern immigrants, which conceals anxiety beneath its contempt, sounds like the last cry of aristocratic parochialism against a leveling cosmopolitanism:

> Fellow citizens, I cannot bear a Greek Rome. And yet
> What part of our slum dwellers are Achaian?
> Syrian Orontes flowed into the Tiber long ago,
> Bringing its lingo and habits along.

Fortunately for the philosophes, there was abundant material in antiquity more generous, more relativistic, in a word, more tolerant, than this – much that they could quote for their own purposes.

https://archive.org/details/in.ernet.dli.2015.55010/page/n607/mode/2up?view=theater

After some minor trials at arms which disposed of lesser contenders, they divided the empire into five parts (321)—Antipater taking Macedonia and Greece, Lysimachus Thrace, Antigonus Asia Minor, Seleucus Babylonia, and Ptolemy Egypt. They did not bother to call a confirming synod of the Greek states. **From that moment, except for some fitful interludes in Greece, and the aristocratic republic of Rome, monarchy ruled Europe until the French Revolution.**

>
> This adoption of Oriental despotism by the son of a slave, this identification of god and king, meant the final failure of republican institutions in antiquity, the surrender of the fruits of Marathon; **it was a reversion, like Alexander's, to the forms and theories of Achaemenid and Egyptian courts,** of Ptolemaic, Parthian, and Sassanid kings. **From this Orientalized monarchy came the structure of Byzantine and European kingdoms till the French Revolution. All that was needed now was to ally the Oriental monarch in an Oriental capital with an Oriental faith.** Byzantinism began with Diocletian.

https://penelope.uchicago.edu/Thayer/E/Roman/Texts/Diodorus_Siculus/3A*.html#ref9

6 1 Of all their customs the most astonishing is that which obtains in connection with the death of their kings.[10] **For the priests at Meroë who spend their time in the worship of the gods and the rites which do them honour, being the greatest and most powerful order, whenever the idea comes to them, dispatch a messenger to the king with orders that he die.** 2 **For the gods, they add, have revealed this to them, and it must be that the command of the immortals should in no wise be disregarded by one of mortal frame.** And this order they accompany with other arguments, such as are accepted by a simple-minded nature, which has been bred in a custom that is both ancient and difficult to eradicate and which knows no argument that can be set in opposition to commands enforced by no compulsion. 3 **Now in former times the kings would obey the priests, having been overcome, not by arms nor by force, but because their reasoning powers had been put under a constraint by their very superstition; but during the reign of the second Ptolemy the king of the Ethiopians, Ergamenes, who had had a Greek education and had studied philosophy, was the first to have the courage to disdain the command.** 4 **For assuming a spirit which became the position of a king he entered with his soldiers into the unapproachable place where stood, as it turned out, the golden shrine of the Ethiopians, put the priests to the sword, and after abolishing this custom thereafter ordered affairs after his own will.**

https://archive.org/details/in.ernet.dli.2015.55010/page/n647/mode/2up?view=theater

Literature waned, creative art died; after the third century Alexandria added little to either. **The Egyptians lost respect for the Greeks; the Greeks, if such a thing can be believed, lost respect for themselves. Year by year they forgot their own language, and spoke a corrupt mixture of Greek and Egyptian; more and more of them married their sisters, after native custom, or married into Egyptian families and were absorbed; thousands of them worshiped Egyptian gods.** By the second century the Greeks had ceased to be the dominant race even politically; the
Ptolemies, to preserve their authority, had adopted the Egyptian faith and ritual, and had increased the power of the priests. **As the kings sank into epicurean ease the clergy reasserted its leadership, and won back year by year the lands and privileges which the earlier Ptolemies had taken away.[50] The Rosetta Stone, dated 196 B.C., describes the coronation ceremonies of Ptolemy V as following almost completely the Egyptian forms.** Under Ptolemy V (203-181) and Ptolemy VI (181-145) dynastic feuds absorbed the energies of the royal house, while Egyptian agriculture and industry decayed. Order and peace were not restored until Caesar, as a mere incident in his career, took Egypt with hardly a blow, and Augustus made it a province of Rome (30 B.C.).

> https://penelope.uchicago.edu/Thayer/E/Roman/Texts/Strabo/17A2*.html#ref87

At any rate, Polybius, who had visited the city, is disgusted with the state of things then existing; and he says that three classes inhabited the city: first, the Aegyptian or native stock of people, who were quick-tempered and not[88] inclined to strife; and, secondly, the mercenary class, who were severe and numerous and intractable (for by an ancient custom they would maintain foreign men-at-arms, who had been trained to rule rather than to be ruled, on account of the worthlessness of the kings); and, third, **the tribe of the Alexandrians, who also were not distinctly inclined to civil life,** and for the same reasons, **but still they were better than those others,[89] for even though they were a mixed people, still they were Greeks by origin and mindful of the customs common to the Greeks.**

But after this mass of people had also been blotted out, chiefly by Euergetes Physcon, in whose time Polybius went to Alexandria (for, being opposed by factions, Physcon more often sent the masses against the soldiers and thus caused their destruction)—such being the state of affairs in the city, Polybius says, in very truth there remained for one, in the words of the poet, merely

> "to go to Aegypt, a long and painful journey."[90]

13 **Such, then, if not worse, was the state of affairs under the later kings also;** but the Romans have, to the best of their ability, I might say, set most things right, having organised the city as I have said,[91] and having appointed throughout the country officials called Epistrategi[92] and Nomarchs[93] and Ethnarchs,[94] thought worthy to superintend affairs of no great importance.

> https://archive.org/details/in.ernet.dli.2015.205098/page/n209/mode/2up?view=theater
>
> **This account is very defective, for it omits at least two most important classes, the so-called Macedonian or household troops, which in every home document are clearly distinguished from the mercenaries; and the Jews, who had long been a part of the population, and who under Philometor had attained to places of public trust. This account, however, does insist upon the disappearance of the Greek population of Alexandria,** and though we may read with a smile the rubbish of Justin (xxxviii. 8), that the terrified populace fled for fear of death, and left the king alone with his servants, the lord of empty houses, **so that he solicited settlers by an edict (*edicto peregrinos sollicitat*), we may possibly have before us traces of an edict by which Egyptians and Syrians (Jews) were granted the privileges of Alexandrian citizenship, and the Greek population discouraged and reduced.**
>
> https://en.wikipedia.org/wiki/Ptolemy_VIII_Physcon
>
> **After Ptolemy VI's death in 145 BC, Ptolemy VIII returned to Egypt as co-ruler with his sister.** His cruel treatment of opposition and his decision to marry his niece Cleopatra III and promote her to the status of co-regent led to a civil war from 132 to 126 BC, in which Cleopatra II controlled Alexandria and enjoyed the support of the Greek population of the country, while Ptolemy VIII and Cleopatra III controlled most of the rest of Egypt and were supported by the native Egyptians. **During this war, native Egyptians were promoted to the highest echelons of the Ptolemaic government for the first time.** Ptolemy VIII was victorious and ruled alongside Cleopatra II and Cleopatra III until his death in 116 BC.
>
> The ancient Greek sources on Ptolemy VIII are extremely hostile, characterising him as cruel and mocking him as fat and degenerate, as part of a contrast with Ptolemy VI, whom they present extremely positively. **The historian Günther Hölbl calls him "one of the most brutal and at the same time one of the shrewdest politicians of the Hellenistic Age."[2]**
> ...
>
> **Although Alexandria had sided with Cleopatra II and she tended to be supported by Greeks and Jews throughout the country, Ptolemy VIII and Cleopatra III were more popular with the native Egyptian population. Most of Egypt continued to acknowledge Ptolemy VIII as king.** In the south of the country, however, a man named Harsiesi took advantage of the chaos to rebel – following in the footsteps of the rebellion of Hugronaphor and Ankhmakis (206-185 BC). Harsiesi probably declared himself Pharaoh and managed to seize control of Thebes in August or September of 131 BC. **He was expelled in November and pursued by Paos, the *strategos* of the Thebaid, who was also an Egyptian.[63][62]**
>
> Ptolemy VIII and Cleopatra III had returned from Cyprus to Egypt by the beginning of 130 BC. By spring, they were in charge of Memphis. **Impressed by Paos' success against Harsiesi, they promoted him to command over the whole of Upper Egypt and put him in charge of the whole military apparatus – the first time that a native Egyptian had held such a prominent position.** Harsiesi was finally captured and executed in September 130 BC.[63]

http://penelope.uchicago.edu/Thayer/E/Roman/Texts/Caesar/Civil_Wars/3D*.html

110 The forces with Achillas were not such as to seem contemptible in respect of number or grade of men or experience in warfare. For he had twenty thousand men under arms. **These consisted of soldiers of Gabinius who had habituated themselves to Alexandrian life and licence and had unlearnt the name and discipline of the Roman people [qui iam in consuetudinem Alexandrinae vitae ac licentiae venerant et nomen disciplinamque populi Romani dedidicerant] and married wives by whom very many of them had children. To them were added men collected from among the freebooters and brigands of Syria and the province of Cilicia and the neighbouring regions; also many condemned criminals and exiles had joined them. All our own fugitive slaves had a sure place of refuge at Alexandria, and assurance of their lives on the condition of giving in their names and being on the army roll; and if any one of them was arrested by his owner he would be rescued by the common consent of the soldiery, who repelled violence done to their comrades as a peril to their own selves, since they were all alike involved in similar guilt. These men had been in the habit of demanding for execution the friends of the princes, of plundering the property of the rich, [bona locupletum] of besetting the king's palace to secure an increase of pay, of driving one man from the throne and summoning another to fill it, after an ancient custom of the Alexandrian army.**

https://en.wikipedia.org/wiki/Antino%C3%B6polis

During the Roman Empire, the city of Antinoöpolis was erected in AD 130 by the emperor Hadrian on the site of Hir-we as the cult centre of the deified Antinoüs. All previous buildings, including a necropolis, were razed and replaced, with the exception of the Temple of Ramses II.[4][2] Hadrian also had political motives for the creation of Antinoöpolis, which was to be the first Hellenic city in the Middle Nile region, thus serving as a bastion of Greek culture within the Egyptian area. **To encourage Egyptians to integrate with this imported Greek culture, he permitted Greeks and Egyptians in the city to marry and allowed the main deity of Hir-we, Bes, to continue to be worshipped in Antinoöpolis alongside the new primary deity, Osiris-Antinoüs.[4]**

https://books.google.fi/books?id=VV8hBcCnYaIC&lpg=PP1&hl=fi&pg=PA254#v=onepage&q&f=false

As the basis for the constitution of the new city of Antinoopolis, Hadrian chose that of Naucratis, the oldest Greek *polis* in Egypt, rather than of Ptolemais or of Alexandria – the great city would have been an unsuitable model, for it had been deprived of an essential feature of the *polis*, the council (*boule*), by its Roman conquerors. **It is easy to see why an emperor with such a love of antiquity should prefer the ancient Naucratis to the relative upstart Ptolemais.** Such evidence as there is suggests that the settlers came from families of the '6,475 cleruchs' in the Heptanomia and from Ptolemais; some of the men will probably have been army veterans. **The settlers were encouraged to enrol by a series of very striking privileges, which would put Antinoopolis in an enviable category of its own:** not least, exemption from the poll tax (*laographia*), from the tax on goods in transit (*enkyklion*) – with, initially, some extension of these exemptions to relatives of new citizens who remained in their place of origin – **and exemption from compulsory public services (liturgies) outside Antinoopolis itself,** were all very attractive. Further, Antinoites would enjoy the right to choose to have lawsuits in which they were involved heard at Antinoopolis, an 'alimentary' system was established – a child support scheme, and the distribution of free corn, on the model of the *frumentatio* at Rome, is also attested. At first sight the aim was to create a 'bulwark of Hellenism in Middle Egypt.' **One further privilege, however, requires this view to be modified: Antinoites, both men and women, were granted the right of intermarriage with native Egyptians, *epigamia* – not enjoyed by the Naucratites. This meant that non-Greeks could become citizens of the new foundation, and thus acquire these great benefits. One must infer that Hadrian viewed this as a means of spreading Hellenism – or, put another way, that he did not regard Hellenic identity as having a racial basis.**40

http://www.attalus.org/old/athenaeus13a.html

And this custom of shaving the beard, originated in the age of Alexander, [565] as Chrysippus tells us in the fourth book of his treatise *On the Beautiful and on Pleasure*. And I think it will not be inappropriate if I quote what he says; for he is an author of whom I am very fond, on account of his great learning and his gentle good-humoured disposition.

https://archive.org/details/in.ernet.dli.2015.218820/page/n353/mode/2up?view=theater

A rather feminine, over-civilized trait shows itself too in the beardlessness which was then universal; one of the Seleucids who did not follow the fashion became so conspicuous that he got the nickname of *πώγων*, the Man with the Beard.

http://www.perseus.tufts.edu/hopper/text?doc=Perseus%3Atext%3A1999.02.0137%3Abook%3D7%3Achapter%3D59

> The next point upon which all nations appear to have agreed, was the employment of barbers.[2] The Romans, however, were more tardy in the adoption of their services. **According to Varro, they were introduced into Italy from Sicily, in the year of Rome 454,**[3] having been brought over by P. Titinius Mena: before which time the Romans did not cut the hair. **The younger Africanus**[4] **was the first who adopted the custom of shaving every day.** The late Emperor Augustus always made use of razors.[5]

https://books.google.fi/books?id=lkFaju2praAC&lpg=PP1&hl=fi&pg=PA15#v=onepage&q&f=false

With the assistance of Cardinals Albizi and Barberini, La Peyrère made his apology to the Pope.64 From its initial claim that it was Calvinism that led him astray, to his contention that as far as La Peyrère was now concerned, the Pope's will shall be La Peyrére's reason and law, **to his conclusion that Pope Alexander VII would accomplish what Alexander the Great had started, namely uniting all mankind,** the apology reeks with hypocrisy. **Pope Alexander, according to La Peyrère's finale, was going to play the role previously given to the King of France.** He would reunite all of the schismatics and bring about the conversion of the Jews.65

https://penelope.uchicago.edu/Thayer/E/Roman/Texts/Polybius/36*.html

5 For instance, take the following case. **In our own time the whole of Greece has been subject to a low birth-rate and a general decrease of the population, owing to which cities have become deserted and the land has ceased to yield fruit, although there have neither been continuous wars nor epidemics.** 6 If, then, any one had advised us to send and ask the gods about this, and find out what we ought to say or do, to increase in number and make our cities more populous, would it not seem absurd, the cause of the evil being evident and the remedy being in our own hands?º 7 **For as men had fallen into such a state of pretentiousness, avarice, and indolence that they did not wish to marry, or if they married to rear the children born to them, or at most as a rule but one or two of them, so as to leave these in affluence and bring them up to waste their substance, the evil rapidly and insensibly grew.** 8 For in cases where of one or two children the one was carried off by war and the other by sickness, it is evident that the houses must have been left unoccupied, and as in the case of swarms of bees, so by small degrees cities became resourceless and feeble. 9 **About this it was of no use at all to ask the gods to suggest a means of deliverance from such an evil.** 10 For any ordinary man will tell you that the most effectual cure had to be men's own action, in either striving after other objects, or if not, in passing laws making it compulsory to rear children. **Neither prophets nor magic were here of any service,** 11 **and the same holds good for all particulars.** 12 But in cases where it is either impossible or difficult to detect the cause the question is open to doubt. One such case is that of Macedonia. 13 For the Macedonians had met with many signal favours from Rome; **the country as a whole had been delivered from the arbitrary rule and taxation of autocrats,** and, as all confessed, now enjoyed freedom in place of servitude, and the several cities had, owing to the beneficent action of Rome, been freed from serious civil discord and internecine massacres. ... **But now they witnessed in quite a short time more of their citizens exiled, tortured and murdered by this false Philip than by any of their previous real kings.** ... 14 But while they were defeated by the Romans in fighting for Demetrius and Perseus, yet now fighting for a hateful man and displaying great valour in defence of his throne, they worsted the Romans. 15 **How can anyone fail to be nonplused by such an event? for here it is most difficult to detect the cause. So that in pronouncing on this and similar phenomena we may well say that the thing was a heaven-sent infatuation, and that all the Macedonians were visited by the wrath of God,** as will be evident from what follows.

https://archive.org/details/in.ernet.dli.2015.218820/page/n341/mode/2up?view=theater

The Greek decadence was taken as the Classical ideal; a Greek that was no longer Greek, as the strong fabric of Hellenic being—such was, unconsciously, the heart of the Classicist theory. Winckelmann took as the “flower” of Greek art works like the Belvedere Apollo, the Belvedere Hercules, the Niobids, which are in truth the over-ripe, withered, and even rotting fruits of the Hellenic creativeness.
...

The Periclean Age having held every one under a continued hypnosis, the Alexandrine period of Greek culture has been passed over for two thousand years, being treated either as decadence or simply as non-existent.
...

If a deeper interest in the Alexandrian age has only recently awakened, there is an obvious, one might say an egoistic, reason for it: it is very like our own.
...

The favourite form of government is absolutism, but enlightened absolutism: **Antigonos Gonatas called monarchy an *ἐνδοξος δουλεία*, a glorious servitude, which sounds quite Frederician,** and the Diadochi loved to give themselves names such as *Euergetes*, the Benefactor, or *Soter*, the Saviour; in fact even the heads of philosophic schools, such as Epicurus, were given such honourable titles.
...

In the Polis the individual had regarded himself simply as a part, member, and organ of a narrow special community which was all in all to him; now, as the Stoa taught, the true State is the cosmos, and the duties of a citizen and father begin to be looked upon with the eyes of the Cynic philosopher whose portrait Epictetus, a few centuries later, limned so shrewdly:

> "**The Kingdom of the Cynic is well worth denying oneself wife and children for its sake. He sees all men as his children. Is it really the greatest benefit for mankind to bring a few snivelling children into the world? Who has done more for humanity as a whole: Priam, who begot fifty wastrels, or Homer?** You ask me if the Cynic will take part in politics? You fool, can there be a greater political problem than his? Is a man to make speeches on taxes and revenues before the Athenians when his duty is to converse with all men, be they Athenians, Corinthians, or Romans, and not about taxes and revenues, about war and peace, but about happiness and misery, good and evil fortune, slavery and freedom?"

https://archive.org/details/in.ernet.dli.2015.57913/page/n373/mode/2up?view=theater

Scientific worlds are superficial worlds, practical, soulless and purely extensive worlds. The ideas of Buddhism, of Stoicism, and of Socialism alike rest upon them.2

> 2. **The first on the atheistical system of Sankhya, the second (through Socrates) on the Sophists, the third on English sensualism.**

Life is no longer to be lived as something self-evident—hardly a matter of consciousness, let alone choice—or to be accepted as God-willed destiny, but is to be treated as a problem, presented as the intellect sees it, judged by "utilitarian" or "rational" criteria. This, at the back, is what all three mean. The brain rules, because the soul abdicates. Culture-men live unconsciously, Civilization-men consciously. The Megalopolis —sceptical, practical, artificial—*alone* represents Civilization to-day. The soil-peasantry before its gates does not count. The "People" means the city-people, an in-organic mass, something fluctuating. The peasant is *not* democratic—this again being a notion belonging to mechanical and urban existence1—and he is therefore overlooked, despised, detested. **With the vanishing of the old "estates"—gentry and priesthood—he is the only organic man, the sole relic of the Early Culture. There is no place for him either in Stoic or in Socialistic thought.**

---

https://www.counter-currents.com/2018/08/marxism-vs-national-socialism/

Marxism was not created in a vacuum. It could only come into being in a world that was already decaying and already infected with ideas similar to it. Hitler describes the role of Karl Marx thus:

> ... **international Marxism itself is just the transformation, by the Jew Karl Marx, of a long existing World-Concept into a definite political profession of faith. Without the widespread pre-existing foundation of such a poison, the amazing political success of this doctrine would never have been possible.** Among millions of people, Karl Marx was the one man who, with the sure eye of the prophet, recognized the poisons essential to his plan were already in the swamp of a slowly decaying world. He separated and identified those poisons, like a black magic wizard, to make a concentrated solution he could use to speed the destruction of the free nations on this earth. All this was done to serve his race.[22]

https://en.wikisource.org/wiki/Lives_of_the_Eminent_Philosophers/Book_IX#Heraclitus

1. Heraclitus, son of Bloson or, according to some, of Heracon, was a native of Ephesus. He flourished in the 69th Olympiad.[1]

> 1. 504-500 B.C.

He was lofty-minded beyond all other men,[2] and over-weening, as is clear from his book in which he says: "Much learning does not teach understanding; else would it have taught Hesiod and Pythagoras, or, again, Xenophanes and Hecataeus."[3] For "this one thing is wisdom, to understand thought, as that which guides all the world everywhere."[4] **And he used to say that "Homer deserved to be chased out of the lists and beaten with rods, and Archilochus likewise."[5]**

2. Again he would say: "There is more need to extinguish insolence than an outbreak of fire,"[6] and "The people must fight for the law as for city-walls."[7] He attacks the Ephesians, too, for banishing his friend Hermodorus: he says: "**The Ephesians would do well to end their lives, every grown man of them, and leave the city to beardless boys,** for that they have driven out Hermodorus, the worthiest man among them, saying, 'We will have none who is worthiest among us; or if there be any such, let him go elsewhere and consort with others.'"[8] And when he was requested by them to make laws, he scorned the request because the state was already in the grip of a bad constitution. 3. He would retire to the temple of Artemis and play at knuckle-bones with the boys; and when the Ephesians stood round him and looked on, "Why, you rascals," he said, "are you astonished? **Is it not better to do this than to take part in your civil life?**"

https://publish.iupress.indiana.edu/read/nietzsche-s-esistential-imperative/section/9a851b55-be5e-4461-a25d-58919afac59e

It is in the Stoic interpretation of Heraclitus, after all, that Nietzsche finds his precursors: **“this doctrine of Zarathustra’s could in the final analysis already have been taught by Heraclitus. At a minimum there are traces of it in the Stoics, who inherited almost all of their fundamental ideas from Heraclitus.”**[5]

https://www.oxfordphilsoc.org/Documents/Chadwick/2017_L.pdf

In his seminal *History of Western Philosophy*, **Bertrand Russell describes the outlook of Friedrich Nietzsche as one of “aristocratic anarchism, like Byron’s.”**

https://archive.org/details/humanalltohuman033380mbp/page/n307/mode/2up?view=theater

480. Envy and Inertia in Different Courses.—The two opposing parties, **the socialist and the national,**—or whatever they may be called in the different countries of Europe,—are worthy of each other; envy and laziness are the motive powers in each of them. **In the one camp they desire to work as little as possible with their hands, in the other as little as possible with their heads; in the latter they hate and envy prominent, self-evolving individuals, who do not willingly allow themselves to be drawn up in rank and file for the purpose of a collective effect;** in the former they hate and envy the better social caste, which is more favourably circumstanced outwardly, whose peculiar mission, the production of the highest blessings of culture, makes life inwardly all the harder and more painful.

https://archive.org/details/dawnofday029675mbp/page/n25/mode/2up?view=theater

The free man is immoral, because it is his *will* to depend upon himself and not upon tradition: **in all the primitive states of humanity “evil” is equivalent to “individual,” “free,” “arbitrary,” “unaccustomed,” “unforeseen,” “incalculable.”**
…

And every individual action, every individual mode of thinking, causes dread. It is impossible to determine how much the more select, rare, and original minds must have suffered in the course of time by being considered as evil and dangerous, *yea, because they even looked upon themselves as such*. **Under the dominating influence of the morality of custom, originality of every kind came to acquire a bad conscience;** and even now the sky of the best minds seems to be more overcast by this thought than it need be.

https://archive.org/details/essayonaristocra00bran/page/34/mode/2up?view=theater

Nietzsche resembles Hartmann in his attacks on socialists and anarchists, with the difference that Hartmann’s attitude is here more that of the savant, **while Nietzsche has the bad taste to delight in talking about “anarchist dogs,” expressing in the same breath his own loathing of the State.**

https://en.wikipedia.org/wiki/Anarchism_and_Friedrich_Nietzsche

One researcher notes: "Indeed, translations of Nietzsche's writings in the United States very likely appeared first in
Liberty, the anarchist journal edited by Benjamin Tucker." He adds **"Tucker preferred the strategy of exploiting his writings, but proceeding with due caution: 'Nietzsche says splendid things, – often, indeed, Anarchist things, – but he is no Anarchist. It is of the Anarchists, then, to intellectually exploit this would-be exploiter. He may be utilized profitably, but not prophetably.'"**[22]
…

Emma Goldman was profoundly influenced by Nietzsche "so much so that all of Nietzsche's books could be mail-ordered through her magazine *Mother Earth*".[26] Ultimately Goldman's view of Nietzsche can be summarized when she manifests in her autobiography *Living My Life*, "I pointed out that Nietzsche was

not a social theorist but a poet, a rebel and innovator. **His aristocracy was neither of birth nor of purse; it was of the spirit. In that respect Nietzsche was an anarchist, and all true anarchists were aristocrats,** I said" and "[i]n Vienna one could hear interesting lectures on modern German prose and poetry. One could read the works of the young iconoclasts in art and letters, the most daring among them being Nietzsche. The magic of his language, the beauty of his vision, carried me to undreamed-of heights. I longed to devour every line of his writings, but I was too poor to buy them."[30] Goldman even went as far as to "baptize" Nietzsche "as an honorary anarchist".[2]

https://archive.org/details/TheMythOfTheTwentiethCentury_400/page/n363/mode/2up?view=theater

The Red standards then joined the banner of Nietzsche, and the nomadic wandering Marxist preachers – the sort of men whose doctrine scarcely anyone else had unmasked with such derision as Nietzsche himself. **In his name, racial pollution through Syrians and Blacks was sanctified, although Nietzsche, in fact, strove for selective racial breeding.** Nietzsche has fallen to the dreams of overheated political whores, which is worse than falling into the hands of robbers. The German people heard only of a release from all bonds, subjectivism, personality, and nothing about discipline and inward building up.

https://archive.org/details/talkswithmussoli006557mbp/page/n81/mode/2up?view=theater

For the rest, every revolution creates new forms, new myths and new rites; and the would-be revolutionist, while using old traditions, must refashion them. **He must create new festivals, new gestures, new forms, which will themselves in turn become traditional.** The airplane festival is new to-day. In half a century it will be encrusted with the patina of tradition."

"Don't you think that many young men are only anarchists because they have no chance of becoming rulers?"

"Of course," he replied; "every anarchist is a dictator who has missed fire."

Finally, he became a hater of his kind and wandered on the mountains, and there he continued to live, making his diet of grass and herbs. However, when this gave him dropsy, he made his way back to the city and put this riddle to the physicians, whether they were competent to create a drought after heavy rain. They could make nothing of this, whereupon he buried himself in a cowshed, expecting that the noxious damp humour would be drawn out of him by the warmth of the manure. But, as even this was of no avail, he died at the age of sixty.
…

Hermippus, too, says that he asked the doctors whether anyone could by emptying the intestines draw off the moisture; and when they said it was impossible, he put himself in the sun and bade his servants plaster him over with cow-dung. Being thus stretched and prone, he died the next day and was buried in the market-place. Neanthes of Cyzicus states that, being unable to tear off the dung, he remained as he was and, being unrecognizable when so transformed, **he was devoured by dogs.**

5. He was exceptional from his boyhood; for when a youth he used to say that he knew nothing, although when he was grown up he claimed that he knew everything. **He was nobody's pupil, but he declared that he "inquired of himself,"[10] and learned everything from himself.**
…

7. Here is a general summary of his doctrines. **All things are composed of fire, and into fire they are again resolved; further, all things come about by destiny, and existent things are brought into harmony by the clash of opposing currents; again, all things are filled with souls and divinities.** He has also given an account of all the orderly happenings in the universe, **and declares the sun to be no larger than it appears.** Another of his sayings is: "Of soul thou shalt never find boundaries, not if thou trackest it on every path; so deep is its cause."[13] Self-conceit he used to call a falling sickness (epilepsy) and eyesight a lying sense.[14]
…

8. Coming now to his particular tenets, we may state them as follows: fire is the element, all things are exchange for fire and come into being by rarefaction and condensation;[15] but of this he gives no clear explanation. All things come into being by conflict of opposites, and the sum of things flows like a stream. Further, **all that is is limited and forms one world.** And it is alternately born from fire and again resolved into fire in fixed cycles to all eternity, and this is determined by destiny. Of the opposites that which tends to birth or creation is called war and strife, and that which tends to destruction by fire is called concord and peace.[16]

https://en.wikisource.org/wiki/Early_Greek_Philosophy/Herakleitos_of_Ephesos#cite_ref-12

(1) It is wise to hearken, not to me, but to my Word, **and to confess that all things are one.**[14] R.P. 40.

(2) Though this Word[15] is true evermore, yet men are as unable to understand it when they hear it for the first time as before they have heard it at all. For, though all things come to pass in accordance with this Word, men seem as if they had no experience of them, when they make trial of words and deeds such as I set forth, dividing each thing according to its kind and showing how it truly is. But other men know not what they are doing when awake, even as they forget what they do in sleep. R. P. 32.
...

(35) **Hesiod is most men's teacher. Men are sure he knew very many things, a man who did not know day or night!** They are one.[27] R. P. 39 b.

(36) God is day and night, winter and summer, war and peace, surfeit and hunger; but he takes various shapes, just as fire,[28] when it is mingled with spices, is named according to the savour of each. R. P. 39 b.
...

(43) **Homer was wrong in saying: "Would that strife might perish from among gods and men!" He did not see that he was praying for the destruction of the universe; for, if his prayer were heard, all things would pass away.**[29] ... R. P. 34 d.

(44) War is the father of all and the king of all; and some he has made gods and some men, some bond and some free. R. P. 34.
...

(85) Corpses are more fit to be cast out than dung.
...

(91b) **Those who speak with understanding must hold fast to what is common to all as a city holds fast to its law, and even more strongly. For all human laws are fed by the one divine law. It prevails as much as it will, and suffices for all things with something to spare.** R. P. 43.

(92) **So we must follow the common,**[42] **yet though my Word is common, the many live as if they had a wisdom of their own.** R. P. 44.
...

(95) **The waking have one common world, but the sleeping turn aside each into a world of his own.**
...

(98, 99) **The wisest man is an ape compared to God, just as the most beautiful ape is ugly compared to man.**
...

(111) For what thought or wisdom have they? They follow the poets and take the crowd as their teacher, knowing not that there are many bad and few good.

For even the best of them choose one thing above all others, immortal glory among mortals, while most of them are glutted like beasts.[46] R. P. 31 a.
...

(125) **The mysteries practised among men are unholy mysteries.** R. P. 48.

(126) And they pray to these images, as if one were to talk with a man's house, knowing not what gods or heroes are. R. P. 49 a.

(127) **For if it were not to Dionysos that they made a procession and sang the shameful phallic hymn, they would be acting most shamelessly. But Hades is the same as Dionysos in whose honour they go mad and rave.** R. P. 49.

(129, 130) They vainly purify themselves by defiling themselves with blood, just as if one who had stepped into the mud were to wash his feet in mud. Any man who marked him doing thus, would deem him mad. R. P. 49 a.

https://archive.org/details/in.ernet.dli.2015.55010/page/n173/mode/2up?view=theater

Heracleitus has been represented in modern literature as building his philosophy around the notion of change; but the extant fragments hardly support this interpretation. Like most philosophers he

longed to find the One behind the Many, some mind-steadying unity and order amid the chaotic flux and multiplicity of the world. “All things are one,” he said, as passionately as Parmenides (1); the problem of philosophy was, what is this one? Heracleitus answered, Fire. Perhaps he was influenced by the Persian worship of fire; probably, as we may judge from his identification of Fire with Soul and God, he used the term symbolically as well as literally, to mean energy as well as fire; the fragments permit no certainty.
…

Though he finds a consoling constancy in the Eternal Fire, Heracleitus is troubled by its endless transformations; and the second nucleus of his thought is the eternity and ubiquity of change. He finds nothing static in the universe, the mind, or the soul. Nothing is, everything becomes; no condition persists unaltered, even for the smallest moment; everything is ceasing to be what it was, and is becoming what it will be. Here is a new emphasis in philosophy: **Heracleitus does not merely ask, like Thales, what things are, but, like Anaximander, Lucretius, and Spencer, how they became what they are; and he suggests, like Aristotle, that a study of the second question is the best approach to the first. The extant apophthegms do not contain the famous formula, *panta rei, ouden menei*—“all things flow, nothing abides”; but antiquity is unanimous in attributing it to Heracleitus.**[56] “You cannot step twice into the same river, for other waters are ever flowing on to you” (41); “we are and we are not” (81); here, as in Hegel, the universe is a vast Becoming.
…

Nevertheless, the operations of the Undying Fire are not without sense and order; if we could understand the world as a whole we should see in it a vast impersonal wisdom, a Logos or Reason or Word (65); and we should try to mold our lives into accord with this way of Nature, this law of the universe, this wisdom or orderly energy which is God (91). “It is wise to hearken not to me, but to the Word” (1), to seek and follow the infinite reason of the whole.
…

All in all, the philosophy of Heracleitus, concentrated for us now in 130 fragments, is among the major products of the Greek mind. The theory of the Divine Fire passed down into Stoicism; the notion of a final conflagration was transmitted through Stoicism to Christianity; the Logos, or reason in nature, became in Philo and Christian theology the Divine Word, the personified wisdom with which or through whom God creates and governs all things; in some measure it prepared for the early modern view of natural law. Virtue as obedience to nature became a catchword of Stoicism; **the unity of opposites revived vigorously in Hegel;** the idea of change came back into its own with Bergson. **The conception of strife and struggle as determining all things reappears in Darwin, Spencer, and Nietzsche—who carries on, after twenty-four centuries, the war of Heracleitus against democracy.**

https://books.google.fi/books?id=OirJPP6mOkEC&lpg=PP1&hl=fi&pg=PA26#v=onepage&q&f=false

For Heraclitus the *Logos* – both a universal rational principle or Law, and at the same time the word, the message which the philosopher presents – is the key to all things. Wisdom consists in understanding the *Logos*: ‘Wisdom is one thing: to understand the principle which steers all things through all.’13 Because the *Logos* is ‘common,’ thought also is common to all; **and the universality of the *Logos* lies behind all human laws or customs (*nomoi*):** ‘Those who speak with understanding must rely on what is common to all, as a city relies on its law, and with far greater reliance. **For all human laws are nourished by one law, the divine law, which has all the power it desires and is enough, and more than enough, for all.**’14
…

Men have the power of reason, and so are one; but they fail to exercise it, and so are divided against each other. Only God is completely wise. **‘Although the *Logos* is common, most men live as though their understanding were only their own’** (fr. 2): they ‘are unaware of what they do after waking up, just as they forget what they do when asleep’ (fr. 1). **‘For those who are really awake, there is one well-ordered universe common to all, whereas in sleep each man turns away to a world of his own’** (fr. 89). ‘Eyes and ears are bad witnesses for men,’ says another fragment, ‘if they have barbarian souls’ (fr. 107) – **the first occurrence of the word *barbaros* in Greek prose:** the minds of most men, Heraclitus means, do not understand the language of the senses, fail to comprehend the *Logos* which sense observation, correctly interpreted, would convey to them. Few writers have been so contemptuous of fools as Heraclitus, or so condemnatory of those normally praised as wise: **‘What intelligence or sense have they? They trust the people’s singers and use the mob as their teacher, not knowing that “most men are bad, and few good,”’** (fr. 104). Homer, Hesiod and Archilochus, Pythagoras, Xenophanes and Hecataeus are all included in Heraclitus’ list of fools. The thought that man is a rational animal, yet not rational, that human beings should be brought together by this common gift but actually go their own disastrous ways, is as important as any aspect of Heraclitus’ philosophy, and may lie behind the deliberate obscurity of his style, intended to appeal only to the few.

The most startling of these sayings is that which affirms that good and evil are the same (fr. 57). This does not mean that good is evil or that evil is good, but simply that they are the two inseparable halves of one and the same thing. A thing can become good only in so far as it is already evil, and evil only in so far as it is already good, and everything depends on the contrast. The illustration given in fr. 58 shows this clearly. Torture, one would say, was an evil, and yet it is made a good by the presence of another

evil, namely, disease; as is shown by the fact that surgeons expect a fee for inflicting it on their patients. **Justice, on the other hand, which is a good, would be unknown were it not for injustice, which is an evil (fr. 60). And that is why it is not good for men to get everything they wish (fr. 104).** Just as the cessation of strife in the world would mean its destruction, so the disappearance of hunger, disease, and weariness would mean the disappearance of satisfaction, health, and rest.

This leads to a theory of relativity which prepares the way for the doctrine of Protagoras, that "Man is the measure of all things."[101] Sea-water is good for fish and bad for men (fr. 52), and so with many other things.

> 101. Plato's exposition of the relativity of knowledge in the *Theaetetus* (152 d *sqq.*) can hardly go back to Herakleitos himself, but is meant to show how Herakleiteanism might give rise to such a doctrine. **If the soul is a stream and things are a stream, then of course knowledge is relative. Perhaps the later Herakleiteans had worked out the theory in this direction.**

At the same time, Herakleitos is not a believer in absolute relativity. The process of the world is not merely a circle, but an "upward and downward path." At the upper end, where the two paths meet, we have the pure fire, in which, as there is no separation, there is no relativity. **We are told that, while to man some things are evil and some things are good, all things are good to God** (fr. 61). Now by God, or the "one wise," there 'is no doubt Herakleitos meant Fire. There can hardly be any question that what he meant to say was that in it the opposition and relativity universal in the world disappear. It is doubtless to this that frs. 96, 97, and 98 refer. ...

83. **The moral teaching of Herakleitos is summed up in the rule "Follow the common." The "common" upon which Herakleitos insists is, nevertheless, something very different from common sense, for which, indeed, he had the greatest possible contempt (fr. 111). It is, in fact, his strongest objection to "the many," that they live each in his own world (fr. 95), as if they had a private wisdom of their own (fr. 92);** and public opinion is therefore just the opposite of "the common." The rule is really to be interpreted as a corollary of his anthropological and cosmological views. The first requirement is that we keep our souls dry, and thus assimilate them to the one Wisdom, which is fire. That is what is really "common," and the greatest fault is to act like men asleep (fr. 94), that is, by letting our souls grow moist, to cut ourselves off from the fire in the world.

Herakleitos prepared the way for the Stoic world-state by comparing "the common" to the laws of a city. And these are even more than a type of the divine law: they are imperfect embodiments of it. They cannot, however, exhaust it altogether; for in all human affairs there is an element of relativity (fr. 91). "Man is a baby compared to God" (fr. 97). Such as they are, however, the city must fight for them as for its walls; and, if it has the good fortune to possess a citizen with a dry soul, he is worth ten thousand (fr. 113); for in him alone is "the common" embodied.

>
> Heraclitus, of Ephesus, deposited his book in the temple of Diana. The book has perished, like the temple and the worship, but its fragments have been collected and interpreted with incredible ardour, by the scholars, the divines, the philosophers, and politicians who have been engaged the most intensely in the toil and stress of this century. **The most renowned logician of the last century adopted every one of his propositions; and the most brilliant agitator among Continental Socialists composed a work of eight hundred and forty pages to celebrate his memory.**
>
> **Heraclitus complained that the masses were deaf to truth, and knew not that one good man counts for more than thousands; but he held the existing order in no superstitious reverence.** Strife, he says, is the source and the master of all things. Life is perpetual motion, and repose is death. No man can plunge twice into the same current, for it is always flowing and passing, and is never the same. **The only thing fixed and certain in the midst of change is the universal and sovereign reason, which all men may not perceive, but which is common to all. Laws are sustained by no human authority, but by virtue of their derivation from the one law that is divine. These sayings, which recall the grand outlines of political truth which we have found in the Sacred Books, and carry us forward to the latest teaching of our most enlightened contemporaries,** would bear a good deal of elucidation and comment. Heraclitus is, unfortunately, so obscure that Socrates could not understand him, and I won't pretend to have succeeded better.

>
> We think of Communism as being all about state ownership of the means of production and central planning: in fact, Karl Marx advocated neither. Instead, according to Alexander Solzhenitsyn, the "soul of Marxism" lies in something called dialectical materialism. **Derived from Hegel and ultimately Heraclitus, this doctrine holds that the world is in a constant state of flux,**

that nothing is absolutely true or false, and that everything is connected to everything else. Permanent revolution is consequently the natural state of reality, and hence of politics.

https://www.marxists.org/archive/marx/works/1880/soc-utop/ch02.htm

The old Greek philosophers were all born natural dialecticians, and Aristotle, the most encyclopaedic of them, had already analyzed the most essential forms of dialectic thought. The newer philosophy, on the other hand, although in it also dialectics had brilliant exponents (e.g. Descartes and Spinoza), had, especially through English influence, become more and more rigidly fixed in the so-called metaphysical mode of reasoning, by which also the French of the 18th century were almost wholly dominated, at all events in their special philosophical work.
…

This primitive, naive but intrinsically correct conception of the world is that of ancient Greek philosophy, and was first clearly formulated by Heraclitus: everything is and is not, for everything is fluid, is constantly changing, constantly coming into being and passing away.[A]

https://en.wikisource.org/wiki/1911_Encyclopædia_Britannica/Stoics

Thus, quite apart from the general similarity of their ethical doctrine, **the Cynics were materialists; they were also nominalists, and combated the Platonic ideas;** in their theory of knowledge they made use of "reason" (λόγος), which was also one of their leading ethical conceptions. In all these particulars Zeno followed them, and the last is the more important, because, Chrysippus having adopted a new criterion of truth—a clear and distinct perception of sense—it is only from casual notices we learn that the elder Stoics had approximated to Cynicism in making right reason the standard. **At the same time, it is certain that the main outlines of the characteristic physical doctrine, which is after all the foundation of their ethics and logic, were the work of Zeno.** The Logos, which had been an ethical or psychological principle to the Cynics, received at his hands an extension throughout the natural world, in which Heraclitean influence is unmistakable. **Reading the Ephesian doctrine with the eyes of a Cynic, and the Cynic ethics in the light of Heracliteanism, he came to formulate his distinctive theory of the universe far in advance of either. In taking this immense stride and identifying the Cynic "reason," which is a law for man, with the "reason" which is the law of the universe, Zeno has been compared with Plato, who similarly extended the Socratic "general notion" from the region of morals—of justice, temperance, virtue—to embrace all objects of all thought, the verity of all things that are.**

If the recognition of physics and logic as two studies co-ordinate with ethics is sufficient to differentiate the mature Zeno from the Cynic author of the *Republic*, no less than from his own heterodox disciple Aristo, the elaboration on all sides of Stoic natural philosophy belongs to Cleanthes, who certainly was not the merely docile and receptive intelligence he is sometimes represented as being. **He carried on and completed the assimilation of Heraclitean doctrine; but his own contributions were more distinctive and original than those of any other Stoic. Zeno's seeming dualism of God (or force) and formless matter he was able to transform into the lofty pantheism which breathes in every line of the famous hymn to Zeus. Heraclitus had indeed declared all to be in flux, but we ask in vain what is the cause for the unceasing process of his ever-living fire. It was left for Cleanthes to discover this motive cause in a conception familiar to Zeno, as to the Cynics before him, but restricted to the region of ethics—the conception of tension or effort.** The soul of the sage, thought the Cynics, should be strained and braced for judgment and action; his first need is firmness (εὐτονία) and Socratic strength. But the mind is a corporeal thing. Then followed the flash of genius: this varying tension of the one substance everywhere present, a purely physical fact, accounts for the diverse destinies of all innumerable particular things; it is the veritable cause of the flux and process of the universe. **Herein lies the key to the entire system of the Stoics, as Cleanthes's epoch-making discovery continually received fresh applications to physics, ethics and epistemology.** Other of his innovations, the outcome of his crude materialism, found less favour with his successor, who declined to follow him in identifying the primary substance with fire, or in tracing all vitality to its ultimate source in the sun, the "ruling power" of the world—a curious anticipation of scientific truth. **Yet under this poetical Heraclitean mystic the school was far from flourishing. The eminent teachers of the time are said to have been Aristo, Zeno's heterodox pupil, and Arcesilas, who in Plato's name brought Megarian subtleties and Pyrrhonian agnosticism to bear upon the intruding doctrine; and after a vigorous upgrowth it seemed not unlikely to die out.**

https://en.wikisource.org/wiki/Lives_of_the_Eminent_Philosophers/Book_VII#Chrysippus

Once when somebody reproached him for not going with the multitude to hear Ariston, he rejoined, "If I had followed the multitude, I should not have studied philosophy." When some dialectician got up and attacked Cleanthes, proposing sophistical fallacies to him,

Chrysippus called to him. "Cease to distract your elder from matters of importance; propound such quibbles to us juniors."
…

184. At last, however, – so we are told by Sotion in his eighth book, – **he joined Arcesilaus and Lacydes and studied philosophy under them in the Academy.** And this explains his arguing at one time against, and at another in support of, ordinary experience, and his use of the method of the Academy when treating of magnitudes and numbers.

http://www.perseus.tufts.edu/hopper/text?doc=Perseus%3Atext%3A1999.04.0104%3Aentry%3Dchrysippus-bio-4

With regard to the worth of Chrysippus as a philosopher, it is the opinion of Ritter that, in spite of the common statement that he differed in some points from Zeno and Cleanthes (Cic. *Acad*. 2.47), he was not in truth so much the author of any new doctrines as the successful opponent of those who dissented from the existing Stoic system, and the inventor of new arguments in its support. With the reasoning of his predecessors he appears to have been dissatisfied, from the story of his telling Cleanthes that he only wished to learn the principles of his school, and would himself provide arguments to defend them. Besides his struggles against the Academy, **he felt very strongly the dangerous influence of the Epicurean system; and in order to counterbalance the seductive influence of their moral theory, he seems to have wished in some degree to popularize the Stoic doctrine, and to give to the study of ethics a more prominent place than was consistent with his statement, that physics (under which he included the whole science of theology, or investigations into the nature of God) was the highest branch of philosophy.** This is one of the contradictions for which he is reproached by Plutarch, whose work *De Stoicorum Repugnantiis* is written chiefly against his inconsistencies, some of which are important, some merely verbal. The third of the ancient divisions of philosophy, logic (or the theory of the sources of human knowledge), was not considered by Chrysippus of the same importance as it had appeared to Plato and Aristotle; and he followed the Epicureans in calling it rather the organum of philosophy than a part of philosophy itself. **He was also strongly opposed to another opinion of Aristotle, viz. that a life of contemplative solitude is best suited to the wise man--considering this a mere pretext for selfish enjoyment, and extolling a life of energy and activity.** (Plut. *de Stoic. Rep*. ii.)

…

The Stoic system is in brief: (*a*) materialism, (*b*) dynamic materialism, lastly (*c*) monism or pantheism. (*a*) The first of these characters is described by anticipation in Plato's *Sophist* (246 C seq.), where, arguing with those "who drag everything down to the corporeal" (σῶμα), the Eleatic stranger would fain prove to them the existence of something incorporeal, as follows. "They admit the existence of an animate body. Is soul then something existent (οὐσία)? Yes. And the qualities of soul, as justice and wisdom—are they visible and tangible? No. Do they then exist? They are in a dilemma." Now, however effective against Plato's contemporary Cynics or Atomists, the reasoning is thrown away upon the Stoics, who take boldly the one horn of this dilemma. That qualities of bodies (and therefore of the corporeal soul) exist they do not deny; but they assert most uncompromisingly that they are one and all (wisdom, justice, &c.) corporeal. And they strengthen their position by taking Plato's own definition (247 D), namely "being is that which has the power to act or be acted upon," and turning it against him.
…

Obviously, again, the Stoic quality corresponds to Aristotle's essential form; in both systems the active principle, "the cause of all that matter becomes," is that which accounts for the existence of a given concrete thing (λόγος τῆς οὐσίας). **Only here, instead of assuming something immaterial (and therefore unverifiable), we fall back upon a current of air or gas (πνεῦμα); the essential reason of the thing is itself material, standing to it in the relation of a gaseous to a solid body.** Here, too, the reason of things—that which accounts for them—is no longer some external end to which they are tending; it is something acting within them, "a spirit deeply interfused," germinating and developing as from a seed in the heart of each separate thing that exists (λόγος σπερματικός).
…

Hereupon follows the first differentiation of primitive substance—the separation of force from matter, the emanation of the world from God. The germinal world-making powers (σπερματικοὶ λόγοι), which, in virtue of its tension, slumbered in Pneuma, now proceed upon their creative task. The primitive substance, be it remembered, is not Heraclitus's fire (though Cleanthes also called it flame of fire, φλόξ) any more than it is the air or "breath" of Anaximenes or Diogenes of Apollonia. Chrysippus determined it, following Zeno, to be fiery breath or ether, a spiritualized sublimed intermediate element.
…

The influence upon Stoicism of Heraclitus has been differently conceived. **Siebeck would reduce it within very small dimensions, but this is not borne out by the concise history found at Herculaneum** (*Index herc.*, ed. Comparetti, col. 4 seq.). **They substituted primitive Pneuma for his primitive fire, but so far as they are hylozoists at all they stand upon the same ground with him.** Moreover, the commentaries of Cleanthes, Aristo and Sphaerus on Heraclitean writings (Diog. Laër. vii. 174, ix. 5, 15) point to common study of these writings under Zeno. **Others again (*e.g.* Lassalle) represent the Stoics as merely diluting and distorting Heracliteanism. But this is altogether wrong, and the proofs offered, when rightly sifted, are often seen to rest upon the distortion of Heraclitean doctrine in the reports of later writers, to assimilate it to the better known but essentially distinct innovations of the Stoics. In Heraclitus the constant flux is a metaphysical notion replaced by the interchange of material elements which Chrysippus stated as a simple proposition of physics.** Heraclitus offers no analogy to the doctrine of four (not three) elements as different grades of tension; to the conception of fire and air as the "form," in Aristotelian terminology, of particulars; nor to the function of organizing fire which works by methodic plan to produce and preserve the world (πῦρ τεχνικὸν ὁδῷ βαδίζον ἐπὶ γένεσιν κόσμου). **Nor, again, is there any analogy to the peculiar Stoic doctrine of universal intermingling (κρᾶσις δὶ ὅλου).** The two active elements interpenetrate the two lower or more relaxed, winding through all parts of matter and so pervading the greater masses that **there is no mechanical mixture, nor yet a chemical combination, since both "force" and "matter" retain their relative characters as before.** Even the distinction between "force" and "matter"—so alien to the spirit of Heraclitus—is seen to be a necessary consequence.
…

Further, a distinction was drawn between irrational animals, or the brute creation, and the rational, *i.e.* gods and men, leaving room for a divergence, or rather development, of Stoic opinion. The older authorities conceded a vital principle, but denied a soul, to the brutes: animals, they say, are ζῶα but not ἔμψυχα. **Later on much evidence goes to show that (by a divergence from the orthodox standard perhaps due to Platonic influence) it was a Stoic tenet to concede a soul, though not a rational soul, throughout the animal kingdom.** To this higher manifestation of Pneuma can be traced back the "esprits animaux" of Descartes and Leibnitz, which continue to play so great a part even in Locke.
…

As to the physical constitution of bodies, they were content to reproduce the Peripatetic doctrine with slight modifications in detail, of hardly any importance when compared with the change of spirit in the doctrine taught.

https://archive.org/details/enlightenmentcon0000isra/page/466/mode/2up?view=theater

Stoicism hence comes closer than Aristotle to espousing Socrates' maxim that virtue arises from wisdom.244 Since Stoic virtue is the practice of what perfects human nature by leading us towards a universal code – conduct consonant with the nature of the cosmos – morality, it follows, can be instilled and improved through education.

https://archive.org/details/completeworksrie033168mbp/page/n367/mode/2up?view=theater

The Greek culture of the Sophists had grown out of all the Greek instincts; it belongs to the culture of the age of Pericles as necessarily as Plato does not: it has its predecessors in Heraclitus, Democritus, and in the scientific types of the old philosophy; it finds expression in the elevated culture of Thucydides, for instance. And it has ultimately shown itself to be right: **every step in the science of epistemology and morality has *confirmed the attitude* of the Sophists. … Our modern attitude of mind is, to a great extent, Heraclitean, Democritean, and Protagorean … to say that it is *Protagorean* is even sufficient: because Protagoras was in himself a synthesis of the two men Heraclitus and Democritus.**
…

In practice, it means that **moral judgments have been torn from the conditions among which they grew and in which alone they had some sense, from their Greek and Graeco-political soil,** in order to be *denaturalised* under the cover of being *sublimated*. The great concepts "good" and "just" are divorced from the first principles of which they form a part, and, as "ideas" *become free*, degenerate into subjects for discussion.
…

In short: the scandal reaches its apotheosis in Plato. … **And then it was necessary to invent the *abstract perfect* man also:**—good, just, wise, and a dialectician to boot—in short, the *scarecrow* of the ancient philosopher: **a plant without any soil whatsoever; a human race devoid of all definite ruling instincts;** a virtue which "justifies" itself with reasons. The perfectly absurd "individual" *per se*! the highest form of *Artificiality*.

https://archive.org/details/greeklifeandtho03mahagoog/page/148/mode/2up?view=theater

The silent antagonism to both Plato and Aristotle is not more remarkable in these schools than their return to older thinkers, whose views they adopted and developed, not without the aid of those recent predecessors whom they despised. **As regards physics they revolted from the spiritualism of Plato and Aristotle to adopt the cruder and easier doctrines of Heraclitus or Democritus; as regards morals they felt that the true descendants of the great master, Socrates, were not the learned and speculative masters of the Academy and the Lyceum, but the outspoken and rude Antisthenes, and the equally outspoken but polished Aristippus.** These men had seized the practical sides of Socrates—Antisthenes, his absolute liberty of spirit and free-thinking, even to a complete break with existing society; Aristippus, his principle that happiness was the first object of man, and that a philosophy which did not take account of pleasure was no adequate rule of life.
